First. Most air carrier accidents have survivable aspects, that is, crash impact force alone was insufficient to kill all on board.

Second. Most aircraft emergencies are unexpected and require quick, correct responses to insure occupant safety and survival.

Third. Due to ever present fuel fires, passengers have very little time to exit following a crash—the rate of survival is closely related to the evacuation rate.

Fourth. In many cases it is the passenger, not a crewmember, who opens emergency exits.

Fifth. The present system of informing passengers of vital safety information is woefully inadequate.

Sixth. The present system of crewmember emergency training may be inadequate.

Seventh. Certainly, in the area of passenger education and perhaps in the area of flight attendant training the air carrier industry is largely self-regulated.

Eighth. Many passengers who have survived crash impacts may have perished because they were unfamiliar with what to do in an emergency—passenger safety briefing methods need to be improved to increase the probability of passenger safety and survival.

Ninth. Air carriers may be letting their marketing concerns and putting passengers at ease interfere with informing and preparing passengers for an emergency.

At the present time the passenger receives his safety education from the air carrier through an oral briefing prior to takeoff and by passenger information cards located in seatback compartments. The oral briefings provide a very minimal and, I believe, inadequate amount of information, are often hurried, suffer from poor PA systems, cannot always be seen, and are largely ignored. The briefing cards, when seen, are often inadequate in that they may have misleading, incorrect, or easily misunderstood information. To illustrate the shortcomings of the present system I would like to use as a classic case in point of the patent shortcomings of the present passenger education system: the emergency oxygen systems for passengers.

Everyone who has flown in an aircraft can remember being briefed on the use of the emergency oxygen systems. However, both in actual practice under real emergencies and in the laboratory, it clearly appears that very few people actually know how to use the system in order to prevent hypoxia. In a recent NTSB case study—NTSB-AAS-76-1—the Board cited several examples where during actual decompression emergencies only a small percentage of passengers correctly activated the oxygen generators and donned their masks. The Board cited the following as causes of passenger inability to use their oxygen masks: passenger briefings; lack of oxygen flow indications; headband adjustment difficulties; lack of mask stowage methods; and flight attendant training. NTSB made several recommendations in the study. To my knowledge none of these have been fully carried out by FAA.

Another shortcoming of the present passenger education system is in the operation of emergency exists. Air carriers deemphasize information enabling passengers to know how to operate these exits—total reliance is placed on crew members being able to open the exits. FAA only requires that the location of exits be pointed out, and I have never seen an oral presentation on how to operate the exits. A summary table presented at the hearings by Dr. Daniel A. Johnson on 10 recent selected accidents indicates clearly that the air carriers reliance on crew members to assist in evacuations is unrealistic. In those 10 accidents 80 percent of the passengers escaping exited through emergency exits opened by passengers. One reason for this is obvious: In the narrow body jets, which comprise the largest part of the current fleet, overwing window exits are very frequently used, yet FAA regulations do not require the exits to be attended by crew members during regular landings or in known emergency situations. Since flight attendants will not normally be at these exits in an emergency, and passengers are not told of this, the need for air carriers to do more than merely point out where the exits are and refer passengers to the information card is obvious.

Mr. Speaker, time does not allow me to detail the wealth of information developed at these hearings. Oxygen mask and emergency exit use were only two of many areas covered. The proper method of using emergency slides, life vests, and life rafts are other areas where passenger education is sadly deficient. Much work needs to be done.

It is time for FAA to reassess its stance in allowing air carriers to regulate themselves in this area. The present system of imparting safety information to airline passenger via "canned" PA announcements and visual demonstrations has been insufficient to assure full and effective use of the provisions that have been made for their safety in emergencies. The FAA and the air carriers need to do much more work in the areas of passenger motivation, standardization of emergency procedures, equipment and information cards, and in developing new concepts in the use of dynamic briefings such as videotape or motion pictures.

We have a fine air transportation system with marvelously designed aircraft, but in my view the next frontiers in air safety are in crashworthiness and passenger reaction to emergencies—this is where we will be making the greatest strides in the near future. The hearings being conducted by the Investigations and Review Subcommittee have and will continue to call attention to the need for redoubled efforts on these fronts, but in the final analysis it is the FAA and the air carriers resolve to make strides that will determine whether we improve air transportation safety. I have been heartened in recent days by several carriers expressing real interest in recommendations made during the hearing. Hopefully this will develop into an industry wide trend which will have widespread benefits for all air travelers.

RESOLUTION IN FAVOR OF TAIWAN

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. DERWINSKI. Mr. Speaker, there has been much discussion over the President's decision to recognize Peking. I direct the attention of the Members to a resolution adopted by the city of Cleveland, dealing specifically with the issue of maintaining diplomatic relations with the Republic of China, Taiwan.

AN EMERGENCY RESOLUTION

Memorializing the President of the United States to maintain diplomatic relations and the mutual defense treaty with the Republic of China, Taiwan

Whereas, the Republic of China, Taiwan, was a founding member of the United Nations and has always been a law abiding member of the community of nations; and

Whereas, the people of the Republic of China, Taiwan, have built a successful, prosperous, free economy out of the ashes of a half century of revolution, invasion and civil war and now serve as an important trading partner of the American people; and

Whereas, the Republic of China, Taiwan, is of great strategic importance in the defense of East Asia and the Pacific and had always utilized its military power in the interests of the free World; and

Whereas, the people of the Republic of China, Taiwan, have been among the most trusted friends and allies of the people of the United States since the founding of the Chinese Republic in 1912; and

Whereas, President Jimmy Carter has repeatedly stated that he will pursue an open and just foreign policy, based on morality; and

Whereas, President Jimmy Carter has also repeatedly stated that he will not compromise the freedom and security of the people of the Republic of China, Taiwan, and will stand by the U.S. commitments to that country; and

Whereas, this Resolution constitutes an emergency measure providing for the immediate preservation of the public health, safety and welfare; now

Be it resolved by the Council of the City of Cleveland:

Section 1. That the President of the United States be and he is hereby memorialized to strongly maintain its diplomatic relations and mutual defense treaty with the Republic of China, Taiwan, and to continue this country's friendship with the people of the Republic of China, Taiwan.

Section 2. That the Clerk of Council be and she is hereby directed to transmit a copy of this Resolution to the President of the United States.

Section 3. That this Resolution is hereby declared to be an emergency measure and, provided it receives the affirmative vote of two-thirds of all the members elected to Council, it shall take effect and be in force immediately upon its adoption and approval by the Mayor; otherwise, it shall take effect and be in force from and after the earliest period allowed by law.

PRAISE FOR COLLEAGUE IN WATER REFORMS

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PHILLIP BURTON. Mr. Speaker, I would like to call to the attention of the House the summer 1977 edition of Cry California, published by the highly respected organization California Tomorrow which is dedicated to problem-solving and environmental protection through proper planning.

In this edition, the article, "Water Politics: Those Clouds Over Westlands Aren't Rain," by Dan Blackburn, calls attention to the valuable contribution made by my colleague, GEORGE MILLER, in initiating the major reform of water policy in California.

Earlier this year GEORGE MILLER'S amendments to H.R. 4390 not only brought about the first full-scale investigation of how water policy and priorities have been set in the past, but also have provided a vehicle for the major reform of water policy which will lead to better protection of our San Francisco Bay and delta regions. For all too long in California's history, big corporate farmers have been able to dictate water policy in this State to the detriment of the public interest. With the passage of H.R. 4390 and the subsequent work by the task force, I believe this will no longer be allowed to happen, and that future water policy will be made with the interests of all Californians in mind.

The article follows:

WATER POLITICS: THOSE CLOUDS OVER WESTLANDS AREN'T RAIN

(By Dan Blackburn)

(NOTE.—Dan Blackburn is a consultant to the American League of Anglers and a free-lance writer who has contributed articles on water policy to *Cry California* and other publications.)

Ralph M. Brody, silver-maned manager-chief counsel for the Westlands Water District in Fresno—the man whom *The California Journal* tagged last year as "California's highest-paid public official" ($81,500 a year)—is contemplating retirement. He has duly noted that, in this dry year, more and more people are asking hard questions about Westlands water and the 1902 Reclamation Act.

The Reclamation Act was a deliberate attempt to use federal irrigation projects for a specific social purpose—putting more people on the land. Although a product of the administration of Theodore Roosevelt, it could as easily have been drafted by Thomas Jefferson—it clearly expressed the old American idealistic belief that there is something naturally healthy about a nation of small farmers. The law required that water from federal projects be supplied only to land-holdings of not more than 160 acres—320 acres in the case of a husband and wife.

It has been systematically nonenforced ever since it was passed, and Brody has certainly done his part.

With impressive skill and tenacity, Brody has molded, manipulated and exploited the Reclamation Act to the multimillion-dollar advantage of his employers—the owner-irrigators of Westlands. For more years than anyone had thought possible, they have gotten what they wanted and he has earned his ample salary for helping them get it. It, of course, being water.

M. Woodrow Wilson of the governor's Office of Planning and Research: "The reclamation laws intentionally provide subsidies to help their intended beneficiaries, the settler and the small farmer. It is arguable, however, that the subsidies were not intended to reach their present magnitude, and it is unquestionably true that most of those presently receiving reclamation benefits in Westlands are not settlers or small farmers."

It is a remarkable understatement. The subsidies' "present magnitude" is expected to top $2.5 billion when the public's investment is computed. And the recipients are certainly not "settlers or small farmers." More than two-thirds of Westlands' total irrigable acreage is held as "excess land"; that is, more than the 160 acres allowable to qualify for reclamation-project water. Large landowners dominate the district: Southern Pacific has 106,000 acres; Boswell's Boston Ranch, 24,000 acres; and Standard Oil, 11,500 acres.

The big owners, using Brody to write their version of the Reclamation Act, were able to spread their excess-land sales over a 10-year period, all the while dumping those tax-bought gallons of water on their crops. Since federal water first arrived at Westlands, property has gone up in price, as well as production. Would-be small farmers who line up for a bid on excess Westlands property going on the block discover that—again in violation of the act—the provision of water has increased the acreage price beyond their means.

But the heat is on Westlands, and it seems likely that the district will soon have to conform to at last *part* of the law. And with compliance in Westlands, it may follow that other Bureau of Reclamation operations, in

other parts of the country, may be in for some Congressional facelifting.

This will not necessarily mean rigid adherence to the 160-acre concept. During California hearings of the Select Committee on Small Business and the Committee on Interior and Insular Affairs, U.S. Senator Gaylord Nelson of Wisconsin said, "There is nothing religious about 160 acres. The idea is to encourage small farmers to live on the land and farm it. If they need more acreage, Congress will consider the question. But 106,000 acres [Southern Pacific's holdings] does not seem to me to be a 'small farm'."

In the late 1950s, George Ballis was the editor of a small labor newspaper. Today he is head of National Land for People, a Fresno-based public-interest group working for land reform in Westlands.

"Back then, no one cared that this huge federal project was being built to line the pockets of the valley's land barons," Ballis smiles. "Today everyone is sitting up and taking notice." Soon, if all goes according to schedule, National Land for People will begin to help first-time investors buy, and farm, their own land in the San Joaquin Valley.

Undoubtedly the drought is helping call attention to the Westlands situation. The 200 farms that receive water within the district are remarkable water-consumers. Collectively they produced crops with a gross value of $275 million in 1974. To do that, they received and spread 1.08 million acre-feet of water over the same 12-month period. That amounts to 700,000 gallons of water each and every minute pouring onto rich, brown earth that only 20 years ago was dry, dusty, and dirt cheap.

MAKING THE DESERT BLOOM

The conversion of Westlands into rich farm country is the direct consequences of the federal government's decision to construct the San Luis water project, a decision made by Congress nearly two decades ago.

In 1959, B. F. Sisk (called "Bernie" by his Fresno neighbors who had elected him to represent them in the Congress of the United States) sought funds for a system of impoundment dams, transfer canals and related facilities that would supply water for a huge, semi-arid belt of fallow land. He wanted to make the desert bloom in central California.

In 1959, if a man said he could make something out of nothing . . . well, by cracky, he deserved a chance.

Congress yawned its approval, and suddenly Sisk's Westlands followers had themselves 192 million federal tax dollars and the authority to appropriate water from the shrinking pool of the Sacramento-San Joaquin Delta. With the water, Westlands landowners could bring into production 600,000 acres of new farmland. Property values began an upward spiral until today an acre of Westlands costs 300 percent more than it did in 1960.

While Sisk was launching water projects in Washington, Charley V. Porter was doing the same in California. Porter, a Southern California assemblyman, successfuly obtained voter approval for the floating of bonds to finance construction of the fruits of his legislative fantasies, a facility to be known as the State Water Project. It mattered not to Porter that the waters he thought would fill his project upon completion were the very same waters that Sisk thought would fill *his*. The conflict was painfully obvious even in 1959, but nobody really believed California would not have plenty of water. Something would turn up.

INTENSE COMPETITION

James F. Sorensen, a Visalia engineer who serves as secretary of Friant Water Users Association, summarized the problem two years ago when he testified before a U.S. Senate hearing about Westlands: ". . . we find ourselves pitted against each other, in effect, competing, and that is what it is: intense competition for what water is available in California at this particular time."

Coincidentally, that "particular time" was the very outset of the current dry spell, and Sorensen, as he spoke, was visualizing exactly twice as much water as exists today. Intense? Sorensen had no idea then what the word really meant.

While Sorensen was competing in his clients' interest, a report was being furnished to Governor Brown that expressed concern about a proposed long-term (40 years) contract between Westlands and the U.S. Bureau of Reclamation, provider of water through the Central Valley Project's San Luis Unit. The contract was already in the hands of Jesse Unruh, who would sign for the state of California, and Thomas Kleppe, who would sign for the United States during his final days as Secretary of the Interior.

G. Donald Meixner of the State Water Resources Control Board noted in the report to Brown: ". . . the Bureau will not have the capability in the near future to meet all of its contractual demands in [in California] and Delta water-quality requirements during certain critical dry periods." There was enough evidence that the bureau had indeed overcommitted itself to convince Brown that the signature of Unruh should wait.

The little matter of insufficient water to fulfill promises didn't faze Kleppe, who sat poised in the nation's capital with raised pen. First he proclaimed that he would await his successor, and then, just as he left office, he signed the contract. Incoming Interior Secretary Cecil Andrus invalidated the signature. The proposed contract presently undergoes additional scrutiny and alteration by Andrus before it gets a second—and binding—signature.

As the situation stands, Andrus will be in no hurry. The only advocates of immediate signing are the Westlands owners, their glib spokesman, Brody, and Congressman Sisk.

While the contract hangs fire in the executive branch, other Westlands-related intrigues are being played out in Congress.

In March of this year, Representative Sisk, father of the San Luis project, introduced an amendment to his original San Luis authorization act. Sisk's intent was to get funding for a drainage system that would carry pesticide- and fertilizer-laden runoff water out of Westlands to be dumped into—where else?—the Delta and San Francisco Bay.

As a counter move, Representative George Miller (who represents the Delta area) introduced far-reaching amendments of his own to Sisk's HR 4390. Miller's amendments neutralize the aspects of Sisk's proposal favorable to Westlands owners, and may pose one of the most significant threats yet. The Delta farmers are anything but radicals, but in the struggle for water they are in fact lending a hand to the land-reform movement. For example, the legislation as amended will:

Limit the total appropriation for San Luis during fiscal year 1978 to $40 million;

Direct Secretary of the Interior Andrus to establish a task force to review the management, organization and operation of the San Luis Unit "to determine the extent to which they conform to the purposes and intent of" the original authorizing act. The task force will include the Commissioner of Reclamation, the Assistant Secretary of the Interior for Land and Water, the Solicitor and the Comptroller of the United States (or their representatives), members of the general public, and representatives of the state of California and the Wetlands Water District;

Prohibit Andrus or his representatives from approving any amendatory or interim contract with the San Luis Unit, or any water service or repayment contracts with Westlands.

At least three hearings (two in California) will be conducted by the task force, which will be charged with completing its analysis and making its recommendations no later than January 1, 1978.

The task force proposed by Miller's amendments could evolve into something more than a paper tiger. Its powers are broad, and its political makeup (mainly Carter appointees) might produce a willingness to use its authority to the fullest.

The task force's report will cover ten specific areas of investigation, including:

A detailed accounting of funds expended for planning and construction of San Luis facilities;

An analysis of the compatibility of the present design and plan for San Luis with the original feasibility report, environmental impact statement, and cost estimate;

An analysis of existing repayment obligations;

The record of enforcement of the requirements concerning the disposition of excess lands by persons receiving federal water or major project benefits.

Francia Welker of OPR thinks such a report could be a sound basis for reassessing Westlands policy:

"This provides a fact-finding forum which is different from Congressional testimony. It's nice when George Ballis and David Weiman (Westland's most vociferous critics) can get up before a committee and sound off, but this is a different structure in that it allows a cost-accounting and other things with regard to the effectiveness of the [San Luis] project, who its real beneficiaries are and who is really paying the cost.

"I think this will give any decision-maker a much better position from which to make a decision that would be unpopular with vested interests. In other words, the facts just dictate one course of direction—to enforce the Reclamation Act of 1902 in terms of its intended beneficiaries and to regulate the water quality [of the Delta]."

THE FORGOTTEN FARMER

Thus ownership of Westlands agricultural property seems to be moving painstakingly toward compliance with the intent of the Reclamation Act of 1902. One of these days, we may see a California version of what the law promised—small farmers happily tilling in the San Joaquin Valley, the boundaries of their property plainly visible on the horizon, their fields irrigated with water from San Luis Reservoir.

California Congressman John Krebs, then a freshman legislator, told a Senate investigating panel:

"At the core of all this controversy is the oftforgotten family farmer. After all, he or she has *theoretically* been the compelling reason behind the federal subsidization of reclamation water all along . . . While there are no doubt differing conceptions of the meaning of a family farm, no one can seriously claim that the 1902 Reclamation Act was ever designed to promote corporate and large-scale farming by abenstee landowners, let alone encourage land speculation at the expense of the general taxpayer, and those who were to benefit from this legislation . . . This act has placed great trust in the integrity of those designated to administer it. Serious questions have been raised as to whether this trust has been faithfully carried out."

In terms a bit more lofty, Governor Brown added his thoughts about the social value of redirecting Westlands:

"As the society allows aggregates of economic power, as we allow ourselves to be regimented in the massive way that we find in so much of our national life, democracy itself is threatened. To the extent that we can moderate the development and provide options for people, I think we can do a great

deal." To the governor, doing "a great deal" would be bringing the small farmer back into the California agricultural picture.

One result of that would be higher agricultural productivity. That's right—despite the agribusiness myth that larger farms are more efficient and the small farmer can't make it, research from several sources (including the University of California and the U.S. Department of Agriculture) shows clearly that small family farms operated by resident owners are more productive.

There would also be secondary payoffs to the Westlands area. Whereas today it is mainly a place of rich land and poor people, vast fields with few buildings except equipment sheds and workers' barracks, the change to significant numbers of small farms would undoubtedly stimulate construction of farm houses and buildings. In place of the rather bleak and semifeudal Westlands that exists today, there could be an area of stable and prosperous rural communities. Perhaps, after 75 years, we will get a chance to see what kinds of social and economic benefits the Reclamation Act can provide.

TAXING TIMES

HON. BOB GAMMAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GAMMAGE. Mr. Speaker, it is a great personal pleasure for me to commend to your attention, and to the attention of my colleagues, this fine editorial written by Lynn Ashby of the Houston Post, entitled "Taxing Times."

Mr. Ashby's article illustrates the difficulty Americans now have in maintaining their present standard of living because of increasing taxes. I hope my colleagues will pay careful attention to this predicament before voting for additional Federal spending.

The editorial follows:

TAXING TIMES

(By Lynn Ashby)

In case you haven't noticed, one of the fastest rising costs to the average American is not his food, rent or gasoline. No, it's his taxes. Taxes are increasing faster than almost anything else. They are not only undercutting our pay raises, but in many cases are leaving us worse off than before. The amount of all taxes collected per person in the U.S. between 1960 and 1976 more than tripled—yes, tripled—from $278 to $900. At the same time, the purchasing power of the dollar was just about cut in half. This combination just might be the reason for some of your problems.

So, I want everyone to just jot down how much you estimated you made in 1960, 1970 and 1976. Ready?

The reason I am asking you to do this is because today we are going to figure out, not how much you are making, but how much you should be making. This particular topic is rather timely since President Carter has announced plans to increase our Social Security taxes, both the rate and the amount to be taxed. To see where we are going, let's see where we've been, depressing though it may be.

For a guide, we turn to the latest figures gathered from the Conference Board, which is an independent fact-finding operation. We begin on an up note: Last year, total personal income was up by 10 per cent, the biggest jump in three years. What is called "per capita disposable personal income," an economist's way of saying what you've got after paying your taxes, was also up last year, by 3.2 per cent. The year before it was up only 1 per cent and the year before that it was actually down, by 2.3 percent.

Now let's look at Social Security taxes, which will probably be increased shortly. In the past 10 years, the amount of money put into the program annually has jumped from $17.8 billion to almost $55 billion, but benefits have increased even more, so the program is going broke.

Here's an interesting point: Personal federal income tax collections have slowed, and have even shown actual declines in three out of the past seven years. So where, you might well ask, are all these additional taxes going? To the social security program, of course, and to state and local governments, which are tacking on income taxes and increased sales taxes and the like. Right after World War II, these state and local taxes made up 19 per cent of our tax load. Today they account for 35 per cent, or in dollars, about $116 billion a year.

Between taxes and inflation, you have to be making a lot more today than you used to, but how much more? A rule of thumb is to take your 1960 income and then compare it with your '76 income. If your income has not more than doubled in that time, you're in trouble. Here's a simple chart to help out, figured for a married couple with two children, for '60, '70 and this year:

	Gross income needed to stay even		
1960	$10,000	$15,000	$25,000
1970	13,181	19,829	32,644
1977	20,340	30,850	51,950

If you are the person who made an even 10 grand in 1960, then that year you paid about $1,400 in federal income and social security taxes. In 1970 you needed $13,181 to stay even, but you were paying $1,900 in those taxes, and last year, when you were making that $20,340, you were sending to Washington $3,336. Thus you can see what has been happening to us in just the last six years.

Ah, but let's say you are a high roller. Big income. And, therefore, heavily taxed. If you plan to make $51,950 this year (which is what it will take to equal that $25,000 you made in '60) you will be paying $12,497 in federal income and social security taxes, and you will have lost $19,490 in purchasing power since '60.

Now, none of this counts what we send to our city and state governments, or even what we send to Washington in the form of other federal taxes. Just the ISR and social security payments. But, as I noted earlier, it's still not enough because the social security program, designed to be self-sufficient, isn't. Not any more. Carter says we will have to tap the federal treasury for more than $14 billion to bail out the program. And, of course, raise taxes.

There is a bright side to all of this, to be sure. You might be making $206,800 this year, and thus would be paying $86,090 in federal income and social security taxes. Can you imagine owing Uncle Sam 86 grand? And if you don't pay, going to jail? There are benefits to everything, and this is one bennie to being poor. If I think of any more, I'll let you know.

PAY INCREASE LEGISLATION

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BRECKINRIDGE. Mr. Speaker, the legislation I am introducing today addresses the unique situation in which Members of Congress must approve or disapprove once every 4 years immediate salary increases for themselves. This bill amends the Federal Salary Act of 1967, Public Law 90–206, to provide that no increase in the salary of Members of Congress can go into effect until after the next Congress is seated. In other words, a Representative would have to be elected to the next Congress before he or she could receive an increase in salary.

The 1967 act devised a method by which congressional salaries could be reviewed every 4 years by a Commission on Executive, Legislative, and Judicial Salaries. This method was established by section 225 which provides for review of not only congressional salaries, but of the salaries of justices and judges of the Federal judiciary, Cabinet and subcabinet officers—levels I through V of the executive schedule—and certain other officials in the executive, legislative, and judicial branches.

Under this section, the Commission recommends salary adjustments to the President, who in turn transmits his own recommendations to the Congress. According to the law, the President's recommendations become effective at the next pay period after 30 days following transmittal unless, in the meantime, one House of Congress by resolution disapproves all or part of the recommendations. Since most pay periods begin every 30 days, Members enjoy the benefits of a pay increase within 60 days upon receipt of the President's recommendations unless they are disapproved.

The Constitution places Members of Congress in the precarious and sometimes awkward position of having to vote on their own levels of compensation. We are the only Federal employees that are authorized to set and adjust their own salary levels and ultimately that authority cannot be delegated to anyone else. Nor should it be.

Nevertheless, we are faced with an inherent conflict of self interest situation when we are required to approve or disapprove a proposal that could be to our immediate and substantial personal advantage. In any other situation the proper course of action would be for any individuals concerned to disqualify themselves from the decision, but this is impossible when every Member of the House and Senate is personally affected and there is no constitutional method by which to delegate ultimate responsibility.

Nearly 200 years ago, the First Congress considered this very problem. Subsequently on September 25, 1789, both Houses of Congress approved and sent to the States for ratification a proposed amendment designed to partially limit the authority of Congress to increase the salaries of its Members. The amendment, introduced by James Madison as part of a package which eventually became the Bill of Rights, would have postponed the implementation of any congressional pay raise approved by Congress "until an election of Representatives shall have intervened." The Annals of Congress record that Members favored the constitutional amendment because it would remove the burden that future Congresses would have alleviating "the disagreeable sensation occasioned by leaving it in the breast of any man to set a value on his own work."

Although Congress approved this amendment to the Constitution as proposed article 2 of 12 amendments, the amendment failed to be adopted by the necessary 11 States and become part of the Constitution.

Two very similar draft amendments which were proposed at the New York and North Carolina conventions considering the ratification of the Constitution in July 1788 may have been the direct source for Madison's proposed amendment. The New York convention proposed 13 amendments to Congress—1 of which forbade a change in congressional salaries "for the benefit of the representatives until after a subsequent election shall have been held." The amendment proposed by the North Carolina convention said that—

The laws ascertaining the compensation of senators and representatives for their services, be postponed in their operation until after the election of representatives immediately succeeding the passing thereof.

Although the proposal for deferred pay increases has been advocated since even before the earliest Congress, we are still faced with a situation in which our pay rates are affected within a few weeks after having been proposed to Congress. This continues to present an intolerable and embarrassing situation, particularly when attempting to provide an explanation to the people we represent. One of the chief benefits of this proposal is that it allows the public to properly express its views on any congressional pay increase, since Members must stand for election before they could receive any benefits from a salary increase.

Consequently, because we would no longer be making decisions that are to our immediate benefit, we could hope for a more rational and objective consideration of congressional salaries than that which has been the case for the past several years.

Finally, I might point out that my proposal benefits those Federal employees whose pay is dependent on congressional approval of the Commission's recommendations The bill makes provision that would not act to delay pay increases for other Federal officials under the purview of the Commission during the congressional deferral period. Although congressional salaries would be postponed until the succeeding Congress, the proposed adjusted salaries of these officials could become effective immediately. This would not only provide the means for a more rational discussion of the subject of congressional pay, but would also assure that these officials would not be penalized, but instead paid compensation comparable with their counterparts in private industry.

This legislation does not alter any of the procedures of the operations and recommendation process of the Commission nor does it eliminate any of the annual comparability pay adjustments provided for in the 93d Congress. It does provide a more rational framework by which we deliberate future salary increase.

MOSCOW'S MAN IN LUSAKA

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. CRANE. Mr. Speaker. When the House of Representatives took up H.R. 6884, the International Security Assistance Act, some of my distinguished colleagues objected in part to an amendment I offered on the floor to the act. My amendment would have prevented any funds from being expended for Angola, Mozambique, Tanzania, and Zambia. Several Members on both of the aisles enlightened me to the fact that Zambia was not in the same category as Angola and Mozambique, and therefore, should not be excluded from receiving funds from the United States. I was told that Zambia and its President, Kenneth Kaunda, are friends of the United States, that Kaunda is a peacemaking moderate in Africa, and that Zambia was a country that would stand up to the Russians if necessary. For those who questioned the inclusion of Zambia in the original amendment, I insert the following article which appeared in the Washington Post last week.

MOSCOW'S MAN IN LUSAKA

(By Rowland Evans and Robert Novak)

LUSAKA, Zambia.—The fortress-like Soviet embassy here has become the nerve center for guerrilla operations against Rhodesia (Zimbabwe) and South West Africa (Namibia), undermining persistent Western hopes that Zambia's President Kenneth Kaunda would become the peacemaking moderate for southern Africa.

Behind the embassy's high heavily guarded walls, a short walk from the Zambian foreign ministry, Ambassador Vasily Solodovnikov is intimately involved in training, supplying and even deploying guerrillas. Moreover, old diplomatic hands see him doing his best to scuttle Western efforts for negotiated settlements in Rhodesia and Namibia. For the Kremlin to cash in on its heavy investment, the guerrillas must win; a genuine free election might well install a non-guerrilla government.

The Soviet aim thus conflicts with popular sentiment in Zambia, possibly shared at heart by Kaunda himself, for a quick, negotiated peace in Rhodesia. Nevertheless, Kaunda publicly takes the hard line and may be trapped in positions not in his nation's best interest. Having mounted the Russian bear, Kaunda cannot easily get off.

Solodovnikov has impressive credentials. An expert at the Soviet Africa Institute with intimate links to the KGB, he was architect of the Kremlin's succesful strategy for southern Africa. But the pudgy, smiling Russian is no KGB heavy, frightening off diplomatic colleagues. Rather, he assures everybody of his sincere best wishes for the Anglo-American initiative on Rhodesia.

Veteran diplomats don't believe a word of it. Solodovnikov supervised the quick buildup of Joshua Nkomo's new 3,000-man guerrilla army based in Zambia. Having put their money on this new military factor, the last thing the Russians want is a quick settlement.

Indeed, Solodovnikov has made Zambia a hub of military activity. It is a base for guerrilla raids against both Rhodesia and the long silver or South West Africa called the Caprivi strip. Aeroflot passenger planes land regularly at Lusaka, ferrying Nkomo's guerrillas to and from training in Angola.

But in typical Russian style, Solodovnikov is no gracious guest. While using Zambia as a base for military operations elsewhere, he is not beyond attempting a little subversion here. Some 250 Russian technicians, mainly teachers, are suspected by Zambian officials of proselytizing student radicals against Kaunda as an old fuddy-duddy with insufficient revolutionary fervor.

The matter surfaced when the Zambian government accused a Novosti press representative (undoubtedly a KGB man) of subversive activities and told Solodovnikov there would be no publicity if the agent were quietly returned home. The ambassador refused. The Zambian government then kicked out the Novosti man, announcing it in a brief item buried in Lusaka's government-controlled newspapers.

The Novosti incident is seized upon by Western diplomats as proof that Kaunda runs his own house, but it actually reveals Solodovnikov's arrogance and Kuunda's caution. Certainly, Kaunda is no free agent capable of throwing out the Russians in Egyptian-Sudanese fashion. Besides reliance on Soviet arms by the Zambian army (now deployed on the Rhodesian border), Kaunda is constrained by fellow "front-line" states (Mozambique, Angola, Tanzania) more radical than Zambia.

So, Kaunda's posture has hardened. The agent for Angola's anti-Communist Unita guerrillas, backed by Kaunda in the Angolan civil war, has been thrown out of Lusaka. Although Kaunda once condemned Cuban intervention in Angola, he recently suggested Cuban troops might be used in Rhodesia.

Kuanda's switch from moderate to hawkish rhetoric on Rhodesia is attributed by Western apologists to disillusionment over past failures in negotiations. But beyond rhetoric, he singlehandedly pushed the African summit meeting in Gabon to a resolution demanding a military solution in Rhodesia. Western diplomats suspect a recent editorial in the Zambia Daily Mail, criticizing a suggested British Commonwealth peace-keeping force for Rhodesia, was written at the presidential palace. Above all, Kaunda is as committed to Nkomo's military force as are the Russians.

Kaunda's militancy does not fit the national mood, which greeted war posters slapped all over Lusaka with ennui. Although depressed copper prices are mainly responsible for Zambia's economic hard times, closing the border with Rhodesia also hurt. Apart from student radicals, Zambians would rather spend money on Lusaka's wretched shanytown slums than for more Soviet military hardware. Even back-benchers in parliament are privately cool to the war effort.

Kaunda cannot change course to satisfy public opinion. He will ride the Russian bear until Soviet-backed guerrillas take over Rhodesia. Whether he dismounts at that point, nearly surrounded by leftist neighbors, is something Solodovnikov will have much to say about.

PUBLIC POLICY OBJECTIVES OF AMERICAN ASSOCIATION OF HOMES FOR THE AGING

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PEPPER. Mr. Speaker, I commend to the attention of my colleagues the

public policy objectives for the 95th Congress which recently were adopted by the American Association of Homes for the Aging. AAHA, which represents 1,500 nonprofit intermediate care and skilled nursing care facilities for the elderly, has long been concerned with assessing and answering the social and medical needs of our elderly. The proposals set forth by this association reflect the know-how and first-hand experience which its members have in providing long-term care to the aging. A number of its officers and members also serve with distinction in other organizations, private and public, which deal with problems of the elderly.

AAHA's goal of achieving a continuum of necessary services for the elderly is shared by the House Select Committee on Aging and its Subcommittee on Health and Long-Term Care, both of which it is my privilege to chair. Several of the bills which I have recently introduced as part of a legislative package for the elderly reflect my own concern that we assure a full spectrum of long-term health and social services to the elderly of our country. A great deal has already been accomplished through the medicare and medicaid programs. Innovative institutional alternatives to care must be developed and made accessible side-by-side with traditional institutional services.

Both the AAHA and the Select Committee on Aging recognizing the need to improve the now predominant medical model of care for the elderly with a broader perspective incorporating social and personal care as well as medical care. The coordination of these varied services is a complex matter; community care organizations are endorsed by both the association and the Committee on Aging as a sound means of providing local information and guidance centers for the elderly who require counseling, homemaker help, nutrition services, physical therapy, and similar services.

I am pleased that AAHA places emphasis upon the need to regulate and review facilities which provide long-term care. Professional standards review should apply to long-term care facilities as well as hospital services and legislation I have offered, H.R. 1116 and 1126, would insure that this is the case. I am also pleased to note that the association supports another proposal also contained in H.R. 1116 and 1126 which require that nurses, social workers and other related health professionals be represented with physicians on PSRO's to assure a broad range of views on the treatment of elderly patients.

The association's objectives represent a most constructive contribution to the ongoing deliberations regarding what steps are necessary to assure a high quality of care for the Nation's elderly citizens. I therefore insert highlights from this report to be included at this point in the RECORD:

PUBLIC POLICY OBJECTIVES OF THE AMERICAN ASSOCIATION OF HOMES FOR THE AGING

PREAMBLE

Of paramount concern to the American Association of Homes for the Aging is the failure of public policy to address the long term care needs of the older population. Existing programs are predicated on the separate approaches of income maintenance, medical services, and housing assistance. Program integration is nonexistent due to conflicting regulations and a disjointed, fragmented bureaucracy.

HEALTH

The American Association of Homes for the Aging advocates the establishment of a long term care service benefit as a social entitlement. Coverage should include a full range of health and social supports, including both institutional and noninstitutional services. Eligibility for services should be predicated on individual needs as assessed by community long term care centers (including existing facilities), which would serve as coordinators for services to the aged. Such a program should optimize community resources, maximize the quality of care offered, and insure program flexibility.

SOCIAL CARE

The American Association of Homes for the Aging urges a public commitment to funding and delivering social care within institutional settings. Benefits under medicare and medicaid must be broadened to include social and residential care. Greater flexibility and variety in facilities serving the elderly must be encouraged, and public support for nonmedical long term care services within the institutional setting must be expanded. Consideration should be given to enacting an entitlement to a social care benefit. The primary thrust of this benefit would be the purchase of environmental and nonmedical supportive services.

HOUSING

To further the objectives of providing appropriate housing and services for the elderly, the American Association of Homes for the Aging urges Congress to amend current housing programs, to mandate the provision and funding of rent supplement payments and health and social services within environments designed for the elderly. Service programs must be an integral part of facilities for the elderly, if all, including the poor and minorities, are to be afforded opportunities to receive needed services. In addition, there should be a full Federal commitment to developing a variety of specialized living arrangements to meet individual needs and preferences. Federal funding which enables sponsors to build the number and types of living units needed by older Americans is imperative. To insure that elderly residents of these facilities receive quality care, the Department of Housing and Urban Development and the Department of Health, Education, and Welfare must work together more closely and cooperatively to develop suitable programs for the aging. Also, AAHA encourages the participation of its members in the national program to certify managers and administrators of facilities for the elderly.

COMMUNITY SERVICES

The American Association of Homes for the Aging endorses the tentative recommendations of the Federal Council on Aging to legislate an entitlement to programs providing basic supports for the elderly appropriate to their needs. Such supports should include a periodic assessment of the types of services needed by the older person. In addition, there should be a determination that the services needed are actually available and accessible. Counseling and implementation of a services plan should enable the individual to lead a reasonably independent and satisfying life.

PLANNING AND STRENGTHENING THE DELIVERY SYSTEM

The American Association of Homes for the Aging is deeply concerned that incidental policy decisions have had a stronger influence on the development of our long term care delivery system that the conscious policy actions of our lawmaners. We encourage a thorough review of Government policies, and encourage the Government to strengthen the capability of the not-for-profit sponsor of services to provide necessary supports for the elderly.

ON AIR BAGS AND AUTOMATIC SEAT BELTS

HON. ANTHONY TOBY MOFFETT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. MOFFETT. Mr. Speaker, the Wall Street Journal recently printed an editorial attacking Secretary of Transportation Brock Adams' decision to require that the cars of the 1980's be equipped with passive restraints, which are automatic crash protections, such as air bags or automatic seat belts.

The chairman of the Allstate Insurance Co. has written a letter to the editor of the Wall Street Journal in response to that editorial. The letter clarifies many questions concerning passive restraints. I would like to insert this letter in the RECORD at this time:

NORTHBROOK, ILL.,
July 21, 1977.

Mr. ROBERT L. BARTLEY,
Editorial Page Editor, The Wall Street Journal, New York, N.Y.

DEAR MR. BARTLEY: I just read your editorial in the Wednesday, July 20, 1977 Wall Street Journal entitled "The Half-Safe Car". This editorial purports to state your editorial opinion on the passive restraint standard proposed by Secretary Adams to provide improved and automatic crash protection for future model automobiles.

Since you include Allstate by name in your attack, I felt the need to immediately respond:

In a free society the press bears a heavy responsibility to ascertain the facts and to base its opinions upon reliable evidence before putting ink to paper. You have failed to carry that burden. Your editorial contains so many erroneous alleged facts and assumptions that it is extremely difficult to know where to begin.

(1) At the very onset you say that the air bag "is both expensive and relatively ineffective". The facts are that the air bag is relatively inexpensive and outstandingly effective.

In the Ford administration Secretary Coleman conducted extensive hearings, compiled a monumental record and determined that air bags were reliable, effective, relatively inexpensive and cost beneficial. In the Carter Administration Secretary Adams reviewed that record and himself held extensive hearings and reached the same conclusions—exactly contrary to your opening statement.

In addition to many other persons and organizations, over 95% of the automobile insurance business testified to the reliability, effectiveness and cost beneficial relationship of passive restraints. This included virtually the entire automobile insurance business except the handful of insurers owned by the auto manufacturers and a few of the AAA insurance companies.

(2) Your editorial goes on to state that "early advocates of the air bag trouble their minds little with recent data demonstrating its inadequacies". You include Allstate by name among these advocates.

The facts are that the recent data totally demonstrates the adequacy of the air bag. The Adams and Coleman records compiled in

their hearings and dockets provide overwhelming evidence of this fact. Both Secretaries Coleman and Adams found the data supportive of the effectiveness and reliability of the systems and of their ability if installed as standard equipment on all automobiles to save 9,000 lives annually and prevent hundreds of thousands of injuries.

The extensive research of the insurance business, the supportive testimony of all major suppliers of air bag components (including some of the largest industrial corporations of this country) and all of the latest crash results and tests absolutely confirm air bag effectiveness.

(3) You allege that the DOT's own research shows lap and shoulder belts far more effective than air bags in protecting passengers.

The DOT research proves exactly the opposite. Your assumptions have no application to frontal or quasi-frontal crashes where the air bag is far superior to the lap and shoulder belt without regard to whether or not a lap belt is worn. In addition, the air bag equipped cars provide a lap belt for those who will use it, so even in rollover crashes of the type where the air bag is not designed to inflate belts are available for those who will voluntarily protect themselves with that additional device.

(4) You allege there have been four fatalities in air bag crashes, inferring that this involves some failure of the air bag system to perform.

Secretary Adams' findings as well as those of Secretary Coleman completely describe the circumstances of these crashes. Two cars were completely crushed so that no restraint system could have saved the drivers. In a third instance a baby was killed by being thrown off the seat in precrash braking prior to the impact, but in that same crash there appears to be little doubt that the mother's life was saved by the fact of the air bag protection provided for her. The fourth case appeared to be to a heart attack or other physical condition wherein no autopsy was performed and where the blood alcohol content of the deceased far exceeded requirements for a legal determination of intoxication. None of these related to air bag performance.

(5) You go on to recite that there were 23 serious injuries in air bag crashes. The few resultant injuries to air bag protected occupants were all what you would call moderate and none of them were critical or life-threatening. You fail to mention that in virtually every instance the injuries would have been severe, critical or life-threatening without the protection afforded by the air bag. Many of the people involved in these crashes testified in support of air bags in the Coleman and Adams hearings.

In your attempt to compare air bag performance with the present lap and shoulder belt system you ignore the fact that the lap and shoulder belts don't have to meet any dynamic crash tests after being installed in the vehicle or any injury performance criteria. The 20% who will use belts have no way of knowing when they purchase a car whether they're buying a well performing or a poor performing system.

(6) The crash tests in the DOT docket show that inertial reels do fail, that belt anchorages do break and that in direct side-by-side comparisons where the passenger seat is protected by standard lap and shoulder belts and the driver's position by air bags in 30 mph crashes, the test dummy in the driver's seat sustained no injuries and the test dummy wearing the lap and shoulder belt sustained fatal injuries.

You further ignore the severe limitations in injury prevention performance of belt systems in subcompact cars and at higher speeds. If the belts in small cars are stiff enough to prevent the occupants from hitting the steering column and the dashboard, they can tend to cause severe internal injuries at relatively low crash speeds. If they have enough flexibility to prevent internal injuries, then at higher speeds the occupants strike the steering wheel and dash with injury producing impacts.

You also ignore the fact that belt usage is only about 20%.

You are obviously unaware of the fact that there has been no live volunteer crash testing of standard production lap and shoulder belt systems of the type installed on automobiles sold to the American public at barrier impact speeds of over 15–17 mph and only then with the inertial reels and retractors prelocked (hardly a real world test). In comparison there have been live volunteer air bag crash tests at barrier impact speeds up to 32½ mph without injury (this is in excess of DOT test requirements which are at 30 mph.)

(7) You seem to rely on Dr. Howard Goldmuntz for whatever alleged technical conclusions you have reached. Dr. Goldmuntz has been a consultant for the seat belt industry and has always opposed any passive restraint standard. He and his associates testified before Dr. Gregory the then head of NHTSA, Secretary Coleman and Secretary Adams. They all rejected the theories he advanced as unsupported by any acceptable evidence.

Extensive research analysis by the insurance business has effectively rebutted all of Goldmuntz' allegations.

(8) The Journal editorial then criticized Secretary Adams by saying "His argument that air bags 'could' cost an added $100 to $200 is so optimistic as to border on the fraudulent."

Allstate had John De Lorean do a detailed cost benefit analysis of air bags. As you're well aware De Lorean was the Corporate Vice President in charge of all car and truck production at the time he resigned from General Motors. His assistant in our air bag study was Robert McLean who ran the General Motors air bag program for two years. They know the exact cost of the air bag system. That study and De Lorean's testimony before Coleman, Adams and Congressional committees established reasonable air bag costs for a full-sized car at $111.50 (which included $50 manufacturer's profit and dealer's markup) and for the smaller two-door front seat cars $90 (which included $40 manufacturer's profit and dealer's markup). Even these estimates are sticker prices and if air bags become standard equipment included in the base price of the car, nobody pays sticker prices.

Both Secretary Coleman and Secretary Adams reached cost conclusions in the same range as De Lorean. After extensive audit and study Secretary Coleman recited several factors wherein he found that General Motors and Ford overstated the cost aspects of air bags as standard equipment. Major suppliers of air bag systems supported the De Lorean figures as accurate within a dollar or so.

(9) You attempt to make some point by alleging that the air bag's extra weight of 40–50 pounds should preclude its installation. The fact of the matter is that the more modern air bag systems such as those found in Allstate's Volvos weigh only 28 pounds and newer systems can be even lighter. It doesn't appear to concern you that many models cannot be purchased without vinyl roofs, expensive trim packages, fancy wheel covers, heavy carpeting and many other items which weigh many pounds more than the air bag.

(10) You allege dire economic consequences in the cost of replacing air bags after they inflate. You say the bills would run between $500 and $600.

Secretary Adams discussed this at length in his findings. He estimates that on a full volume basis in mass production the journey will cost two-and-one-half times the factory installed cost of an item to repair and replace it out in the field. Thus at an initial cost of $100 we could anticipate replacement cost between $250 and $300 to be charged to an insurance company when it repaired or replaced the air bags rather than the $500–$600 you estimate. Many of the cars in which the bags inflate will be total losses and no air bag repairs are therefore involved.

You ignore the extensive testimony of the Nationwide Insurance Company which projected that if all cars had air bags the automobile insurance savings per car would total annually $32 and the additional cost of the collision coverage for repairing air bag systems would be less than $1.00. Other insurers certified the Nationwide estimates.

(11) You accept an allegation by Congressman Shuster of Pennsylvania that there would be 30,000 accidental deployments per year if all cars are air bag equipped. This is an absolutely unsupportable figure and Congressman Shuster as a late comer to this issue has no technical or other qualifications in relation to air bag technology.

Allstate has the largest privately owned air bag fleet on the road. We have been operating our air bag fleet since 1972. It includes five different makes spread over five model years (Mercurys, Chevrolets, Buicks, Oldsmobiles and Volvos). We have operated over 600 air bag equipped cars, driven millions of miles by our employes under all types of climatic conditions. There have been a lot of fender benders, parking lot bumps, panic stops and other occurrences of the type usual in any types fleet operation as well as a few high speed crashes. We have never experienced an inadvertent inflation in any of the cars in our air bag fleet and there has never been a failure to inflate in the high speed situations where the air bags were supposed to inflate. We know of no experience whatsoever that Congressman Shuster has had with air bags or air bag automobiles.

Secretary Coleman's findings, Secretary Adams' findings, the testimony of virtually the entire automobile insurance business, the testimony of air bag suppliers and the many other technical qualified people attest to their reliability.

I wonder why you think virtually the entire automobile insurance business supports the concept of air bag systems. If they're not cost beneficial, effective and reliable they would substantially increase our loss costs, since we have to repair and replace the automobiles in which they would be installed. The fact is the automobile insurance business knows that air bags besides saving thousands of lives a year and preventing hundreds of thousands of injuries (this should be our major concern) will save the public millions of dollars on their automobile insurance costs when installed on all automobiles as standard equipment.

Air bags are inconspicuous, concealed, automatic and convenient. They no more infringe on personal freedom than do the requirements for safety glass, dual braking systems, padded dashes or similar passive items already required on automobiles. For safety to be affordable and fair, safety items need to be standard equipment so there's no price penalty for a safety pioneer trying to add safety to its automobile and so that the public gets the benefit of reduced prices through mass production rather than having to pay high prices for limited production safety items. The government already requires every automobile purchaser to pay for a relatively expensive lap and and shoulder belt, inertial reel-retractor front seat restraint system whether they want it or not. As I've stated that system is not required to meet any injury performance standards or be dynamically crash tested yet it must be installed in the automobile. We and the rest of the insurance business say that if we're going to force everyone to purchase a restraint system—let's make available as standard equipment the best system—that is,

one that's passive, effective, automatic, reliable and cost beneficial—in other words, the air bag.

The strength of a great organization, whether it be a newspaper, manufacturer, or financial institution, rests in its expert and informed staff members. The first rule of good business management is to consult with these experts before a public statement is made on a major issue. It is painfully obvious that before writing your editorial you did not consult the one passive restraint expert on your staff—Mr. Al Karr of your Washington Bureau. Al would have helped you avoid the serious errors of fact and improper assumptions to which we were forced to respond in this letter.

An editorial opinion not founded on fact is worthless. An editorial opinion founded on misstatements of fact is dangerous. How dangerous? If your editorial helps to prevent installation of air bags as standard equipment, that mistake spread over a similar period will kill and maim more Americans than did the Vietnam war.

Sincerely,

ARCHIE R. BOE.

AMERICAN CASUALTIES IN FOUR WARS IN THE 20TH CENTURY AS COMPILED BY AMSTERDAM, N.Y. VETERAN ANTHONY J. TOMASELLO

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STRATTON. Mr. Speaker, last Memorial Day the Amsterdam (N.Y.) Evening Recorder carried a half-page ad inserted by the John J. Wyszomirski Post No. 701, American Legion, which summarized the costly toll which America has paid in the four wars we have fought in this present 20th century. These are sobering statistics, which should surely reinforce the strong desire of every American to deter any further war rather than be forced to fight another one.

I want to express my personal appreciation to Mr. Anthony J. Tomasello, of Amsterdam, a member of the post, for his hard work in compiling these statistics and in presenting this very poignant and effective message. Mr. Tomasello, by the way, is 81 years old, but is obviously still vigorous and productive. We are all grateful to him for the work he did in compiling this very powerful message.

The ad, which was printed in the May 28, 1977 issue of the Amsterdam (N.Y.) Evening Recorder, follows:

JOHN J. WYSZOMIRSKI POST No. 701
AMERICAN LEGION

Our eternal tribute transcends the Invisible realm of eternity in the Bosom of Blessedness and the glory of God in this memorial ad infinitum, Amen!

During the 20th century, or within a period of 50 years, our country—the United States of America—was involved, with honor, in 4 (four) major wars: World War I; World War II; Korean war, and Vietnam war . . . the historical facts are enumerated in detail for further manifestation, as described . . .

Wars	Number served (1)	Battle deaths (2)	Other deaths (3)	Casualties, wounds not mortal (4)	Total (cols. 2-3)
World War I, Apr. 6, 1917, to Nov. 11, 1918	4,743,826	53,513	63,195	204,002	320,712
World War II, Dec. 7, 1941 to Dec. 31, 1946	16,353,659	292,131	115,185	670,846	1,078,160
Korean war, June 25, 1950 to July 27, 1953	5,764,143	33,629	20,617	103,284	157,530
Vietnam war, Aug. 4, 1964 to Jan. 7, 1973	8,744,000	46,498	10,388	153,329	210,215
Total	35,605,628	425,771	209,385	1,131,461	1,766,617

Source: N.B. statistics– Copied from World Almanac and Book of Facts 1977.

Throughout that era 35,605,625 Stalwart Americans marched on with honor and glory for God and our country . . . America! . . . With each fact we cannot describe all the consequences, however . . . we pause: In memoriam to the glory of God and to their Devotion and Honor for the Ideals of our country, the honored dead (here rests in honored glory an American soldier known but to God, Amen), are enshrined on the altar of devotion and glory to God; on the pedestal of honor, freedom and security for our country—America—forever.—John J. Wyszomirski Post 701, American Post 701, American Legion.

We also pause reverently to honor the memory of the following comrades who departed into the invisible Realm of Eternity, where the Angels of Mercy, Compassion and Honor reveal the beatitudes of everlasting peace, ad infinitum: Judge Felix Aulisi, John H. Cline, William H. DeHart, Peter LaMothe, Richard Karchesky, Desmond F. Nichols, Joseph Sajta, Albert J. Zostautas, George H. Small, Frank Stasy, Joseph Williams.

Lord God, almighty and omniscient, may Thy grace bless their souls within the spiritual abode of peace and the glory of the beatitudes . . . as the requiem of the invisible choir and symphony reigns in the bosom of perpetuity! . . .

IN PACE REQUIESCAT

Joseph A. Dybas, Commander. Prepared by Anthony J. Tomasello, Treas.

OUR MEMORIAL DAY CREED

To this sublime task of devotion we have dedicated ourselves anew to the glory of God our Heavenly Father, whose inspiration of equality symbolizes our unity of purpose: To consecrate the honored dead and our departed comrades; to cherish forever the solemnity and memory of our beloved.

In this divine supplication we pray for the assistance of the public in general: That our cause of freedom for humanity and civilization shall enlighten the universe . . . 1957 . . . Anthony J. Tomasello.

To inculcate a sense of individual obligation to the community, State, and Nation.

SPOUSE RIGHTS IN DIVORCE PROCEEDINGS

HON. JIM LEACH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEACH. Mr. Speaker, a great deal is said about equality and justice. The Federal Government has taken significant strides in enacting laws which force the Nation to move in that direction. Yet, we often stumble across examples, right under our own noses where the Federal Government resists the application of principle it wishes that others would apply to themselves.

Twelve years ago, the social security system adopted a change which the Federal Government, in its role as employer, still refuses to make. The principle of homemaking was granted an economic value in the instance of divorce proceedings, and certain former spouses of social security recipients could, if the marriage had lasted at least 20 years, claim a portion of that recipient's annuity.

The underlying assumption in the social security position is that during the marriage, the earning power of the home is dependent not only on the primary wage earner, but on both partners in the marriage relationship. But today, the Federal Government refuses to grant former spouses of Federal employees that same right. In fact, it even ignores court ordered divisions of a Federal employee's pension during a divorce settlement. A double standard is clearly evident—the Federal Government has mandated for others a standard with which it does not itself comply.

On August 3, I introduced legislation, H.R. 8738, which seeks to correct this inequity. The bill does the following:

Allows for a former spouse to claim a portion of the Civil Service pension, if a State court fails or refuses to consider retirement assets in divorce proceedings.

Establishes a fair formula, which in essence recognizes that during the time of the marriage, the pension earned belongs to both partners equally.

Makes both men and women eligible to assert that claim, whereas the social security system does not allow men, as former spouses, to make a claim on the women's benefits.

Recognizes that a court may prefer to award other family assets to the spouse in lieu of providing annuity rights.

Requires the Civil Service Commission to honor a court ordered division of a Federal employee's pension, made during the property settlement at the time of the divorce.

The Subcommittee on Compensation and Employee Benefits of the Houst Post Office and Civil Service Committee, of which I am a Member, has recently approved legislation to require the Civil Service Commission to honor court settlements with regard to pensions. Unfortunately, it offers no relief beyond that and fails to recognize instances where a court may neglect or refuse to consider retirement fund assets in dividing marital property.

My bill is not retroactive. It does not require increased expenditures from the

Civil Service retirement fund. It leaves the decision regarding the pension first and foremost to the parties to the divorce and the courts. It gives men and women equal rights. Finally, it provides some economic hope to spouses who after years of marriage find themselves in serious financial straits, unfamiliar with, and unwelcome in, a job market which places a premium on youth and vocational training which was not available a decade or two ago.

I plan to reintroduce this legislation September 21 and would urge my colleagues to consider joining me as cosponsors.

Below follows a section-by-section analysis of H.R. 8738:

SECTION BY SECTION ANALYSIS

Section 1—Defines 'former spouse' as someone married to an employee or Member of Congress for at least five years (the time required for an annuity to vest in the employee or Member), at least eighteen months of which occurred during periods of creditable service. The eighteen month period was included in order to avoid inappropriately small annuities (without such a provision, a former spouse might be married to an employee for 5 years or more, but might have been married to him for only one day during his government service, which would result in a negligibly small annuity for the former spouse.)

Section 2(c) (page 2)—Requires the Commission to honor court decrees and orders in connection with the dissolution of an employee's or Member's marriage.

Section 3(a) (page 3)—Awards an annuity to a former spouse if the employee's or Member's annuity is not taken into account by the divorce court as property subject to division by the court between the two parties to the divorce, and if the former spouse notifies the Commission in writing of this within 120 days of the dissolution of the marriage (the finalization of the divorce decree).

Section 3(b) (page 4)—The amount of the annuity of a former spouse shall be equal to one half of the amount which bears the same ratio to the employee's or Member's annuity as the period of creditable service during the marriage bears to the total creditable service.

Section 3(c) (page 4)—The former spouse's annuity begin on the first day of the month in which the individual becomes a former spouse. The annuity ends when the employee, Member or former spouse dies, or when the former spouse remarries before becoming age 60 or becomes entitled to a survivor annuity.

Section 3(c) (page 5)—In the event the former spouse predeceases the employee or Member, the annuity of such an employee or Member is recomputed and paid as if it had not been so reduced.

Section 3(c)(1) (page 5)—Allows a lump-sum credit to a former spouse if the divorce court does not take an employee's or Member's lump-sum credit into account as property subject to division between the two parties to a divorce, and if the former spouse so notifies the Commission within 120 days of the dissolution of the marriage.

Section 3(c)(2) (pages 6–7)—Computes the former spouse's lump-sum credit in the same manner as his or her annuity.

Section 4(d) (pages 8–9)—Allows an employee or Member to designate a former spouse as recipient of a survivor annuity either as such employee or Member retires or before the final dissolution of the marriage, whichever is later.

Section 5—The amendments made by this act shall only apply to marriages dissolved on or after the date of the enactment of this act.

ENERGY QUESTIONNAIRE

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. YOUNG of Florida. Mr. Speaker, more than 38,000 people have responded to my 1977 questionnaire, which has just been tabulated by a dedicated corps of volunteers in my district office.

This year's questionnaire was divided into two sections. The first consisted of 11 questions on general legislative subjects—some of which are the most frequently asked of me when I am back in the district. Because of the President's energy proposal, I included 10 additional questions related to this subject.

There is one response that I would specifically like to call to the attention of my colleagues. It is the question on foreign aid. As ranking minority member of the Appropriations Subcommittee on Foreign Operations, I am particularly interested in public opinion about this program. Question 10 asks if my constituents favor the increase in foreign assistance that the administration proposes. An overwhelming 92 percent answered in the negative—the strongest response in the entire questionnaire.

This response is particularly significant, however, when compared to a question on the same subject in my 1976 questionnaire. That question asked, "Do you support America's foreign aid program?" To that question 80 percent of the respondents answered no.

I encourage my colleagues to discuss these two questions with their constituents during the August district work period. I am confident that they will find a similar feeling among the people they represent. That is—the American people are overwhelmingly disappointed with the foreign aid program as it is currently constructed, but they are even more displeased with the increases in that program that have been proposed.

I would like to share with my colleagues the responses of my constituents to these questions. The questions and tabulations are as follows:

CONGRESSIONAL QUESTIONNAIRE—THE PEOPLE SPEAK

(1) Are you in favor of using Federal Funds to help finance Congressional Election Campaigns?

	Percent
Yes	33.6
No	60.7
No opinion	5.7

(2) Do you favor abolishment of the Electorial College, and providing for direct election of the President and Vice President based on actual votes cast?

	Percent
Yes	80.4
No	16.3
No opinion	3.3

(3) Would you support repeal of Section 14B of the "Right to Work" provision of the Taft-Hartley Act?

	Percent
Yes	19.7
No	54.3
No opinion	26.0

(4) Do you support legislation raising the limit on the amount of income a retired person can make without jeopardizing his/her full social security benefits?

	Percent
Yes	73.7
No	22.7
No opinion	3.6

(5) Do you support my bill to prohibit unionization of America's Armed Forces?

	Percent
Yes	89.4
No	7.1
No opinion	3.5

(6) A new treaty is under negotiation with Panama which would considerably reduce U.S. control over the Panama Canal. Do you favor such a treaty?

	Percent
Yes	12.8
No	80.1
No opinion	7.1

(7) Should governmental subsidies to the Postal Service be increased in order to meet higher operating costs?

	Percent
Yes	26.7
No	64.9
No opinion	8.4

(8) Do you support FDA's decision to ban the use of saccharin?

	Percent
Yes	14.4
No	72.0
No opinion	13.6

(9) Do you support legislation to legalize or decriminalize marijuana?

	Percent
Yes	27.0
No	65.8
No opinion	7.2

(10) Secretary of State Vance has advised me that the Carter Administration plans to double our annual Foreign Aid Program in the next five years, from approximately $7-billion this year to $14-billion per year at the end of 5 years. Would you favor this increase in Foreign Aid?

	Percent
Yes	4.2
No	92.0
No opinion	3.8

(11) Do you feel that Congressional Newsletters and Questionnaires are worthwhile?

	Percent
Yes	90.4
No	4.3
No opinion	5.3

PRESIDENT CARTER'S ENERGY PROPOSALS—WHAT'S YOUR OPINION?

(1) President Carter proposed a tax on the purchase price of new "fuel inefficient" automobiles (those which do not meet certain miles per gallon standards) coupled with a rebate on new "high miles per gallon" automobiles. Do you favor this approach?

	Percent
Yes	39.6
No	54.1
No Opinion	6.3

(2) President Carter has proposed an increase in the Federal gasoline tax by from 5c to 50c per gallon. Would you support this tax increase?

	Percent
Yes	14.5
No	81.8
No Opinion	3.7

(3) President Carter would use the revenue received from these taxes for the tax rebates. If these taxes are imposed, would you prefer that the extra revenue be used to develop more energy?

	Percent
Yes	68.9
No	20.7
No Opinion	10.4

(4) President Carter has proposed a ban on further study of the Nuclear Liquid Metal Breeder Reactor, designed to convert nuclear energy to electric power. Do you favor such a ban?

	Percent
Yes	17.6
No	64.9
No Opinion	17.5

(5) President Carter's proposal would require utility companies to offer their customers service for installation of home insulation and financing for that installation. Do you favor this idea?

	Percent
Yes	37.1
No	50.6
No Opinion	12.3

(6) President Carter has proposed tax penalties to force industry and the utilities to convert from natural gas and oil to coal, except for those industries where those fuels are an essential part of the process, by 1990. Do you support conversion to coal?

	Percent
Yes	66.4
No	20.0
No Opinion	13.6

(7) President Carter has issued an executive order requiring vigorous enforcement of the 55 mph speed limit. Do you approve?

	Percent
Yes	77.9
No	17.6
No Opinion	4.5

(8) President Carter has proposed mandatory energy conservation efficiency standards for new household appliances (all appliances sold after a pre-publicized date). Do you support this proposal?

	Percent
Yes	80.1
No	11.0
No Opinion	8.9

(9) President Carter's proposal would provide a tax credit to homeowners who purchase solar plants for conversion of energy for any purpose in their own homes. Do you support this proposal?

	Percent
Yes	61.7
No	27.9
No Opinion	10.4

(10) President Carter has delayed the implementation date for increased auto emission (clean air) standards in order to increase miles per gallon of gasoline. Do you support this action?

	Percent
Yes	61.6
No	28.5
No Opinion	9.9

AN EMPLOYER'S CANDID LETTER TO HIS EMPLOYEES ABOUT INFLATION

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ARMSTRONG. Mr. Speaker, can you imagine how painful it would be to tell each employee of the House of Representatives that—because of inflation—they cannot count on an adequate pension?

More and more employers are realizing that their best laid plans for adequate employee retirement pensions are being eroded by inflation. One such employer is Mr. Herman Sutherland of Sutherland Lumber Co. In a letter to 1,300 employees, Mr. Sutherland warned that—because of inflation—the purchasing power of their retirement pensions will probably not be enough to pay living expenses.

The letter is truly remarkable. Frankly, it indicts Congress for ignoring inflation. Unless Congress finally resolves to fight inflation by reducing Federal spending, Mr. Sutherland's letter is the first of many we can expect to receive. I hope my colleagues will read Mr. Sutherland's candid report to his employees.

KANSAS CITY, MO.

Hon. WILLIAM L. ARMSTRONG,
House of Representatives,
Washington, D.C.

DEAR SIR: We have about 1,600 employees, 84 of which are in the state of Colorado, and I am writing the enclosed letter to each one of them.

We have spent a long time trying to plan a decent retirement program, but with present inflation rampant, to talk glibly of a meaningful retirement is just not honest. There is no way an adequate pension can be funded under the present inflationary conditions. The federal Social Security system's crises is a prime example of what will surely happen to private pensions under the inflation that seems to have become our way of life.

Some way, some how Congress must balance fiscal outgo and income. Otherwise, inflation will make a shambles of any attempt by the American citizen to plan for his own future.

Some day the voters will finally learn how they are being robbed by this subtle thief, and then their political reaction will be quite vigorous.

How can we find the necessary statesmanship in Congress to balance our budget and retire some debt? The consequences of not doing so are in evidence all over the world from England to Zaire. Why can't Congress see it and take responsible leadership?

Sincerely,

HERMAN R. SUTHERLAND.

DEAR FELLOW EMPLOYEE: Some 25 years ago your company became convinced that we all should be putting something away each month to make our life easier when we retired.

If you will look at the record of the annual inflation rate, you can see that at that time, and for some generations before, we could depend on the fact that the value of a dollar, put away for our future, would still be a recognizable dollar in purchasing power when we retired and depended on it for our livelihood.

Then a few years ago we became uncomfortable because we felt that what we were putting away for each of us was not going to be as supportive in our older years as we had been led to believe a quarter of a century ago. Inflation had entered into our world as none of us could have believed possible.

So we started another fund into which your company has been depositing, at its expense, an amount equal to 5 percent of your salary each year. This, we believed, could keep up with this new "devil inflation" if we invested it into common stocks. These, theoretically, would rise in value as the dollar's value declined. So far this theory, seemingly so obvious and logical, just hasn't worked. The stock market averages today are less than they were twelve years ago, while the purchasing value of the dollar has shrunk 50 percent since 1965.

This is a problem that no one anticipated. And yet with the present attitude of Congress and other elected officials, it is pretty naive to expect that anything will be done to correct the over spending by political entities. Each year our politicians have accepted the formula that their reelection depends upon the amount of public funds they can spend. What is taken in has no relation to what is spent. The result is inflation. Politicians seem to have accepted deficit financing as a way to buy their continuation in office. We pay for it by having our savings, life insurance, government bonds, bank accounts, and pensions lose their value year after year. It is a silent, sneaky leech that painlessly bleeds us all white.

Let's see how devastating it can be over the years. Nothing is ever sudden or startling; that is what makes inflation so sinister and such an acceptable, slow poison.

If a young person starts today at $500.00 per month and receives a 5 percent raise every year for 45 years, when he retires at 65 he will be receiving $4,000.00 per month. We all accept 5 percent per year inflation as manageable, and yet a salary of $6,000.00 per year in 1977 needs to be increased to $48,000 in the year 2022 to provide the same scale of living.

Therefore, to be honest we must face up to this new world of inflation that our politicians have introduced. Let's face the truth; the plans that we made together 25 years ago and again five years ago just aren't valid, now that our elected leaders are spending more than they collect. There will be every excuse in the world given us to obscure the real reason behind this silent thief. But remember, a federal, state or local deficit means inflation, it means every dollar we have becomes less and less valuable.

Therefore, we must tell you that no matter how we have tried to insure a retirement for ourselves which is decent and honorable, we must face the fact today that probably the inflation we are suffering will make this retirement income less effective than we had hoped and planned for.

Your company will continue to put away for you as it promised, but the results are now not dependable or predictable. Inflation through deficit spending comes out of your pocket and your future. Maybe inflation can be stopped, but there are no signs of it yet. Perhaps the stock market will go up to reflect this inflation, but it hasn't so far.

We are in this together. As your partner and co-worker I felt I must share with you this new development and my concern about each of our futures.

Best regards,

H. SUTHERLAND.

WHAT'S BEHIND THE SUNDAY TIMES OF LONDON'S "EXPOSÉ" ON ISRAEL?

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. EILBERG. Mr. Speaker, ever since the Sunday Times of London published what it alleged was an investigative piece on Israeli treatment of Palestinian prisoners, a controversy has raged in the news media over what's really behind this story.

I offer for the record an article from the New Republic of July 23, 1977.

The New Republic's probe shows that there were serious deficiencies in the Sunday Times article—not the least of which is the fact that at no point did reporters from the London newspaper ever talk to Israeli judicial or military officials to seek a response to the serious charges of torture.

The magazine rightfully states that these charges cannot be dismissed lightly. But it acknowledges the difficulty that the Israelis have had in proving that something did not happen.

Mr. Speaker, the New Republic concludes that—

Any suggestion that Israel engages in this kind of systematic torture of Arabs simply is not true.

I commend the following to the attention of my colleagues:

TORTURE TEMPEST

(By Seth Kaplan)

Governments torture, or at least some governments do. It is by now one of those evil banalities of modern life. But are all charges of torture—in Chile and the Soviet Union, in Syria and South Africa, in some African minstate or in an industrial superstate—equally true and equally newsworthy? Or perhaps more to the point, what constitutes proof of a coherent and deliberate program of torture as an instrument of revenge and intimidation?

On June 19, the Sunday Times of London published a long and detailed report by its investigative "Insight Team" alleging that the Israeli government systematically tortures Palestinian prisoners in the West Bank and Gaza. Two weeks later, the Israeli embassy in London issued a reply denying the charges and challenging the journalistic methods of the reporters. On July 10, these reporters wrote again, this time in their own defense. In Israel itself, the Jerusalem Post, though doubting the credibility of the Sunday Times's indictment, called for some sustained oversight against the temptation of a beleagured people to ingore the use of torture against their enemies; in the Israeli parliament, there is a move for a parliamentary inquiry. But, as the Insight Team conceded in its initial story, it's hard to know whom to believe. "In the nature of torture, only the two parties are present: torturer and victim."

The Insight Team charged that the Israelis have used torture to gain information about terrorist groups, to obtain confessions which then are used to obtain convictions of the terrorists by Israeli courts, and to deter the Arab population from resisting Israeli rule. The story was based on interviews with 49 Arabs who had been detained, some members of their families and two Jewish Communist lawyers who had defended them.

In the Israeli rebuttal, much was made of the fact that the reporters relied only on involved Arab sources and their defense attorneys. At no point in its investigations did the Insight Team confront Israeli judicial or military officials with their evidence and charges. Having made their choice not to do so, the British journalists set about to compile a strong circumstantial case. It is certainly not one that can be shrugged off cavalierly. The core of their findings is the mutually corroborating accounts of five Palestinians. All of them said they were taken to an interrogation center known as "The Palace of the End" where they were subjected to almost identical forms of abuse. They said they were blindfolded, and once a day sent to "the frigidaire," a cold box with spikes on the floor, constructed so that the prisoner can neither sit down nor stand up. Others testified to different abuses.

The Israeli reply included a general denial of the Sunday Times' charges, and some specific counter-evidence on a few of the cases. Of course it's hard to prove that something did not happen. How could the Israelis adduce concrete proof that one or another Arab was not tortured? However the Israelis did not even attempt to disprove—or even specifically deny—the most vivid charge in the Sunday Times article, that concerning the "frigidaire." The Israeli reply says, "The fact . . . that prisoners were at such and such a prison together and both describe it, is indeed evidence, but it is evidence as to facts that are not in question." This is disingenuous; these identical descriptions go to the heart of the Insight Team's accusations.

The thrust of Israel's rebuttal is a defense of the integrity of its judicial system. Most effectively, the Israelis show that the Sunday Times disguised to the point of deception the terrorist activities of its complainants. These people have taken many lives, including those of Arabs. In the latest round, the Insight Team conceded some significant omissions.

So what is the verdict in England? The Sunday Times reported that it had received 384 letters from readers, of which 262 criticized "a farrago of innuendo" and 90 praised a "courageous exposure." Thirty-two discussed associated matters. Two law lords came down hard against the Sunday Times article. Lord Justice Salman said, "The Israeli reply destroyed the credibility of the allegations." The former Lord Chancellor, Lord Hailsham, termed the Israeli judiciary "manifestly independent. I am quite certain that they would never have allowed things to pass by that would have aroused criticism or complaint in the most meticulous English court."

In this country, Nicholas von Hoffman discussed the Insight Team report with glee in his syndicated column of July 1. Von Hoffman adopted the same metaphors for the Israelis that became so popular in the Soviet press after the Six Day War, comparing them to Nazis: "If Heinrich Himmler were around to read The [Sunday] Times report his stony heart might beat with pride . . . [T]he grotesque irony of using gas as an instrument of torture ought to have been too much . . . for . . . Israeli officials . . . ." But the facts as they have emerged from the Insight Team-Israeli exchange hardly justify von Hoffman's analogy. At worst, the Israelis seem to have tortured only active terrorists. Nothing in the articles indicates the use of torture as a way of controlling the Palestinian population as a whole.

The American press does not seem to know what to do with stories about human rights violations by foreign governments. They are almost always difficult to verify. The Boston Globe reprinted excerpts from the Sunday Times reports and a few other papers played the controversy big. Others ignored it or buried it in the back pages.

There are reasonable policies that newspapers might follow. Ronald Koven, foreign editor of The Washington Post, said last week that his paper would report allegations made by the Red Cross, the Human Rights Commission, and those discovered by the Post's own reporters. The Post carried a five-paragraph item the day after the Insight Team's report appeared, and nothing since then. Earlier in the year it ran a series by its own correspondent on conditions in Israeli prisons. These articles reported allegations of torture, but did not give them any credibility. The Post may have missed an interesting controversy by doing so little with the Sunday Times story, but at least its coverage seems consistent.

The New York Times, on the other hand, followed a ragged course. The day after the Sunday Times article appeared, our Times buried a small box on the Insight Team's report in the nether regions of the paper. When the Israeli reply was issued, the Times ran a long bylined article on page three. The story itself, however, was a model of even-handedness: six paragraphs on the accusations, six paragraphs of rebuttal. Then, later in that week, the Times ran a Reuters dispatch from Israel by Bernard Edinger. Israeli authorities allowed Edinger to interview Palestinian guerilla prisoners in Gaza, specifically to counter the Insight Team's allegations. Edinger found the prisoners' descriptions of their treatment—being stripped and beaten—not sufficiently grim to qualify in his book as "torture." Why the Times chose to print Edinger's story at all, which had been censored by Israeli military authorities, is something of a mystery, particularly in view of the short shrift allowed the original Sunday Times dispatch.

Systematic use of torture as a method of political control is obviously repugnant. But one thing is clear from this controversy: any suggestion that Israel engages in this kind of systematic torture of Arabs simply is not true. The question of how a government should treat people who regularly detonate bombs in public places is not susceptible to simple absolutism, such as the outright condemnation of torture. One may have to use extreme measures—call them "torture"—to deal with a terrorist movement whose steady tactic is the taking of human life.

CARTER'S AFRICAN POLICY

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Diego Union, June 24, 1977]

CARTER'S AFRICAN POLICY

When running for President, Jimmy Carter said that the time for American intervention "in all the problems of the world" is over. The early months of his administration, however, make plain that Mr. Carter didn't exactly mean that. He did mean that America wouldn't intervene militarily in the problem areas defined by the ideological battle between East and West. But he didn't mean that America would keep its diplomatic hands off those problem areas defined by racial conflict.

The harsh fact is the United States under President Carter is intervening in Southern Africa. The intervention reflects the Carter Administration's belief that race, not Marxist ideology, is Africa's most important social issue.

It was in recognition of this new foreign policy—not in any rebuke of the garrulous Andrew Young—that Vice President Walter Mondale recently was assigned to head up our African affairs. Mr. Young and Mr. Mondale intervened last month on behalf of black Africans by serving notice on African whites. The de facto government of Rhodesia, said Messrs. Mondale and Young, must be replaced by black majority rule before the end of 1978, or else, South Africa's de facto protectorate, South West Africa, must become independent and ruled by a black majority government approved by the United Nations, or else. And South Africa must give up its policy of apartheid, quickly integrate its blacks into full citizenship, and shift to black majority rule, or else.

This is clearly Mr. Carter's new foreign policy in Africa. It is unequivocally and volubly supportive of black majority rule. The policy derives in part from Mr. Carter's belief that race is the most important social issue, in part from his belief that human rights are the most important personal issues. The policy is not an abstraction to Mr. Carter,

since he apparently believes black majority rule in Africa is a logical extension of the civil rights struggle in the United States. Mr. Carter believes that black majorities will pass through Marxist growing pains, and eventually evolve into liberal democracies.

However, it is demonstrably false that man is born unto democracy. Witness the paucity of democracies that now cling for dear life in a world full of dictatorships and totalitarian regimes. There is no magic in any advent of black majority rule in southern Africa. It may, and probably will, mean what black majority rule has meant in many parts of Africa: the violation of human rights, both of whites and blacks.

That this probability has not been emphasized indicates the low level of debate concerning Mr. Carter's policy. Further, there is little questioning, and there should be, whether black majority rule can be understood in the context of the American civil rights struggle. Or whether transition to black majority rule can be "peacefully" effected, as Mr. Carter claims. Or whether race is, indeed, a more important consideration than Marxism or Soviet aggression.

These questions deserve public attention because they dig to the assumptions of Mr. Carter's African policy. There is the practical side as well. For now our intervention in Africa is only verbal, but, as Vietnam should have taught, unreflected ideals can have unfortunate consequences.

PROCEDURAL DELAY: THE NEED FOR LABOR LAW REFORM

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. WEISS. Mr. Speaker, the National Labor Relations Act guarantees workers the right to join a union and to participate in other collective activities for their mutual aid and protection. The law prohibits certain employer actions which interfere with these rights and confers upon the National Labor Relations Board the right to remedy any violation and prevent the occurrence of future ones.

In theory, the law is fine. In practice, however, employers who are not above violating the law can take advantage of the Board's slow-moving procedures to such an extent that an organizing drive becomes nearly impossible.

In early March 1971, employees of the Federal Prescription Service, Inc., and the Drivex Co., two companies sharing the same ownership, began an organizing campaign to seek higher wages and better working conditions. (See 86LRRM 2185.) Operating out of a single plant in Madrid, Iowa, the work for each company was conducted by the same employees—primarily housewives and schoolgirls—who were paid $1.60 an hour and were given no paid holidays or sick leave.

Upon hearing of the organizing efforts, the management promptly began violating the National Labor Relations Act in an attempt to kill the workers' campaign.

The management coercively interrogated and threatened to discharge Betty Peterson, an employee who on March 4 helped circulate a petition asking for higher wages. During the next couple of weeks, the owner and other managers attempted to inhibit employee discussion, invaded meetings where the possibility of union recognition was being debated, threatened to discharge employees, and offered employees benefits if they did not support the union.

Management also directly violated the NLRA when it changed the working conditions for several union sympathizers. In some cases, regular overtime hours were eliminated, employees were moved to locations where their actions could be easily observed, their daily working hours were altered, oftentimes their plant keys were taken away, and their general activity was closely supervised so they would not confer with other employees.

Other violations were just as numerous. The most severe was the unexpected laying off of 10 employees on April 2 under the pretense of an economic cutback.

Following the 10 layoffs, the workers struck to protest these unfair labor practices. Previously, 36 of 65 employees, a clear majority, had requested union certification based on this count of valid authorization cards.

During the Board-directed election, which followed the strike, management refused to allow the 10 discharged employees to vote, and brought in unqualified voters to cast ballots against the union. The Board found this conduct "outrageous" and "persuasive" and ruled that a reliable election would be impossible. Therefore, the company was ordered to bargain with the union. The Board also ruled that the 10 employees were fired because of their prounion stand and ordered them reinstated.

In spite of the severity of these violations, it was not until May 1, 1974, that a court of appeals finally enforced the Board's order and ordered the company to recognize and bargain with the employees' designated representative and offer reemployment to the 10 illegally discharged employees. Despite this court order, final vindication of the employees' rights did not occur until 1976 when under threat of a contempt of court the company finally relented and offered reinstatement.

It was 3 years before Federal Prescription ever had to seriously consider bargaining with the union selected by its employees. It was nearly 5 years before the discharged employees could return to their old jobs.

Determined employers can place these sorts of obstacles in the way of employees who wish to organize. The chilling effect of such dilatory techniques can have on the exercise by workers of their rights is all too obvious.

To prevent this sort of abuse of the law, we must plug up the loopholes in our labor laws. We must shorten the processing of cases and insure that employees wronged by their employers are adequately compensated for their losses. For these reasons, I wish to announce my wholehearted support for H.R. 8410, a bill to reform the National Labor Relations Act.

REPORT ON U.N. LAW OF THE SEA CONFERENCE

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. McCLOSKEY. Mr. Speaker, on behalf of my colleague from New York, BEN GILMAN and myself I would like to submit the following report on the recently concluded session of the United Nations Law of the Sea Conference.

The sixth session of the Third United Nations Conference on the Law of the Sea ended on July 15, 1977 with many conference participants hopeful that a major step had been taken toward a successful Law of the Sea treaty. This hope was based upon the progress made in open negotiations on the highly contentious deep seabed issues. The release of the informal composite negotiating text—ICNT—however, dashed these hopes. Ambassador Elliot Richardson pointing to a lack of "fair and open processes" in compiling the ICNT, recommended that the United States undertake a "most serious and searching review of both the substance and procedure of the Conference."

Ambassador Richardson's comments were prompted by what he characterized as an "unfortunate, last minute deviation from what had seemed to be an emerging direction of promise in the deep seabed negotiations." This "deviation" was a major, 11th-hour revision of a series of compromise articles drafted by Minister Jens Evensen of Norway. Most delegations had expected that the Evensen articles, reflecting compromises reached after arduous negotiations in Geneva in March and in New York during the past session would be reproduced in the informal consolidated negotiating text—ICNT—when that text was assembled by the President of the Conference, H. Shirley Amerasinghe, after receiving input from each committee chairman.

The "Evensen articles," prior to their last-minute revision, had pointed to formulas which could break the deadlock between the group of 77—a caucus really representing over 110 developing countries—and the industrialized countries, over the issue of the terms and conditions which should attach to the exploitation of the resources of the deep seabed, the "common heritage of mankind." This deadlock was apparent during the previous session in September 1976 after a closed or restricted negotiating process had made compromise and accommodation in an atmosphere of mutual trust impossible. Evensen managed to create a productive, open atmosphere by proposing a series of articles on the unresolved issues and allowing closely focused and limited debate which was open to all parties who wished to participate. Using this slow and painstaking process, both prior to, and during, the May–June session, Evensen was able to close the differences between all parties.

The Evensen-produced articles included provision for:

First, access to the seabed by States and private parties for the purpose of exploitation;

Second, general policies and principles regarding control of exploitation;

Third, financial arrangements, including initial financing for the "Enterprise"—an internationally controlled deep seabed mining company—as well as revenue sharing and transfer of technology to the international community via the International Seabed Authority;

Fourth, institutional arrangements, including the power relationships between the one-nation, one-vote "assembly" and the interest oriented executive body, the "council," as well as a mechanism to settle disputes arising out of deep seabed exploitation, the "tribunal"; and

Fifth, a mechanism to review the workings of the entire system after it has been in operation to ensure that it is achieving its basic goals.

Although Richardson has stated that "substantial" differences remained between the U.S. position and the Evensen articles, it was clear that the administration was prepared to accept much of Evensen's work, with some modification, in exchange for the conclusion of a comprehensive treaty which satisfied the majority of the U.S. interests on all law-of-the-sea issues. It was generally accepted within the U.S. delegation that, if the Evensen articles were passed on by the committee I chairman—Paul Engo of the Republic of Cameroon—to the Conference president, H. Shirley Amerasinghe, for inclusion in the ICNT, substantial progress would have been achieved at the Conference. Furthermore, it was believed that the result would be generally acceptable to the administration and could be ratified by the Senate if some minor changes were made.

Therefore, Richardson and many delegations were shocked and frustrated when they discovered, after the adjournment of the Conference, that the Evensen articles had been surreptitiously replaced by articles which did not reflect the compromises negotiated in the open sessions; nor, as the Ambassador pointed out before the House Merchant Marine and Fisheries Committee, the "preponderant views of the group of 77" or those of the United States.

Restricted, behind the scenes negotiations resulting in last minute substitutions of unfamiliar provisions clearly favoring one interest group or another have often plagued the Conference. In this session, such behind-the-scenes negotiations resulted in articles contrary to U.S. interests. However, only 15 months before, during the March through May 1976 session, behind the scenes negotiations resulted in the revised single negotiating text—RSNT—which favored the U.S. position.

The reaction to the RSNT by the group of 77 after their realization that secret negotiations had been conducted was similar to the reaction of Ambassador Richardson to the ICNT. Just as Richardson blasted the last minute switch in a press release after the release of the ICNT, the group of 77 had made their position and annovance with procedures surrounding the production of the RSNT clear following the March-May 1976 session. During the August-September session, they rejected the bulk of the RSNT while clinging to the concessions made by the United States.

The shortcomings of secret or closed negotiations, interestingly enough, was recognized by Chairman Engo in a speech to a number of House Members a few days before he changed the Evensen articles when he said "restricted negotiations, however efficient and productive, are unreliable as devices for achieving progress, since any compromises reached are treated with suspicion and often rejected by those who did not, or could not, participate."

Apparently failing to heed his own advice, Mr. Engo, either acting alone or in concert with a limited number of other persons, materially changed the Evensen articles when drafting his section of the ICNT for submission to the Conference president for compilation.

The question now is whether or not a reasonable balance can be restored, and whether or not the next session of the Conference scheduled for next March in Geneva, can hold out any hope of further progress.

Ambassador Richardson could not have expressed the problem more succinctly than when he stated it is time to review "whether or not an agreement acceptable to all governments can be best achieved through the kind of negotiations which thus far have taken place."

The disappointment of the most recent New York session was sharply focused in the immediate markup and passage of a strong, anti-internationalist oriented deep seabed mining bill by the House Merchant Marine and Fisheries Committee on July 28.

Ordinarily, U.S. international posture is determined by the executive branch, not Congress. However, in the case of the Law of the Sea Conference, we in the Congress now have before us a piece of domestic legislation which could have a significant impact on, if not destroy, the success of these negotiations, in which we have been the acknowledged leader since 1970. We have a particularly important responsibility to understand the problems at the Conference and the chances of their resolution, as well as the international relations impact of unilateral action on the Conference, on international law and on the future chance to preserve world peace on and under the oceans which cover two-thirds of the surface of the earth.

The deep seabed legislation has its genesis in deep seabed mining technology which is largely the creation of the United States. During the past few years, several U.S. corporations and their foreign partners have asked Congress for legislation to give financial, diplomatic, and military protection to their proposed deep seabed mining ventures.

Although these multinational corporations have stated that they would prefer to see such activities conducted under an acceptable, comprehensive international Law of the Sea Treaty. 7 years of fruitless negotiations have frustrated the continued development of their technology through an understandable reluctance of capital investors to risk their investment without either a treaty or U.S. legislative support. The companies presently maintain that further delay will prejudice the U.S. technological lead. They further argue that any restriction on the development of new technology, a valuable commodity, is contrary to our national interest, since we are, or will be, increasingly dependent on potentially-hostile foreign nations for supply of the minerals found in abundance in the deep seabed nodules, notably nickel, copper, cobalt, and manganese.

We face important questions which have broad international ramifications. Should we support unilateral legislation which will protect the rights, property and investments of U.S. citizens, and foreign nationals in partnership with U.S. citizens, who choose to exercise the freedom of the seas by mining the resources of the deep seabed? Should we allow the negotiations to continue, perhaps slowing the development of new technology and resources, without the complicating factor of unilateral claims to jurisdiction over deep seabed resources which may result after the passage of unilateral legislation? Or should we attempt to enact unilateral legislation which will: Encourage the successful conclusion of the Conference; recognize the basic principles underlying the Conference; allow the development of the technology necessary to develop the resources of the seabed; and insure that deep seabed resources are brought to the world market?

While few disagree that unilateral deep seabed mining legislation will have an effect on the Conference, there is widespread disagreement over the precise nature of this effect. Therefore, we must consider our actions very carefully.

Unilateral action by the United States over the exploitation of deep seabed resources will set a significant precedent in international law. Other countries are looking to our lead in the formulation of their alternatives regarding deep seabed exploitation. For example, on June 22, 1977, the legislature of the Federal Republic of Germany passed a resolution stating that:

> If the difficulties that have arisen in respect of the elaboration of a seabed regime should prove impossible to overcome the German Bundestag will examine without undue delay whether, on the basis of reciprocity, there must be found alternative or interim settlements as have already been considered by some States. The further continuous development of seabed mining technology by German enterprises and the investments already made therein must be safeguarded.

It is very likely that should the United States pursue unilateral action, the Federal Republic of Germany and other countries will quickly follow suit. In light of this possibility, we should be careful not to pass legislation which could be used against us to reduce our rights on the high seas. We must recognize that if we assert jurisdiction over deep seabed resources or attempt to regulate the activities of our nationals in an area of the high seas, we lose the ability to argue that it would be illegal

for other countries to take similar actions.

If our legislation for example, authorizes or licenses our nationals to conduct their activities in a specific area of the ocean—"site-specific"—it is likely that such provisions can touch off a series of claims by other countries over vast areas of the deep seabed, regardless of whether they currently possess the technology to mine the deep seabed. This could lead to chaos in the oceans through conflicting claims or assertions of rights. Even if it does not lead to actual conflict, unilateral action can damage our international relations, prompting possible retaliation in other area—for example, oil embargoes, coffee restrictions, expropriations, et cetera. A number of the diplomats of the group of 77 countries have privately stated this to us, and there seems little doubt, that these countries' emotional attitudes fully justify a prediction that they will take strong action against us if they can.

Another outcome of our enacting unilateral legislation could be further disruption or even termination of the negotiations themselves. The Conference deals with a host of issues of great importance to the United States ranging far beyond that of deep seabed mining; the Conference has come to agreement on many of these issues, some of which have been the subject of dispute for 30 years or more. Codification of these emerging international agreements could create a stable system of law for the oceans of great value to the United States since we are involved in virtually every conceivable ocean use.

Agreement has been reached upon the territorial sea and navigational rights within it. The concept of "innocent passage" has been tightened. The provisions of the RSNT regarding pollution control and safety of navigation have been revised to bring them closer to U.S. practice under the Ports and Waterways Act. The ICNT has been improved to the point where a treaty based upon it would satisfy our national defense requirements of unimpeded transit through and over straits as well as preserving important high seas freedoms associated with navigation and communication in the economic zone. Important changes have been made to prevent the territorialization of the economic zone. Commercial navigation has been protected through provisions for the application of uniform international standards regarding navigational safety and marine pollution beyond the territorial sea.

The ICNT marks progress on the difficult, but crucial, issue of scientific research, clearly stating the conditions under which such research will take place. The ICNT articles provide that States "shall, in normal circumstances, grant their consent" to conduct scientific research in the economic zone which is not of "direct" significance to resource exploration and exploitation. Should a State not respond within 4 months of a request to conduct scientific research, consent is "implied." While such gains are modest, in light of international trends regarding the regulation of scientific research, Ambassador Richardson has correctly stated that the ICNT is extremely helpful in "regularizing what until now has been a capricious situation."

Progress has also been made toward establishing boundary delimitation over the continental margin and between zones of adjacent and opposite states. Finally, progress has occurred in the creation of an acceptable system for peaceful settlement of disputes related to ocean uses. This final gain is of extreme importance to the United States and the world if we are to have further conflicts resolved through peaceful means rather than through confrontation and hostile action.

Therefore, the attempt to achieve a comprehensive international Law of the Sea Treaty remains of great potential value to the United States and deserves our continued support despite the very real frustration and dismay caused by apparently only a single individual, Chairman Engo.

We recommend that three courses of action be pursued. First, that we commend Ambassador Richardson and his staff for the patience and skill they have exhibited in stimulating an open and fair negotiation which restored mutual faith and trust of the negotiating participants to a degree which seemed impossible at the conclusion of the last LOS session last September.

Second, we should ask Ambassador Richardson and the State Department to seriously examine procedures under which the ICNT was negotiated, and recommend both to us and to the Conference leadership the methods which seem most appropriate for reaching final comprehensive agreement. We make this recommendation because we believe that in spite of the good faith efforts on the part of the United States, the negotiations have become heavily politicized, and we badly need to end any chance for special interest manipulation if there is to be genuine progress toward a treaty. Finally, we believe the Congress should take real care in its consideration of legislation to allow U.S.-based multinationals to continue to develop the technology necessary to mine the deep seabed. We strongly recommend that any such legislation be drafted to clearly reflect our continued commitment to successful treaty negotiations and confirmation of the principles that the deep seabed resources are the common heritage of mankind. We see no reason to abandon the principles embodied in House Resolution 330—93d Congress—and Senate Resolution 82 of the 93d Congress:

Resolved, That the House of Representatives endorses the following objectives, envisioned in the President's ocean policy statement of May 23, 1970, and now being pursued by the United States delegation to the Seabed Committee preparing for the Law of the Sea Conference—

(1) protection of (a) freedom of the seas, beyond a twelve-mile territorial sea, for navigation, commerce, transportation, communication, and scientific research, and (b) free transit through and over international straits;

(2) recognition of the following international community interests:

(a) protection from ocean pollution,

(b) assurance of the integrity of investments,

(c) substantial sharing of revenues derived from exploitation of the seabed, particularly for economic assistance to developing countries,

(d) compulsory settlement of disputes, and

(e) protection of other reasonable uses of the oceans beyond the territorial sea, including any economic intermediate zone;

(3) an effective International Seabed Authority to regulate orderly and just development of the mineral resources of the deep seabed as the common heritage of mankind, protecting the interests both of developing and of developed countries; and

(4) conservation and protection of living resources, with fisheries regulated for maximum sustainable yield, with coastal state management of coastal species and host state management of anadromous species, and international management of such migratory species as tuna.

Additionally we should reconsider the established doctrine of freedom of the seas, as expressed in the 1958 Convention on the High Seas.

In conclusion, we believe that the Congress now has a significant responsibility with regard to the question of the timing and content of deep seabed mining legislation. If we are to discharge this responsibility successfully, we should continue to press the Administration for a careful consideration and development of a new comprehensive oceans policy.

For our part, we need to understand:

(1) the Administration's foreign policy program, recognizing that seabed mining legislation is a *major* foreign policy initiative and cannot and should not be attempted by Congress alone;

(2) the problems the Administration now faces in negotiating a comprehensive Law of the Sea Treaty;

(3) the probabilities of successfully concluding the Law of the Sea negotiations;

(4) all of the substantial ocean interests of the United States which could be protected by a Treaty, a number of which have not been fully expressed to congressional committees of jurisdiction;

(5) the real needs of U.S. and world consumers for the resources to be developed from the seabed; and

(6) the true problems faced by the U.S. based consortiums which intend to exploit the resources of the seabed and which are seeking financial and military protection from the U.S. through legislation or from the international community through a Treaty.

Deep seabed mining legislation will be a history-making precedent. It will represent, for the first time, U.S. governmental exercise of statutory jurisdiction over activities conducted in specific areas of international waters beyond our continental shelf and 200 mile limit. We owe the people of the U.S. a far more thoughtful consideration of the issues outlined above than the cursory and rushed proceedings of a single House Committee which acted without giving the Administration the chance to consider and reflect on the serious consequences arising from events occurring only a few days earlier.

WHAT RATIONALE FOR CARGO PREFERENCE

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GRADISON. Mr. Speaker, Congressman PETE MCCLOSKEY, through his work on the oil cargo preference legislation in the House Merchant Marine and

Fisheries Committee, has given Congress and the American people a rare look at how the executive branch develops the administration's position on a specific piece of legislation, and he deserves our commendation.

My Republican colleague from California obtained copies of White House memorandums which reveal President Carter's decisionmaking process on a bill to require that a certain percentage of oil imports be carried on U.S.-flag tankers. Although the President's advisers from the Defense, Treasury, and State Departments raised significant objections to the bill, the President overruled them. He decided to support the bill which will cost the American people $233–$884 million directly in higher oil prices, would contradict his pledge at the London economic summit meeting to reject trade protectionism, and would not enhance our national security—according to the Departments of State and Defense. President Carter's advisers agreed that the bill would benefit a limited group of America's working population, those in the maritime industry.

PETE MCCLOSKEY was not satisfied with the administration's justification for the cargo preference bill and wanted to investigate further. The Democratic majority on the Merchant Marine and Fisheries Committee turned him down. I would like to insert in the RECORD an editorial from the Cincinnati Post which suggests the administration's possible rationale for the cargo preference legislation. I think that Congress and the American people deserve an explanation from President Carter.

POLITICS AND SHIPPING

It had been a puzzle why a bright fellow like President Carter was backing a bad bill requiring that a fixed share of oil imports be carried in high-cost tankers flying the American flag.

Now the reason is known: Politics, sheer politics.

Somehow Rep. Paul McCloskey, R-Calif., got ahold of a stack of internal White House memoranda about the so-called cargo preference bill that is sliding through Congress, greased by the maritime lobby's campaign contributions.

The documents show that Carter's economic, diplomatic and defense advisers counseled against the measure. They warned it would jack up the price of oil, decrease employment by slowing the economy, violate the tradition of free trade, anger allies, invite retaliation and breach treaties with more than 30 countries.

However, memos by domestic adviser Stuart Eizenstat and Robert Strauss, former Democratic National Chairman, carried the day. They admitted the bill was "flawed" but said it was necessary in light of Carter's promises to the maritime industry.

"Politically, something in the way of a cargo preference is going to be hard to resist," Strauss wrote. His note and many others made clear that Carter's decision was made on political grounds alone.

In May 1976, when candidate Carter was fishing for support, he promised maritime unionists "a fair share of all types of cargo." The unions and industry promptly raised $200,000 for his primary campaign.

That may sound like a lot of money, but for the maritime lobby it isn't. According to Common Cause, just two of the seafaring unions gave $996,000 to Senate and House candidates in 1976. Now are there any questions why the industry is so lavishly subsidized by Congress?

In any event, the Administration is hard pressed to explain why it is supporting such protectionist, special-interest legislation as the cargo preference bill. So it sent Robert J. Blackwell, assistant secretary of commerce for maritime affairs, to Capitol Hill the other day where he avowed the law was required by "the national defense and national security of the United States."

Unfortunately, one of the documents Rep. McCloskey made public showed that the Defense and State Departments did not believe the bill enhanced national defense. Written by Treasury Secretary Michael Blumenthal, the memorandum states:

"Defense believes that the essential national security problem is access to, not carriage of, oil and does not support (the bill) on national security grounds. State believes that, on balance, oil cargo preference would not be beneficial to national security."

Cute. We are not only getting saddled with higher oil prices for the benefit of a small coddled industry, but we also are, as shown by Blackwell's testimony, being lied to in the process.

PUBLIC WORKS JOBS FUNDS

HON. WILLIAM F. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GOODLING. Mr. Speaker, who says the Federal Government does not listen? It listened to the folks of Winter Park, Fla., and the Government liked what it heard so much as to give Winter Park much more than requested.

Specifically, I am speaking about the Economic Development Administration's peculiar insistence that Winter Haven accept $1.75 million more in public works jobs funds than the town needed or even wanted. Although Winter Haven is not about to give the money back willingly, neighboring communities have called for equally lavish treatment by the EDA. These pleas, however, have fallen on deaf ears.

And so have pleas from the city of York, Pa., which just happens to be in my district. York has an unemployment rate of 9.6 percent, certainly high enough to qualify for Federal funds under the public works jobs program. The catch lies in EDA's refusal to use the proper census figures which would allow this city of 50,000 to receive some of the Federal money which is being needlessly thrown at the people of Winter Park, Fla.

I could go on and on relating the rationale EDA has thrown at York, but I am sure that even today's appeal will fall on deaf ears and so for that reason, I will not take any more time here.

I do ask that a recent editorial from the Washington Star which adequately details Winter Park's windfall be reprinted in the RECORD at this point.

FOR ITS NEXT TRICK, EDA WILL—

Grit your teeth, friends—it's another of those woolly stories about the feds and your tax dollars.

Winter Park is a town of 23,000 in central Florida. It is described in the New York Times dispatch as an "affluent community." Thousands of cities, towns, villages and hamlets, of course, have come to realize that the federal Economic Development Administration is more fun than winning a lottery. So Winter Park a year ago applied for $900,000 to replace the dowdy library.

There was the usual paper procrastination at this end, but recently the joyous tidings came from Washington. Winter Park would get its $900,000—plus another $1.75 million that it neither requested nor has the faintest idea what to do with. Lovely.

The total bundle from the bureaucrats represents more than $100 for every man, woman and child in Winter Park, or more than half of the city's annual budget. Wait—the story gets better.

Six other communities in Orange County, which encompasses Orlando as well as Winter Park, also had asked the friendly Economic Development Administration for a few bucks for worthy local projects. They got nothing—despite Winter Park's unrequested windfall of $1.75 million. For some reason, the other six communities are miffed.

Well, you say, the federal computer erred or some agency operative absent-mindedly credited Winter Park with another town's request for a waterworks and community pizza parlor. Not so. The huge grant, called "a planning target for spending" in the obfuscatory dialect of government, resulted from a "formula."

Spake an agency official: "The size of someone's request on an application has nothing to do with the money that is appropriated. The money is allocated according to a formula. The EDA has the right to reject a project if it fails to meet our criteria, but under the formula Winter Park is entitled to the funds."

The formula is based on a comparison between 1970 and 1976 unemployment and labor force figures. In 1970, 6.3 per cent of the unemployed in Orange County lived in Winter Park. In 1976–77, the town's percentage of unemployed rose to 9 per cent. "This is a statistical formulation and we do not claim it is accurate," said EDA's flak-catcher, "but it is as close as we can get . . ." Close, we had always heard, counted only in horseshoes—and, now apparently, in throwing federal money at unemployment.

Winter Park, momentarily stunned by its added affluence, first thought to use the money on such civic adornments as 15 tennis courts, to complement the dozen the town already has, and extensive bicycle paths. However, after the neighboring towns murmured indignantly, Winter Park is revising its list of $1.75 million worth of projects.

This is a nutty affair.

VIEWS OF CONGRESSMEN EDGAR, AMBRO, NOWAK, AND MINETA ON WATERWAY USER FEES

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. MINETA. Mr. Speaker, during the consideration of the Navigation Development Act, H.R. 8309, in the House Committee on Public Works and Transportation, of which I am a member, the matter of waterway user fees was discussed. I supported the administration position which recommended recovery of 100 percent operations and maintenance, and 50 percent of construction, phased in over a 10-year period. The Ways and Means Committee, however approved a fuel tax which would recover less than 7 percent of the Corps expenditures for the inland waterway system. In order to advise Members of the House and Senate of our position on this matter, Congress-

men EDGAR, AMBRO, NOWAK and myself cosigned additional views to the committee report on H.R. 8309.

Regrettably, through a clerical error, my name was inadvertently omitted from the list of those cosigning the additional views. I wish at this time to call these additional views to the attention of the House, and to advise that my name should have appeared along with the names of Congressmen EDGAR, AMBRO, and NOWAK, in support of waterway user fees which would recover 100 percent of the cost of operations and maintenance and 50 percent of the cost of construction, phased in over a 10-year period.

The material follows:

ADDITIONAL VIEWS OF EDGAR, AMBRO, NOWAK, AND MINETA

The initiative of the Ways and Means Committee in recognizing that waterway users should contribute to the cost of operating, maintaining, rehabilitating, and constructing our nation's inland waterway system is commendable, on the surface. We agree with the philosophy of the Committee that an immediate 100% recovery of the nearly $400 million in annual Corps of Engineers' expenditures for this system would not be in the national interest, and would upset the balance between competing modes of commercial transportation.

The four cent fuel tax effective October 1, 1979, followed by an additional two cent tax effective October 1, 1981, is a cautious first step toward reimbursing our Treasury for expenses which provide a direct economic benefit to a narrow economic interest. Waterway user charges, in some form, have been endorsed by every Administration since 1940.

We believe that this first step is perhaps too cautious. The four cent fuel tax will recover only $35 million per year, less than 7 percent of the Corps of Engineers' expenditures for the inland waterway system. It will be more than two years before the first cent of this program is collected.

After nearly a score of studies on the economic and social impact of user charges, we have reason to believe that the waterway industry can absorb much more than provided for in this bill without adverse economic damage. The Administration has recommended recovery of 100% operations and maintenance, and 50% of construction, phased in within a ten year period. The Senate last month approved such a schedule of recovery. In the House, there appears to be little enthusiasm for recovery of this magnitude.

The user charge issue has been studied and restudied for over three decades. We feel that this House can approve a user charge or tax which will recover more than 10% of Federal costs at the end of the fifth year, as proposed in this bill.

There may be amendments offered during consideration of H.R. 8309 which will accelerate the schedule of payments under this program. We urge you to support amendments of this type which will responsibly allow our waterway users to pay their fair share without economic harm.

HAMMOND 2076 TRICENTENNIAL FUND

HON. ADAM BENJAMIN, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BENJAMIN. Mr. Speaker, I am delighted to inform the House of the formation of the Hammond 2076 Tricentennial Memorial Fund. The establishment of this fund marks a great accomplishment for the future of the city of Hammond, Ind.

Through the ingenuity, leadership, and guidance of John Bowlby, chairman of the Hammond, Indiana Bicentennial Committee, the Hammond 2076 Tricentennial Memorial Fund became a reality. This fund provides that the sum of $1,000 be invested for 100 years to provide the future citizens of Hammond, Ind., and their children funds for continued education. An investment of this nature will produce a legacy of over $350,000 in the year 2076.

Dr. Willard J. Congreve, superintendent of Hammond's public schools, offered the suggestion of inviting the schoolchildren of Hammond to provide the funds by donating an estimated 6 cents each to the program. This suggestion was quickly adopted for it not only enabled the children to participate in a most worthwhile endeavor but also, to contribute the two smallest coins of American currency signifying their faith in our country and their city, Hammond, Ind. The children also participated in a contest to design a scroll onto which all contributors would affix their signatures. The citywide winners of the competition were Paul Rincon of Tech High School, Teresa Gardner of Hammond High School, and Janet Peregoy of Morton High School.

The significance of this project was best expressed by the Committee for the Tricentennial Memorial Fund of Hammond, Ind. which said:

This 2076 Tricentennial Memorial Fund of Hammond, Ind., demonstrates what can happen when good people, fine Americans, adults and children, decide to work together on a project designed to help our beautiful country. Over 20,000 people were involved, all of them serving voluntarily and willingly. What better way is there to show America our appreciation for what this country means to us than to demonstrate our faith and enthusiasm by investing in its future. This we have done and we are pleased and proud.

To this I can only add that it is indeed an honor to represent the fine people of Hammond, their children, and the educators who have taught them so well.

For the benefit of my colleagues I would like to insert into this RECORD a list of the individuals and schools who participating in making this venture such an overwhelming success:

SCHOOL WINNERS—TRICENTENNIAL SCROLL DESIGN CONTEST

School, teacher, and student

Sacred Heart; Sister Gertride Marian Bauer; 1st place, Vicki Urbanski, grade 8; 2nd place, Loretta Chorba, grade 8.

St. Paul Lutheran; Mr. Paul R. Long; 1st place, June Seehausen, grade 6; 2nd place, Jennifer Peterson, grade 6.

Clark Middle; Mrs. Norabell Grych; 1st place, Karla Kortokrax, grade 8; 2nd place, Pat Fout, grade 8.

Clark High; Mrs. Norabell Grych; 1st place, Brian Wind, grade 11; 2nd place, Terri Mores, grade 12.

Edison Middle; Miss Arlene Salakar; 1st place, Linda Crosslin, grade 7; 2nd place, Dianna Forsythe, grade 8.

Eggers Middle; Mr. Harry Mech; 1st place, Richard Lippman, grade 7; 2nd place, Michelle Golden, grade 7.

Gavit Middle; Mrs. Beulah Seckinger; 1st place, Candace Chang, grade 7; 2nd place, Kelly Chapin, grade 7.

Gavit High; Mr. Regie Gilbertson; 1st place, Steve Kartz, grade 10; 2nd place, Terry Tosseng, grade 12.

Hammond High; Mrs. Karen Baumann; 1st place,* Teresa Gardner, grade 12; 2nd place, Dana Ball, grade 11.

Jefferson/Riley/Wilson—Combined; Mrs. Carol Severa—Wilson, Mr. William Kirchner—Jefferson, Miss Glenda Prusiecki—Riley; 1st place, Monica Kovach, grade 6; 2nd place, Agnes Mackiewicz, grade 6.

Morton Middle; Mr. Charles Lambersie; 1st place, Priscilla Purnik, grade 8; 2nd place, Kathy Deasy, grade 8.

Morton High; Mr. Tony Waring; 1st place, Chris De Lache, grade 11; 2nd place,* Janet Peregoy, grade 10.

Scott Middle; Mr. Robert Fischer; 1st place, Dan Leisner, grade 7; 2nd place, Sharon Jadernack, grade 7.

Spohn Middle; Mr. David Kwolek; 1st place, George Karountzos, grade 8; 2nd place, Robert Walls, grade 8.

Technical-Vocational High; Mr. Jeffrey Jacobson; 1st place,* Paul Rincon, grade 12; 2nd place, Doug Dabis, grade 10.

CITYWIDE WINNERS*

1st Place, Paul Rincon, Tech H.S., $25 Bond.

2nd Place, Teresa Gardner, Hammond H.S., $10 Award.

3rd Place, Janet Peregoy, Morton H.S., $5 Award.

CONTRIBUTIONS TO HAMMOND 2076 TRICENTENNIAL MEMORIAL FUND

School, address, and principal

St. Adalbert's; 2118 Indianapolis Blvd., Whiting; Sister Beata.

St. Catherine of Sienna; 6525 Kentucky Avenue, Hammond; Sister Margeline.

St. Paul Lutheran; 5848 Erie Avenue, Hammond; Mr. Waldemar Beckmann.

Clark Middle & High; 1921 Davis Avenue, Whiting; Mr. Dennis Burdock.

Gavit Middle & High; 1670 175th Street, Hammond; Dr. Gary Jones.

Hammond High; 5926 Calument Avenue, Hammond; Dr. Kenneth Feuerbach.

Morton High: 6915 Grand Avenue, Hammond; Dr. Winston Becker.

Technical-Vocational; 5727 Sohl Avenue, Hammond; Mr. Walter Simpson.

Eggers Middle; 5825 Blaine Avenue, Hammond; Mr. Matthew Gorsich.

Morton Middle; 7040 Marshall Avenue, Hammond; Mr. Dan Gyure.

Scott Middle; 3635 173rd Street, Hammond; Mr. Steve Stavros.

Spohn Middle; 4925 Sohl Avenue, Hammond; Mr. George Saliga.

Caldwell Elementary; 3105 173rd Street, Hammond; Mr. Jess Keltner.

Columbia Elementary; 1238 Michigan Street, Hammond; Mr. Donald Sohacki.

Edison Elem & Middle; 7025 Madison Avenue, Hammond; Mr. Ray Buell.

Franklin Elementary; 1000 116th Street, Hammond; Miss Rose Dudas.

Harding Elementary; 3211 165th Street, Hammond; Mr. William Schooler.

Irving Elementary; 4727 Pine Street, Hammond; Mr. Bernard Smitka.

Jefferson Elementary; 6940 Northcote Avenue, Hammond; Mr. Donald Robling.

Kenwood Elementary; 6416 Hohman Avenue, Hammond; Mr. Victor Goodman.

Lafayette Elementary; 856 Sibley Street, Hammond; Dr. Sue Pifer.

Lincoln Elementary; 4221 Towle Avenue, Hammond; Mr. John Sutter.

Maywood Elementary; 6040 Howard Avenue, Hammond; Mr. Milford Miller.

Miller Elementary; 6530 New Hampshire Avenue, Hammond; Mr. Ross King.

Morton Elementary; 7006 Marshall Avenue, Hammond; Mr. Dan Gyure.
Orchard Drive Elem.; 3640 Orchard Drive, Hammond; Mr. Jess Keltner.
Porter Elementary; 2321 171st Street, Hammond; Mr. Donald Robling.
Riley Elementary; 1245 N. River Drive, Hammond; Mr. Eugene Trelinski.
Riverside Elementary; 741 Michigan Street, Hammond; Mr. Donald Sohacki.
Wallace Elementary; 7235 Jefferson Street, Hammond; Mr. Edward Brock.
Washington Elementary; 41 Williams Street, Hammond; Mr. Victor Goodman.
Wilson Elementary; 1317 173rd Street, Hammond; Mr. Wm. Weyhmueller.
Bishop Noll Institute; 1519 Hoffman Street, Hammond; Father Raymond Fauerbaugh.
Total contributions: $1,169.93.

CYPRUS

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STEERS. Mr. Speaker, it was a little over 3 years ago—on July 20, 1974—when the Turkish Armed Forces invaded the small and defenseless Republic of Cyprus. The repercussions of this act are still with us today: The southern flank of NATO lies shattered and impotent; our bases in Turkey remain under suspension; war threatens to break out at any moment in the Aegean.

But I would like to remind us today of the human aspect of this drama, the untold suffering of tens of thousands of innocent civilians who happened to be in the path of the invasion: 4,500 Cypriots killed, some 2,000 missing, 200,000 homeless refugess; one of the most blatant violations of human rights in any conflict since the end of World War II; occupation of 40 percent of the island republic by force. When viewed in the most basic terms, this operation contains the elements of what might have happened several centuries ago: a small country is invaded by a powerful neighbour; its population is uprooted through killings, rape, terror, vandalism of religious establishments, and looting of homes and properties; then, a large number of settlers is brought in to occupy most of the deserted houses and property.

The usually restrained London Times in its January 23, 1977, issue wrote a commentary on the report of the Human Rights Commission of the Council of Europe—

It amounts to a massive indictment of the Ankara government for the murder, rape, and looting by its army during and after the Turkish invasion of summer 1974.

And all of this was perpetrated by the wilful misuse of American arms supplied to Turkey for its defense as a member of NATO.

It has now been 3 years, and the occupation army is still there, the refugees are still homeless, and the remainder of the island exists under the constant threat of complete occupation by the Turkish Army. Government instability in Turkey has been used as an excuse for the perpetuation of the status quo. We, in the Congress of the United States, have taken a firm stand on this issue. Yet, we must continue to press for justice and freedom for the Cypriot people and not allow those who violated our law to continue to receive the benefits of our friendship.

OSHA

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TEAGUE. Mr. Speaker, ever since the enactment of the Occupational Safety and Health Act which set up the Office of Occupational Safety and Health Administration, I have received complaints of the high-handed tactics utilized by the representatives and agents of this Office.

Recently I had the opportunity to speak with an attorney concerning the operation of this agency inasmuch as he had been personally dealing with a number of cases. I asked that he write me a letter, and the attached letter is his response. I have purposely deleted his name for his own protection; but it is easy for my colleagues to see that great number of cases which have been tested in the courts as a result of the activities of this Agency. I believe the entire program needs to be looked at good and hard, and some corrective action taken.

The letter follows:

Congressman OLIN TEAGUE,
U.S. Representative, House Office Building, Washington, D.C.

DEAR MR. TEAGUE: You asked for a summary of OSHA litigation. Since I am familiar with most of the Fourth Amendment challenges to warrantless OSHA inspections, I will list those cases and will also relate some of my experiences with OSHA personnel.

In January, 1976 in *Brennan* v. *Gibsons Products Inc. of Plano* a three-judge court for the Eastern District of Texas held that OSHA may not compel an objected-to inspection without a search warrant. The Court stated that to construe the law to authorize warrantless inspections would render it unconstitutional.

In April, 1976 in *Usery* v. *Rupp Forge* the Northern District of Ohio also held search warrants are constitutionally required for OSHA inspections.

On August 19, 1976 another three-judge panel in Albuquerque ruled in *Dunlop* v. *Hertzler Enterprises* that OSHA is required by the Fourth Amendment to secure a search warrant based on probable cause. In that case the OSHA Area Director had personally met with Bruce Hertzler and advised him that the law authorized warrantless inspections. When Hertzler asked "what about my constitutional rights?" the Area Director reportedly answered "I don't give a damn about your constitutional rights. As far as I'm concerned you don't have any because you are in business." Hertzler refused to be intimidated, so OSHA secured a warrant, showing as probable cause only that Hertzler was covered by the Act and would not let them in. The court threw out the warrant because it was not based on probable cause as required by the constitution.

Only a few days later the Circuit Court of Franklin, Kentucky disallowed as unconstitutional a warrantless inspection by the Kentucky state OSHA. The style of this case is *James R. Yocum, Commissioner of Labor* v. *Burnette Tractor Company Inc.*

In September a Maryland Circuit Court disallowed a warrantless boiler inspection in *Epstein* v. *Fitzwater Furniture* on Fourth Amendment grounds.

On November 1 the Oregon Circuit Court held warrantless inspections under the Oregon state OSHA unconstitutional. There the inspectors had gotten a search warrant based on a provision in the Oregon statute for "Administrative Inspection Warrants" which required only a showing that the contemplated inspection was "routine." The court held that that portion of the statute "which allows search warrants to be issued on the basis of routine inspections (instead of probable cause) is unconstitutional." The name of the case is *State of Oregon ex rel Accident Prevention Division of the Workmans Compensation Board* v. *Keith R. Foster d/b/a Keith Mfg. Co.*

Similar reasoning was employed by the three-judge federal court in *Barlow's Inc.* v. *Usery*, decided December 30, 1976. There the court reaffirmed that warrants are constitutionally required for OSHA inspections—but held that since Congress did not contemplate or provide for warrants based on probable cause, the law is unconstitutional.

The next month, on January 10, 1977, the Northern District of Georgia ruled again in *Usery* v. *The Centrif-Air Machine Co.* that warrants are required to compel objected-to OSHA inspections.

On January 19 a Utah District Court in *Baird* v. *State of Utah* et al held the entire Utah state OSHA statute unconstitutional on various constitutional grounds—including violation of the Fourth Amendment. In so ruling, the Judge stated that the unlimited scope of OSHA inspections and "the possibilities of unannounced, uninvited and compelled intrusions into the lives of all concerned staggers the imagination." Well stated. Particularly in view of the fact that OSHA purports to cover more than 6 million workplaces.

The next day a New Mexico District Court disallowed a warrantless OSHA inspection in *State, ex rel New Mexico Environmental Improvement Agency* v. *Albuquerque Publishing Company* on the same constitutional grounds.

At the same time an Alaska Superior Court held the Alaska state OSHA statute unconstitutional insofar as it "approves the concept of search without warrant of business establishments covered by the Statute." *State of Alaska, Department of Labor, Division of Occupational Safety and Health* v. *General Home Repair and Roofing, and Glenn Smart.*

On March 24, 1977 a California Court held Cal/OSHA unconstitutional in *People of the State of California* v. *Melvin Salwasser.* There—as is the burgeoning practice in many states—the state of California sought to prosecute Salwasser criminally for failure to honor an inspection warrant which was not based on probable cause. The Court held the charge "unconstitutional on its face in that the warrantless searches demanded by the statute do not comply" with the constitution.

The holding in the *Burnette Tractor Company* case referred to above was unanimously affirmed by the Court of Appeals of Kentucky on May 27, 1977.

A few days later on June 2, the Alaska Supreme Court in *Woods & Rohde, Inc. d/b/a Alaska Truss & Millwork* v. *State of Alaska* prohibited warrantless OSHA inspections. Noting that OSHA "embraces an enormous number of unrelated and disparate activities which make up private enterprise" and "reaches many commercial undertakings which have no history of regulation, let

alone a history of intensive regulation" the Court held that "without judicial review far too much discretion is lodged in the official in the field." Therefore, the Court concluded "authority to inspect and search one's business premises should be evidenced by a warrant."

Finally, on July 11 the U.S. District Court for the Southern District of California disallowed a warrantless OSHA inspection as being in violation of the Fourth Amendment. The style of the case is *Marshall* v. *Great Lakes Dredge & Dock Company.*

In just the past couple of months OSHA inspections—both with and without a warrant—have been preliminarily enjoined by courts in Montana, Michigan and North Carolina. In each case the courts have viewed OSHA inspections as having serious Fourth Amendment problems.

It is significant that in light of recent Supreme Court precedent not one court has upheld warrantless OSHA inspections! The judge in the North Carolina case asked why, in view of the overwhelming precedent, OSHA continued to insist on compelling warrantless inspections or to act without probable cause to support a warrant. Perhaps the answer to that question was stated by the Area Director in Albuquerque—that OSHA "doesn't give a damn about employers' constitutional rights; as far as they are concerned employers don't have any constitutional rights because they are in business."

This same attitude is prevalent in the day to day administration of OSHA. One case I handled involved a subcontractor on a multiple-contractor construction job. A hazard existed. My client did not create the haz rd, had no control over it, instructed his workmen to be careful, and spoke to the general contractor about the hazard. Recent court decisions have held that is all my client is required to do under the law. He is not required to pull off the job. When my client was cited I approached the OSHA Area Director about dismissing the citation, since my client had fulfilled his obligations under the law. The Area Director refused. I asked if he was familiar with the Anning-Johnson rule. (The court decisions I referred to above). He said yes, but they did not care what the courts said—they were going to enforce OSHA as *they* interpreted the law!

This same attitude was revealed by OSHA in North Carolina recently when the Commissioner of Labor indicated he was going to "nail to the wall" an employer who had the audacity to question warrantless inspections. The same type thing also occurred in the *Barlow* case.

It seems to me that employers would have more rights, and be accorded better treatment *if they were accused of being common criminals!* Which is a sad reflection on the state of our society.

Enroute to Washington recently I had the opportunity to tour Philadelphia and refresh my knowledge of the founders of our country. It is inconceivable that Thomas Jefferson, Patrick Henry, Sam or John Adams would pass a law like the Occupational Safety and Health Act of 1970. Imagine Jefferson writing ". . . endowed by our Creator with certain inalienable rights, including the right to work in a place of employment with split-end toilet seats." Or George Washington succumbing to an inspection to see whether his spittoon was emptied daily.

Two hundred years ago OSHA would not be tolerated. If it is tolerated today—in the words of the Utah Judge—our democracy is gone.

Sincerely,

———— ————.

KEMP EXPRESSES DISAPPOINTMENT AT SUPPRESSION OF JOHN COLLINS' INFORMED AND OBJECTIVE REPORT ON UNITED STATES-SOVIET MILITARY CAPABILITIES

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KEMP. Mr. Speaker, I wish to call my colleagues' attention to what I consider to be deplorable efforts by the administration and the Congressional Research Service (CRS) to suppress what qualified defense specialists have described as a balanced and informed net assessment of United States and Soviet military power.

The report was suppressed because it conflicts with the optimistic view of a Soviet-American military balance by the authors of the top secret Presidential Review Memorandum, PRM–10/NSC–10.

Mr. John M. Collins, a senior specialist at CRS and one of our Nation's foremost defense analysts, prepared the suppressed assessment as a congressional aid to help legislators make difficult defense policy decisions.

A senior member of the Senate Armed Services Committee staff requested the report but he has adamantly refused to publish it—or release it to Members of Congress.

Mr. Speaker, I am disappointed that—under an administration which has repeatedly professed dedication to open Government—a report of such importance and paid for by public funds is being withheld despite considerable efforts by colleagues and myself to make it available to the elected representatives of the people who are charged with making responsible policy for the defense of our country.

For the record, I wish to add a summary of circumstances concerning the suppression of Mr. Collins' report.

THE COLLINS REPORT

The administration and the Congressional Research Service, appear to be suppressing what U.S. defense experts who have reviewed the report consider, "one of the most thoughtful and comprehensive reports on United States/Soviet military balance."

John M. Collins, senior specialist in national defense at CRS, an arm of the Library of Congress, prepared the unclassified report, American and Soviet Military Strength Contemporary Trends Compared, 1970–1976, for the Senate Armed Services Committee, at the request of a senior staff member. The report was requested as early as July 1, 1976, but Collins did not receive official approval to begin the study until August 5, 1976.

Besides suppression of his report, Collins also faces disciplinary action by CRS, and has already been denied a within-grade increase.

The staff of SASC not only refuses to publish the report, but CRS sources close to the issue said that a May 4 CRS memorandum exists which states that a senior SASC member, "will neither print the study in its current form, nor release it for other congressional use without changes."

In their July 21 nationally syndicated column appearing in the Washington Post, "Suppressing A Gloomy Report on Defense," Evans and Novak quoted Senate staffers as saying they only asked Collins for a "bean count."

Yet as early as July 1976, Collins submitted a copy of a study plan which outlined a much more elaborate report than SASC ever received. One entire section, devoted to issues and options, was later deleted from the report so that Collins could meet a SASC deadline. The senior SASC staffer who requested the report does not even remember whether he received the study plan or not.

Collins, those close to the issue said, gave SASC periodic progress reports and did not receive any criticism of his work. Collins also sent a copy of the rough draft of the report to SASC members for their comments and criticisms. Sources disclosed that SASC failed to offer criticism of the report.

It is, however, possible that SASC failed to understand the study plan or the rough draft, and so did not know that they were going to receive a very detailed and comprehensive report with a long-term comparison of the U.S.S.R. threat versus the United States.

A SASC staffer now contends that, "As far as we're concerned, we asked for something and didn't get it, and that's the end of it." Collins wrote the report as an update to his earlier study, U.S./Soviet Military Balance, A Frame of Reference for Congress, later known as the Culver report (due to the fact that the report was requested by Senator CULVER), published by SASC in 1976. The current report augments and complements the Culver report, but stands as a separate study.

However, the Culver report never was a mere "bean count." The abstract to it says,

> Raw statistics, however, are significant only in context.

Senator CULVER praised the report, saying,

> I believe that this study is balanced, detailed and thought provoking.

CULVER also said,

> It contains the most comprehensive and current unclassified data on the relative strengths and weaknesses of the Soviet Union and the United States.

SASC maintains that the current report it refuses to release, "did not specifically update, refine, or substantiate (the Culver Report)," and thus refuses to use the study. In fact, one SASC staffer does not even consider that there is a report. However, Aviation Week and Space Technology has uncovered evidence to support that the administration is trying to suppress the report. A July 11, 1977, article says,

> The effort to suppress the document by delaying its approval is coupled with certain staff members touting a presidential review memorandum, PRM–10, a document prepared for high-level Administration officials that

sketches a much brighter picture of U.S. defense and strategic capabilities.

The Evans and Novak article said,

Some defense sources claim the National Security Council, then drafting PRM-10's cheery view of U.S.-Soviet strength, intervened to kill the Collins report. The committee's staff denies it, and there is no evidence to contradict them.

However, documented evidence exists that proves the NSC was sent a summary draft of the Collins report, then still in the rough stages, but nearing completion, as early as January 31, 1977. Evidence also shows that the NSC was given unauthorized access to parts of the completed draft February 17, the day after it was presented to SASC.

Zbigniew Brzezinski, National Security Advisor to the President, denies having seen a copy of the report. There is no conclusive proof of coordination between the National Security Council and SASC, to suppress the Collins Report, but the circumstantial evidence is strong.

However, not only does SASC refuse to publish the report, but it will not allow the report to be broken up into its component parts, one of which is a detailed analysis of NATO. The highlights to the NATO section state that,

Future U.S. force requirements for NATO will remain uncertain until current controversies concerning tactics and strategy are resolved, and that, "NATO has far more to lose from tactical nuclear warfare than satellite states or the Soviet Union.

The Evans and Novak article, "Conceding Defeat in Europe," appearing in the Washington Post, August 3, 1977, said that:

President Carter late this week will be presented by his national security advisers with a new defense strategy that secretly concedes one-third of West Germany to a Soviet invasion rather than seek increased defense spending, which these advisers say would provoke Moscow and divide Washington.

PRM-10, the Carter administration's top-secret strategic study, suggested that this policy could be made palatable to Western Europe by simply not admitting its implications.

This question needs to be answered: Why would an unclassified report, prepared for congressional use have to be harmonized with a Top Secret executive memorandum?

In the current report, Collins used DOD resources for U.S. statistics and received his figures, on the U.S.S.R. forces from the Defense Intelligence Agency. Collins also solicited interpretive materials from a wide range of sources both liberal and conservative. One estimate of total taxpayer cost for the currently unpublished report is $75,000.

Collins' previous CRS work is well known in many Government agencies, and to informed professional defense analysts throughout the United States. He is the author of the book, "Grand Strategies: Practices and Principles," which has been translated into Russian and Chinese, as well as, 15 other major LOC publications. A Pentagon official said that his CRS report on city defense, "was the best our city defender has ever seen."

A top level DOD source said that the current report is a substantial improvement over the earlier report. The Culver report used 2 isolated years a decade apart for all data and accompanying charts. In the updated document, 7 year continuous time-series data are used, a major statistical improvement. For example, it is possible to determine if any weapons system was steadily deployed, or if it peaked out and increased but at a decreasing rate, or if deployment ceased altogether in a particular year.

Collins explains the problems that occur in any statistical analysis, but with a special emphasis on the problems of the presentation of defense information. It illustrates the problem of reliable data on the Soviet Union, which normally employs cover and deception tactics to conceal its statistics on defense expenditures. For example, the Ministry of Transportation otherwise thought of as a civilian agency, handles all troop movements; these expenditures are excluded from the Soviet defense budget. Collins also addressed the difficult technical problem of determining an appropriate exchange ratio for the ruble and the dollar, in order to compare defense budgets, and relative cost of armaments.

One House staff member interviewed, criticized the Culver (1976) report for not being qualitative enough. The source said that any good assessment has to qualify the numbers.

The current report responds to this criticism, and is much qualitative, while carefully avoiding advocacy. One DOD official said the report is, "not biased at all, and is a very objective job."

SASC staff members may have misunderstood the qualitative aspects of the report. The report does not advocate a particular position with respect to the evidence assembled but cites alternative characterizations of the significance of the evidence.

Collins took our second strike strategic nuclear strategy as given. A second strike strategy is based on the concept of Mutual Assured Destruction, predicated on the ability to destroy the Soviets through retaliatory action, should they strike first.

Collins cited the concerns of many analysts about U.S. ability to retain an effective second strike capability, while the Soviets continue to increase the accuracy and yield of their MIRVed ICBMs. Aviation Week and Space Technology, July 18, 1977, quoted study highlights, saying,

The concept of Mutual Assured Destruction as a means of deterrence for both nations is less mutual than it was in 1970, the starting year for the comparison study.

The author does not argue for higher defense spending. To the contrary, he argues that higher defense spending does not insure greater defense capability.

In the introduction to a revised copy of the report, Collins said that the four purposes of the report were to: first, furnish facts; second, outline opinions; third, sharpen issues; and fourth, stimulate debate.

To correct the errors in his report, and to receive constructive criticism, Collins sent copies of the draft to about 30 offices at the Pentagon, Defense Intelligence Agency, specialists at CRS, and SASC. While he never sought concurrence, he did receive a wide variety of criticism, but reserved the right of final determination in balancing all the comments, since many of them conflicted.

Comments were returned by reviewers of which the following constitute a representative sample:

"First, DOD: Have read with interest your draft study and found it quite good. Second, DOD: This is a solidly researched, basic document—most suitable for use as a reference source and as a basis for future net assessments. Third, J-5 of the Joint Chief of Staff: You do good work. Fourth, Department of the Army: The report appears to satisfy the study objective of providing data to assist Congress in reviewing U.S. military requirements and budget request."

One DIA source said that his agency made some marginal notes to correct small errors, but that Collins did all his own research. "With his background, he knows what's outstanding," the source said. A Pentagon official who saw an early draft said, "it had a number of small errors, but was good then." The same official said the report was not biased at all, adding that, "a pure bean count is counter productive for staffers and Congressmen that are not very into it (defense)."

Technically, since CRS works under a proprietary relationship with its clients, SASC owns the report and is not obligated to publish it. Under CRS guidelines, the analyst is required to maintain client confidentiality, but may submit a substantially rewritten report to a new client, if the original client decides not to use the report.

Collins rewrote the introduction, made numerous editorial and substantive revisions, rewrote the "wrap-up," and added an annex, before submitting it to a senior House Armed Services Committee staff member, on March 17, a week after SASC told Collins that his report was inadequate for its needs. The House staff member immediately called a senior SASC member, to make sure that he would not be infringing on SASC's proprietary right by publishing the report, and was told that SASC was still interested in the report, and planned to publish it.

Two questions beg to be answered. Should a senate staff member, not an elected official, have the right to withhold from Congress one of the most objective and comprehensive reports on a very controversial issue, thus blocking its further dissemination? And, why won't SASC release the report for others use if it does not plan to publish or otherwise use it?

Perhaps the report really is being suppressed because it conflicts with view of the NSC and its own document on the subject, PRM-10. One CRS source said that the Collins report is not being used because it, "needed more consideration of PRM-10." By preparing a report that conflicts with PRM-10, Collins has become "the little boy" who asked, "Why isn't the Emperor wearing any clothes?"

While never questioning a client's proprietary right, Collins has been strug-

gling to get his important document published as a SASC report. The outrage of suppression of the document is compounded now that Collins faces disciplinary action from CRS. On June 3, 1977, the CRS warned Collins that he would be denied a within-grade increase, unless "improvement in his performance" was shown within 60 days. A CRS gave Collins an oral warning that, in order to improve his performance, he must demonstrate his understanding of and compliance with CRS guidelines about the review of and dissemination of work, and the requirements of objectivity and nonadvocacy, and the confidentiality of congressional relationships.

CRS did not state how Collins could demonstrate his "understanding," or how such improvement would be judged. On July 28, CRS issued Collins an official denial of a within-grade increase, almost a full week before the 60 days had elapsed.

CRS also subjected Collins to a CRS procedure known as a peer review, and ordered the original reviewers of the report to rereview it after a SASC staff member expressed its displeasure with the report. A CRS official insists that Collins incorporate all criticisms by his rereviewers, in order to bring the report up to CRS standards of "objectivity and nonadvocacy."

The Collins report, said a CRS source, was found to be analytically deficient, and void of alternative concepts for making net assessments. Collins apparently was also instructed to make numerous changes in the language of the paper.

However, a CRS "Official Senior Specialist Job Description," issued in May 1974, states that, "The Senior Specialist works under administrative supervision with work reviewed only from the standpoint of Library policy. Work is not review for quality of analysis or the authoritative character of its content."

CRS contends, said one CRS source, that it will not release the report in its current form, (the revised edition currently in re-review process), even if SASC wanted it. Collins must also now clear all his DOD sources with CRS before contacting them other CRS officials have said.

How the Collins report is being suppressed is quite simple. In order for Collins to issue a revised report to a new client it must first pass through re-review in CRS. However, CRS officials informed this office that the re-review process will not be completed because SASC does not want the report. The re-review process is nothing more than a "Catch-22" situation designed to insure that the Collins report is not published.

Congressman BRECKINRIDGE has been trying for several months to make the Collins report available to the Congress, and the American people. He has thus far been unsuccessful, despite the fact that he submitted a written request for the report. However, a CRS source said that at one time, CRS told BRECKINRIDGE that he could sponsor the report.

After CRS gave the go ahead, Collins sent a copy of the report to BRECKINRIDGE. The next day, CRS sources said, CRS claimed there must have been a "communication foul-up," and refused to release the report, and now threatens Collins with disciplinary action for breaking the confidentiality of his client.

CRS is now preparing a "revised" report for SASC, sources there say, and Collins has not been asked to help prepare it. Yet Collins is the most qualified senior specialist in the national defense field within CRS.

Collins is a retired Army colonel with 30 years service, who specialized in strategic and tactical planning. He was G–2 planner for the 18th Airborne Corps of the Mideast (1957), and for the 82d Airborne Division in Southeast Asia, (1958–59), a G–3 planner for the 18th Airborne Corps on Cuba, (1963–64), the largest contingency plan between WWII and Vietnam. He was Chief of Campaign Planning Group in Vietnam, (1963–64). As planner, Collins had to acquire expert knowledge of all branches of the Armed Forces, and their weaponry.

Collins was the Director of Military Strategy Studies at the National War College, from 1968–71. One DOD official said he liked Collins' work because Collins was able to write in factors of opposing views in his reports. Another Pentagon official said, "John Collins deserves the status of professional." Aviation Week and Space Technology ran his strategies arms limitation talks report, and editors there said, "it was one of the most comprehensive reports on SALT available."

TRIBUTE TO RABBI ABRAHAM FELDMAN

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. DODD. Mr. Speaker, today I would like to bring to my colleagues' attention the recent death of a great ecumenist and national spokesman for American Jews, Rabbi Abraham Feldman. The death of Rabbi Feldman was a sad event for all of us who knew and loved him.

Abraham Feldman, serving on every national reform board, was known throughout the Nation as an advocate of liberal, Reform Judaism. Among the numerous posts he has held, Rabbi Feldman headed the oldest and largest rabbinical organization in the Nation—the Central Conference of American Rabbis, as well as the Synagogue Council of America from 1955 to 1957.

Rabbi Feldman energetically searched out the Christian community for friendship and increased understanding. As stated in the Hartford Courant, he believed that his as well as all clergymen's task was "to speak the word of God and the message of religion in the hope of influencing human behavior in every sphere."

His commitment to Judaism was a part of his deep interest in all mankind. Rabbi Feldman was an ardent defender of human welfare. In a 1955 testimony before a U.S. Senate subcommittee, he supported a first come, first serve immigration policy giving preference to victims of racial, religious, or political persecution; those who possessed special skills; and relatives of American citizens and legal residents, rather than the "discriminatory and arbitrary scheme" of the national origin immigration system.

Undeterred by fear and corruption in the world, Rabbi Feldman saw good qualities in men. He lived his life according to the words he once uttered: "A rabbi is the captive of the cause and prisoner of hope."

Rabbi Feldman's life was an inspiration to many, and he will be remembered and revered by all who knew him.

BIG FOOD CHAINS CONTROL MEAT PRICES

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ALEXANDER. Mr. Speaker, the Washington Post, in its Sunday edition of July 31, 1977, carried a story on the marketing of beef in this country which was very disconcerting to me.

The American cattleman has suffered far too long from depressed prices paid to him, but the consumer has seen little reduction in retail beef prices. The market mechanism has not worked.

I am concerned by the Post report that a few large retail supermarket chains could so dominate the meat market that they may underpay the farmer and overcharge the consumer. I am inserting the article in the RECORD in the hope that these charges will be more fully investigated by the Department of Agriculture, the Antitrust Division of the Justice Department, and the Congress.

The article follows:

BIG FOOD CHAINS CONTROL MEAT PRICES, STUDY SAYS

(By Lou Cannon)

SACRAMENTO.—The beef-buying policies of a few large supermarket chains keep retail meat prices artificially high while driving down the prices paid to cattlemen for their livestock, according to an analysis presented here to a state legislative investigating committee.

University of California economist James H. Cothern said that a detailed study of beef marketing practices showed that consumer prices are 6 to 10 cents higher than they would be in an "open market," while the prices paid to livestock producers were 4 to 6 cents lower than they would be in such a market.

The analysis was praised by State Sen. John Garamendi, chairman of a subcommittee that has spent several months investigating food-pricing policies in California, the nation's leading agricultural state.

"Traditional economic notions of supply and demand no longer govern the price of beef in California," Garamendi said. "Instead, there is frightening evidence that a few large corporations are able to totally dominate the market and set the price."

Cothern's analysis focused on the policies of Safeway, the nation's leading supermarket chain, but it also discussed those of A&P, Kroger, Lucky and Winn-Dixie. He said his analysis of the price effects of supermarket policies included a study of several Eastern cities, including Washington, and that his

figures would be "roughly applicable" in Washington.

Safeway disputed Cothern's analysis and Garamendi's conclusions. Safeway is the dominant chain in the West, where it is the leading supermarket in 15 states. It has 2,438 stores nationally, including 500 in California and 130 in the Washington metropolitan area.

Because of the continuing drought the situation for cattle producers is precarious throughout the West. The cattle industry is California's leading agricultural money-maker, with 5 million cattle on 15,000 ranches. A number of smaller cattle ranchers face economic extinction unless the drought eases and wholesale beef prices increase.

Cothern said that the prices large firms are willing to pay for beef are heavily influenced by the Daily Market and News Service, known in the industry as a pricing guide. By buying certain deliveries likely to be sampled by the yellow sheet at a very low price—a practice known as "low-balling"—beef buyers can establish a low wholesale price for cattle, Cothern said.

Safeway denies using the yellow sheet to determine the price offer it will accept. The firm maintains that wholesale beef prices are low because of overproduction.

Robert Minch, a former meatpacker, told the committee earlier that Safeway's buying of choice beef set the market for other chains on the West Coast. Minch said that packers would call Safeway each Wednesday and offer to supply cattle the following week at a price they thought the supermarket would accept.

Minch said that Safeway's buying impact was so great "that the trend would be set and the word would be out before nightfall, not only to every packer, but to every feedlot." The other chains usually would follow Safeway's lead the following day, he said.

Safeway and other chains declined repeated invitations to testify before Garamendi's subcommittee. A Safeway official said the reason was that the company faces class-action lawsuits alleging that it has conspired to keep wholesale prices down and retail prices up. The plaintiffs might gain information from the testimony that they could use in court, the official said.

But W. S. Mitchell, president of Safeway, said through a spokesman that his company purchased only 2 to 3 per cent of the beef sold in markets nationally and was unable to control wholesale prices.

"It is Safeway policy to purchase beef at the prices quoted by packers without negotiating for lower prices," Mitchell said.

Garamendi said that the pattern his subcommittee has found in beef prices extends to other commodities. A study completed several months ago contended that supermarkets maintained artificially high prices on fresh fruit that had no relation to wholesale prices.

At a time that supermarkets were buying peaches for five cents a pound, Garamendi said, they were selling them for 50 cents a pound, 10 times what they paid.

THE NATIONAL ENERGY CONSERVATION CHALLENGE

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ARMSTRONG. Mr. Speaker, is government harassment the only effective means to spark energy conservation among Americans? One college group does not think so, and they are out to prove it.

More than 300 students at Western State College in Gunnison, Colo., set two goals in forming the National Energy Conservation Challenge. First, NECC encourages energy conservation on campus through new and creative voluntary initiatives. Second, NECC challenges any college, business or government unit to match its energy conservation record between October 1, 1977 and April 30, 1978.

While it remains to be seen whether NECC achieves its goals, the group has already triggered significant accomplishments. Western State this summer has saved about 20 percent over previous summer's electricity consumption. And three colleges, several high schools and retail stores have accepted the college's energy conservation challenge.

I applaud the group's initiative and creativity, and its faith in individual action to meet and solve national problems. NECC's enthusiasm is a great step toward securing our energy independence. This approach is certainly preferable to increasing mandatory government conservation programs, taxes, subsidies and regulations that never seem to work.

I wish the National Energy Conservation Challenge every success in achieving its goals.

AIR SERVICE IMPROVEMENT ACT

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ANDERSON of California. Mr. Speaker, I have introduced today the Air Service Improvement Act of 1977, a bill to reform the economic regulation of the Nation's airlines. The proposed reforms are designed to provide a vehicle for further legislation that would produce improved air service and lower fares for the traveling public and provide an improved financial climate for the industry, in which efficiently managed air carriers will be able to earn reasonable profits and attract capital.

Under the existing regulatory system, which was established in 1938 and has not been substantially changed since that date, airlines are subject to public utility-type regulation by the Civil Aeronautics Board. Airline management does not have discretion over basic operational decisions, including the cities which a company will serve and the prices it will charge. Under the existing system, these and other basic management decisions are controlled by a Government agency.

In the last Congress, the Aviation Subcommittee of the Public Works Committee held extensive hearings on the need for reform of the existing system. We heard more than 50 witnesses representing such diverse parties as the administration, the academic community, CAB regulated airlines, intrastate airlines which would like to obtain CAB certificates, labor unions, and State regulatory officials. The record developed in these hearings has led me to conclude that the existing regulatory system does not produce the best results for either the industry or the traveling public. Nor is it likely that there will be substantial changes for the better if the regulatory system remains unchanged.

From the industry's standpoint, the existing regulatory system interferes with managerial efficiency by preventing airlines from making necessary adjustments in fares on a market-by-market basis. Fares cannot readily be adjusted upward to meet increasing costs, or downward to meet the public's demand for low-cost transportation. The existing system also makes it difficult for airlines to begin to serve new cities; as a result, many airlines are saddled with inefficient route systems: some airlines' route systems rely too heavily on business traffic to the exclusion of pleasure traffic; some airlines have route systems in which traffic varies widely from season to season; and some airlines have average lengths of haul which are too short for cost efficiency.

To conclude that the existing system has not been good for the airlines, one need only consider the industry's record of earnings. Since 1966, the CAB certified air carriers have approached the 12-percent rate of return, which the CAB recognizes as reasonable, in only one year. In many years the rate of return has been below 6 percent, before interest.

United Airlines, the Nation's largest carrier, believes that unless there is substantial regulatory reform, the regulatory structure is unlikely to produce reasonable returns for airlines in the future. As stated by Monte Lazarus, United's senior vice president:

> There is no way for the airlines to prosper, or perhaps even to survive under the existing regulatory regime. It's reasonable to predict that under existing economic regulation our future fortunes will vary from sizeable losses to a maximum return of about 7 to 9 percent. This earnings shortfall would inevitably produce a situation similar to that of the Northeast Railroads—and beyond that—nationalization. We do not want to be wards of the State, we do not want the public to rely on governmental whim for the quality and price of its air transportation. We do want to be free to provide the public with the finest air transportation at the lowest reasonable price, to earn a fair return for our stockholders and employees, and to purchase aircraft when necessary. Whatever the merits of economic regulation as practiced in 1938, we are not the way we were. Our country is different. We must be alive to the changing needs of a new world. Leather puttees and silk scarves and C.A.B. cases as they used to be, are great for nostalgia but as outdated as the fireman in the locomotive. We think it is clear enough that we must change. In the National Interest the status quo is simply unacceptable.

From the standpoint of the traveling public, there is considerable evidence that the existing system is not producing low fares in markets that could support them.

One indication that lower fares are possible in certain markets is that low fares have been successfully offered by intrastate airlines such as PSA and Southwest Airlines. These airlines are not regulated by the CAB and operate in State regulatory environments which leave them free to offer low fare service. In the Los Angeles-San Francisco mar-

ket, PSA charges a fare of $25 while in comparable markets served by CAB carriers, the fare is $49. In Texas intrastate markets, Southwest Airlines offers off-peak fares well below the fares in comparable markets elsewhere in the country. Similar low fares are beginning to be offered by the Florida intrastate airlines, Air Florida.

The opponents of regulatory reform have argued that the intrastate airlines operate in a unique environment and that their low fares cannot be duplicated in the interstate system. However, an in-depth analysis of the allegedly unique features of the intrastate markets was conducted by Senator KENNEDY'S Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee. Senator KENNEDY'S subcommittee concluded:

> The basic reason why intrastate fares are lower is that intrastate airlines fly fuller planes. There is no economic or technical reason why such low fare service cannot be provided elsewhere in the country as well.

The intrastate experience shows that the Los Angeles-San Francisco market, lends to a substantial increase in the number of persons traveling by air. In the Los Angeles-San Francisco market, traffic increased 117 percent in the 5 years following introduction of PSA's low fare service. In the Los Angeles-Sacramento market, traffic increased 91 percent in the year PSA began low fare service. Thus, low fare service can lead to higher load factors and more efficient operations in addition to enabling more persons to travel by air.

Recently, a number of interstate airlines appear to agree that low fares can be successful in interstate markets. Texas International is offering discounts of 50 percent to compete with surface carriers and build traffic on underutilized flights. American Airlines is offering 45 percent discounts on transcontinental flights.

There are several arguments against the relevance of the intrastate experience to which I would like to respond. The first is that the intrastate airlines are "cream skimmers" who have been able to offer low fares because they serve only dense markets. In fact, these airlines have also offered low fare service in medium density markets and frequently have been highly successful in this endeavor. For example, in 1975, Southwest began service at Harlingen, Tex., a relatively small community which generated 100 passengers a day when served by Texas International, a CAB regulated carrier. After Southwest had served the market for a year with its low fare service, traffic had grown to 350 passengers a day.

PSA offers low fare service at small and medium sized communities, such as Fresno, Stockton, and Lake Tahoe. Of the 34 segments PSA serves with low fares, 12 generate less than 70 passengers a day each way. Thus there is considerable evidence that low fare service can be successful in markets of medium density.

A second argument which has been advanced against the intrastate carriers is that these carriers are regulated by the States which have given them monopoly rights. While this may be true so far as competition from intrastate carriers is concerned, the intrastate carriers are in heavy competition with the CAB regulated interstate carriers and their success in this competition is largely attributable to their low fare philosophy. This philosophy was well explained by Lamar Muse, president of Southwest Airlines. In his testimony before the House Aviation Subcommittee, Mr. Muse stated:

> What the [interstate carriers] say is that their problem of not making profits is because they cannot raise their fares enough, even though in the last six months they have had four fare increases.
>
> They just do not look at this world the way I do, sir, and we just cannot reconcile our differences. I say the way to make money is to cut your fare. They say the way to make money is to raise your fare. And we just do not agree.

PSA follows a similar philosophy and believes that low fare service can double traffic in 18–24 months.

It can also be argued that the intrastate airlines are successful because they pay low wages. However, those carriers are unionized and their wage scales exceed those of some certificated airlines. For example, in 1976, PSA's average annual pay for a B–727 captain was $59,000, while the average for American's 727 captains was $55,000. In the same year, PSA's average pay for a mechanic was $20,500 while United's average was $19,700.

The existing regulatory system discourages experiments with low fare service. According to the CAB's testimony, certificated air carriers have never asked the CAB for permission to lower their basic fares. Some witnesses believe that this failure is a consequence of the protected economic environment in which the industry operates, while other witnesses blame the CAB's domestic passenger fare policies. Whatever the cause, the best prospect for new low fare service would be entry into the industry by new air carriers, who would have no established market identity and who would be likely to compete by offering new and innovative fares.

The CAB has generally been hostile to new entry. Since 1939, 79 carriers have attempted to obtain trunkline certificates from CAB. None of these applications was granted. A leading case occurred in the 1960's when World Airways proposed to provide transcontinental service at a one-way fare of $75. The CAB took no action on the application for seven years, and finally dismissed it as stale.

Recently the CAB has begun to change its policies and has instituted investigations of low fare proposals by World Airways and by several new carriers wishing to serve Midway Airport. However, under existing law the process will be time consuming—for example, it recently took the CAB 7 months to issue preliminary procedural orders in the Midway case. Moreover, although these cases have been instituted, there is no assurance that CAB will finally decide in favor of new entry and low fare service.

Thus, the present regulatory system is not serving the best interests of the industry or the public. Indeed the only group which seems to benefit from the existing system is regulatory lawyers. In 1976, CAB-regulated airlines paid more than $7,000,000 to Washington, D.C. law firms.

Both the industry and the public would be better served by a system affording price flexibility and easier entry into new markets for new and established carriers. The Air Service Improvement Act would meet these needs.

Contrary to the claims of some industry witnesses, I do not believe that a more competitive airlines system would disadvantage small and middle-sized communities.

In the first place, small communities have not fared well under the existing regulatory system. In the past 16 years 179 communities have lost certificated air service.

I have not been persuaded by the evidence which has been advanced thus far, to establish that under the present system airlines "cross-subsidize" small and medium-sized community service by excess profits gained from serving larger cities. Many of the airlines serving smaller communities do not have access to lucrative routes which would yield excess profits. Additionally, the CAB's fare policies require fares to be related to costs and thereby make it difficult to achieve excess profits on any route.

Finally, there is no logical reason why the airlines should now be serving route segments including small and middle-sized communities if these segments fail to cover their incremental costs. Under their CAB certificates, the airlines have considerable flexibility to determine the route segments they will serve. Airlines are unlikely to continue serving segments which do not cover incremental costs. If, on the other hand, a route segment does cover incremental costs and makes a contribution to overhead, there is no reason for an airline to stop serving that segment solely because profits are reduced on other routes.

The absence of cross-subsidy has been confirmed by studies of the Kennedy Subcommittee which examined United Airlines' route system and concluded:

> There remain 29 route segments in United's system that might be viewed as beneficiaries of cross-subsidy. Those 29 segments average 155 miles in length; together they account for 130 million revenue passenger-miles or about one-half of one percent of United's total domestic revenue passenger-miles.

A similar conclusion was reached in a recent study by the General Accounting Office.

The Aviation Subcommittee's recent field hearings at Harrisburg and Williamsport, Pa., also confirm the absence of cross subsidy at small and medium size communities. These hearings indicated that in 1976, Allegheny operated in the Pittsburgh-Harrisburg market at a load factor of 61 percent and in the Pittsburgh-Williamsport market at a load factor of 61 percent. Allegheny's new Harrisburg-New York service with small aircraft has been operating at a 70-percent load factor. Allegheny's system break-even load factor is 53-percent. Thus, Allegheny's service at Harrisburg and Williamsport seems profitable; if anything, this service may be

cross-subsidizing other service at larger communities.

This proposal contains provisions which is intended to help improve air service at small communities. Under the bill, if a certficated airline terminates service at a small community, the CAB will be required to provide subsidy to continue air service for 10 years. The CAB will be permitted to subsidize replacement service by a commuter airline. Commuter airlines operate small aircraft well-suited to small community service and subsidization of their services should insure a continuation of needed small community services at reasonable cost levels.

In many cases, service will improve if commuter airlines serve those small communities which the certificated carriers no longer wish to serve. Because the commuters operate small aircraft, they can provide more service at a small community than a carrier using larger aircraft. The use of small aircraft also frees commuters from the economic necessity of serving several small communities on the same flight to fill empty seats, and for this reason commuters generally are able to provide service directly from a small community to a larger hub. This bill will also insure that commuters are able to offer joint fares with certificated airlines.

There have been a number of studies indicating that commuters can serve small communities at a lower subsidy cost than certificated carriers using large aircraft. As a consequence, a transfer of small community responsibilities to commuters will permit new communities to be added to the subsidized system at no increase in overall subsidy cost.

The following summarizes the act's main features:

(1) DISCRETIONARY ENTRY

Airlines holding CAB certificates including supplemental carriers and large intrastate carriers—such as Pacific Southwest Airlines—would be allowed to enter one new market each year without CAB approval.

If more than one carrier chooses the same market, CAB must select between them.

Only one new carrier may enter a particular maket in any three-year period.

After the first year the CAB may incease the allowance of one market per carrier.

This section includes a "sunset provision" providing that the section expires after five years. The expiration does not impair the effectiveness of authority granted while the section was in effect.

(2) CAB REQUIRED TO ENCOURAGE COMPETITION

The policy criteria of the Act are amended to require the CAB to encourage competition and to favor applications proposing low fare service and applications by carriers not presently holding certificates.

The bill also establishes a rebuttable presumption that an application for a certificate should be granted. The burden of proof is on those opposing the application to show that it should not be granted.

(3) DORMANT AUTHORITY

At present there are many markets in which carriers hold authority from the CAB to provide non-stop service, but do not provide this service.

The bill provides that in any market in which there is unused authority, the CAB must grant authority to any fit carrier which wishes to serve the market.

When a new carrier is authorized, the Board is required to hold an investigation of whether to revoke the unused authority.

(4) FARE FLEXIBILITY

Carriers are free to adjust their fares within a zone without CAB approval. Fares may be adjusted upwards by 10 percent a year and downwards by 25 percent in the first year and thereafter to the lower of (a) 50 percent of the fares now in effect, or (b) 110 percent of direct costs.

(5) FILL-UP RIGHTS FOR INTERNATIONAL CARRIERS

International carriers, such as Pan American, now hold authority to serve several United States cities on an international flight, but not to carry passengers between these United States cities.

For example, Pan American may operate Los Angeles-New York-London, but it may not carry Los Angeles-New York passengers.

The bill would allow the U.S. international carriers to obtain the right to carry local U.S. passengers on their international flights.

They could obtain this right (limited to one flight a day) in three markets in the first year and in two markets in subsequent years.

These fill-up rights would be substituted for the discretionary authority discussed in item 1 above.

(6) CARGO DEREGULATION

The bill deregulates all-cargo service and requires the CAB to issue cargo licenses to any fit applicant.

Under these licenses there would be no regulation of the cities served or the fares charged except that the CAB could prevent discriminatory or predatory fares.

These licenses would be available to the existing all-cargo operators (including Federal Express and Flying Tiger) in the first year, and thereafter to any fit applicant.

(7) COMMUTER AIRLINES

Commuter airlines now operate aircraft of up to 30-seat capacity exempt from most CAB regulation of fares and service. The bill raises the authority to 56 seats. The bill makes commuters eligible for subsidy for serving small communities.

It requires certificated carriers to enter into fare arrangements with commuters on the same basis as they do with other certificated carriers.

The bill also makes commuters eligible for Federal aircraft loan guarantees.

(8) EXPEDITION OF CAB PROCEDURES

The bill requires the CAB to complete its case in one year and allows CAB to act without hearings in less controversial cases.

(9) PREEMPTION OF STATE REGULATION

The bill precludes the states from regulating the fares or service of interstate carriers, including the intrastate service of these carriers.

However, there is an exception for any carrier which is now totally regulated by a state, such as PSA in California or Southwest Airlines in Texas.

If these carriers obtain CAB authority the states may continue regulating their intrastate operators so long as more than 50% of their operations are intrastate.

(10) SMALL COMMUNITY SERVICE

The bill makes commuter airlines eligible for subsidy for serving small communities.

It further provides that any city now listed on a CAB certificate is guaranteed continued air service for 10 years.

If a certificated carrier terminates its service at a community, CAB is required to subsidize a commuter replacement for 10 years.

(11) EMPLOYEE PROTECTION

The bill requires the Secretary of Transportation to prescribe regulations to protect employees who are adversely affected by the provisions of the bill permitting discretionary entry and entry in markets in which there is dormant authority. The employer of affected employees makes initial payment of all allowances and will then be reimbursed from a special account established in the United States Treasury.

CIVIL ENERGY FROM LASER FUSION; A GROWING REALITY: THE IMPORTANCE OF PRIVATE SECTOR RESEARCH AND DEVELOPMENT

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PURSELL. Mr. Speaker, more and more Members of Congress are coming to recognize the need to make laser fusion an integral and important part of our national energy program.

I would also like to emphasize the importance of supporting a key role for private industry in the research and development of the potentially unlimited national energy resource.

I would like to share with other Members key portions of a 1975 report by the Special Laser Fusion Advisory Panel to the U.S. Atomic Energy Commission. The Panel was chaired by Dr. Lawrence R. Hafstad, and clearly recognized the vital role the private sector could play in exploring the possibilities of energy from laser fusion.

While laser fusion knowledge and technology has advanced considerably since the Hafstad report was submitted, I believe the panel's conclusions on the importance of private sector involvement are at least equally valid, and perhaps more valid, today. The report follows:

I. INTRODUCTION

In response to its charter, this Panel has considered the potential value and technical status of the laser-fusion program and the question of industrial and university participation in the national effort in laser-fusion. The role of electron-beam fusion is considered to be so closely related to laser-fusion that it is treated synonymously with laser-fusion in this report.

The laser-fusion program has potential applications to both national security and national energy problems. The role of the private sector in relationship to both of the applications has been considered by the Panel. The Panel has agreed on seven findings and recommendations which are summarized in Section II.

II. FINDINGS AND RECOMMENDATIONS

1. The laser approach to fusion power is a potential alternative to magnetic confinement and deserves broader support

In utilizing inertial, rather than magnetic confinement, the laser method obviates some of the difficulties of instabilities, synchrotron radiation, cost, and structural engineering associated with large magnetic fields. Although they are sufficiently different from those of magnetic systems, roadblocks to one route are not likely to be roadblocks to the other. Only more experimental work will tell which approach is more likely to succeed. The benefits of an early solution to the fusion problem are so great that the expense of following a second option through the research phase is amply justified.

Laser-fusion offers the possibility of a greater range of applications than is provided by the magnetic confinement fusion techniques. The promise of greater compact-

ness and simplicity of reaction chambers, combined with greater flexibility in reactor system design, suggests early possible applications even before the achievement of energy breakeven. Examples of such applications include an intense source of neutrons and x-rays useful in simulation of nuclear weapons, in medical applications, regeneration of fission reactor fuel elements, and fission-fusion hybrid reactors. Looking to the distant future, laser-fusion also offers the attractive possibility, as yet unproven, of power plants in the 100 MW range and smaller which are of greatest usefulness in power distribution systems.

2. Laser-fusion is still in a research phase: Consequently, the program should be broad and encourage contributions from all sectors

Even within the present budget levels, we believe that the overall United States laser-fusion effort can be strengthened by encouraging participation by industry, universities, and utilities for the following reasons:

a. a larger portion of the key research and development resources of the country can be tapped, including existing facilities;

b. the scientific personnel base can be expanded to generate new ideas and to produce new trainees;

c. the ability to procure new materials and specialized equipment for laser-fusion research will be enhanced;

d. the base of an industrial capacity for eventual commercialization will be established; and

e. the existence of independent efforts will, through competition, act as a catalyst to enhance the scientific output and cost effectiveness of the national laboratories.

Laser-fusion's promise is still based mainly on simplified theoretical concepts. Experiments to check these concepts have just begun. As in any research program, we should expect a mixture of progress and setbacks, including unexpected discoveries. The program needs the attention of as many competent scientists as possible with various backgrounds to generalize and explore new ideas. Stimulation of ideas by competitive interaction is essential.

3. To create a truly national program, Federal support for laser-fusion should include funding of "external" projects outside the national laboratories

For the immediate future the main drive in an expedited program should continue to be in the national laboratories, which have unique talent, experience, and facilities. We believe that the overall United States laser-fusion effort should now be supplmented by encouraging participation by industry, universities, and utilities.

The proportion of the laser-fusion budget ultimately allocated to industry and universities will necessarily depend on the quality of proposals received. To stimulate outside participation, we recommend that a minimum increment of ten percent of the present budget be so allocated initially. Much more than ten percent could probably not be effectively administered the first year; much less than ten percent would not have a serious impact on broadening the research base.

4. Private sector support not sponsored by the national laboratories should be implemented by a small, competent staff at the Energy Research and Development Administration (ERDA), which will ensure the impartiality of the review process and proper program balance

Proposals on research and civilian applications from the national laboratories and from outside organizations should be considered on an equal footing and without bias by Energy Research Development Administration/Division of Military Application. The recent establishment of ERDA gives an unparalleled opportunity to ensure that the administrators of the laser-fusion program have the scientific competence to treat proposals equitably. Although the wisdom and experience of the highly capable staff at the national laboratories should be drawn upon frequently (particularly in areas approaching the classified area), these laboratories should not be the sole reviewers of the "external" program.

5. The major obstacles to the practical production of power by laser-fusion should be identified at an early date by detailed studies of power systems

Although it is too soon to start detailed engineering design work, one can, and should, begin now to identify critical engineering problem areas and to develop concepts which would give promise of solutions. Examples of areas requiring emphasis are:

a. reactor systems design studies in sufficient detail to give data on parametric dependences and cost of repair and replacement;

b. development of high-efficiency, short wavelength lasers;

c. achievement of high repetition rate, with adequate cleanup and minimum loading time between pulses; and

d. development of materials capable of withstanding the high photon and neutron fluxes, as well as the blast wave stresses.

If there were only one fusion program, concern for engineering problems could logically be left until after the essential preliminary of a successful breakeven experiment. It is recognized that the choice among competing fusion schemes will ultimately rest on the tractability of the problems of engineering design and cost. To avoid entering long development periods for all schemes, these problems must not be left to the distant future.

6. Recent declassification action has effectively removed barriers to adequate exchange of laser-fusion research information

The small amount of weapons related information can (and should) remain so without jeopardizing a strong, broad based unclassified program. Advantage should be taken of the possibility of utilizing university laser-fusion centers as a liaison between unclassified work on laser-fusion for commercial power and classified research on national security applications of laser-fusion concepts. This can be done by using a few suitably qualified professors in such centers as consultants in the classified work areas. This is currently being done in the University of Rochester operation. If the laser-fusion program continues to show promise, a need for several such centers can be visualized.

The ERDA should not encourage privately financed research in work impinging on classified topics. Research in unclassified areas, on the other hand, should be encouraged. Although private organizations may initiate work leading into classified areas without exchange of information with ERDA laboratories, they run the unavoidable risk of having their work put under classification at some later time.

7. ERDA should facilitate industrial and university participation by liberalizing its administration of patents taking full advantage of flexibility in overall Government patent policy

The traditionally restrictive patent policy of the AEC, which may have been adopted for good reasons nearly three decades ago, has long been a serious handicap in getting effective industrial participation in programs intended for civilian use. The transfer of responsibility of the laser-fusion work to ERDA should provide a unique opportunity to change this traditional policy to meet the needs of the new emphasis on energy which will require encouragement of industrial participation.

It is important to realize that in the engineering development phase of a major project, the ingenuity and cost-cutting incentives of private industry can be tapped only by enlightened administration of patent policy permitting return on investment in both development costs and the use of the previously developed know-how in the private sector.

ELECTRIC TAXIS AND BUSES

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OTTINGER. Mr. Speaker, in a press conference on August 4, 1977, Congressman CHARLES A. VANIK and I advocated a series of measures that should be taken to avoid the catastrophic imports of oil that will be taking place by 1985—9.6 million barrels a day, even with the conservation measures incorporated in the national energy plan.

One of the measures we advocate is the Federal purchase and use of electric vehicles and other vehicles that are powered with alternatives to oil. This same kind of switch should be made by local communities, particularly in large cities, where the air pollution problem is severe and the need for transportation acute.

"Watt's Watt in Public Transport," an article by Edwin F. Shelley which appeared in the July 14, 1977, issue of the New York Times, proposes that New York City should carry out a municipal program to demonstrate the benefits of operating electric taxis and buses instead of the traditional polluting, petroleum-consuming vehicles now in use. I commend this article to the attention of my colleagues.

[From the New York Times, July 14, 1977]

WATT'S WATT IN PUBLIC TRANSPORT

(By Edwin F. Shelley)

New York City and its inhabitants suffer much of the time from an unacceptable level of air pollution, yet no practical course of action has been set forth to solve this increasingly crucial problem.

Most of the pollution is traceable to emissions from internal-combustion engines in automobiles, trucks and buses. Federal Environmental Protection Agency proposals to reduce vehicular traffic by imposing tolls on the East River bridges and by increasing parking limitations in midtown Manhattan are widely considered to be economically damaging to the city and of doubtful effectiveness in any event.

Meanwhile, the physical and mental health of New Yorkers continues to be attacked by the insidious depredations of continual air pollution, and the economic health of the city is further eroded by the unsatisfactory climate thus created.

A solution to the problem is available, and it is both practical and economically advantageous to all concerned. While commuter automobiles emit pollutants when operating, they are actually parked for most of the day: and while many large trucks come into the city, they normally discharge their cargo and leave the city with a minimum of driving time. Taxis and buses, however, operate almost continuously, and account for a major share of the pollution caused by internal-combustion vehicles traveling in the city.

The substitution of electric taxis and buses for the present polluting, petroleum-consuming vehicles would dramatically reduce the

air pollution in the city, and would reduce the operating cost of taxicabs and buses. Substantial operating experience with electric vehicles in this country and abroad provides ample evidence of the cost-effectiveness, reliability and practicality of electric vehicles for intracity operation.

Present battery technology limits practical electric vehicles to speeds of 40 to 50 miles per hour and a cruising radius of approximately 50 miles per battery charge. These limitations make present electric vehicles unsatisfactory for many ordinary uses. City taxis, however, can operate quite satisfactorily without exceeding a speed of 50 miles per hour, and a network of automatic, unattended battery-substitution taxi stands throughout the city would permit the insertion of a fully-charged battery pack into any taxi in place of a depleted battery in approximately one minute.

The cost of electric-taxi operation would be lower than that of gasoline taxis, and intelligent design could increase rider comfort while decreasing overall size. Pollution of the air by taxis would be entirely eliminated.

Electric buses have been operating successfully in West Germany for more than three years. These are not old-fashioned trolley buses, but modern motor coaches operating on electric batteries with a network of battery-substitution stations where a fully-charged battery pack can be slid into the bus in place of a depleted pack. A higher first cost is more than offset by lower operating and maintenance costs, and German oil consumption is reduced while air pollution by buses is eliminated.

Examination of the extensive information now available on electric vehicles and their operation in the United States and abroad will permit an accurate determination of the cost of taxi-fleet replacement and bus modification, as well as a determination of operating savings in dollars and in barrels of oil for New York City and its taxi industry.

The substantial market for electric taxis to replace the gasoline fleets in New York and other major cities would provide a new economic incentive to the manufacture of comfortable, efficient, low-cost electric vehicles and would popularize the use of these nonpolluting, energy-efficient vehicles in other sectors of the economy.

Through Public Law 94-313 (The Electric and Hybrid Vehicle Research, Development and Demonstration Act of 1976) Congress has authorized the establishment of a variety of programs to demonstrate the commercial feasibility of electric vehicles. Substantial funds will be available from the Federal Government under this act in fiscal 1978. A municipal program to demonstrate the feasibility of operating electric taxis and buses in New York City should qualify for Federal support under this law.

The unquestioned reduction in air pollution which would be accomplished under such a program should satisfy the Environmental Protection Agency—as well as the inhabitants of New York—that the city has at last found a practical way to achieve the improvement in air quality mandated by present Federal law and required for the survival for a healthy populace and a viable economy.

PROPOSED AGENCY OF CONSUMER PROTECTION

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. WEISS. Mr. Speaker, some Members of Congress believe that the public does not want the proposed Agency for Consumer Protection, but a recent public opinion poll contradicts that assertion.

A July 11, 1977, Lou Harris poll found that 55 percent of the American people favor the proposed agency, and only 28 percent oppose it. Moreover, 65 percent believe that "such an agency is long overdue, for the individual consumer needs help in making his complaints heard and in getting better quality and safer products and services." Twenty-one percent disagreed with this statement.

By an even larger margin, 67 to 16, a majority believes that "big business has so much power with Government that unless the consumer has someone in Government to argue his case and make business give better quality, the consumer will continue to be shortchanged on products and services."

I hope a majority of my colleagues will concur with this majority sentiment and support H.R. 6805.

A STUDY IN SUPPRESSION

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BRECKINRIDGE. Mr. Speaker, I call your attention at this time to recent actions on Capitol Hill that have a disturbing influence on national defense.

John M. Collins, with whom I have had a close professional relationship since I first came to the Congress, after he joined the Library of Congress as senior specialist in national defense 5 years ago, is a respected analyst of military affairs. His study entitled "The United States/Soviet Military Balance," published by the Senate Armed Services Committee—SASC—in January 1976, is still widely used as a reference.

Collins used his original survey as a tool to create a net assessment of American and Soviet military strength, which was designed to assist Congress in reviewing fiscal year 1978 defense programs and budget requests. That second-generation effort was suppressed by a small group of SASC staffers from March until August 1977, when Senator JESSE HELMS inserted the entire text in the CONGRESSIONAL RECORD.

The complete rationale is still unknown, but I have pieced together the following partial course of events from sources in the Pentagon, SASC, the House, the Library of Congress, and my own unsuccessful attempts to publish Collins' document over a period of several months.

The story began in June 1976, when Francis J. Sullivan, now SASC's staff director, first contacted Collins concerning a follow-on study of the United States/Soviet balance for publication by that committee. In anticipation, Collins prepared a detailed outline and study plan, which he submitted to 26 specialists for comment on July 1. Sullivan, who was on top of the list, filed a tentative request with the Congressional Research Service—CRS—on July 7, and confirmed it with Collins on August 5. No written communications were involved. Both transmissions were by telephone, a common practice.

The study plan expressed a fourfold purpose: "Revise quantitative/qualitative comparisons; refine original analyses; review resultant issues; reconnoiter corrective courses of action." The intent was to fashion "a new format that strives to substitute dynamic trends for the rather static impressions conveyed by the (1976) study." Statistics, if possible, were to cover the period from 1965 to the present, with "a projected balance 10 years in the future if straight-line trends persist." The assessment was to culminate with a section on U.S. shortcomings and 10 associated issues, each accompanied by three corrective courses of action. No "straw men" were to be allowed. "Every option (was to be) credible and worth serious consideration. Pros and cons (were to) accompany each course."

Sullivan and Collins met in October, 1976 to review the nascent report. Louise Hoppe, who Sullivan had appointed as his routine point of contact in SASC, was present. Collins had already scaled back statistical goals, which were unattainable. Sullivan suggested that the section on issues be cut from 10 to 5. Problems connected with assembling compatible United States and Soviet manpower data were discussed. There were no points of contention.

Work proceeded at a feverish pace through the Christmas holidays, as Collins strained to satisfy Sullivan's request for a finished product that SASC could use during the authorization process, which ignited in February.

Collins submitted a periodic progress report to Louise Hoppe, including completed chapters. Three copies of the full first draft were hand-carried to her office on February 16, 1977, when it floated for comment by more than 30 addressees. At no time did Sullivan indicate that either the structure or contents of the study were unsatisfactory. In fact, Collins received no reaction of any kind.

Collins personally delivered three copies of the finished report to Ms. Hoppe on March 9, fully coordinated and ready for publication. There was still no response. He reached Sullivan by phone 5 days later. The conversation was short, but not sweet. Conclusions, Frank contended, were not supported by the text. In any case, the request had been just for a "bean count." He obviously had not even read the report at that time, because he asked who had reviewed. Key reviewers were cited in the cover letter. He complained that statistical sources were not identified. They were designated or page 2. He was too busy to discuss disagreements in detail, and did not know when an opportunity would arise. Collins then asked him to release the report for publication by the Library of Congress or another congressional sponsor. Sullivan declined.

Pressure to release the report, however, soon began to build. It was advertised as forthcoming in a footnote to a strategic nuclear weapons study published by the CRS in March 1977. An undetermined number of first draft

copies, including some reproduced locally by action addressees, were retained by various reviewers. Some SASC staffers who favored publication passed the word around.

A representative of Aviation Week and Space Technology reportedly confronted Frank Sullivan in late March or early April, and was told that no new CRS study on the United States/Soviet military balance existed—an assertion the caller knew was false. John Ticer, a SASC staff member, repeated that fairy tale to the same inquisitor the following day. Aerospace Daily apparently had a similar experience about the same time. So did others. In each instance, Collins told members of the media to, "Lay off. You'll lose me my job," when queried about the matter.

Just why the Collins study was suppressed is still uncertain. None of Sullivan's criticism ever made much sense. He approved the plan, and clearly knew how the study was developing at every stage.

Suspicions that publication was blocked to prevent a collision with Presidential Review Memorandum (PRM)–10, as suggested by Aviation Week on July 11 and 18, therefore assumed considerable credibility in the eyes of many. If confirmed, that could indicate collusion between a cabal of SASC staffers and highly placed parties in the National Security Council—NSC.

The means were available.

Collins deliberately refrained from forwarding a copy of his draft to that highly politicized body for review, but a former member of CRS, described by associates as "a loose cannonball rolling around the deck," furnished Col. William Odom a summary of the unfinished study as early as January 31, 1977. His letter says,

> I "stole" this in the belief you ought to know what is coming up—John does not know that I have done this.

Evidence intimates that he also mailed parts of the finished first draft to Odom on February 17, the day after Collins distributed the document for comment, and sent a complete copy 6 days later.

There may also have been motive.

The PRM–10 directive assigns the improbable task of developing a net assessment and U.S. responses concurrently, although no reasoned response could be devised until assessment was complete. That inconsistency encourages speculation, current in some quarters, that the Carter administration had made up its mind shortly after the inauguration, and simply used PRM–10 as an ex post facto paper exercises to simulate support. If so, the Collins study could constitute dangerous competition.

Suppression, however, is a chancy game in our open society.

The two Aviation Week articles and a syndicated column by Evans and Novak in the Washington Post on July 21, 1977, created a stir in Congress, even though few other newsmen picked up the prospects of scandal. Items began to appear in the CONGRESSIONAL RECORD. I personally wrote letters to the White House, Defense Secretary Brown, and SASC Chairman JOHN C. STENNIS, and ranking minority member JOHN TOWER, urging their assistance in affecting the release of the report, then sought added influence from 360 other Congressmen through a "Dear Colleague" letter.

Still, committee and party politics played powerful roles. It would appear that no coalition in the Senate Armed Services Committee, much less one with bipartisan character, ever stood up to be counted. JESSE HELMS, a conservative Republican from North Carolina, emerged as Collins' only champion in SASC who was willing to "go to the wall."

When it became apparent that no decision could be reached before Congress recessed for a month beginning August 5—and a favorable decision was doubtful thereafter, HELMS read the entire report into the CONGRESSIONAL RECORD, which placed it in the public domain, open for reproduction by private publishers.

Meanwhile, Collins has been, and still is, experiencing strong pressures on a second front.

Gilbert Gude, newly appointed Director of the CRS, initially seemed sympathetic, because he authorized Collins to submit his study to a second prospective sponsor in mid-March, after making minor modifications. When that proved unproductive for protocol reasons, Gude met with Frank Sullivan, who reiterated his rejection and refused to print the report in its present form or release it for other congressional use without substantial changes.

Gude shaped his subsequent actions after consulting John P. Hardt, CRS Associate Director for Senior Specialists and William W. Whitson, Chief of the Foreign Affairs and National Defense Division—FAND. The three then met with Collins on April 8.

As that trio explained it, the client's study requirement was for facts and figures, not analysis. Collins contended that a task of that sort could be better undertaken by 3½ GS–5's than a GS–17. The client further found the study biased. DOD statistics were deemed especially undesirable, according to Gude, Hardt, and Whitson, although there is no other primary source in most instances. The client allegedly refused to accept any study that portrayed a balance between United States and Soviet armed forces or excluded a wide range of non-Soviet considerations that condition U.S. defense demands.

Gude and his consorts concluded that the scope of Collins' assessment was unmanageable for one man in any case. Future efforts should be undertaken by Whitson's division, with contract support if necessary. Collins perhaps could write a foreword. A major study on the subject, responding to a new Sullivan request, already is in progress without Collins' participation. Researchers are starting from scratch, at considerable cost to taxpayers.

Five days after that meeting, on April 13, Gude appointed three "peers" to recommend alterations, so that Collins' study would "better * * * maintain the standard of individual and collective performance that CRS is charged with." One was James W. Robinson, who handles CRS policy review. The others were Dr. Hardt and Dr. Whitson. Robinson had already reviewed the first draft in detail. Hardt has critiqued sections pertaining to his specialty, which is Soviet economics, and had scanned the rest. Whitson had equal opportunity to review the original product, but returned it unread. None of the three is a recognized authority on American and Soviet military strength.

Their determination, in a two-page memorandum dated May 4, 1977, was not delivered to Collins until I inadvertently smoked it out 23 days later. The last lines indicated that "many specific changes in language are recommended in the attached copy of the study," but those actually were not ready until June 3, a full month after the memo was written. The implication: Gude and his associates never expected to pursue the matter further.

CRS guidelines, established in 1974 and still in effect, stipulate that Senior Specalist products are "reviewed only from the standpoint of Library policy. Work is not reviewed for quality of analysis or the authentic character of its content."

A special exception, however, was made in Collins' case. Correspondence signed by Gude on June 3 stipulates that "revisions to your draft indicated in the May 4 memorandum from Dr. Hardt, Dr. Whitson, and Mr. Robinson are necessary in order to meet CRS standards, regardles of the willingness of—blank—or any other congressional client to accept the draft." I had been pressing hard to publish the study as a House Document, but was denied permission even if I printed component chapters separately in a different sequence, unless each segment was revised and rerouted through the hand-picked "peer" reviewers.

In short, CRS leadership not only reserved the right to designate who Collins' professional peers were for review purposes in a very specialized field, but required him to accept their recommendations, whether he agreed or not. Intellectual freedom within time-tested CRS policy guidelines, which comprises the foundation of the Senior Specialist system, was absent. Since the only official court of appeals was confined to Hardt, a member of the "peer" review panel, and Gude, who appointed him, no impartial arbiter was available.

Gude also initiated adverse personnel actions against Collins at that time. A notice filed on June 3, 1977 concluded that hs "work is not of an acceptable level of competence for purposes of—perfunctory—within-grade increases" as a civil servant.

It was accompanied by the threat of "possible disciplinary action," and was followed by an oral warning, which constitutes a preliminary step in the process of ousting offensive employees.

Some of the charges centered on Collins' efforts to encourage publication of the study. "An additional area of concern," however, "relates to—his—apparent failure to adhere to CRS standards of objectivity and nonadvocacy." On advice of Dr. Whitson, Gude specifically accused him of "unbalanced" views and sharp criticism of "particular—

executive branch—agencies and officials" when he participated as a panelist at a Senate symposium chaired by Senator CULVER on May 11–12, 1977.

The full text of Collins' troublesome comments will soon be published, along with those of other speakers. Suffice it to say here that part of the objectionable substance had previously been included in approved CRS documents. Other elements were featured in two banner headlines, front page articles by Henry Bradsher, printed in the Washington Star on December 29–30, 1976. The remainder were contained in a lecture on U.S. strategy, delivered at the Library of Congress during a conference sponsored by Dr. Whitson. No one on Capitol Hill or anywhere else complained to CRS leadership or suggested that those statements brought discredit. On the contrary, a wide range of critics, liberal and conservative alike, cite Collins for his commonsense approach to national defense and refusal to promote special interests.

Harassment nonetheless continues. Dr. Whitson, for example, failed earlier this year to evict Collins from his cubicle, which is collocated with Whitson's division, so that the space could be assigned to an arms control specialist brought in on contract for 2 weeks. If present CRS plans are put in effect, Whitson soon will succeed in separating Collins from the division, effectively isolating him from research materials, incoming distribution, and defense analysts with whom Collins has worked closely and reciprocally for the last 5 years. That action seems especially counterproductive, since Director Gude, in a memorandum of oral warning on July 28, 1977, cautioned Collins "to strengthen—his—working relationships, including peer review, with—the Foreign Affairs and National Defense Division."

From all this, several issues arise that concern U.S. national security and CRS abilities to serve Congress effectively in any field.

Top priority most certainly involves suspicion that important parties in SASC and the NSC conspired to suppress an objective study that deals with U.S. survival and other crucial interests. That subject calls for complete investigation by a competent, trustworthy team, followed by corrective action if foul play is confirmed.

Collins summarized secondary and tertiary issues in correspondence to Gude on May 28:

a. Should a committee staffer be permitted to suppress a CRS study, and refuse to release it for use by other segments of Congress unless it is altered to suit his personal specifications? I contend he should not. That prerogative should pertain solely to senators and members of Congress, if at all.

b. Should peers be permitted to prescribe not only what a Senior Specialist should say, but how he should say it? I contend they should not. The Senior Specialist system will cease to exist if others are confronted with constraints such as those in the proposition presented to me.

Some Senators and Representatives already express interest in exploration of such fundamental issues by the Joint Committee on the Library, the Committees on Government Operation, and the Rules Committees. I support that position and am directing communications to the interested committees and others in a position of responsibility accordingly.

In the course of this controversy, Collins has consciously put his job on the line. One cynic in the CRS front office seriously questions whether Collins is doing so as a dedicated public servant or simply for publicity. As he paints the picture,

It's easy to put principles before job security if you're a "double dipper".

Collins' answer to that charge was low key. He said:

I had these principles long before I had an Army colonel's retirement paycheck. That's why I never amounted to anything.

U.S. LOANS AND CREDITS TO FOREIGN GOVERNMENTS

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ALEXANDER. Mr. Speaker, I would like to share with my colleagues the latest update from the Department of the Treasury on the principal and interest due and unpaid 90 days or more as of March 31, 1977, on U.S. loans and credits to foreign governments.

I am pleased to report that, since Treasury's last report, arrearages have been reduced by $284,171,152, from the $1,027,871,357 level on December 31, 1976. March 31, 1977, delinquencies totaled $743,700,205.

A number of nations and international organizations have made substantial improvement in their standing on these debts including Angola, Denmark, Switzerland, Greece, Tunisia, Venezuela, Ireland, Netherlands, Spain, United Kingdom, Yugoslavia, Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Turkey, Bangladesh, Algeria, Central African Republic, Gabon, Morocco, Sudan, Zaire, People's Republic of China, Indonesia, Japan, Singapore, Bahamas, Brazil, Dominican Republic, El Salvador, Honduras, Jamaica, and Mexico.

The March 31, 1977, foreign debt arrearage table follows:

Principal and interest due and unpaid 90 days or more on U.S. loans and credits to foreign countries and international organizations

Area/country	*Dec. 31, 1976*	*March 31, 1977*
Total, all countries and international organizations	$1,027,871,357	$743,700,205
Western Europe (excluding Greece and Turkey):		
Austria	33,274	57,718

NOTE.—A credit with an amount overdue is not necessarily in default. The arrearages reported are frequently technical, pending conclusion of discussions or negotiations between the borrower and the collecting agency.

CIVIL ENERGY FROM LASER FUSION; A GROWING REALITY: LASER FUSION ESSENTIAL TO ENERGY INDEPENDENCE

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PURSELL. Mr. Speaker, when Congress returns this fall the continued formulation of a comprehensive national energy policy will still occupy a prime spot on our agenda.

I am particularly concerned with joining with other members to stimulate an all-out research and development effort on alternative energy sources, which I view as the only permanent solution to our very real energy problems.

It is my belief that laser fusion offers one of the most promising alternative energy sources. A research and development effort devoted to following all avenues of promising research in this field is essential to any energy policy which is truly comprehensive in scope and serious in intent.

I am indebted to Science and Technology Chairman OLIN TEAGUE, as well as Representatives JOHN DINGELL, MATTHEW RINALDO and LEO J. RYAN for the excellent material they have recently inserted in the RECORD or distributed to members to help increase congressional knowledge and awareness of the potential of laser fusion.

The establishment of the new Department of Energy is a hopeful sign that we will have a serious effort to bring alternative energy sources on line as soon as possible. The people who are likely to be running that department appear highly competent and seem to have a genuine interest in constructing a really effective energy policy. I sincerely hope my impressions in this regard are borne out by their performance. I have already communicated to them my personal belief that laser fusion must have a key role in meeting our future energy needs.

In regard to pursuing all promising avenues of laser fusion research, I think it is crucial that Congress support both a Government program and a private industry R. & D. program. This method, in my opinion, will yield the best and quickest results for the benefit of all our citizens. That, after all, should be our only concern.

I recognize that our national laboratories are doing important work in laser fusion research, and they should be encouraged to continue to develop the energy potential of laser fusion. They also should welcome and support other efforts to achieve the same goal, and to cooperate fully with a multifaceted approach to solving the scientific and industrial hurdles to full utilization of laser fusion energy.

I also recognize that there are legitimate military aspects of the laser fusion program. I am not concerned with detracting from that work in any way. I ask only that the civilian energy potential of this program receive equal attention, as befits a program with such significance to our national priority of energy independence. I believe energy independence is one of the best defense systems this country could possibly produce.

I hope my colleagues on the Armed Services Committee will find it possible to support the civilian aspects of laser fusion, just as I am willing to support legitimate military applications. We all have the same goal of preserving the future of our country, and I think a great deal of that future depends on the decisions we make concerning the energy potential of laser fusion.

I am concerned that the attitude of some Government officials toward an aggressive laser fusion energy program by a private research organization has not been as open and receptive as it might have been.

I make particular reference to KMS Fusion, Inc., whose program has been repeatedly supported by the Congress, and whose brilliant scientists have accomplished much of the pioneering work that has brought laser fusion to its present position of promise as a means to unleash a clean, safe and virtually unlimited supply of energy for our future.

Yet there are indications that this organization has not received the support throughout the Government that their excellent efforts would seem to deserve.

The following memorandum, written about 1 year ago to Dr. Robert Seamans, then Administrator of ERDA, from his science adviser, Chalmer G. Kirkbride, makes a penetrating objective analysis of the KMS–Government relationship. I think this is an interesting historical document which is relevant to the current efforts by myself and other members to stimulate additional funding for civilian aspects of laser fusion, and for the KMS program in particular.

The contents of this memorandum have been approved for release by the executive branch under the freedom of information statute; its use has been authorized by Chalmer Kirkbride; the contents of the memorandum have been published by at least two newspapers.

I insert the memorandum at this point:

To: Robert C. Seamans, Jr., Administrator.
From: Chalmer G. Kirkbride.
Subject: KMS Fusion contracts with ERDA and the National Laboratories.

On June 30, 1976, you referred to me a letter of June 29, 1976 to you from the Director of the Division of Laser Fusion with an attached assessment of the KMS Fusion Research Program. You asked for my comments.

Before getting into my critique, I want to confess that I have become somewhat biased on this project. I cannot tolerate a game in which I think the deck of cards is "stacked" or the "dice are loaded."

I am attaching a detailed critique of the assessment. I have done this in much the same way that I would as an expert witness in a patent lawsuit. I have examined the document, paragraph by paragraph, and often sentence by sentence.

There are several general observations also that I think you should consider in your deliberations. I am presenting these in this letter of transmittal.

When I carried out my investigation that led to my report to you of April 7, 1975, the National Laboratories (NL) and the Division of Military Applications (DMA) wanted to fund KMSF at a $500,000/year level. I emphasized at the time that this was a good way to liquidate KMSF and that unless full funding were done, we should save our pennies. I have told you of the pressures put on me, including the bugging of my telephone, and I believe also my office to pressure me to recommend no funding for the KMSF proposal of January 1975.

The recommendation by DLF in their letter to you of June 29, 1976 to terminate funding all KMSF work with the exception of pellet manufacture is yet another disguised way to liquidate KMSF. Unless ERDA can justify full funding, we should not fund at all; but, in my opinion, it would be a serious national mistake not to fund KMSF. It stands out as the only real competition the National Laboratories have in laser fusion. It represents the private sector. It keeps the NL honest. Pertinent to this point, I am attaching a copy of a letter dated June 21, 1976 from C. E. Thomas to J. F. Clayton that I got from Dr. Henry Gomberg.

Unfortunately, there seems to be deep resentment on the part of the NL against KMSF. I suspect this stems from the fact that the NL were embarrassed when KMSF was the first to achieve thermonuclear neutrons by laser implosion. Before that, little or no experimental work had been performed at the NL on laser fusion. Prior to the time KMSF announced to the world that they had produced thermonuclear neutrons by laser fusion, NL had not conducted any laser-pellet interaction experimental work in this field. Their work had been confined entirely to mathematical theory that proved to them that fusion by lasers could not be achieved except at very high incident energy. So it was indeed an embarrassment to the NL when the small insignificant KMSF private company showed to the world how to do it without any cost to the U.S. Government. The KMSF achievement was recognized by the Russians and by many other prominent scientists throughout the world before the NL finally (after about a year) were willing to admit that they were wrong and that KMSF indeed had achieved laser fusion.

At the time of my report to you of April 7, 1975, I did not realize how deep the resentment is from the NL toward KMSF, or I would never have recommended a close working relationship between Los Alamos and KMSF. I now think this is impossible. Also, I think any arrangement that allows for utilization of the NL and/or the DMA in the ERDA contractual administration would be detrimental to the program and not for the best interests of the country. Indeed I think it was disastrous in the last ERDA/KMSF contract.

I recommended orally to you in April 1975 that this contract be administered by Dr. Hirsch's organization, and I still think this was a sound recommendation. I feel stronger about it today than I did in April 1975. The decision was made to put the administration under Dr. Hirsch, and I prepared a proposed announcement of this. But this decision was reversed at the last moment.

Throughout the administration of the EIDA/KMSF contract, the NL and DMA kept KMSF in a contractual strait-jacket. They wanted KMSF liquidated in April 1975, and if anything, they want this more today than in 1975. I strongly advise against your continuation of the present methods of contractual administration within National Security and the NL.

I am advised by well-informed people that the administration of the KMSF contract really was handled by DMA rather than by DLF. It has been emphasized to me that Dr. Stickley came from ARPA and consequently the DLF is nothing but a disguised extension of the military fraternity. Whether this is so or not, many key people in ERDA and many men of substantial scientific stature outside ERDA think it is so. Hence, I urge that this be corrected.

I am making the three following key recommendations:

(1) KMSF should be funded through Phase IIa of the original proposal of January 1975, (about $14 x 10^6). Also, the program presented in their proposal of March 1976 for a 10 Kj iodine laser should be funded (about 33 million for 1 kilojoule).

(2) The administration of the KMSF contract should be moved from National Security, the National Laboratories, DMA and DLF to the administration of Dr. Robert Hirsch. There is no question in my mind but that the benefits from the ERDA/KMSF contract could have been substantial to the USA had the contract been administered by Dr. Hirsch.

(3) On Page 16 of my report to you of April 7, 1975, I recommended that the question of how the NL should be managed should be referred to the GAC for study and recommendation. At present, the NL are a law unto themselves. They account to no one. They submit proposals (with requests for huge funding) directly to the Congress, and they get pretty much what they request. For example they were not held accountable for missing their projections on Argus and Shiva in the same harsh way they propose to hold KMSF accountable for missing their projection of laser power delivery. I think it would be to the best interests of the nation if the NL were held accountable to hard nosed review panels of industrialists and university scientists who do not have conflicts of interest.

Many people feel that there are built in conflicts of interest in the J.C.A.E. which together with the way the NL are administered are responsible for the failure of the Atomic Energy Commission. Many people to whom I have talked feel that the productivity of the NL will be no better under ERDA management than it was with the AEC. They feel that there must be some way devised to manage the NL so they are held accountable for the monies appropriated to them from the Congress, so that their productivity is commensurate with the taxpayers' money they spend.

I do not have any well thought out system of management, but somehow I think if the NL can be held accountable to hard nosed panels of industrialists and university scientists, a drastic improvement in management might be achieved. Also wherever possible, I think the scrutiny of the press would be a powerful tool in holding the NL accountable for their major underestimations of costs of their proposed research projects. As I said, I do not have a well thought out plan, but I think this would be a splendid assignment for the GAC and your Panel of Consultants.

I have been amazed at the large number of people who are critical of the lack of accountability to which the NL are held. Also these people think that too often the poor performances of the NL are shielded and covered up under the guise of national security without justification.

Whether this is so or not, the fact remains that the suspicions are there and if the GAC could devise an acceptable plan, it would go a long way toward bringing about a better feeling in the scientific and technical communities. I urge that this problem be assigned to the GAC.

Mr. Speaker and Members, the importance of the development of new energy sources for our Nation's future requires prompt and cooperative action from all concerned. The importance of this program demands that we set aside any internal disputes and work as one to fully develop every avenue for laser fusion and other promising energy-producing techniques.

I will be looking for a commitment from our new Department of Energy to give laser fusion proper recognition as an ever-more-promising alternative energy source.

When Congress reconvenes in the fall I hope that all Members will resolve to put the national interest first, and give appropriate support and direction to programs that promise to help us fulfill that national interest.

REMARKS BY GEN. NET RAFAEL NIVAR SEIJAS, NATIONAL CHIEF OF POLICE OF SANTO DOMINGO

HON. HERMAN BADILLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BADILLO. Mr. Speaker, at the June 22 convention of the Chiefs of Police in Atlantic City, Gen. Net Rafael Nivar Seijas, National Chief of Police of Santo Domingo, made some interesting remarks that I would like to share with my colleagues. For their information, I am inserting them into the RECORD in their entirety.

REMARKS OF GEN. NET RAFAEL NIVAR SEIJAS

Honorable Attorney General; Honorable Representative of the Governor of the State of New Jersey; President of the New Jersey Police Chiefs Association; Members of the Convention; Ladies and Gentlemen:

It is my privilege to address the Convention of the New Jersey Chiefs of Police Association on this memorable occasion of its Annual Convention Banquet.

The International Association of Chiefs of Police reflects the marked universal trend of these times to unite common efforts in a world where the conquests of science and the achievements of civilization force its inhabitants to an increased sense of unity, of brotherhood, and of the growing knowledge that is at their reach. It forces the inhabitants of this world to increase their mutual cooperation in their efforts to help in finding a favorable solution to the complex and acute problems facing mankind throughout.

If this is so for mankind in general, it is even more so for the Chiefs of Police in particular, whose delicate function and enormous responsibilities require, to an even greater degree, a frequent exchange of information and experience with each other, for the good of the communities they serve. Their aim is to apply the required measures and foresight, if and when it is deemed necessary, effective, and constructive.

We know full well that there is a set of specific police objectives that are common to all peoples of the world, significantly those concerning people's safety and guarantee of property, and the continuous battle with organized crime, drug trafficking, national and international terrorism.

My country has achieved a highly favorable balance in its efforts to eradicate these two latter serious and terrifying aspects of crime, so characteristic of the times we live in. It can be stated that terrorism has been reduced to such an extent that I am not boasting nor exaggerating in saying that we practically have attained its total disappearance. Insofar as drug addiction in general and drug traffic in particular is concerned, we are pleased to say that our untiring and head-on attack has had positive and definite results. So much that, to the greatly reduced extent in which we suffer from it, we must emphasize that it comes from foreign sources. Since we are aware that it is the outside from where the threat comes, it makes it easier for us to control, and to avoid and sanction the soulless drug pusher and his willing victim, the drug addict.

We are also very much aware of the specific problems certain countries face, especially in the political and social arena; problems which ought to be handled with utmost care. The function of the police ought to be interpreted with the necessary force to have law and order respected, and the right to peace within the communities; but also with special sensitivity and with regard to the nature and features of these problems. The economic conditions created by the divergence of development reveal varied kinds of phenomena and disturbances, the handling of which is very much the task of the police.

I must point out at this opportunity that there are great similarities in the concepts and interests of both Mr. Carter, President of the U.S., and Dr. Joaquin Balaguer, President of the Dominican Republic. They share a concern for and strict adherence to human rights, and the scrupulous way of defending and guaranteeing them equally for all human beings. We know that—without exception—the Police Force in every nation is one that regards as its major task and its most direct responsibility the safekeeping of human rights, without which life would lack a fundamental characteristic—human dignity.

Of course, regarding this risky and polemic question of human rights, we maintain the belief that the violation of these rights is not the sin of the authorities alone. For even though it is true that there are repressive governments whose officials violate these rights, it is also true that such an objectionable aggression is also frequently shown by individual delinquents who raise their flags of assumed injuries or false ideals, and who recur to threats, kidnapping, extortion and assassination, and who are without a doubt undisputedly delinquent figures seriously and reprehensibly violating human rights.

The police must be watchful and alert to this reality and carry out its duty to safeguard the rights of our citizens. In the Dominican Republic, we have a democratic government, legitimately elected by the people through polls that are above suspicion. Elections are called within the constitutional framework and are carried out with full integrity. We have a judicial system that guarantees the freedom and the rights of our citizens. And our illustrious statesman presiding over the nation, Dr. Joaquin Balaguer, is a jealous guardian of these human rights, and, in keeping with it, he has instructed those of us accordingly, who in one way or another hold public office.

That is the reason we try daily to instill in our police force the highest sense of its responsibility, and to achieve within our police force an outstanding degree of technical and scientific excellence, and, at the same time, to be a police force fully conscious of its civic duties.

I wish to close my remarks by extending a cordial greeting to all attending this Convention, and assuring them that in the Dominican Republic and in its national police force, they have fellow policemen who steadfastly dedicate themselves to their work and regard you with a spirit of friendship and cooperation.

I also wish to express my heartfelt gratitude for the honor it means to me to have been named a member of the renowned International Association of Chiefs of Police. On behalf of my wife and myself, I want to thank you for the invitation and the many courtesies we received from everyone; especially from the civil and police authorities of beautiful and hospitable Atlantic City. We shall retain the fondest memories of your hospitality. Thank you very much.

HUMAN RIGHTS IN THE SOVIET UNION

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STOCKMAN. Mr. Speaker, I wish to share with the Congress an example of the senseless and inhumane disregard for human rights which the Soviet Union continues to inflict upon its Jewish citizens. Thirteen years ago, a good friend and constituent of mine found that his brother had not, in fact, been a victim of a Nazi concentration camp and that he was alive in the Soviet Union.

For many years, this Soviet Jew has been attempting to obtain a travel visa to visit his brother. Despite many appeals and countless letters from interested parties, the Soviet's decision remains unchanged. I believe that my friend's recent letter from his brother—translated from Hebrew—should serve as a message to us all that this sort of senseless oppression must be opposed with any means at our disposal:

FRUNZE, *June 1, 1977.*

MY BELOVED BROTHER AND DEAR MERY: Every day for the last two weeks I am trying to write a letter to you but my hands are trembling and I have to lay down the pen. Today I decided to put on strength to report to you the evil news.

Two weeks ago I went again to the office of the intern ministerial to inquire about my visiting visa. After insisting that I must be given a reply they finally called me in. On the desk was my file with all the letters written by your congressman and other dignitaries. But, it was stamped with a big NJET! The denial had been made already on October 6, 1976! How I felt, and the bitterness and anger in the depth of my heart and soul, nobody in the world but you alone will understand.

To begin with I was numb and speechless. Then slowly I regained enough guts to say a lot of things. Why they let me, for so many days and weeks and months, stay behind closed doors when they already knew the verdict? Where is human dignity? Why let me run time after time with false hope? I asked, why the irony and plain ironic sadism? If they think that their verdict and decision is right, then why be ashamed of telling me? Or, are they aware that the *Njet* is not human! It is contradictive to the constant publicity they are making daily, of bureaus all over the land through which every Friday on radio and television they are reading names of separated families as a result of the Second World War. When a family is being reunited they spend a lot of place in the papers and other public media instruments emphasizing the tragedy of the Hitler Era. What a hypocrisy I told them, is your handling of my case. Here I find a brother after 23 years and time after time without any explanation you deny my request. Tell me, what crimes have I committed that you with such a cool frozen irony you say NJET! NJET! NJET! No answer, talking to them is like talking to the bare wall. In the end the bureaucrat in charge blamed everything on his secretary, and said, well maybe you should try again.

My dear beloved brother, now that two weeks passed by I say on the other hand I am not so disappointed. I am practically aware of the "high morality" and sense of "humanity" and of this kind of results we always have to be ready. I've never lost hope and believe that maybe someplace somewhere the flame of dignity rightfully is still burning. I see a lot of good wearing with pride the honors and medals they earned through their struggle with Hitler. They are true believers that they fought for a human cause and it was worth it.

The germs of Fascism penetrated and poisoned a lot of people in the high areas of decision making and they are playing recklessly with the destinies of human lives.

I know you my dear brother are aware of the struggles and blood you give in fighting for human rights and freedom and I believe that you are still stubborn like ever not to give in to mediocrity and inhumanity. This gives me strength and hope to try again. Send me please an application for a visa and I will try again for the fourth time.

Meanwhile keep on writing your encouraging letters and stay healthy and strong. Give my regards to Mery and to your good friends who are also mine even though I do not know them physically but I feel I've known them for a long time.

YOUR BROTHER.

THE NATIONAL CLIMATE PROGRAM ACT OF 1977

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BROWN of California. Mr. Speaker, pending on the House calendar is a fairly minor bill, H.R. 6669, the National Climate Program Act of 1977. As the author of this legislation, I am understandably convinced of its value to the Nation, but I am also encouraged by the interest and support this legislation has received from my colleagues in both this House and the other body. It is clear from even casual observation that we are going through a period of climatic fluctuation, with severe consequences to our economy. Professional observers have called for a major Federal effort in this area, such as that represented in H.R. 6669.

Mr. Speaker, I wish to urge expeditious consideration of this bill so that we can complete action on the national climate program during this session of Congress. Our constituents might not immediately recognize the value of such foresighted action on our part, but they would receive the benefits of improved information nevertheless.

Among the many sources of support I have had in developing this legislation has been Ken Weaver, who spent a year in my office, thanks to the sponsorship of the Institute of Ecology. His description of this bill, while flattering to myself, should help demonstrate to my colleagues the importance of The National Climate Program Act of 1977.

The article from the August issue of BioScience follows:

ROLE FOR BIOLOGISTS IN CLIMATE PROGRAM

(By Ken Weaver)

The National Climate Program Act of 1977, H.R. 6669, has been the prime result of a broadening review of environmental R&D by Rep. George E. Brown's (D-Calif.) Subcommittee on Environment and the Atmosphere, a unit of the House Science and Technology Committee. The bill is scheduled for a floor vote soon.

Climate has been called the long-term average of weather and is largely the province of atmospheric sciences and physical oceanography. For biologists, the House climate bill implies a novel departure. With the present ignorance of the agents of potential climatic change very much in mind, such as the biotic sources and sinks for carbon dioxide from fossil fuel combustion, climate research under the bill is enlarged to examine the "relationship of atmospheric, hydrospheric, and biospheric processes and their effects on the climate" (emphasis added). Also expressly directed is inquiry into the integrity of agricultural and other ecosystems under varying climatic regimes. The bill calls for "continuing assessments, on a global, national, and regional basis," of the impacts of fluctuations and change in climate "on crop production, energy demand and supply, land and water resources, biological productivity and diversity, transportation, and demography."

Another feature of the bill is its heavy emphasis on data management, quality assurance, and information transfer. According to testimony before the Environment Subcommittee, U.S. and global climate data sets are now too expensive and difficult for scientists and others to obtain. With basic data more readily available, new statistical research and analysis could begin. H.R. 6669 authorizes an additional $50 million annually on top of the current federal base of $38 million, to strengthen climate research and monitoring.

Under the proposed legislation, the President will designate a lead agency to administer the climate program. NOAA, which is responsible for a major portion of current federally funded meteorological research, is a prime candidate. One role of the director of the Climate Program Office within the lead agency will be to encourage participating agencies to provide the climate services mandated by the law. With the program director serving as chairperson, a multiagency Management Council will recommend research priorities and budgetary requirements and advise in the preparation of a five-year plan. Regular reports, including impact assessments and climate predictions or "outlooks," are to be produced for "specific user groups" on a time schedule most useful to them.

Two bills are under consideration in the Senate: S-421, similar to an early version of the House bill, was introduced by Senators James B. Pearson (R-Kans.) and Harrison Schmitt (R-N. Mex.), and S-1652, identical to the present House bill, was entered by Sen. Hubert Humphrey (D-Minn.) and nine others. Senate consideration began with hearings in Washington early in June and field hearings last month. Further action is expected in September.

On the opening day of hearings, Sen. Adlai Stevenson's (D-Ill.) Subcommittee on Science, Technology and Space appropriately staged a television video-conference using the telecommunications capability that will be necessary for effective global climate monitoring and data exchange. The Capitol Hill hearing room was linked by the new U.S.-Canadian Communications Technology Satellite (CTS) to a Springfield, Illinois, courtroom, where witnesses presented their testimony.

During the hearings, Rep. Brown urged his Senate counterparts to hasten enactment of a climate bill. According to Brown; "During the last decades of unusually favorable climate, we have been developing in this country a technology-based economy and social organization with increased vulnerability to climatic fluctuations and potential climate change. Most climatologists believe we cannot expect this unusually favorable climate period to continue. Instead, more serious fluctuations are likely to occur, and unless we monitor and prepare for them, we will face more and more serious disruptions."

The congressional intent to begin anticipating impacts concurrently with advancing research on basic climatic phenomena goes beyond a draft National Climate Program Plan, prepared by the Interagency Committee on Atmospheric Sciences (ICAS), which primarily advocates increasing atmospheric and oceanographic research and modeling. Brown believes a firmer program to transfer data to user communities must begin right away. "The costs of our vulnerability will only increase if we wait longer to assess and plan for climatic contingencies," he has stated.

For biologists, the bill may offer opportunities to attempt relating climate variables to knowledge of agricultural and other land- and water-use patterns, including some extensive studies on ecosystems stability and sensitivity.

The House Environment Subcommittee began in July 1975 to examine environmental research areas in which longer term and highly problematical issues arise. In May 1976 the committee heard testimony on the need for and nature of climate research. Testimony on particular issues has suggested generic problems in federal management of environmental research, so that the focus now is shifting to broad questions, such as how best to implement a national environmental monitoring strategy, encourage regional environmental research centers, develop research reserve networks, and sustain long-term R&D.

President Carter's recent environmental message may well have opened the way for concerted action on several long latent environmental research management and organizational innovations. Climate has been the first on the agenda, and this session of Congress may well see the beginning of a national climate program.

THE ROAD TO RACIAL QUOTAS

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. SYMMS. Mr. Speaker, a recent editorial in the Wall Street Journal, August 11, addresses the unconscionable situation of "reverse discrimination." The editorial is written by Mr. Laurence Silberman, former Under Secretary of Labor. Mr. Silberman centers his remarks around the Bakke case which will be heard by the Supreme Court this fall.

As I pointed out in the RECORD of July 28, this case is an extremely important one for the future of our republican form of government. As Mr. Silberman states, " * * * it is now up to the Supreme Court to insure the survival of the fundamental principles of American democracy." He seems to be crying out for the Supreme Court to terminate the Frankenstein which he unwittingly helped create in the infernal laboratories of the bureaucracy.

I seriously recommend the editorial to all my colleagues:

THE ROAD TO RACIAL QUOTAS

(By Laurence H. Silberman)

In the Bakke case, the Supreme Court has agreed to consider the merits of what is popularly referred to as "reverse discrimination." At issue is the fact that the University of California Medical School (Davis) twice rejected Allan Bakke, a white male, while admitting a specific number of blacks and Chicanos whose objective qualifications did not match Bakke's.

If the Supreme Court reverses the Supreme Court of California—the latter decided 8-to-1 that the preferential admissions policy for minorities was unconstitutional—it is hard to conceive of any "affirmative action" plan that would be forbidden. The only remaining issue will be the size of each minority group's share of education or employment slots.

That we should have come to such a pass—that the constitutionality of this scheme could seriously be argued (as the administration apparently intends to do)—is particularly troubling to me. While serving in the Labor Department, I helped devise minority employment goals for government contractors.

I now realize that the distinction we saw between goals and timetables on the one hand, and unconstitutional quotas on the other, was not valid. Our use of numerical standards in pursuit of equal opportunity has led ineluctably to the very quotas, guaranteeing equal results, that we initially wished to avoid.

The Labor Department had (and still has) responsibility for implementation of the presidential executive order requiring "affirmative action" by government contractors to redress past employment discrimination. Prior to 1969, affirmative action was defined in ambiguous procedural terms. Contractors were continually pressed to do more minority hiring. But fearing legal and political objections to quotas, the Office of Federal Contract Compliance had always refused to say how much more.

Appalled by the resulting confusion, troubled by the assertion of government power without specified standards, uncomfortable with the image the party of Abraham Lincoln had developed, and most of all because the GOP was anxious to expand employment opportunities for blacks, we launched what I have come to see as a fundamentally unsound policy. Its maiden voyage, the Philadelphia Plan, required construction contractors in that city to hire minorities in accordance with numerical goals developed by the Labor Department.

RATIO OF WHITES TO BLACKS

To be sure, we were not solely responsible. Federal courts already had begun to fashion orders in employment discrimination cases which went beyond relief for those specifically discriminated against. The orders required employers found guilty of discrimination to hire in accordance with a set ratio of whites to blacks, whether or not new black applicants had suffered discrimination. Thus was introduced a group rights concept antithetical to traditional American notions of individual merit and responsibility.

It was on that developing legal authority that the Philadelphia Plan was defended when challenged by the Comptroller General. We have been careful to find that the Philadelphia construction unions had engaged in discrimination, therefore we were able to justify the plan as a remedy of discrimination. This was also decisive in persuading a doubtful assistant attorney general—now Supreme Court Justice Rehnquist—and several judges as to its constitutionality.

With that battle won, we went on to spread construction plans across the country like Johnny Appleseed. The next year Labor Department Order #4 required all manufacturers who "underutilized" minority employes to fashion numerical goals for minority hiring and timetables to meet them.

We no longer even purported to base these orders on findings of discrimination—except insofar as we invoked 200 years of American history. But since we conceded that quotas were unconstitutional, we required only "good faith efforts" to reach the goals in accordance with set timetables.

Theoretically, at least, this loose formulation avoided forcing employers to discriminate against a clearly better qualified white applicant for a given opening. Instead, we hoped they would be induced to recruit qualified minorities more aggressively, so as to broaden the applicant pool.

This distinction between goals and quotas, perhaps more metaphysical than real, was never truly understandable; recently it baffled even so sophisticated a lawyer as HEW Secretary Califano.

In practice, employers anxious to avoid inquiry from government officials concerned only with results (rather than merely with efforts) often earmarked jobs for minorities without regard to qualifications. Influenced by government policy—this was happening, after all, under a Republican administration, unopposed on this issue by Democrats—some universities abandoned all pretense and adopted outright quotas for minority applicants.

In hindsight, one can see this was predictable. We wished to create a generalized, firm but gentle pressure to balance the residue of discrimination. Unfortunately, the pressure numerical standards generate cannot be generalized or gentle; it inevitably causes injustice.

Incredible as it now seems, our policy was not designed to foster proportional representation—the dangerous notion that ethnic, racial or religious groups are entitled to proportional representation in all occupations, fostering the Balkanization of America. Admittedly, it should have been clear that no other theory supports the formulation of numerical goals.

Initially the hiring goals of the Philadelphia Plan were significantly below the minority representation in the labor market. That was because black representation in skilled construction trades was so low that any goal represented significant progress. But the plan's numbers had no real conceptual base, and so eventually all plans and orders were directed towards proportionate minority representation in a given labor market. Indeed, the very word "underutilization" necessarily implied that objective.

There were some thoughtful objections to our policy, but since it initially affected only blue-collar jobs, academic support for the Philadelphia Plan was overwhelming. The AFL–CIO assertion that the plan undermined legitimate job qualifications was discounted—in part because apprenticeship standards had been misused by some skilled trades in an effort to keep out blacks, but also because many people in and out of government did not take blue-collar qualifications all that seriously.

THE INTELLECTUALS REACT

However, when HEW, following Labor Department policy, required goals and timetables for university faculty hiring, the intellectuals reacted sharply. I remember my own special shock when three deans came to complain about HEW's decree that in meeting its goals a university department could not hold minorities to a standard higher than the least qualified faculty member. I was asked whether I could identify, for example, the least qualified member of the economics faculty at Harvard. (I could, although admittedly based more on philosophic preference than objective standards.)

Paradoxically, at the very time many universities were complaining vigorously about governmental efforts to impose numerical goals on faculty hiring, they were embarked on admissions policies which have led to the Bakke case.

The University of California's argument that quotas were necessary in order to ensure an appropriate percentage of minority doctors to serve minority patients can also be applied to faculty hiring: An appropriate percentage of minority faculty is needed in order to convert the appropriate percentage

of minority students into the appropriate percentage of minority doctors, and so on. There is no stopping point. Which, of course, is the reason why it is so important for Bakke to prevail in the Supreme Court.

Are the consequences of a Bakke victory as socially intolerable as universities predict (most recently the Association of American Law Schools)? If the court prohibits quotas and even goals, because they discriminate against non-minorities, will the gains blacks have made over the last 10 years be wiped out?

I don't believe so. There is sufficient flexibility in the selection process of all institutions, including universities, to permit consideration of the disadvantages minorities face in competition, without recourse to quotas and separate substantive standards. I am convinced that institutions will generally exercise that flexibility, in part because they will be influenced by the prowess of minorities brought into the mainstream of business and academia in the last decade.

The major discriminatory barriers have been broken and can never be rebuilt. But it is now up to the Supreme Court to ensure the survival of the fundamental principles of American democracy.

JUST A START ON ENERGY

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STEERS. Mr. Speaker, as a member of the Ad Hoc Committee on Energy, I had the privilege of examining the President's energy plan, H.R. 8444, at the time of introduction and after the standing committees of the House had completed their work. I supported and support much of the plan to conserve energy resources, reduce imports and convert to coal. However, the President's plan as approved by this House is not enough.

It has been called a national energy plan, but it fails to cover important areas like atomic energy and leaves more to be done even in the areas covered.

There is much more to do in the energy field both to reduce future energy consumption and increase future energy sources. Coal transportation systems, off-shore drilling, nuclear energy and increased use of geothermal, wind and solar technologies are only some of the major energy issues inadequately covered by the President's energy plan and the work of the ad hoc committee.

The leadership of the Congress, both Democrat and Republican, agrees that H.R. 8444 is a "starting point" of energy legislation. There will be more work done in this field and I look forward to contributing what I can to additional energy legislation.

AMENDMENTS OFFERED

During consideration of H.R. 8444, I offered two amendments to the ad hoc committee during mark-up. The first would have allowed those utility companies that currently offer insulation to continue to do so. This amendment was supported by both utility companies and many environmental groups. Many of these companies that currently help homeowners to insulate and weatherize their homes provide an important service to their customers. These companies are, for the most part, regulated by State agencies and as such would be more responsive to consumer problems and complaints. In addition, their involvement would preclude "fly by night" operations that could do poor quality work and charge too much for that work. Another amendment which had a similar effect was adopted by the ad hoc committee.

My second amendment requires utility companies to provide customers with a list of suggestions of energy-saving techniques developed by the Secretary of the Department of Energy. These suggestions would include the use of energy-efficient lighting and other modifications of household activities that do not require the purchase of energy-saving devices. I feel it is important to encourage voluntary energy conservation. Each of the four research agencies affiliated with the Congress have indicated that the President's energy goals will not be met by the measures included in H.R. 8444. These reports point to the need for voluntary conservation by all citizens, and I feel that my amendment will be a step in the right direction. This amendment was incorporated into the bill as passed by the House.

KEY ISSUES

During consideration of the bill by the House, there were several measures and amendments that generated a great deal of debate. Among these proposals was the deregulation of natural gas. In my earlier statement, I had indicated that I would support some form of deregulation as a means for developing new natural gas supplies. In discussions with many people, including gas drillers and suppliers, it was clear that the regulated price of $1.75 per thousand cubic feet would provide a good rate of return for their investment and would be an attractive incentive for future drilling. Should this not hold true, I will reexamine the question of deregulation to insure adequate gas supplies for our citizens. The President has indicated that the $1.75 price is the first step toward deregulation, and I will be watching developments in this area very carefully.

GASOLINE TAX

A second area of debate was the proposed tax on gasoline. The President had originally requested a standby authority to increase the tax on gasoline as tied to consumption. This measure was defeated in the House Ways and Means Committee. The ad hoc committee voted for an increase in the Federal excise tax on gasoline by $.04. Finally, there was a substitute to that proposal to increase the tax by $.05.

I voted against both of these measures. Supporters of these amendments freely admitted that they were not designed to curb consumption, but to increase revenue for highway construction and improvement as well as mass transit systems. While I support the construction of mass transit systems such as Metro, I could not support encouragement of more driving at a time we should be driving less. I have instructed my staff to explore widening the use of trust funds for construction and operation of energy-saving mass transit systems. If feasible, I will introduce that proposal as legislation at an early date.

CRUDE OIL TAX

I voted against the proposal of the Crude Oil Equalization Tax (COET). This measure would have also increased the price of gasoline by 5 to 7 cents per gallon. Although this is a fairer tax than the proposed gasoline tax, I voted against it because this tax is not a sufficient incentive to conserve gasoline. In addition, it again would have placed a burden on too many people who are already severely strained financially due to the energy crisis and its accompanying inflation. Unlike the gasoline tax, which was defeated, the COET passed the House.

ADDITIONAL FEATURES

I supported: the $400 tax credit for home insulation and a program of low interest loans tied to existing Federal housing programs for weatherization; tax credit for the installation of solar energy technologies and an extension of that tax credit for 2 additional years; a tax on "gas guzzlers" (that is, an automobile that is inefficient in its burning of gasoline); a van pooling program for Federal employees; a study on the potential use of bicycles as an energy savings option; greater use of coal, particularly by the industrial and utility sectors of the economy.

The coal program would be encouraged by tax credits for conversion to coal, and by increased taxes, with certain exemptions, for failure to convert. This use of coal is tempered by certain environmental restrictions which will not be threatened by this conversion program. Also in the bill is a program of appliance standards for more efficient use of energy and a program of utility rate reform that would have each class of customer pay a rate based on the cost of the energy used by that class. This reform is similar to one that I cosponsored in separate legislation here in the House, and one that I introduced in the Maryland State Senate which passed that body.

In general, I feel that the bill proposed by the President is an improvement over present law. The bill passed by the House is an improvement over what the President proposed. I believe it to be a good start on what we need. There remains however, much more to do about energy.

OUR NATION SALUTES THE GREENWOOD FOREST CAVALIERS OF WEST MILFORD, N.J., 1977 WORLD CHAMPION JUNIOR TWIRLING PARADE CORPS

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ROE. Mr. Speaker, on Saturday, August 20, residents of the Township of Wayne, my congressional district, State of New Jersey. will honor the Greenwood Forest Cavaliers who returned from the National Baton Twirling Association's National Championship World Open Competition at the University of Notre Dame, South Bend, Ind., as the world

champion team in the junior advanced parade corps division. The Greenwood Forest Cavaliers, ranging in age from 8 to 18, and averaging less than 13 years of age, have again reached the summit of excellence in the twirling world, bring great honor to the Township of West Milford, the State of New Jersey, and America.

Mr. Speaker, I know that you and our colleagues here in the Congress will want to join with me in extending our warmest greetings and felicitations to the members of this world championship corps: the leaders, the honor guard, the baton twirlers, the rifle twirlers, the flag twirlers, and the drummers; the esteemed instructor-director, managers, parents, and sponsoring organizations of the Greenwoood Forest Cavaliers whose standards of excellence in achieving this most prestigious world championship award and other record performances have brought great pride, recreation, and refreshment of spirit to the people of our community, State, and Nation. I commend to you Philip D'Angelo, instructor-director; Doris and Lyle Gillow, business managers; Louis Finnegan, president of the parents group; Dan Raymond, drum instructor; Maria Geingero; Robert Ketterer, publicity chairman; and the following team members:

Ruth Bakker, Flag.
Jeff Bakker, Drummer.
Fran Beach, Twirling Rifle.
Chris Beach, Main Guard.
Jenifer Bien, Featured Twirler.
Colleen Brennan, Twirling Rifle.
Anthony Cantillo, Drummer.
Enrico Cantillo, Drummer.
Lynn Cooper, Main Guard.
Dawn D'Angelo, Twirler.
Sherry D'Angelo, Featured Twirler.
Judy Dutcher, Twirler.
Susan Dutcher, Flag.
Jacqueline Enfinger, Main Guard.
Carol Finnegan, Main Guard.
Pattie Finnegan, Leader.
Sue Fitzpatrick, Leader.
Gary Foy, Drummer.
Paul Frueh, Drummer.
Karen Gillow, Twirler.
Bobby Gillow, Drummer.
Billy Gillow, Drummer.
Sue Hargash, Corps Captain.
Emma Harper, Twirler.
Gloria Harper, Flag.
Willie Hojnacki, Twirler.
Katie Ketterer, Flag.
Beth McVeigh, Twirler.
Jack Miller, Drummer.
Jack Mullin, Drummer.
Karen Nicol, Flag.
Julian Noonan, Twirler.
Donna Oorbeek, Featured Twirler.
Kim Oorbeek, Main Guard.
Dawn Rammler, Twirler.
Denise Rooney, Flag.
Kelly Seiler, Leader.
Kim Smith, Twirler.
Mary Jo Smith, Twirler.
Eddie Smith, Drummer.
Ricky Smith, Drummer.
Andrea Sobota, Twirler.
Lisa Stephan, Main Guard.
Sharon Taggart, Twirling Rifle.
Doug Thurston, Drummer.
Harold Thurston, Drummer.
Vincent Thurston, Drummer.
Robin Wagner, Twirler.

Mr. Speaker, the Cavaliers were organized as the Greenwood Forest Twirling Team—now known as the Greenwood Forest Cavaliers—under the sponsorship of the Greenwood Forest Volunteer Fire Company and have achieved State, national, and world honors since their organization in 1960. These first-place-winning performances, on more than one occasion in many instances, include the New Jersey State, the New York Open, and the Connecticut Open Championships, with many blue ribbon titles to their credit, such as:

Grand National Parade Corps Division.
Overall for Senior, Junior, and Juvenile Champions.
National Junior Parade Corps Division.
World Competition: United States and Canada.
National Color Guard.

Mr. Speaker, 18 Corps from Canada and the United States performed in this year's national junior parade corps competition. Winning this first place trophy gave the Cavaliers the opportunity to perform in the grand national parade corps competition. The grand national matches the senior, junior, and juvenile national champions in a run-off competition. This first place trophy ranked the Greenwood Forest Cavaliers No. 1 in the world. The color guard received an overall first-place trophy. Finally, the corps was awarded the South Bend Mayor's trophy in honor of their exceptional accomplishments.

The Cavaliers consist of five basic units plus the leaders. The units are the honor guard, the baton twirlers, the rifle twirlers, the flag twirlers, and the drummers. Although each unit is independent, the precision drill choreography produces a single exciting and spectacular show that defies comparison. It is impossible to comprehend the entire show in just one sitting.

This successful national championship drive began last September with the corps annual reorganization. It had proceeded smoothly accumulating almost 800 hours of instruction by the Corps Director Philip D'Angelo, the drum instructor, Dan Raymond, the rifle instructor, Marian Geingero, aided by the highly capable administrative assistance of Lyle and Doris Gillow, the business managers, and Lou Finnegan, president of the parents auxiliary. The quality of the instruction is easily measured when you realize that most of the children were not on the 1974 national champion corps and some started this season.

Mr. Speaker, we in New Jersey take great pride in the quality of their performance which certainly serves as a fine tribute to each of the members and the preparation, training, personal effort and hard work that they have devoted to attain this worldwide victorious achievement. I am indeed pleased to extend heartiest congratulations to each of the members and seek, through our historical journal of Congress, this national recognition of their good deeds. As they celebrate their latest victory ribbon of national renown in "Greenwood Forest Cavalier Day" in West Milford that our people are planning for them on August 20, it is indeed my great pleasure to join with their family and friends in extending this congressional salute to the Cavaliers for their distinguished contribution to the recreational and cultural enrichment of our community, State, and Nation. We wholeheartedly salute the Greenwood Forest Cavaliers, world champions.

YEARLONG BICENTENNIAL CELEBRATION

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. CONTE. Mr. Speaker, it is a great pleasure to call the attention of the House to the upcoming climax of the yearlong bicentennial celebration in the town of Lee, Mass., in my congressional district.

Just as our Nation's Bicentennial last year rekindled interest in our heritage and bolstered pride in our accomplishments, so too, the marking of the 200th anniversary of the town of Lee has captured the spirit and enthusiasm of the townspeople.

Their pride in their community is certainly well justified. Settled in 1760, the town, located in the southern portion of Berkshire County, flourished, first through an influx of persons, many from coastal Cape Cod, seeking fertile farmland, and whose descendants are still numbered among the population; then with the arrival of persons of Irish heritage, whose work building the Housatonic Railroad led them to settle in Lee; and then by a large number of Italian Americans, whose work as stone carvers brought them to Lee's famous marble quarries. Through the years, Lee has served as a veritable melting pot for highly skilled persons from several ethnic backgrounds.

BUSINESS AND INDUSTRY

The industries located in Lee throughout these 200 years have amply demonstrated the talents of the townspeople.

Because of its location on the Housatonic River, Lee early became known for its fine papermaking concerns. In fact, it gained fame as the site, in 1867, of the first U.S. demonstration of a revolutionary process whereby paper was made from wood pulp rather than rags. Today, still, Lee is known for its papermaking with the established firms now engaged in specialty lines.

Those of us who labor within this magnificent Capitol Building here in Washington see the artistry of the people of the community of Lee every day, probably without realizing it. When, in 1851, construction began on the extension of the Capitol, the exterior of the House and Senate wings were fashioned from the strong marble taken from Lee marble quarries. Across the Potomac at Arlington National Cemetery, and across the globe, a great many of the simple, somber headstones marking the graves of our deceased veterans were made from Lee marble.

The Lee marble quarries, for the most part idle for the past four decades, recently were reactivated. Additionally, an off product of the marble quarrying activity, lime has proved a continuous industrial base for the town.

Machine manufacturing has also expanded in the town and its location, since 1956, on an interchange of the Massachusetts Turnpike, has offered easy access to the town to business and industry as well as the tourists who travel to Lee and other Berkshire communities seeking a respite from city hustle and bustle.

CONCERNED CITIZENS

A sense of patriotism was demonstrated early by the citizens of Lee. The town, named after Revolutionary War Maj. Gen. Charles Lee, contributed both men and material to the colonial cause. Lee also figured prominently in Shay's Rebellion, the citizen revolt in the late 1780's.

Citizen activism and involvement remain a hallmark of this small community. A new dam for the municipal water works; a new high school; a new Catholic parochial school; an addition to the First Congregational Church, whose lofty steeple identifies the town of Lee for miles around; a new post office and a well-equipped home for the elderly are just a few of the construction activities in this concerned community over the past 15 years that should be noted. Having in recent years reached the requisite 6,000 population to enable it to change from the town meeting form of government it had maintained since its incorporation in October 1777, to a representative system, its citizens are no less committed to community improvement. The town is also concerned with preserving the beauty of its surroundings with environmental activities currently ranking high in public priority.

CELEBRATION

I regret that time does not permit me to expand on this brief history of this delightful community. The town's history has been well chronicled and as a part of the celebration of the Bicentennial the history of the last 100 years of the town is being compiled. Publication date is planned to coincide, next March, with the date 100 years ago of the publication of the first 100-year town history.

During this year, the Lee Bicentennial Committee has coordinated Bicentennial activities, which, among other events, has included a well-attended Bicentennial costume ball sponsored by the Kwani-annes. The climax of the celebration will come on September 4 with a gigantic Bicentennial parade organized by the Veterans of Foreign Wars, a fireman's muster, and fireworks display.

I know that my colleagues join me at this time in extending a hearty "Happy 200th Birthday" to the town of Lee, Mass., and its citizenry.

EATING OUT WITH EILEEN

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. THOMPSON. Mr. Speaker, although it pains me to say so, there are those of our colleagues more fortunate than you and I who will not necessarily be confined to their respective districts during the August recess by lack of wherewithal for travel. Indeed, some of them may well find themselves in the Caribbean and, therefore, will find of great interest the following article from the Virgin Islander should they at midnight be overcome with an overpowering desire for lox and, perhaps, who knows, even a bagel. In short, the delights of the "deli" are now to be found in St. Croix. The Major Domo of the Strand Street Deli, Mr. George "Sailboat" Sutch, will make the visiting politician feel completely at home having retired himself from the political scene in my home county of Mercer.

EATING OUT WITH EILEEN

You and I normally eat out at one of the many noteworthy resturants which populate the United States and British Virgin Islands. But it's summertime and the livin' is easy. Residents have more leisure time and can be seen scampering off to picnics, going off on sailing trips and there seems to be a rash of fishing tournaments.

But there is, of course, the negative aspect of summer in the V.I.—the drying up of the cash flow. A tourist oriented community, we tend to hi-roll it in season, to wine and dine like the best of tourists, but in the summer it's called tighten the belt.

For both of the aforementioned reasons I have decided to feature take out places, where to go when you want it put in a traveler. Pizza places, Barbequed ribs and chicken to go and as for "brown bagging it," in St. Croix we have recently been blessed with a "new" concept called the delicatessen.

Those of us from America or those who have spent any time in that country are familiar with the term, but it came to my attention the other day that to many islanders it is a foreign statement. I had been looking for the Intercontinental Delicatessen. I heard it was past Sunny Isle near Super Foods, yet I couldn't find it. There was a group of local boys on bicycles in the supermarket parking lot and I stopped and asked them.

"Intercontinental Delicatessen?" I drew a complete blank. Then the spokesman asked, "But what is it?"

"You mean what is a delicatessen?" and he nodded his head.

"Oh, well a delicatessen is a . . ." and I realized it was going to be difficult to explain. "Ah, it is a place where they sell cheeses and cold meats and sandwiches to go . . ."

"Oh it's right up there next to the Bank of America."

I was empathetic to their lack of exposure. I remember when I was first exposed to delis. It was when I was a child and we would go to Brooklyn to visit my grandmother. In the display cooler there would be all sorts of cold cuts and cheeses and I always wanted a bologna sandwich with cole slaw and potato salad on the side. There was a huge wooden pickle barrel, beer on tap and sausages suspended by strings from the ceilings. Grandma told me that the man who owned the store was Jewish and that the reason I didn't recognize many of the different items was that it was Jewish food. I was 17 before I realized that that wasn't necessarily the case, and that as a matter of fact you didn't even have to be Jewish to own a delicatessen.

Mrs. Mickey Reed, owner of the Strand Street Deli in Christiansted, says that delicatessen is a foreign word, that delikatesse in German means a delicacy. In her native Germany a delicatessen is a store that handles special gourmet items like truffles, which a regular store would not carry. Unlike Stateside delis, they do not have sandwiches to go because Germans are not a "take out people." They have their main meal at lunchtime and although they might have a sandwich in the evening they would tend to make them in their own kitchen.

Yes, a delicatessen has some Jewish foods such as Kosher hot dogs and kosher salami. Yes, there are many Jewish delicatessen owners especially in New York. Most had been shopkeepers in Germany before leaving their home country during the time of the Second World War.

The Strand Street Deli is the closest thing to a New York Delicatessen this side of Brooklyn. But the twist is that the place positively exudes Los Angeles—Hollywood to be exact. Sandwiches are named such things as Liza with a Z(that's egg salad with Westphalian ham), Mutiny on the Bounty (an excellent combination of rare roast beef, chicken liver and Bermuda onion on rye) and Tyrone Power which is pastrami and melted cheese. These movie star specials are $2.50 with straight sandwiches $1.95.

I had thought that all this could be attributed to the past presence on St. Croix of the film company for the Burt Lancaster movie, *The Island of Dr. Moreau*. During the shooting, "George George" (that's George Sutch, the Deli's chief hauncho) was really in his element. Everything was "Here Comes Hollywood" and everyone was either a movie star or a producer. But he says no, that he was always a movie buff, especially a fan of the old stars. George can sometimes be seen at Frank's restaurant next to the piano player, gripping the mike and belting out a song and dance.

I like to stop by Strand Street and pick up some goodies, like a Mitzi Gaynor hard boiled egg ($.25), some authentically Danish herring in wine sauce ($3.00 for half a pound) or lox (that's Nova Scotia salmon) and bagel with cream cheese and Bermuda onion and tomato. Dessert to go? Sure. A best seller is Mickey's homemade carrot cake with cream cheese frosting for $.75 a slice.

Now, as is typical, the Strand St. Deli carries homemade salads, potato, macaroni and cole slaw, as examples, and a large assortment of fresh cheeses and cold meats which are flown in fresh either from New York or in the case of the Dutch cheeses, St. Maarten. Swiss cheese is the best selling cheese because, Mickey Reed explained, there are many people who still don't know the other cheeses. The same holds true with the meats, roast beef being the most popular item. The Deli, though, tries to educate the people to different kinds of meats by offering specials like Polish Kielbasa with horseradish sauce. For those unfamiliar, why not stop by someday and ask George to give you a taste of a mild Leicester cheese from England or a Dutch Jarisberg.

Anyone going on a sail can call the Deli the night before and they will pack up a picnic for you. Many businessmen keep a menu tacked to their office wall and "call in" so their sandwich is ready for them when they come. For those who want to cook strange and exotic things in their home, check out some of their other products such as an entire new Dutch Indonesian line or some Oriental delicacies . . . "a package of black fungus if you please."

It is a jolt to find an old world deli on Miracle Mile, that strip along the north shore road which has a multiplicity of gas stations and quickly constructed store fronts.

As you open the front door of Rheinhard's Delicatessen, a little overhead bell jingles in a most homey fashion. Just like in those childhood delis there are hanging bloodwurst and Braunscheiger sausages and a dearth of hard rolls and pumpernickel bread. Cold meats by the quarter pound show

through the glass display counter, there are homemade doughnuts. Fruit rolls (dried fruits pressed and rolled into a cylinder) stand up in apricot and raspberry rows and there are oversized Swiss chocolate bars with lovely technicolor scenes depicting alpine Hansel and Gretel scenes, boxes of fancy cookies dance on strings suspended from the ceiling and there are paper mobiles which say 'specialities from Germany'.

Also German born, Rheinhard has a round face, slight sideburns, a moustache and wears a long white apron. He stands behind a counter which has a spigot that dispenses Courage draft beer for $.75 a glass. Above the counter hang paper pennants—a series of American and German flags interspersed by a fancy food flag.

"Delicatessens in Germany", Rheinhard will tell you, "basically are shops which carry fancy foods, although now more and more they are having separate stores for each category of food, like fish stores and butcher shops."

His deli happens to include select frozen meats, top drawer speciality meats such as sweetbreads, veal for scallopine and country style spare ribs. But the shop is filled with all the other usual fascinating deli foodstuffs such as bristling sardines in curry sauce, pickled quails' eggs and Romanoff lumpfish caviar. It also includes a sandwich take out service with a price range from $1.80 to $2.40.

Rheinhard admits that his supply of cheeses is down but says that he cannot keep the usual amount of fancy cheeses in stock during the summer when the snowbirds (parttime island residents) who are his best customers, are gone. And maybe you actually have to be German in order to have German potato salad taste as good as his.

The Intercontinental Deli started out as a Vimark Cash and Carry, added a deli in July, a health food center just this May and has always been a grocery store. It is an excellent place to buy accouterments, those plastic and paper goods which eliminate the dirty dish syndrome from picnics. At the front of the store is a supermarket basket filled with plastic freezer containers for $.30 a piece. Down the middle aisle you will find "travelers", those 14 oz. plastic party glasses that local bars will give you if you want "to walk with it" (15 glasses for $1.59). On the same shelf, find paper plates, napkins, plastic spoons and flexible straws. There are always bags of ice and even bigger bags of charcoal.

John and Agnes Keagan have recently added a Health Valley line which means you can nibble away on healthy munchies rather than trash food. This concept seems to becoming increasingly popular and you feel like you're doing yourself a favor by snacking on Health Valley Corn Chips and potato chips ($.50), bags of raisins, natural nuts, almonds and on up and down the nut spectrum, pumpkin seeds and party mix.

As I scanned their selection of potables, Agnes said, "Speaking of boat trips, how about a sail in the moonlight with a bottle of cold Moet Chandon?"

"Sounds excellent as long as I have my choice of skippers. Why then I'd even settle for the Great Western Champaigne ($4.50 versus Moet at $8.00)."

Intercontinentals selection also includes a fairly good range of wines from the locally popular Boones Farm Apple Wine ($1.10) to Sichel Chablis ($5.10). Beer is sold by the bottle or the case and runs the gamut from Guinness and Double Diamond on through to all varieties of American beer. And lest we forget, just like its other deli-cousins, they will make up sandwiches and will cater to parties or whatever or whomever.

PIZZA

Davey Jones' Locker is not an easy place to stumble upon. It is located in Gallows Bay, a commercial and light industrial park which is as deserted at nights as it is busy during the day. The restaurant is right behind one of the red doors which line the outside of a concrete building that also incorporates a tonsorial, several warehouses and other commercial enterprises. The only clue that there is a "pizza place" inside is a rather inconspicuous sign which in brief and with no detail, gives its name. Normally, when a restaurant chooses to keep such a low profile it is either a matter of snob appeal or the fact that they cater to a word of mouth crowd.

The latter is true in this case and residents and workers in the area have been coming to Davey Jones' Locker for years. They used to come for coffee in the morning, a serve yourself operation with truck stopper mugs. Others remember it as a pool hall. It is presently very active at lunchtime due to the popularity of the specials, both native and American. In the evening they serve both sandwiches and Italian dishes including a fine antipasto tray. But our major concern is its pizza, its excellence and the fact that since the early 50's, when Dean Martin used to sing *When the Moon Hits Your Eye Like a Big Pizza Pie*, pizza has been one of America's foremost take out items.

Although they have a long itemized list of individual pizzas, most everyone seems to opt for the DJ (and that does not refer to a radio announcer) Special Combo which includes pepperoni, ground beef and mushrooms. On any of the pizzas it is $.75 a shot for any additions, so for $1.50 more I find extra cheese and green peppers a justifiable expenditure. Another big decision is whether to order a regular or large pie, but a scrutinizing look shows that the standard size is $6.25 and an extra large one is only $.75 more, so it is good economics to go for the $7.00 one. It is $.25 extra to take it out and it travels in a large white proper pizza box.

Served in the correct manner, on paper plates and with a jar of dried hot peppers, Davey Jones' is as good as any pizza you might find in a Stateside Italian neighborhood pizzeria. And that is just what Renee Rela's place reminds me of. It has knotty pine walls, continuous black leatherette seating against the walls and reproductions of seascapes.

Families bring the kids in on Friday nights and on Sundays "the guys" stop in for a beer after fishing or playing softball. The juke box plays anything from the Beatles to C&W or in other words, it's my type of place.

RIBS

Vince's Place has become so popular this year and all because one friend told another who told me and now I'm telling you. If I go there one night and find a Maitre d' handing out table numbers, I'll know it's partially my fault. As it is now, St. Kittian Vince Murray says he can't cook the chicken and ribs fast enough.

On Queen Street in Christiansted, just down from the Hummingbird Laundromat, Vince's is housed in a West Indian bungalow, complete with the traditional shutters, overhead fans in tray ceilings and a front gallery which runs the length of the building. Diners can sit back in the outdoor patio if they choose or in the front room and watch the tele while they eat. Red checkered tablecloths, captain's chairs and a dinner menu spelled out in black moveable type on a white plastic board. But many, many customers choose to bring it home, to take away large platefuls of barbecued ribs, corn on the cob, potato salad and garlic bread. At $3.50 a pop they can afford to take out a stack of dinners up to their chin, for the mama bird and all the little sparrows.

The ribs are the thick meaty kind and are knuckle deep in a gorgeous red BBQ sauce which Vince will tell you is homemade but he won't tell you how he makes it. I don't blame him.

The chicken is just as fine as barbequed chicken can be and wades in the same good sauce, only $3.00, including the corn and potato salad or as with all of the dinners one can opt for macaroni salad, macaroni and cheese and in addition there is usually a green vegetable of some kind. If you have trouble making the big decision, there is a combination plate of chicken and ribs for $6.50. The other big sellers that just walk out of there are the broiled lobster ($8.50) and fish ($6.00). The fish steak is always local and fresh and is covered with a homemade onion sauce. Vince is proud of his luncheon specials which are often fish, saltfish and sweet potato and dumpling, or fried fish and johnny cake.

I find it impossible to resist ending a meal without one of Vince's homemade pies, maybe a lemon or chocolate or coconut cream. Why I've been known to take one home in a brown paper bag and have it as breakfast.

ICE CREAM

Probably the original all-American "walk with it," is the ice cream cone. Although it may not have the bizarre excesses of Baskin-Robbins, The Taste Place on King's Wharf boasts of 32 flavors, mas or menos, not all of which even make it to the menu.

A woman commented favorably on the lavendar ice cream cone she was licking. Owner Dave Farlow smiles, "Wait 'till you taste it, it will change your life."

REMOVE GEN. GEORGE BROWN AND YOU REMOVE THE STENCH OF VILE PREJUDICE

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KOCH. Mr. Speaker, I am distressed that President Carter has not seen fit to fire Gen. George Brown. Through his own words, General Brown has shown himself to be antidemocratic and anti-Semitic and has demonstrated an appalling lack of discretion and judgment. On May 9 of this year, 17 Members of Congress joined me in writing to President Carter, asking that he relieve Gen. George Brown as Chairman of the Joint Chiefs of Staff. Regrettably, I have not received a response from the President.

I am certain that we all recognize the danger that this top-ranking military man poses to the values we hold dear. Let me recount some of the horrifying remarks that General Brown has made. In 1974, General Brown in a speech at Duke University in which he said:

> The Jewish influence in this country. . . . It is so strong you would not believe . . . They own, you know, the banks in this country, the newspapers, you just look at where the Jewish money is in this country.

In April of 1976, Ranan Lurie, the syndicated columnist and journalist, secured an interview with General Brown, in which General Brown referred to Britain as militarily "pathetic"; to Israel as a "burden"; and questioned the ability of the United States to stand up to the Russians. Then in May of 1976, General Brown made the most frightening statements. He warmed up by criticizing Congress for interfering in foreign policy "like the man who is kibitzing a chess

game and occasionally reaches in and moves a piece and thereby screws it all up." Far and away the most unnerving statement was the anti-democratic statement which makes it clear why the Ku Klux Klan nominated General Brown as their candidate for President:

If any citizen in this country is so concerned about his mail being read or is concerned about his presence in a meeting being noted, I'd say we ought to read his mail and we ought to know what the hell he has done.

While these statements are now famous, I would like to bring to the attention of my colleagues several incidents surrounding this episode which are shocking and must be investigated more closely. First, there is the fact that the Pentagon actually doctored the tape recording of the Lurie-Brown interview in an attempt to soften the impact of the general's vile words. In maneuvers which call to mind recent acts of secrecy, deception, and abuse of power, General Brown first denied ever meeting Lurie. Then Newsweek International was somehow pressured into delaying and then "killing" the publication of the Lurie-Brown interview. Ranan Lurie was able to overcome all of these activities, and was even able to get the Pentagon to admit that its version of the transcribed interview was false, although the Pentagon attributed it to "clerical errors." Ranan Lurie has written to me about this whole incident and I want to append his letter to me for the information of my colleagues. The letter appears at the end of my statement.

In his letter to me, Lurie makes the point, and I agree with him, that General Brown has so destroyed his credibility and demonstrated his incompetence that he no longer serves any useful military purpose, if indeed he ever did. No one—not the President, nor the Congress, nor the intelligence community—puts any stock in his judgment. Fearful of further alienating himself from the President and being fired, General Brown has now been reduced to a fawning, servile puppet who does not and cannot make independent evaluations of security issues. The Chairman of the Joint Chiefs of Staff should be a person who can skillfully articulate legitimate military concerns on important issues. General Brown is neither skillful nor articulate, although even if he were, he appears to be so prejudiced and ignorant that the damage he has done might have been greater.

General Brown has done a great disservice to himself, his country, and the position of the Chairman of the Joint Chiefs of Staff. If he has any respect for himself or his office, he will resign immediately. President Carter has pledged to restore decency and integrity to Government. He can go far in meeting this pledge by removing General Brown from the scene. Removing General Brown will have the added advantage of restoring the proper functioning of the Chairman of the Joint Chiefs of Staff.

Until President Carter removes General Brown, the stench of vile prejudice, totalitarianism, and servility will pervade the upper reaches of our Military Establishment.

The letter follows:

JULY 28, 1977.

Congressman EDWARD I. KOCH,
New York, N.Y.

DEAR CONGRESSMAN KOCH: Following our good conversation in my club yesterday, I am sending you, as you suggested, some of the points in my forthcoming book that will question the capacity of General George Brown, Chairman of the Joint Chiefs of Staff, to originate sound military judgments, so important to our country. This is due to a lack of personal integrity, poor judgment, political and racial prejudices, and to his incapacity to face the President of the United States to defend legitimate Pentagon frustrations—as is happening right now, for instance, on the subject of our planned troop withdrawals from South Korea.

The combination of his poor personal performances also serves as a very bad example for other Generals who can see what they can get away with. The mere fact that he was not fired immediately creates the most dangerous precedent for future generations, as we have already seen happening with General Singlaub and General Starry.

However, I would like to zero in on some short, specific points, such as the irrational behavior of General Brown that led to the ridiculing of his position all over the world. On April 12, 1976, he gave me an interview that, among other things, disclosed the military impotence of Great Britain, his opinion that Israel is a "burden" to the U.S., raised "the puzzling question" why Iran buys all these arms, disclosed that Greece and Italy were out of the confidence of NATO, emphasized the total dependence of the U. S. on Saudi Arabian oil, and revealed that the U. S. will not allow any war in the Middle East since such a war might endanger the oil flow of the U. S.

The dramatic consequence of such an open interview, which was published by my 250 newpaper clients and almost simultaneously by every paper in the world, was a disclosure of U. S. military and political evaluations that castrated some of our most important allies and even the U. S. itself. It exposed to the opponents of NATO—the Warsaw Pact countries—the poor status of the British fighting forces, and the distrust of the Pentagon in their capacity. Such an official statement coming out of the mouth of our Number One Soldier, probably helped open the eyes of some Soviet generals who never had it so good and such convenient information.

Then, since the good General promised to tie the hands of the Israelis from fighting another war, he certainly helped eliminate their deterring power at a possible peace negotiating table. If the Chairman of the Joint Chiefs of Staff promises "not to allow war in the Middle East," why should the Arabs worry about crowding the Israelis, slowly but surely, with petty terrorism, infiltrations, and economic pressures? As a matter of fact, why should the Arabs sit with the Israelis at all after General Brown proclaimed the Israelis will stand no chance within a short time anyhow? How can we sell billions' worth of weaponry to Iran and at the same time challenge the integrity of Iran's desire to buy these weapons?

And the most important of all: General Brown challenges our own moral capacity to face the Soviets. Answering a British admiral's question whether the U. S. would have the stomach to face the Soviets, he spoke directly into my tape, for publicity, and said: "I must admit it is one whale of a problem!"

The reason for all these catastrophies is the General's ambition to overcome Congress and to "reach" the people of the U.S. by frightening them, worrying them, and having the people "help" the Pentagon with its ever growing budget.

Once the interview came out, a series of manipulations of the media, personal harassment, personal pressures, official lies, misinformation delivered to the Secretary of Defense and to the President of the U.S. started to take place. For instance, General Brown, at the beginning, simply denied ever meeting with me . . . To the Secretary of Defense he did not deliver the whole truth: General Brown told him later that he was interviewed by me on April 12 but did not disclose that he was also interviewed by me in August and September. As a result, misinformed President Ford gave the country the impression that it was a "postponed" interview (part of it, indeed, was unfortunately postponed by the media—however, General Brown himself was responsible for part of that postponement, which political analysts claim helped topple Ford from the presidency.)

In the General's pathetic efforts to explain his own catastrophies, the Pentagon did not hesitate to release to the media doctored transcripts which contained so-called disclosures by the General that were totally opposite to what he really said in his interview with me. Only after I had involved U.S. Senators did the Pentagon release a statement confirming every accusation that I had made about the doctored transcripts. The Pentagon called them "clerical mistakes" (the Pentagon's confirmation to Senator Weicker of May 12, 1977, is attached).

On May 21, 1976, General Brown delivered in a lecture to about three hundred generals, admirals, and high ranking State Department intelligence officials his personal political beliefs that can be summed up in one headline: "I think it is terribly important to continue to woo Egypt . . ." (by selling her sophisticated weapons). This reflects General Brown's personal lobbying in very specific pro-Arab directions over a long period. Combining these facts (again confirmed in the attached letter of May 12 to Senator Weicker) with his declared anti-Jewish and anti-Israeli previous statements, adding the fact that the Ku Klux Klan nominated him as their candidate for the presidency—a regular American taxpayer must have to start wondering what kind of objective services the Chairman of the Joint Chiefs of Staff performs here?

At the same lecture at Ft. McNair, the General also proposed opening the mail of American citizens and registering citizens' appearances in public meetings—some kind of KGB tactics. Although it was widely exposed in the media, beginning in March 27, 1977, in the Chicago Sun Times and in numerous editorials all over the country—I believe that until today we have not heard any apology by General Brown for such comments. My book will establish the fact that the General sticks to his guns and yet maintains his very high position with the blessing of the President. Should we assume that the General continues to think this way and perhaps is creating the framework for such violations? (Just today I learned that private mail is continuing to be opened and delivered for the inspection of military intelligence!)

However, the even more dramatic conclusion that the book is going to draw will be the fact that President Carter maintains General Brown in his position since he has found the Chairman a most convenient General to handle. Worrying about his personal position, General Brown offers almost no resistance to the President as he should when it concerns pure military evaluations: since the General is most eager not to anger the President anymore, he fails to present legitimate U.S. military objectives and evaluations that are contrary to the President's policy. Such is the case with the South Korean-U.S. troops withdrawal—which my sources say that General Brown is very much opposed to, yet does not dare put on record because of his flimsy performance in the past. The Detroit Free Press of May 30, 1977, says: "The

Joint Chiefs of Staff accepted President Carter's decision to withdraw U.S. ground forces from South Korea, but did not display 'any exuberant enthusiasm' Pentagon sources say. The man who was in a position to rally official opposition to the plan, General George Brown, is believed to have backed off a stronger stand for personal reasons. His outspokeness in the past, especially some anti-Semetic remarks, have made him less than eager to go up against the President."

So, Congressman Koch, the real question is: How much is this great nation of ours and every individual citizen sacrificing in dignity, efficiency, and security to maintain the position for General Brown?

Respectfully yours,

(RAN).

MAY 12, 1977.

Hon. LOWELL P. WEICKER,
U.S. Senate, Washington, D.C.

DEAR SENATOR: Following up on our meeting today in your office, I would like to confirm that:

(1) Upon listening to a tape recording of the remarks of General George Brown, Chairman of the Joint Chiefs of Staff, at the National Defense University on May 21, 1976. I distributed to the press, radio and television the following quotes of what General Brown said:

"Perhaps the most dramatic thing that has happened in the past couple or three years has been the inclination of the Congress, the Legislative Branch, and I may sound very cruel here and I'm sure they are well motivated and have only the interest of the country at heart, but the propensity of those people who seem to me very much like the man who is kibitzing a chess game and occasionally reaches in and moves a piece and thereby screws it all up."

"If any citizen of this country is so concerned about his mail being read or is concerned about his presence in a meeting being noted, I'd say we ought to read his mail and we ought to know what the hell he has done."

"The Congress with their Constitutional responsibility can tell you to take it from point A to B, don't drive it over 20 miles an hour or 55. But that doesn't mean every damn hand has to be on the steering wheel. That causes a wreck. And that is what happened."

"Let me say that I acknowledge that the legislature has the Constitutional responsibility in the overall management of the objectives of the country and the programs in support of those objectives."

"The Israelis are well armed. I think the number now is nine or ten armored divisions. Just think about that. That's more than we have. (Laughter) So that I don't think that the area of balance has changed dramatically by this. I think it is a very worrisome thing because it lets the Soviets in there and all that it may bring. But it happened in Egypt and some of the Egyptians got a belly full and they asked them to go home and they went. And we had a big debate about whether to sell 6 C–130s."

"I think we ought to sell it to them. I don't think it would pose any serious threat to the Israelis. We are selling them F–15s and F–16s and I don't think anyone in their right mind would try and fly an F–5 against either of them. They have had MIG 21s. It's not an improvement. It is really a sustaining element of their force. The F–5 is roughly equivalent to the MIG 21. Same functions. So I personally think we ought to do it. I think it is terribly important to continue to woo Egypt and keep her away from Soviet Union. But we have one whale of a debate in this country. I sat with the Jewish National Leadership yesterday as strange as that may sound (laughter) for about an hour and I tell you I would hate to have mentioned I wanted to sell Egypt F–5s. No I just don't think the country is ready to do that. Congress just wouldn't face up to it. They wouldn't even sell Hawks to Jordon. And the big debate about 6 C–130s and they made big statements about this isn't an offensive armament. What would they say about F–5s? I don't think it will happen."

(2) The original Department of Defense transcript of General Brown's interview with Ranan Lurie on April 12, 1976, should be corrected to read:

In the first answer, sixth line: "have us moving in that direction" instead of "are misleading in their appearances."

In the sixth answer, eleventh line: "(inaudible) we didn't. Congress prohibited" instead of "and no one involved in Congress is prohibiting."

In the eighteenth answer, first line: "there really is Iran and the puzzling question" instead of "there is Iran and there wasn't any question."

As I have publicly stated before, I conducted an extensive, personal investigation of the way in which the tape of the April 12, 1976 interview was transcribed. I concluded that the inaccuracies were the result of clerical transcription mistakes, resulting from the fact that, as the transcript noted, the original tape was "imperfect."

Sincerely,

THOMAS B. ROSS.

THE FEDERATION OF IDEAS

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KEMP. Mr. Speaker, there are some changes in society which occur so subtley that they go unperceived by the bulk of policymakers, even when they had something to do with the change.

This is what has occurred with respect to idea generation in the United States. Through Government funding of programs, especially in the basic research area, and its sponsorship of various institutions, the creativity of the Nation's principal resource people, has been bent toward Government. The innovation we need to preserve our technological lead and assure its future successes has been recast into a framework established by Government interests and needs.

In no place has this occurrence been more observable in recent years than in energy. The Federal Government is coopting the entire subject field, and in my opinion that will result in substantially less innovation. It is a problem of serious magnitude, one which is going virtually unnoticed in the current national debate on energy. Yet it is not for lack of a paper of seminal importance that this has gone unnoticed and unmentioned.

There is such a paper. It is authored by David G. Soergel, whom I regard as one of the singular authorities on creativity, Government and private research and procurement policy in this capital city. He knows of what he speaks.

The Heritage Foundation of Washington, D.C., published one of its "Backgrounders", one authored by Mr. Soergel, on this subject. It follows, and I commend it to the attention of all my colleagues, particularly those in the Senate now debating the President's proposed energy program, those on the Committee on Science and Technology, and those in the Office of Technology Assessment:

THE FEDERALIZATION OF IDEAS: A NATIONAL ENERGY DEPARTMENT

(By D. G. Soergel)

INTRODUCTION

President Carter has characterized our national energy situation as the "moral equivalent of war." Naturally, he has proposed to win this "equivalent war" by creating an "organizational equivalent of the Pentagon"—the National Energy Department.

Most Congressional debates have focused on federal tax and price mechanisms to conserve current energy supplies and regulate its use. We are all familiar with protracted debate on such matters as gas-guzzler taxes, natural gas wellhead price controls, nuclear power issues and the like. Some new technologies, such as geothermal and solar, have also hit the news and been the subject of congressional debate. But what about other new technologies, products and processess—the kind of technologies and approaches which reside in the minds of inventors and innovators across America, ones which have not been "invented" in Washington and are not likely to be? The Administration has a position about those "unkown" technologies and inventors. It requires that unknown inventor to come to this new department. It will decide what is worth financing and what is not.

This proposed statutory approach to the introduction of "things that are new"—innovation—is the same as the Defense Department's. However, as will be shown, Congress has paid little attention to large-scale economic distortions which this approach will cause.

Whether we are truly in a situation which is the "moral equivalent of war," makes no difference—the innovation of new products, supplies, services, and processes cannot be centrally financed, managed and controlled from Washington. The reasons for this are found in important differences between energy and weapons markets, where the federalization of ideas is legitimately practiced. What will be shown is that energy innovations require the democratization of ideas rather than the federalization of ideas.

MARKETPLACE DIFFERENCES

When the Defense Department implements its innovation policies, it creates choices for the government's eventual investment and use. On the other hand, the choices that the Energy Department proposes to innovate will not be for the Department's investment and use but for nonfederal purchase and use by city and state governments and private energy users and producers.

The National Aeronautics and Space Administration's (NASA) marketplace is the same as the Defense Department's. Both NASA and the Defense Department assess their capabilities to responsibly perform in the future—and both will, from time to time, create a demand for the innovation of new weapons, space systems, products, and services. The Defense Department along with NASA legitimately practice the federalization of ideas—they motivate and select ideas and provide risk capital financing to create future investment choices. But the Administration proposes that the new National Enenergy Department do exactly the same—it will also federalize ideas.

COMMON INNOVATION POLICIES WILL NOT WORK

The difference in the end-use marketplace for innovation (federal versus nonfederal buyers) means that common innovation policy simply will not work in the taxpayer's interest. Here is why:

Nonfederal energy buyers and users must learn about new innovations along with developers. If not, they will be inferior buyers. The Defense Department and NASA technical personnel learn along with developers so that what they eventually invest in and operate is a consequence of learning about possible choices from their beginnings. While there may be arguments about how efficiently the Pentagon procurement policy operates, there is little argument about its need to perceive the demand for innovation, to manage it, and to finance the process which supplies it.

Energy must be delivered within a local framework of price, capability, and availability goals, in a context of local operating conditions. Each locality has a different framework from the next, and an innovation suitable for one locality is not necesarily suitable for another. Thus, the local demand for energy delivery may be common for several localities, but the constraints placed on innovation be uniquely different. Different alternatives must be explored to deliver a common capability.

The decision to use and control "seed" or "startup" risk capital which is required to start proving new ideas must be decentralized. If it is centralized, small firms and individuals will not be able to afford the cost to create and propose their ideas for consideration, and a sizable share of the nation's inventive and innovative resources will remain untapped. Small firms and individuals simply cannot afford the cost of proposing new ideas and waiting for decisions according to federal procurement rules. These elaborate rules have been instituted to control the large costs of large companies. They total more than 4,000 procurement-related statutes and 3,000 pages of implementing regulations.

INNOVATION REQUIRES ADAPTIVE-LEARNING

Why should federal engineers and scientists learn about new energy innovations when they are not part of eventual using organizations? Transferring what they learn to state and local governments, or to private buyers is certainly less effective and efficient than directly engaging eventual buyers and users from the beginning. This practice of engaging buyers and users at the beginning of innovation works well for Defense and NASA and should work equally well for nonfederal buyers and users. So, why statutorily install the "federalization of ideas" where what is learned must go through an additional costly step of transference? Also, coercive measures may be applied to force the use of whatever the Department has created. Localities and other nonfederal and private buyers will have no choice but to invest in what the federal level comes up with, even if it does not match what is needed locally.

DEMOCRATIZATION OF IDEAS

If the selection and control authority is vested in one centralized public group, a group which also has the "seed" capital to commence innovation, too many of the nation's future energy decisions will rest on the wisdom of that group's arbitrary choices made within this a noncompetitive bureaucratic environment. Ideas competitive to those selected by the centralized authorities may be simply "buried" and never heard about.

Centralized public selection authority is a key feature in the "federalization of ideas"—in stark contrast to the "democratization of ideas" characterized by many private idea investors, selectors, and risk-takers, each in competition with others.

Competition between several "idea sponsors" is needed to drive prices down in the delivery of a common local capability.

Friederich Hayek, the 1975 Nobel Prize winner in economics, had this to say about centralized or decentralized government functions:

"While it has always been characteristic of those favoring an increase in governmental powers to support maximum concentration of those powers, those mainly concerned with individual liberty have generally advocated decentralization. There are strong reasons why action by local authorities generally offer the next-best solution when private initiative cannot be relied upon to provide certain services and where some sort of collective action is needed; for it has many advantages of private enterprise and fewer of the dangers of the coercive action of government. Competition between local authorities or between larger units within an area where there is freedom of movement provides . . . that opportunity for experimentation with alternative methods which will secure most of the advantages of free growth.

"It is usually the authoritarian planner who, in the interest of uniformity, governmental efficiency, and administrative convenience, supports the centralists' tendencies. . . ." (*The Constitution of Liberty*, F. A. Hayek, pages 263–264.)

"LARGE" AND "SMALL" TECHNOLOGIES

Most innovations which have benefited private consumers—where we find the energy market—have not come from current producers and do not involve large-scale technologies. To name a few: Xerox was not invented by an office equipment manufacturer; the transistor was not invented by a vacuum tube producer; the ballpoint pen was not invented by a pen producer; the hydromatic auto shifting mechanism was not invented by Detroit car manufacturers. There are many other examples. Each of these privately created and financed ideas has pumped millions of dollars into our private enterprise economy.

Another example of this is electric motor energy conservation of up to 50%. This invention, which is now well into the innovation stage, is of particular interest not only because an electric motor producer did not invent the approach but also because government research and development had nothing to do with it. The engineer/inventor mortgaged his home and borrowed money to finance his idea; he did not spend his resources trying to penetrate the federal bureaucracy.

The ability to create new and beneficial ideas is independent of corporate size. Large firms tend to improve what they are currently producing. All firms, large or small, which are not producing for a particular market but wish to enter it tend to create ideas which deliver similar capability but with products made up of different, competitive technologies.

This is not to be construed as an argument that "bigness is bad" and "smallness is good." Large federal contractors have contributed significantly to attaining national goals in the past and will continue to do so in the future. Rather, these questions must be addressed: Do our federal innovation policies foster equal economic opportunity to create and propose ideas to nonfederal and federal sponsors alike? Do they foster corporate growth based on competitive merit?

The answers to these questions are of critical importance to the health and vitality of our private enterprise economy. If federal innovation policies give unequal economic treatment favoring corporate largeness, they may be identified with the growth of economic concentration and oligopoly. This would head us dangerously close to the nationalization process such as has been occurring in Britain. The "means of production" will be transferred from private to public ownership where unequal economic opportunity exists.

WHERE THREE DECADES OF FEDERALIZATION OF IDEAS HAVE LED

There is another problem—other than marketplace difference by unchallenged adoption of Defense's innovation policies by the new department. Current federal innovation policy, procedure, and practice is largely an outcome of the Defense Department's need for new weapons since World War II. Understandably, private risk capital has shied away from what may be characterized as a monopsonistic and highly uncertain marketplace. Three decades of federally sponsored innovation to primarily meet the Defense Department's needs have led to serious domestic economic distortions. These distortions continue to be promulgated by other civil agencies and are proposed to be continued by the new Energy Department.

Here is where we are today. The federal government is now the "risk-taker of last resort" and finances more R&D risk capital than all private industry combined. Civil agencies have adopted the Defense Department's innovation policies and their sponsorship of risk capital research and development funding has been on the rise. In constant dollars, civil agencies have shown real growth while Defense and NASA research and development funding has been in decline. The 1967–1977 rise in civil research and development, in constant 1967 dollars, has been 50 percent, from $3.2 to $4.8 billion, while Defense Department/NASA research and development funding has dropped 40 percent, from $13.3 to $8.3 billion.

Individuals and small firms must go to private capital markets to get "seed" money in order to challenge established federal contractors. However, privately-sponsored risk capital is in decline and small technical firms are finding private risk capital increasingly more difficult to obtain. A Department of Commerce report shows that small, technical firms' public stock offerings declined from $1.16 billion in 1969 to $16 million in 1974—a reduction of more than 10 to 1 over five years when inflation is taken into account. No small, technical-firm public offerings were made between March 1974 and August 1975. The earliest risk capital expenditure, "seed" or "start-up" money, is almost impossible to get through new offerings.

In contrast, during 1975, the federal government controlled and distributed $20.8 billion of taxpayer-supplied risk capital for R&D activities. Fifty-four percent of the money went to organizations which do not pay federal taxes, the not-for-profit organizations; the remainder went to profit organizations. This means that most of the critical beginnings of innovation, the selection of technologies to configure into new products, is not performed within a price competitive supplier's marketplace.

FEDERAL RISK CAPITAL MECHANISMS

How does government spend our money for R&D purposes? Government uses two mechanisms in the distribution of R&D risk capital: indirect payments by federal contract price markups and direct payments by research and development contracts, grants, and agency budget allocations for in-house scientific and technical work.

Eighty-five percent of the federal equivalent to private "seed" or "start-up" capital was indirectly paid to ninety-nine of the largest defense contractors out of 23,875 defense suppliers. The amount the ninety-nine received was slightly less than $1 billion while the 23,776 remaining suppliers received only an estimated $100 million.

This "start-up" risk capital is indirectly distributed according to the amount of federal contracts a contractor has or expects in the next year—the more federal contracts,

the more "start-up" risk capital allowed in federal contract price mark-ups.

Obviously, it is beneficial to be "big" in federal contracting because "start-up" capital is more readily obtanied from the federal Treasury. The corollary, however, is that individuals and firms without federal contracts will not receive "start-up" capital indirectly from government and, very likely, not from private sources either.

Federal government also makes direct risk capital payments to support innovation after indirectly paid "start-up" capital has been spent. These direct payments are called "applied research" expenditures in the scientific and technical community. In 1975, out of $5 billion directly spent, $3.5 billion went to not-for-profit organizations, the remainder to profit companies—a distribution of over 2 to 1 favoring organizations not obligated to pay federal taxes or perform work competitively with a profit objective.

THE NET OUTCOME

The net outcome of three decades of the federalization of ideas, as legitimately practiced by the Defense Department and NASA is that their federal innovation policies foster an unequal economic opportunity to participate in federally sponsored innovation markets. Hard-to-get seed capital is mainly distributed to the largest defense suppliers. Follow-on-money for applied research is mainly distributed to not-for-profit organizations; privately supplied risk capital is increasingly difficult to come by.

This has serious long-term economic consequences. The essential economic role of individuals and small firms is to challenge economically-concentrated large firms and their economy-of-scale marketplace advantages.

Equal economic opportunity to create and propose ideas should be an essential feature of federal innovation policy and practice, but the opposite has been the case.

CONCLUSION

Two important considerations should have provided the framework for the new Energy Department:

A recognition that the Defense Department/NASA innovation policies and practices have led to serious distortions to our domestic economy. These distortions should not be adopted by the new Department.

A recognition that the Energy Department's demand for innovation should open choices for nonfederal buyers, not federal buyers, and that nonfederal buyers must learn along with developers before investment decisions are made. This means that the selection and financing of ideas must be spread wider. rather than concentrated.

It is not in the nation's interest that the federalization of ideas be applied to civil markets. Where it is legitimately applied, such as the Defense Department and NASA, extremely important changes are still to be made.

THE PROBLEM OF ILLEGAL ALIENS: THE PRESIDENT'S PROPOSAL

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STEERS. Mr. Speaker, our country is currently faced with problems with which we must cope to insure an economically and socially healthy America. However, while the United States does not enjoy full employment and, in fact, many able Americans are on welfare, we are still viewed as a haven to many millions of people throughout the world.

This lure of the promise of success has been one of America's greatest assets in its first 200 years of development, because it attracted a wide variety of nationalities seeking a bright future in a new land. However, times have changed, and America can no longer assimilate new immigrants to the same extent as we once could.

In fact, new illegal aliens are now aggravating the already difficult situation. Estimates of the numbers of illegal aliens in the United States range from 4 to 12 million. In addition to violating the Immigration and Nationality Act, illegal aliens are believed to contribute to a number of social and economic problems, including unemployment and the overburdening of Federal and State public assistance and social service programs.

Last week, President Carter presented to the Congress and the Nation his proposal for coming to grips with this severe problem. I commend his recognition of the need for a comprehensive plan, but I must say that I have serious reservations about some of its provisions.

EMPLOYER SANCTIONS

Without a doubt, the problem of illegal immigration is fostered by employers seeking a cheap source of labor. I favor stiff civil penalties for those employers who consistently hire illegal aliens. However, it is important that a system be devised whereby the employer can determine reliably whether or not the prospective employee is legally entitled to employment in the United States. If this is not done, employer sanctions will not be equitable or enforceable.

BORDER ENFORCEMENT

One of the greatest obstacles to reducing the flow of illegal immigrants is the large and underpatrolled perimeter of our country. I feel that border enforcement should be increased, especially where it has been shown that the greatest problems exist.

ADJUSTMENT OF STATUS

In his proposal, President Carter placed illegal aliens in three categories: Those who arrived during 1969 or earlier, those who arrived in the period 1970 to 1976 inclusive, and those who arrived after January 1, 1977.

I find it strange that only those in the last group will now be subject to existing immigration laws. Is this not a defeatist attitude that implies our immigration laws are impossible to enforce?

Illegal aliens who arrived before January 1, 1970 will receive permanent resident status. This may be acceptable, since those aliens have established, in many cases, strong community ties and it would be inhumane to deport them.

I do not see the merits, however, of providing temporary resident alien status to those who entered the country from 1970 to 1977. The administration claims this will enable the Immigration and Naturalization Service, INS, to compile statistics regarding the scope and severity of the overall problem. The temporary resident status will be granted for 5 years, at which time a decision on their final status will be made.

It would appear to me that, in 5 years, strong arguments could and would be made to provide these aliens with permanent resident status, as with those now who immigrated before 1970. In fact, I view this part of the whole program with the greatest skepticism. Those who arrived in the United States as late as December 1976 should not be given this tacit permission to remain.

We are fortunate to be a country that is appealing to millions of people throughout the world. However, if we do not find the strength to say "No" to many people wishing to immigrate, we might find our basic socioeconomic system weakened and endangered.

There is also a great inequity created for those people who came to this country legally and cannot change their status to that of permanent resident. The real irony that is created with President Carter's proposal is that, had these people entered the country illegally, they would be allowed to remain whereas now they will be forced to leave when their visas expire.

COOPERATION WITH THE SOURCE COUNTRIES

If prospective illegal aliens find their home economies are improving, their desire to enter the United States will obviously decrease. I agree with President Carter in principle that the United States should give special attention to aid programs in the source countries. However, I think this approach will work only in the long run, and the potential for less-than-effective results is great.

ENERGY CONSERVATION BY TAXATION

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. YOUNG of Florida. Mr. Speaker, when President Carter first challenged the Congress to develop an energy program, I applauded his determination to meet our energy problems head on. Although finding some initial fault with a few of the President's recommendations, I pledged my every effort to work toward a workable and coherent energy policy. I regret to say, however, that the Energy Policy Act approved by the House does not meet this goal, and I am seriously concerned over the negative impact some of its provisions will have on our Nation, the State of Florida, and especially the residents of the Sixth Congressional District. In my opinion, the bill is laden with flaws and inconsistencies, and I would like to take this opportunity to discuss just a few of these defects.

The basic approach of this legislation is to rely upon increased taxes to discourage energy consumption—increased taxes which, in the long run, will have to be borne by the already overburdened consumer. Fortunately, we eliminated the proposed gasoline tax increase, but this legislation imposes a crude oil equalization tax—COET—which affects al-

most every aspect of the American way of life. Over a 3-year period, it is predicted that this $39 billion crude oil equalization tax will drastically increase production costs for American goods and services. It will increase by some 7 cents a gallon the price of gasoline, diesel fuel, residential fuel oil, home heating oil, and jet fuel. Higher fuel costs will result in increased transportation costs, which obviously will be passed on to the consumer via higher prices for goods and materials; increased costs in manufacturing synthetics which range from the clothes we wear to the foods we buy wrapped in plastic will be passed on to the consumer; and the list goes on and on. Do any of my colleagues seriously believe that industry will—as a measure of good faith—sacrifice its profit margin to absorb these increased costs?

Supposedly, in an effort to lessen the burden imposed on the individual taxpayer, part of the money received from COET will be rebated to the public through various tax credits. Let us examine this so-called rebate proposal: Only 6.5 percent of total revenues received from this tax are rebated directly; only 12.3 percent is to be rebated through residential tax credits; only 1.75 percent is rebated through business tax credits; and only 6.3 percent will be rebated through home heating oil tax credits—52 percent is not rebated at all. Where does it go? There is some speculation that a large portion of this tax revenue will be reallocated toward the implementation of President Carter's proposed welfare reform package. None of this money will be used to provide for the production of new quantities and sources of energy. It is interesting to note that, in response to my recent congressional questionnaire, not only were the vast majority of my constituents opposed to the use of increased taxes as a means of achieving energy conservation, but 68.9 percent indicated that should such additional taxes be imposed, they would prefer that the extra revenue be used to develop more energy. Only 20.8 percent opposed earmarking revenues for energy development and 10.3 percent expressed no opinion.

The bill passed by the House offers no means by which the revenue received from the imposition of the crude oil equalization tax would be used to seek out new energy sources. We attempted to amend this section of the bill to redirect the revenue received from COET to provide additional incentives for the investment in oil exploration, to build mass transit systems, and to encourage the development of synthetic fuels. Unfortunately, we lost on each count. I have consistently maintained that we cannot tax away our energy problems, and that while energy conservation is good and necessary, it is only part of the solution. Much more emphasis must be placed on increased exploration of existing untapped supplies and on developing alternative sources of energy.

Another principal provision of this bill imposes tax penalties which force new and existing powerplants and major industrial facilities to convert from oil and gas to coal. While I support conversion to coal whenever and wherever possible, forced conversion within a specified time frame places an unfair burden on States such as Florida. There is simply just no coal reserve reasonably close to most of Florida's powerplants. Instead of long lines at the gas stations like we experienced during the last energy crisis, I envision long lines at the railroad crossings as the thousands of gondola cars pass by loaded with coal on the way into our peninsular State and with sludge on the way out. It has been estimated that the cost to convert from oil and gas to coal for a State like Florida will range somewhere between $10 to $14 billion—another cost which will be passed on to the consumer.

Furthermore, the coal conversion program conflicts with current air quality requirements since the goal of using 400 million tons of new coal by 1985 cannot be met under the 1977 Clean Air Act until coal can be converted cleanly into low- and medium-Btu gas that can be burned in an environmentally acceptable manner. The problems associated with developing this technology are not even addressed in the bill except to levy an additional financial burden on those unable to convert to coal.

Mr. Speaker, months of committee time was spent on drafting this legislation and 5 days of heated debate took place on the House floor. It saddens me to know that the end result of all that time and effort is nothing more than another tax revenue bill. The National Energy Act passed by the House raises revenues for the Federal Government, but lacks any incentive to provide for increased production and exploration of alternative energy sources by private industry; it raises consumer costs for all Americans, but does nothing to solve our long-range energy problems; and the overall energy savings purported in the bill are minimal. I am greatly disappointed in the House's failure to enact a comprehensive and workable energy program which addresses both present and future energy demands.

INTRODUCTION OF H.R. 8897, ELECTRIC UTILITY TAX REFORM ACT OF 1977

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. STARK. Mr. Speaker, on August 5, 1977, I introduced H.R. 8897, the Electric Utility Tax Reform Act of 1977. I would like to take this opportunity to insert my statement, the bill, and an excellent article on this issue by the Honorable Robert Batinovich, president of the California Public Utilities Commission that appeared in the July 21, 1977, issue of the Public Utilities Fortnightly. The referred to material follows:

Mr. Speaker, today in conjunction with Senator METCALF, I am introducing the Electric Utility Tax Reform Act of 1977. This legislation is presented because current Federal tax laws that apply to utilities are harmful to both utilities and to consumers, and act to undermine the credibility and integrity of the entire regulatory process.

This legislation, which exempts electric utilities from the payment of Federal corporate income taxes and establishes a usage tax on electrical consumption, will restore to the States complete authority to regulate their utilities. In addition, this bill will lead to a considerable simplification of company financing and will neither increase rates to consumers, nor decrease revenues to the Treasury.

In 1975, the Nation's privately owned electric utilities computed a tax liability of over $3 billion, which was considered a legitimate expense by State regulatory authorities and passed on to the customers in the form of higher rates. Through the use of liberal tax write-offs, such as Accelerated Depreciation and the Investment Tax Credit, these companies actually paid taxes of only $833 million, which is less than 2 percent of their total revenues of $45.6 billion. The customers of these utilities, while paying for the estimated taxes in higher rates, rarely benefit from these tax credits. Federal law prohibits the State regulatory bodies, in a majority of the States, from mandating that the companies pass the credits on to the customers. Furthermore, section 46(e) of the 1971 Tax Reform Act, requires State utility commissions to permit the private utilities to earn a return on the value of the Investment Credits just as if the credits were privately raised capital rather than monies provided by the customer ostensibly for meeting Federal tax burdens.

The timing of this legislation is ideal in the sense that we are in the midst of developing a coherent energy policy. Many provisions of the energy bill underscore the fact that reliance on electricity in this country will continue to grow, and it is just this growth that has contributed to the egregious situation that the legislation seeks to address. As long as utilities continue their growth, the taxes that have been deferred through the tax credits will never be paid to the Government. In essence, we are giving electric companies an interest-free loan, that probably never will be paid to the Government, while individuals are forced to borrow money at interest rates that range up to 18 percent. This is a prime example of an injustice that is built into the tax code, and it is no wonder that people have lost faith in the regulatory process, and in the fairness of our laws.

A recent Library of Congress analysis concluded that if tax benefits were flowed-through to the customer, rather than amortized by the companies over the life of an asset, customers would be paying lower rates in the long run, even when higher financing costs are taken into account. Even when companies stop growing and exhaust their tax deferrals, rates remain artificially high. These companies must ask for 50 percent more than they actually need in rate increases. The additional 50 percent is necessary to pay to Federal taxes, and the state commissions must allow the increase.

The present system provides no mechanism to promote the conservation of electrical energy. According to the Edison Electric Institute, growth in electrical consumption has once again reached the pre-oil embargo level of 7 percent annually, and our energy program will, if anything, increase this rate of growth. While my legislation imposes a usage charge to equal the tax revenues paid by the utilities, it will provide us with a future means to induce conservation by scaling the tax according to consumption.

With the elimination of the complex Federal tax regulations covering the Investment Tax Credit and Accelerated Depreciation, state regulatory authorities will be freed from the conflict between their responsibilities to ratepayers and the dictates

of Federal law. They will be able to conduct rate-setting proceedings in a simple, straight forward manner, and they will be able to readily ascertain the effects of their decisions on both the companies and the consumers. The regulatory lag, the delay between the time a rate change petition is filed and when it is finally acted upon, will be diminished, and, most importantly, the process will be more understandable which should dispel the prevalent belief that the companies are scalping the public.

This legislation will also greatly simplify the accounting procedures of the companies. They will no longer have to worry about an impending tax liability in the event that they stop growing. Instead, the companies will be relieved of all future tax liabilities, which should lead them to base decisions to expand on true needs rather than tax preferences. To be sure, there may be an increased cost to companies trying to raise construction capital. This increase, however, will be offset by the elimination of tax liabilities and by the higher rates of return that will be allowed by the state commissions to compensate for the decreased cash flow. Savings will also be achieved because companies' operating expenses will no longer be subsidized by the government through the tax code. This should lead to a reduction in overall operating expenses, and greater cost-consciousness by company managers which will decrease the need for regulatory oversight. Further, the companies will no longer require the armies of accountants and attorneys that they have needed in the past to conduct rate proceedings.

For ratepayers, this legislation will not, on the average, produce any immediate change in the cost of electricity. The usage tax is constructed so that rates will remain at present levels, and to insure that the Treasury receives an amount of revenues equivalent to that lost through the exemption to the utilities. Ratepayers are already paying the Federal income tax of the companies, as it is included in the rates. Their bill will simply show the customer what portion of the bill is going for Federal income taxes, and it will be collected by the companies in much the same way that the telephone company collects the U.S. tax from its customers. The major benefit to consumers in this bill is that they will be assured that they are paying the actual taxes owed to the government, instead of the present method where companies collect taxes that are never paid.

The usage tax, while in its present form will lead to no significant change in either consumption or rates, will provide an effective method for future conservation efforts. Passage of this bill will allow us to base the tax on consumption, should that become necessary in future years to discourage the use of electricity. As a mechanism for promoting conservation, the usage tax is not a new idea. In 1975, S. David Freeman, who was recently appointed Administrator of the Tennessee Valley Authority, proposed just such a system as a way to promote conservation.

I have discussed this proposal with many people, both in the industry and on the state regulatory boards. In general, the reaction has been very positive. Robert Batinovich, President of the California Public Utilities Commission, recently published an article outlining legislation similar to this in a journal called, Public Utilities Fortnightly, which is an independent publication monitoring developments in the field of public utilities. The journal called Mr. Batinovich's proposal, "A more uniform taxation of utility services to replace the current confused impact of Federal income taxation on utilities with a more equitable and certain result". Mr. Batinovich, in the two and one-half years that he has served on the California P.U.C., has earned a national reputation as a leader in regulatory reform and simplification. A copy of his article follows.

In sum, this legislation will be more beneficial to the companies, consumers, and to the State regulatory commissions. The proposal is founded upon simplicity in the ratemaking process, and fairness in our tax system. I urge you all to support H.R. 8897, the Electric Utility Tax Reform Act of 1977.

H.R. 8897

A bill to amend the Internal Revenue Code of 1954 to provide that income derived from the regulated sale of electrical energy will be exempt from income taxes, to impose an excise tax on the purchase of electrical energy from a public utility, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Electric Utility Tax Reform Act of 1977".

SEC. 2. (a) Part III of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to items specifically excluded from gross income) is amended by redesignating section 124 as 125 and by inserting after section 123 the following new section:

"SEC. 124. EXCLUSION OF AMOUNTS DERIVED FROM REGULATED SALE OF ELECTRICAL ENERGY.

"(a) IN GENERAL.—In the case of a regulated public utility, gross income does not include any amount derived by such utility from a regulated electric trade or business.

"(b) REGULATED ELECTRIC TRADE OR BUSINESS.—For purposes of subsection (a), the term 'regulated electric trade or business' means a trade or business of the sale or furnishing of electrical energy if the rates for such sale or furnishing, as the case may be, have been established or approved by a State or political subdivision thereof, by an agency or instrumentality of the United States, or by a public service or public utility commisison or other similar body of any State or political subdivision thereof.

"(c) GAIN FROM SALE OF PROPERTY.—For purposes of this section, gain from the sale or exchange by any regulated public utility of any property shall be treated as derived from a regulated electric trade or business only if such property was used predominantly by such utility in a regulated electric trade or business.

"(d) CROSS REFERENCES.—

"(1) For denial of deduction for amounts allocable to income excluded under this section, see section 265.

"(2) For definition of regulated public utility, see section 7701(a)(33)."

(b) Subsection (a) of section 48 of such Code (defining section 38 property) is amended by adding at the end thereof the following new paragraph:

"(10) PROPERTY USED IN A REGULATED ELECTRIC TRADE OR BUSINESS.—Any property which is used predominantly in a regulated electric trade or business (as defined in section 124(b)) shall not be treated as section 38 property."

(c) Paragraph (33) of section 7701(a) of such Code (defining regulated public utility) is amended by inserting "and without regard to section 124" after "capital gains and losses" in the first sentence following subparagraph (H).

(d)(1) The amendments made by subsections (a) and (c) shall apply to amounts received or accrued after December 31, 1978, in taxable years ending after such date.

(2) The amendment made by subsection (b) shall apply to property placed in service after December 31, 1978.

SEC. 3. (a) Chapter 33 of the Internal Revenue Code of 1954 (relating to tax on facilities and services) is amended by inserting after subchapter C the following new subchapter:

"Subchapter D—Electrical Energy

"Sec. 4285. Imposition of tax.
"Sec. 4286. Definitions.
"Sec. 4287. Exemptions.

"SEC. 4285. IMPOSITION OF TAX.

"(a) GENERAL RULE.—There is hereby imposed a tax on any taxable purchase of electrical energy in an amount equal to 0.04 of a cent for each kilowatt hour of electrical energy so purchased.

"(b) BY WHOM PAID.—The tax imposed by subsection (a) shall be paid by the person purchasing electrical energy from a public utility.

"SEC. 4286. DEFINITIONS.

"(a) TAXABLE PURCHASE.—For purposes of this subchapter, the term 'taxable purchase' means any purchase of electrical energy from a public utility.

"(b) PUBLIC UTILITY.—For purposes of this subchapter, the term 'public utility' means any entity which is engaged in the sale or furnishing of electrical energy—

"(1) if such entity is a State or political subdivision thereof, the United States, or an agency or instrumentality of any of the foregoing, or

"(2) if the rates at which such entity furnishes or sells electrical energy have been established or approved by a State or political subdivision thereof, by an agency or instrumentality of the United States, or by a public service or public utility commission or other similar body of any State or political subdivision thereof.

"SEC. 4287. EXEMPTIONS.

"(a) STATE AND LOCAL GOVERNMENTS.—Under regulations prescribed by the Secretary, no tax shall be imposed by section 4285 on any purchase of electrical energy by a State or political subdivision thereof.

"(b) PURCHASES BY PUBLIC UTILITIES.—Under regulations prescribed by the Secretary, no tax shall be imposed by section 4285 on the purchase of electrical energy by a public utility."

(b) The table of subchapters of chapter 33 of such Code is amended by inserting after the item relating to subchapter C the following new item:

"SUBCHAPTER D. Electrical energy".

(c) The amendments made by this section shall apply with respect to electrical energy furnished after December 31, 1978.

[From the Public Utilities Fortnightly, July 21, 1977]

A SENSIBLE SUBSTITUTE FOR THE FEDERAL INCOME TAX ON UTILITIES

(By Robert Batinovich)

Congress should immediately enact legislation to exempt utilities from federal income taxation and to substitute a gross usage or gross revenues tax in lieu of the federal income tax.

Elimination of the federal income tax for investor-owned utilities would accomplish the following objectives:

(1) Simplify the rate-making process and mitigate "regulatory lag." Regulatory commissions presently expend an inordinate amount of time litigating allowable tax expenses under existing federal tax laws. For example, the necessity for a regulatory commission to evaluate the election by a utility of "flow-through" versus normalization accounting of tax savings in light of the utility's particular financial circumstances is often very time consuming. In addition, the resultant determination is often subject to prolonged judicial review.

Elimination of the federal income tax and its resulting tax accounting problems, would allow utility management and the regulatory commissions to focus on important issues in rate-making proceedings, such as rates of depreciation and growth, in an expeditious manner and with a view toward

guaranteeing adequacy of service rather than promoting tax benefits.

(2) Restore credibility in the regulatory process. Unfortunately, the burden of "regulatory lag" is not outweighed by any benefit from the existing tax laws. On the contrary, the present tax structure leads consumers to believe that utilities are reaping profits from "phantom taxes."

The ostensible purpose of the income tax is to raise revenues. A secondary purpose, as applied to corporations, is to reach corporate profits so as to prevent the undue accumulation of wealth within the corporate entity. Existing tax laws are ill-designed to accomplish either objective.

Several highly publicized studies have shown that public utilities generally have either avoided taxes entirely or have paid a relatively low effective tax rate due to legislative policy, particularly accelerated depreciation and the investment tax credit.

As applied to public utilities, the attempt to reach corporate profits via the federal income tax duplicates the efforts of regulatory commissions to regulate utilities' earnings as well as service. Also existing provisions for normalization and deferred tax reserves result in the accumulation of substantial internally generated funds. At the same time such tax provisions erode aftertax interest coverage, one of the fundamental indicators of a utility's financial standing.

(3) Eliminate tax incentives to construct unnecessary utility plant. The present tax laws are being used to implement policies which are inconsistent with responsible regulation or with the present and future need to conserve resources.

Prudency is the watchword of both utility management and regulation. However, under existing tax laws, management's duty to be prudent may be inconsistent with its duty to the shareholders to maximize profits by utilizing all available tax credits or deductions. Also, the investment tax credit and accelerated depreciation provisions give utilities monetary incentives to promote growth. The desire for tax credits often undermines the responsibility of prudent utility management to determine whether growth is reasonable in light of foreseeable customer requirements. The present tax laws stimulate growth regardless of need within a particular service territory. No attempt is made to couple supply with demand.

The need to provide a tax incentive for conservation, instead of unchecked growth, is long overdue. Conservation will be a cornerstone of President Carter's national energy plan. The continuing drought in the western United States highlights the need to conserve water as well as energy. However, consumers must be given a direct incentive to conserve. A gross usage or revenues tax would provide such an incentive.

The gross usage or revenues tax would be based on units of energy or water consumed, or revenues, for telephone service. The utilities, both privately owned and municipally owned, would collect these taxes on behalf of the federal government.

THE PROPOSED SUBSTITUTE

Substitution of a gross usage or gross revenues tax for the federal income tax would serve the following purposes:

(1) Provide revenues to the federal government. Legislation aimed only at exempting investor-owned utilities from federal income taxation would not provide the federal government with any substitute revenues. A reasonably structured gross usage or gross revenues tax would provide revenues to the federal government far in excess of what the government has actually collected from the utilities as a result of the federal income tax. At the same time, a gross usage or revenues tax would not interfere with the responsibilities of the regulatory commission to regulate a utility's earnings.

(2) Reward conservation-oriented consumers. A gross usage or revenues tax would provide an incentive to conserve because of the direct correlation between energy, water, and telephone service used and taxes paid. The conservation incentive resulting from a gross usage tax is diametrically opposed to the growth stimulation inherent in the present tax system. By eliminating tax incentives for the construction of unnecessary utility plant, capital would be available to other segments of the economy.

(3) Provide a national lifeline rate. Certain mechanisms might be built into the gross usage tax structure so that those residential customers who use less than a specified amount of energy, water, or communication service would not be taxed. This approach would not preclude state regulatory commissions from implementing additional rate design programs to further encourage conservation.

Also, low-income residential consumers might be allowed an income tax credit for taxes paid as a result of the gross usage tax. This process would in effect relieve low-income people of payment of the gross usage tax without creating another bureaucracy inherent in other "means test" proposals, such as fuel stamps.

(4) Remove the "phantom tax" income. The existing disparity between the rates incurred by consumers where utilities use normalization as opposed to "flow-through" accounting for rate-making purposes cannot be adequately explained in terms of public policy. A gross usage tax would erase the enormous disparity among utilities with respect to their effective tax rates.

(5) Eliminate two-for-one payments by consumers. Under the present tax structure consumers in effect pay $2 in rates for every dollar of additional revenue required by the utility, the other dollar being applied to taxes (often phantom taxes). This effect compounds the problems of financing major energy supply projects. A gross usage tax would eliminate this problem.

(6) Finance new energy supply projects. The revenues from a gross usage tax could be dedicated to the financing of the technologically risky and highly capital-intensive energy supply projects, either directly or by Federal Deposit Insurance Corporation-type guaranties.

The merits of a gross usage or gross revenues tax charged directly to the consumer and collected by the utility as a conduit for the federal government, as here described, provide more than ample justification for eliminating the federal income tax presently levied against utilities.

MORE ON PIGGYBACK SERVICE TO THE NORTHEAST

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KOCH. Mr. Speaker, I am pleased that the conference committee on the Department of Transportation appropriations bill agreed to language which I proposed in the House version calling for an assessment by the Federal Railroad Administration to determine whether a new class of low-profile, lightweight flat cars might not overcome the low tunnel and overhead bridge clearances in the Northeast. These low clearances, which are prevalent throughout the region, prevent the passage of full-size trailers on standard flat cars and, therefore, obstruct direct, efficient, and high-speed intermodal freight service. If the assessment shows that a low-profile flatcar would be a feasible solution, the FRA is further directed to build and test three prototype cars, at a total cost not to exceed $500,000 from unused funds leftover from other FRA projects.

Movement of freight by trailer-on-flat-car—TOFC—service is attractive because of its energy efficiency and its low pollution compared to individually hauling trailers long distances over the highways. In congested areas like the Northeast, TOFC also offers reduced traffic congestion, lower noise levels, and less damage to the roads. Because of both physical and institutional obstructions to TOFC service in the Northeast, however, the amount of freight that moves to and from the region by railroad is insignificant compared to the volume moving by truck over the highways. An effective low-profile car coupled with aggressive marketing and convenient scheduling could reverse this imbalance because the vast majority of goods produced in the Northeast is high-value merchandise, which is particularly suited to intermodal shipment. Shippers are willing to pay premium rates in return for reliable, high-speed and damage-free delivery. Truckers are currently more able to meet this demand than the railroads are.

Bringing excellent piggyback service to the Northeast and capturing a significant share of the freight traffic back from the trucks will, of course, require much more than just the development of a new railcar. The FRA's ongoing intermodal demonstration project is vital in determining the kind of service and marketing required to make TOFC competitive with trucking. In addition, planners and other interested parties must continually evaluate the unique requirements of specific regions. It is with this idea in mind that I have engaged in a series of correspondence with James A. Hagen, senior vice president for marketing and sales at ConRail, concerning piggyback service in the Northeast. I am appending our latest exchange of letters, which discuss a number of issues that must be resolved if competitive TOFC is to be brought to the region.

The two letters follow:

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 21, 1977.

JAMES A. HAGEN,
Senior Vice President, Marketing, Conrail, Six Penn Center Plaza, Philadelphia, Pa.

DEAR MR. HAGEN: I have enclosed a copy of the section of the Department of Transportation Report, passed by the House on June 2, containing the language which provides for an assessment and, if appropriate, demonstration of three low-profit intermodal rail cars to overcome clearance restrictions in the Northeast.

It has come to my attention that two points I made in my *Record* statements and press release on the subject were not entirely accurate. Whereas it was my understanding that no piggyback trains could travel north of Washington, D.C., because of clearance restrictions, apparently some piggyback service is routed around the existing obstacles.

Similarly, I believed that no intermodal traffic could travel into New England, north of the Hudson. Apparently some traffic is routed by way of Selkirk to the southern part of New York and New England, and some piggyback trains from the Mideast are able to take a northern route to upper New England (to Springfield, Mass. for example).

At the same time, I have been assured that this intermodal service, while possible, is limited because most shippers wish to avoid the delays caused by the roundabout routes required to overcome the clearance restrictions. I would like to know exactly what the facts are. Could you provide me with the routes, schedules, and approximate usage of piggyback service offered by Conrail north of Washington, D.C., and north of the Hudson River?

On a related matter, I would be interested in your thoughts on the concept of routing freight trains with light-weight, as opposed to bulk, loads through the Amtrak tunnels under the Hudson during off hours. This would seem to be a natural route for dedicated intermodal trains using advanced low-profile cars (when they're available).

Because of the energy-saving and environmental advantages inherent in railroads, and because I would like to see the congestion caused by trucks in the New York-New England area relieved and the economic climate of the region improved, I would be interested in any suggestions you might have as to how I could be helpful in improving freight rail service in the Northeast.

I look forward to hearing from you and appreciate your assistance.

All the best.

Sincerely,

EDWARD I. KOCH.

CONRAIL,
Philadelphia, Pa., July 5, 1977.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR SIR: This refers to your letter of June 21, 1977 with regard to Conrail's piggyback operations in the Northeast.

Conrail operates piggyback service between Potomac Yard, south of Washington, D.C. and South Kearney, New Jersey near New York City. Connections are made at Potomac Yard with the Southern, R. F. & P., and SCL railroads which serve the South and Southeast. The Conrail trains, TV–23 southbound and TV–24 northbound, operate via a route through Baltimore, Maryland, Wilmington, Delaware, Philadelphia, Pa., Trenton, New Jersey, Newark, New Jersey, with trackage rights over the Amtrak Northeast Corridor. TV–24 is scheduled to depart Potomac Yard at 8:30 P.M. daily and arrive South Kearney, New Jersey at 4:00 A.M. the following morning. TV–23 is scheduled to depart South Kearney, New Jersey at 12:01 A.M. daily except Monday and arrive Potomac Yard at 6:45 A.M. the same morning.

There are clearance restrictions on this route through the tunnels in Washington, D.C. and Baltimore, Maryland. A loaded height of 16' 2" can be accommodated. All trailers 12' 6" high can be moved on standard height (3' 8") piggyback cars. Trailers that are 13' 0" or 13' 6" high must be moved on low deck cars, which are available in the Trailer Train Company fleet.

Piggyback traffic moving between Potomac Yard and New England cities, such as New Haven, Connecticut, Springfield, Mass., and Boston, Mass. is handled in freight trains moving on the Amtrak Northeast Corridor between Washington, D.C. and Newark, New Jersey and on the west shore of the Hudson River to Selkirk Yard near Albany, New York. Traffic is then moved over former Penn Central lines between Selkirk Yard and various New England cities. Typical schedules are shown below:

			Time	Day
Northbound:				
LV	Potomac Yard	NE–2	5:30 p.m.	1
AR	Selkirk Yard	NE–2	3:00 p.m.	2
LV	Selkirk Yard	BA–2	11:00 p.m.	2
AR	Boston	BA–2	10:30 a.m.	3
LV	Selkirk Yard	BA–4	1:00 p.m.	3
AR	Springfield	BA–4	6:00 p.m.	3
LV	Selkirk Yard	CH–4	1:00 a.m.	3
AR	New Haven	CH–4	11:15 a.m.	3
Southbound:				
LV	Boston	BV–3	4:00 a.m.	1
LV	Selkirk Yard	BV–3	3:00 p.m.	1
LV	Do	MW–1	7:00 p.m.	2
AR	Potomac Yard	MW–1	6:15 p.m.	3
LV	Springfield	NS–3	3:30 a.m.	1
AR	Selkirk Yard	NS–3	8:00 a.m.	1
LV	New Haven	NS–3	11:00 p.m.	0
AR	Selkirk Yard	NS–3	8:00 a.m.	1
LV	Selkirk Yard	MW–1	7:00 p.m.	1
AR	Potomac Yard	MW–1	6:15 p.m.	2

The same clearance restrictions exist in the Washington-Baltimore area for traffic moving between Potomac Yard and New England cities as was explained in a prior paragraph.

Piggyback service is also provided between New England cities and the West or Southwest by connection with other railroads at such major gateways as Cincinnati, St. Louis, Chicago or Streator, Illinois. Service is also available between New England Conrail piggyback ramps at Albany, Springfield, Worcester, Boston, and New Haven and Conrail piggyback ramps located in various cities, among others, such as Chicago, St. Louis, Indianapolis, Columbus, Detroit, Louisville, and Cincinnati. Typical service schedules between Chicago and Indianapolis on the one end and Boston is as follows:

			Time	Day
Eastbound:				
LV	Indianapolis	TV–6	7:30 a.m.	1
AR	Boston	TV–6	5:30 p.m.	2
LV	Chicago	TV–14	11:30 p.m.	1
AR	Boston	TV–14	8:45 a.m.	3
Westbound:				
LV	Boston	TV–5	8:30 p.m.	1
AR	Indianapolis	TV–5	4:30 a.m.	3
LV	Boston	TV–13	11:45 p.m.	1
AR	Chicago	TV–13	6:05 a.m.	3

Numerous piggyback trains operate in the New England area serving various routes to the West and Southwest on the Conrail system. These trains are specifically TV–5, TV–6, TV–7, TV–8, TV–9, TV–9S, TV–10, TV–10S, TV–13 and TV–14. These trains travel over former New York Central routes via Albany-Cleveland, etc. There are no clearance restrictions over these routes which prohibit moving 13'6" trailers on standard height piggyback cars.

Conrail is now handling substantial volumes of piggyback traffic via all of these routes. However, this volume is rather insignificant when compared with the volume of traffic moving on the highway.

The concept of routing freight trains with lightweight traffic through the Amtrak tunnels under the Hudson River during off hours is an interesting proposal. Many facts would have to be developed, however, before this can be seriously considered. Included, would be a marketing survey to determine traffic potential, engineering studies to determine the capability of the Hudson tunnels to withstand freight train operations, determination that freight operations would not unduly hamper passenger operations and track maintenance in the Penn Station Complex, and development of a low deck car capable of carrying a 13'6" trailer without exceeding the allowable clearance of 14'8". This would have to be done with the cooperation of Amtrak. The ultimate decision of whether to allow freight operations in the Penn Station Complex would rest with Amtrak. All of this would have to be compared with service that will be available over rehabilitated routes which avoid the Hudson tunnels. I have an open mind with regard to this proposal, but must point out its complexity.

I appreciate your assistance and interest in improving rail service.

Sincerely,

J. A. HAGEN,
Senior Vice President,
Marketing and Sales.

CONGRESSIONAL SALUTE TO THE HONORABLE EDWARD B. HAINES, PUBLISHER-EMERITUS OF THE NEWS, PATERSON, N.J., DISTINGUISHED JOURNALIST, ESTEEMED COMMUNITY LEADER, AND GREAT AMERICAN

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ROE. Mr. Speaker, on Saturday, August 20, the residents of my congressional district, State of New Jersey will assemble at the Wayne Manor in testimony to the outstanding newspaper career of my good friend, exemplary community leader, and distinguished citizen, the Honorable Edward B. Haines, publisher-emeritus of the News, whose richness of wisdom and lifetime of professional expertise in reporting the news with distinction and dedication to our people deserves our highest commendation.

As Publisher Haines retires from his illustrious daily pursuits as publisher, editor, and president of the News, I am pleased to join with his many, many friends in deep appreciation of all of his good works and share great pride in the success of his achievements with his wife Florence and their two children, Diane and Harry.

Mr. Speaker, Ed Haines commenced his career in journalism at the age of 14 with the News. As he forged ahead with ever-increasing knowledge, training, hard work, and personal commitment to rise from office boy to publisher, the quality of his leadership and excellence of his expertise evolved and merged with the renown and acclaim of the News as the most prestigious all-day, morning, and evening, newspaper in Paterson, N.J.

As a reporter, ad salesman, circulation district manager, business manager, vice president and, finally, president and publisher, he guided the News through some of its most difficult and glorious years as a free investigative press, opening the doors of enlightenment in its public information endeavors of bringing local, State, national and world news to our people. Under his direction and leadership, the newspaper has flourished, achieving record high precedents in advertising, circulation and revenue in 1972.

Mr. Speaker, the news media, universally known as the fourth estate of our people, perform a most vital function in our Nation involving the very texture and fiber of the kind of society to which we aspire. Ed Haines is the third genera-

tion of the Haines family to be publisher of The News, succeeding his father, the most distinguished editor-publisher, Honorable Harry B. Haines, who went to his eternal rest in 1972. Ed's grandfather, the Honorable Edward B. Haines, who founded the News, in 1890 had served as editor and publisher prior to his passing in 1912.

The Haines family has been "reporting the news" to our people and contributing to the quality of life in our community for over 87 years. They have earned the highest esteem and respect of all of us who have had the good fortune to know them and, most assuredly, have always achieved the fullest confidence and strongest support of all of our people.

Ed Haines married Florence Horcher 37 years ago and along with their two children are carrying on the journalistic traditions and community leadership of the Haines family. Their son, Harry B. Haines is executive editor; and their daughter, Diane Haines, is the supreme court reporter for the News.

Mr. Speaker, Ed Haines has excelled in his profession and, through his writings and by his example, has truly inspired the youth of America, serving as a shining example of the vast intricate fiber that has been woven by our people throughout the centuries to make our world a better place to live in and maintain our Nation's preeminence and leadership in global affairs.

Ed graduated from Columbia University in 1932 with the highest honors in journalism and currently serves on the Board of Trustees, St. Joseph's Hospital; Board of Directors, Suburban Savings and Loan Association; Honorary Life Member, Policemen's Benevolent Association—PBA. He is founder, first president and has served as State president of the Paterson Jaycees and is an honorary life member of Rotary. The Boy Scouts honored him with their highest award—the Silver Beaver, and he is a lifetime member of the Passaic Valley Boy Scout Council.

Mr. Speaker, I appreciate the opportunity to call to the attention of you and our colleagues here in the Congress the lifetime of outstanding public service of Ed Haines and seek this national recognition of all of his good works. His standards of excellence, professional expertise and sincerity of purpose in gathering, writing, editing, disseminating and reporting the news of local, national, and international significance with the highest ideals of principle and service to our people have truly enriched our community, State and Nation. We do indeed salute the Honorable Edward B. Haines, publisher-emeritus of the News, Paterson, N.J.

SENATE—*Wednesday, September 7, 1977*

The Senate met at 12 noon and was called to order by Hon. DENNIS DECONCINI, a Senator from the State of Arizona.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Mr. President, responding to a resolution of the First Continental Congress, on this day September 7, 1774, the Reverend Jacob Duche of Christ Church, Philadelphia, appeared in ecclesiastical vestments, read the 35th Psalm and followed it with "a fervent prayer." Since that day, the daily sessions of the Congress have been convened with prayer. It is fitting that our prayer on this anniversary should be a portion of the prayer on that day—nearly 2 years before the Declaration of Independence.

Let us pray:

"O Lord, our Heavenly Father, High and Mighty King of Kings, and Lord of Lords, who dost from Thy throne behold all the dwellers on Earth and reignest with power supreme and uncontrolled over all the Kingdoms, Empires, and Governments; look down in mercy we beseech Thee; on these American States, who have fled to Thee from the rod of the oppressor, and thrown themselves on Thy gracious protection, desiring henceforth to be dependent only on Thee; to Thee, they have appealed for the righteousness of their cause, to Thee do they now look up for that countenance and support which Thou alone canst give; take them, therefore Heavenly Father, under Thy nurturing care; give them wisdom in council and valor in the field; . . .

"Be Thou present, O God of wisdom, and direct the councils of this honorable assembly; enable them to settle things on the best and surest foundation, that the scene of blood may be speedily closed; that order, harmony and peace may be effectually restored, and truth and justice, religion and piety prevail and flourish among Thy people. Preserve the health of their bodies and vigor of their minds; shower down on them, and the millions they here represent, such temporal blessings as Thou seest expedient for them in this world, and crown them with everlasting glory in the world to come.

"All this we ask in the name and through the merits of Jesus Christ, Thy Son, our Saviour. Amen."

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 7, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable DENNIS DECONCINI, a Senator from the State of Arizona, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. DECONCINI thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, August 5, 1977, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETING DURING SENATE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Research and Development Subcommittee of the Armed Services Committee be permitted to meet during the session of the Senate today, to consider S. 1863, supplemental authorization for the cruise missile.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period, not to exceed 10 minutes, following the recognition of the two leaders under the standing order, for the transaction of routine morning business, for the purpose of the offering of statements, resolutions, bills, petitions, and memorials into the RECORD, and that there be a limitation on statements by Senators of 2 minutes each.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

CURRENT DELIBERATIONS WITH FUTURE RAMIFICATIONS

Mr. ROBERT C. BYRD. Mr. President, during the first 7 months of the 95th Congress, the Senate established an enviable record of accomplishments. Among our actions, we adopted a tough code of conduct, as well as enacting environmental legislation, establishing a new Department of Energy, granting the President authority to reorganize executive branch agencies, and passing the President's economic stimulus program, to name only a few pieces of legislation that we considered and passed.

All Senators are to be commended for their determination to cover as much legislative ground as possible before we resumed our work today.

In this regard, I express my deep appreciation to the distinguished minority leader and members of the minority party, the distinguished chairmen of the committees, and the ranking members of committees, as well as my colleagues on this side of the aisle, for the splendid cooperation, understanding, forbearance, and patience that have marked the ac-

tions of the Senate during the session thus far.

In the next few weeks, it will be our responsibility to make some of the most important and far-reaching decisions that we shall be called on to make in the 95th Congress. We shall have before us the President's energy program. Our actions on this matter will have a potential to affect every American for decades to come.

For several years, experts in the field of energy have predicted that many of the readily available fossil fuels on which contemporary civilization is dependent—especially oil and natural gas—are being depleted at rapid rates. Our habitual dependence on the internal combustion engine for transportation, and oil and gas for heat and the generation of electricity have pushed our rates of consumption of fossil fuels to higher and higher levels each year.

The oil embargo of 1973 and the severe seige of cold weather experienced by much of the country last winter combined to provide the citizens of this Nation with but a mild foretaste of the impact that a genuine energy famine could have on us. Without responsible actions to assure the wise use of our available energy resources in the immediate future and the development of alternative energy supplies in coming generations, the economy of the United States, the welfare and health of our people, and the very security of this country are in jeopardy.

The Senate has already passed 21 energy-related bills in this session, 10 of which have been enacted into law. The actions that we have thus far taken on the energy crisis, coupled with the decisions we shall make in the weeks ahead, are but the beginnings of a counterattack against an impending "energy doomsday." By our deliberations on energy, we are laying the groundwork for future possible solutions to the energy dilemma and providing time in which to search for and discover the energy supplies of the centuries to come. To paraphrase the poet Wordsworth, in our work in these autumn days, we serve the future hours. Some of us may not live so long as to witness and enjoy the full fruits of our labor and wisdom, but I hope that we shall work in such a fashion that our posterity will acknowledge that we acted responsibly in the Senate of the 95th Congress to insure that our sons and daughters were enabled better to enjoy the continued prosperity and privileges of life in the United States.

Mr. BAKER. Mr. President, this is, of course, the first day of the reconvening of the Senate following the break in our legislative schedule sanctioned and required by statute.

I take this opportunity to extend my congratulations to the majority leader for his statement just given. I offer to him my congratulations for the work of the Senate in this session to date. I express to him my appreciation for his remarks directed toward the minority and its participation in moving the workload of this body.

Also, I say to my friend the majority leader and to all our colleagues that it is good to be back, refreshed by the statutory break, with, I trust, the wisdom given us by the collective judgment of our constituents on a range of issues, and fully prepared to meet and come to terms with the matters that will be before the Senate.

There are important issues—indeed, issues, as the majority leader has said, of transcendent importance—issues that not only the Senate but also the committees of the Senate must consider carefully.

I note the presence on the floor now of the distinguished chairman of the Committee on Foreign Relations. It is no surprise to him, I am sure, to know that in my travels in Tennessee, the issue most often mentioned was the proposal for two new treaties and other agreements and undertakings with the Republic of Panama.

I also see on the floor the distinguished chairman of the Environment and Public Works Committee, and we know that the matter before the Senate now is within the jurisdiction of that committee. I would mention also that during those travels in Tennessee the issue probably second most often mentioned was the question of energy and alternative fuels.

The only observation I would offer in these brief remarks, Mr. President, is that the country is fully aware of the nature, the importance, and the urgency of the great issues that confront us. In some ways the country may be ahead of us in deciding what we ought to do about it, but that is not infrequently the case.

As I have remarked on the floor of the Senate on previous occasions, I have a great confidence, indeed, a veneration, for the collective judgment of the people of the United States. It is our business as public servants to try to harvest that judgment and translate it into effective governmental policy.

So as we approach these serious issues, the Panama Canal, our general foreign policy situation, the energy program of the Government of the United States, and other issues, I would assume my friend the majority leader, as I believe he already knows, that we will approach them in good spirit and good conscience.

We will work together. We will agree, and on occasions we will disagree, but it is my fervent hope that the Senate and the country will be better served in both cases for the sustained effort.

Mr. President, I think the Senate is fully prepared to come to terms with the important issues, and we are ready to proceed.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader for his eloquent, cogent, and very appropriate remarks.

Mr President, I yield back the remainder of my time.

Mr. BAKER. Mr. President, will the majority leader withhold that?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, I have a request from the distinguished Senator from South Carolina (Mr. THURMOND) for part of my time remaining under the standing order. I see he is coming through the door now.

Mr. President, if I may, I yield the remainder of my time under the standing order to the distinguished Senator from South Carolina.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order there will now be a period for the transaction of routine morning business, with a time limitation on statements therein of 2 minutes.

The Senator from South Carolina is recognized.

Mr. ROBERT C. BYRD. Mr. President, if the distinguished Senator from South Carolina will yield to me briefly——

The ACTING PRESIDENT pro tempore. Will the Senator from South Carolina yield?

Mr. THURMOND. Mr. President, I am pleased to yield.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Finance be authorized to meet during the session of the Senate on Thursday, September 8, at 2 p.m. to consider social security legislation.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PANAMA CANAL TREATIES

Mr. THURMOND. Mr. President, after careful consideration and study over a number of years, I have concluded that the Panama Canal is of such vital importance to the United States that it would be a serious error to cede it to the Republic of Panama as contemplated in the treaties which will be signed later today.

I have made several trips to Panama to view firsthand the situation there. As recently as August 19–21 of this year, I traveled with Senator HELMS of North Carolina and Senator HATCH of Utah on an inspection trip to view the canal. The more I learn about the situation there, and the more I am able to find out about the treaty to cede the territory and the neutrality treaty and their implications, the more convinced I am that the Senate should reject them.

There are a number of considerations I would like to discuss, among them the defense, political, economic, and legal reasons to oppose ratification of the treaties.

First, I will discuss national defense considerations.

The canal permits a quick two-ocean response by our naval forces to any military emergency. As you are probably aware, four former Chiefs of Naval Operations have so attested in a personal letter to the President. These four great naval strategists, Admirals Anderson, Burke, Carney, and Moorer, have retired from the active service and speak with a free mind uninhibited by political considerations. Their assessment of a canal giveaway, as reflected in the warning to the President, is sobering to say the

least. In their letter to the President they warned:

Loss of the Panama Canal, which would be a serious setback in war, would contribute to the encirclement of the U.S. by hostile naval forces, and threaten our ability to survive.

Approximately 98 percent of our naval fleet can transit the canal. Only our larger aircraft carriers are unable to use it. It is well to bear in mind that the 8,000-mile journey around the Horn adds 3 weeks to interocean transit time and costs 10 times as much as passage through the canal. Clearly, movement of troops or supplies around the Horn is hardly an acceptable alternative to use of the canal. As long as the United States retains sovereignty over and title to the canal, our Government maintains practical control. Under the neutrality arrangement proposed in the treaty, we lose practical control. Not only that, but according to members of the State Department negotiating team who briefed me, we oblige ourselves to guarantee access to our enemies in time of war. For this reason alone, Mr. President, I would urge my colleagues to reject this treaty. Control of territory and access routes is one of the most important elements of successful military strategy. Unless we maintain control, we will be at the mercy of the government which controls Panama.

Now, Mr. President, I shall turn to the question of the political importance of the canal and to foreign policy considerations.

Closely related to the military importance of the canal is the strategic deterrence which our presence in the canal area provides against Communist initiatives in that part of the world. As our treaty negotiators were reaching the agreement in principle on ceding American ownership and control, the ink was barely dry on a new economic and commercial agreement between Panama and the Soviet Union. Apparently, as our Government prepares to evacuate that part of the world pursuant to the proposed treaty, the Soviets are preparing to move in.

As might be expected, a canal giveaway has other implications as well for our foreign policy. Whether this means a further diminishing of U.S. influence throughout the world is of great concern to me. Is it part of a pattern of retreat which we have established in Southeast Asia, South Korea, Western Europe, and possibly Taiwan? This misguided direction of our foreign policy engenders consternation on the part of our allies and audacity on the part of our adversaries.

Mr. President, we cannot hope to deal effectively with other nations, and certainly not to play a leadership role, if we yield to blackmail. That is the only way to describe the threats of violence in Panama and in the Canal Zone, and threats of sabotage to the canal, which treaty proponents are broadcasting far and wide, and using as their chief argument for ratification. If the Senate were to ratify a treaty in the face of such threats, it would show the world a craven attitude which is entirely alien to our national character and our history and which would invite further exploitation by others.

Moreover, the present government in Panama is unstable and ill-prepared to run the canal. Panama has had 59 chief executives in 74 years. Under General Torrijos, who has ruled as dictator since 1968, public indebtedness has increased ten-fold, from $167 million to $1.5 billion. It is my prediction that, if the Torrijos regime gains control, such economic ineptitude will bankrupt the canal operation and oblige Panama to call upon other nations to take it over.

Furthermore, the current government there has violated the present treaty 11 times within the past 2 years.

This is not a record which inspires confidence in those of us who are being asked to approve a new, more generous treaty. The aspect of the Torrijos government though, which may be most significant for our purposes, is that it is a repressive dictatorship. Freedom House, the respected organization which ranks countries on the basis of human rights, gives Panama the lowest rating in Latin America. Panama received the same 1977 rating on political and civil liberties as the Soviet Union, and was rated even lower than Cuba.

Freedom House is a nonpartisan organization which the State Department cites in its report to Congress pursuant to the provisions of the Foreign Assistance Act. At the time of its last report on January 30, 1977, Freedom House listed as members of its board such eminent citizens as Mr. Zbigniew Brzezinski, now Director of the National Security Council; former Senator Gale McGee, now Ambassador to the OAS; Senator JACOB JAVITS; Mr. Roy Wilkins, former executive director of the NAACP; and other notable Americans.

Mr. President, I ask unanimous consent that the Freedom House table of nations that sets out the comparative survey of freedom among the nations of the world be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARATIVE SURVEY OF FREEDOM—TABLE OF NATIONS

[1] The scales use the numbers 1–7, with 1 comparatively offering the highest level of political or civil rights, and 7 the lowest. A plus or minus following a rating indicates an improvement or decline in the rating since the last survey. A rating marked with an asterisk (*) has been changed since the last survey due to reevaluation by the author. This does not imply any change in the country. For further information on the scale and survey see "Freedom at Issue," Jan.–Feb. 1973, p. 2ff.

[2] A free state is designated by F, a partly free state by PF, and a nof free state by NF.

[3] A positive outlook for freedom is indicated by a plus sign, a negative outlook, by a minus, and relative stability of ratings by a zero. The outlook for freedom is based on the problems the country is facing, the way the government and people are reacting to these problems and the longer run political traditions of the society. A judgment of outlook may also reflect an imminent change, such as the expected adoption of a meaningful new constitution.

[4] The name of Dahomey has been changed to Benin. Cambodia is now officially Kampachea.

Mr. THURMOND. In fact, we are about to legitimize the regime of General Torrijos by awarding him the triumph of concluding this treaty.

If the administration were serious about human rights, it would not even negotiate with this man until he held free, open, and honest elections. This is selective morality at its worst.

Now, Mr. President, I shall turn to the economic considerations involved in the current debate. The economic interest which the United States has in the canal, like our defense interest, is so vital to us that we can ill-afford to gamble with it.

In 1975, approximately 14,000 ships transited the canal; 45 percent of which originated in the United States, and 23 percent of which were bound for the United States. No other nation has an equal economic stake in the canal. The canal, though, is important to all of the world's commercial nations, since 96 percent of the world's ocean-going vessels can transit it.

The canal is just this year assuming an additional commercial importance to the United States as Alaskan oil begins to flow. When the Alaskan pipeline reaches its full capacity, it will yield 1.2 million barrels of oil a day. The west coast of the United States can accommodate only 700,000 barrels a day. This means that approximately 500,000 barrels a day cannot be used on the west coast, and must be transported to the east. No pipeline has yet been constructed across the United States, and the trip around the Horn, as has been demonstrated, is not economically feasible. Unhindered use of the Panama Canal is critical until an adequate pipeline can be constructed.

At the present time, the United States has an overall investment in Panama of $7 billion. By the year of our total evacuation under the terms of the treaty, that interest will have grown to $9.3 billion.

Contrary to popular argument, control of the canal by the United States serves the best economic interests of the people of Panama. In 1976, U.S. agencies purchased over $29 million worth of goods in Panama, and we paid over $108 million in wages to non-U.S. citizens. U.S. private investments amount to 50 percent of the capital investment in Panama. And U.S. employees spent $39 million there.

If we retain sovereignty and control over the canal, it is my suggestion that we propose a modernization which will mutually benefit the people of the United States and the citizens of Panama. In the past, I have supported the Terminal Lake Third Lock plan. This would provide for approximately $2.5 billion in capital investments over a 5- to 10-year period. In this effort, many Panamanian nationals would be used as subcontractors and the result would be an infusion of American capital into the Panamanian economy. As the canal is modernized, any unneeded land in the zone can be ceded to Panama. It would also be appropriate to make a realistic adjustment in the annuity.

With the foregoing considerations in mind, Mr. President, I turn now to the legal question posed by the current debate.

Article IV, section III, clause 2 of the Constitution unequivocally gives Congress the "power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States."

Congress enacted the Spooner Act in 1902 to provide for the construction and defense of an interocean canal, and pursuant to this act the United States acquired its property rights in the Canal Zone in perpetuity. It is thus my belief that a treaty to cede property rights in the Canal Zone to the Republic of Panama requires prior authorization by Congress.

On the other hand, the State Department contends that under the treaty power clause contained in article II, section 2, the President holds concurrent authority to dispose of U.S. property. The counterargument is that the property clause in article IV limits the treaty power clause where the disposition of property is concerned. That seems to me to be obvious.

Since the Executive claimed the authority, however, to dispose of U.S. property without first seeking prior authorization from Congress, and actually proceeded to do so, I joined with a number of other Senators and Congressmen to seek a declaratory judgment on this significant separation of powers question.

Both the District Court for the District of Columbia and the Court of Appeals in the District refused to consider the merits of the case on the basis that the issue was premature. At that time, they said, we did not know the specifics of any proposed treaty. In June, the Supreme Court declined to grant certiorari.

Now, Mr. President, we do know the specifics of the treaties. We know, too, that the State Department continues to ignore the questions of prior authorization and the role of the House of Representatives in disposition of property by treaty.

The only way to settle the questions is to seek a determination by the courts. I am pleased, therefore, to inform the Senate that Senators JESSE HELMS, JAMES A. MCCLURE, and I, together with Congressmen DANIEL J. FLOOD, LAWRENCE P. MCDONALD and M. GENE SNYDER, and William R. Drummond, a resident of the Canal Zone, will again file suit as soon as the President formally sends the treaties to the Senate.

I am further pleased to inform the Senate that five States will join as parties to the action, and that because of the importance and timeliness of the issue, we will seek original jurisdiction in the U.S. Supreme Court. We will be represented by the distinguished attorney, George S. Leonard, of the District of Columbia, who has so ably testified before the Subcommittee on Separation of Powers of the Senate Judiciary Committee on the legal problems raised in respect to the Panama Canal negotiations.

It is not the function of our courts to enforce public opinion. Nevertheless, it is worth noting that public opinion is strongly against a giveaway of the Panama Canal. The margin was 3 to 1 in a nationwide poll by Opinion Research Corp., and 9 to 1 in my own poll of South Carolinians.

Its individual members are also charged with the responsibility of responding to the public will. In this matter, the two responsibilities converge. The disposition of the Panama Canal under the proposed treaty is unwise, unwanted and unconstitutional. I urge the Senate to do all it can to prevent it.

This Senate is charged with the responsibility of protecting the interests of the legislative branch and of monitoring the separation of powers between the three coordinate branches of our Government.

Mr. President, I wish to thank the distinguished Senators who yielded time to me. I now yield the floor.

EXTENSION OF TIME FOR MORNING BUSINESS

The ACTING PRESIDENT pro tempore. The time for the transaction of routine morning business has expired.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be an extension of time of an additional 5 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SEPTEMBER GOLDEN FLEECE GOES TO NATIONAL ENDOWMENT FOR THE ARTS

Mr. PROXMIRE. Mr. President, today I am giving the Golden Fleece of the Month Award for September to the National Endowment for the Arts for making a $6,025 grant to an artist to film the throwing of crepe paper and burning gases out of high-flying airplanes.

The National Endowment for the Arts, which will spend $123.5 million of Federal money in the coming year, made this grant in order to "document on film an event designed to alter an audience's immediate environment for a short period

of time," according to Mrs. Nancy Hanks, the Endowment Chairman.

The audience's immediate environment is altered when four 1-mile-long, 20 inch wide crepe paper rolls were thrown out of two small planes flying over El Paso, Tex. The crepe paper rolls were accompanied by two sky divers who reeled out the crepe paper as they—the paper and skydivers—fell toward the ground.

Another taxpayer-sponsored drop involved a team of skydivers parachuting down to Earth in Pennsylvania wearing backpacks of glowing gases.

According to Mrs. Hanks' letter to me, funding for this project was based on the review of past work of the artist by a panel of experts. Some of the earlier work of this artist, none of which was paid for with Federal funds, include a film of crepe paper drops in New Mexico, Pennsylvania, and Texas. In addition to crepe paper drops the artist has dropped bouquets of plastic streamers, tire rubber, and even 35 rolls of toilet paper out of airplanes. The artist told my staff that the toilet paper made lovely patterns as it dropped from the sky, but crepe paper is even better.

While the taxpayer was not charged for the toilet paper fling, the crepe paper extravaganza is just about as outrageous.

In explaining the nature of her work to my staff the artist said that her work calls attention to the higher spirit of mankind and the coming era of peace and harmony on Earth.

MONEY SPENT TO FILM IN CARIBBEAN AND SOUTHWEST

Based upon documents submitted to the Endowment by the Pittsburgh artist, here is how some of the $6,025 in grant money were spent:

The amount of $1,424.28 for air fare and lodging for the artist and her husband, who served as cameraman, for a week's stay in February of 1976 on the Caribbean island of St. Maarten. The artist told my staff it was necessary to go to this exclusive resort island in order to film one of the environments which had influenced her development as an artist. She also explained that she needed the unique combination of beach, sky, flowers and wall paintings found in that part of the world for her movie.

A total of $1,713.32 for travel expenses, including air fare, meals, care rental, and airport parking to the Southwest in August 1976, for the artist, her cameraman husband, a sky diver, and two of her children, who were the ground crew assigned to retrieve the dropped crepe paper.

The movie, which runs about 20 minutes, was received by the Endowment only after my staff asked to see it last month. The film, to which the artist retains the copyright, only contains brief glimpses of the crepe paper and light drops. Much of the film shows various scenes of the artist posing in St. Maarten. The artist says the movie documents those places and elements which influenced her artistic development and has been well received by her peers.

PRIVATE SECTOR, NOT HARD WORKING TAXPAYERS, SHOULD SUPPORT PROJECT

While I strongly support the idea of free expression by all creative artists and believe that the crepe paper dropping artist sincerely believes in the importance of her work, I see no reason for the Federal Government to support these activities.

The money to pay for this outrage comes from taxpayers. The worker who trudges through the factory gates at 7 every morning to spend a grueling day on the assembly line pays. So does the cleaning woman who ekes out a living scouring the floor in a Madison office building all night. The dairy farmer in Marathon County, Wis., who rises at 5:30 to milk his cows and puts in an endless day of work until he harvests his hay crop by the dim light of his tractor long after sunset also pays for this artistic fling.

While the $6,025 in the grant is relatively very small, it is the sum total of the taxes paid by three typical taxpayers of the kind I have listed here.

The Federal Government simply must stop spending hard-earned tax money for this kind of artistic froufrou.

This artist has been successful in carrying out her work without Federal funds in the past, and I wish her the best of luck in her future creations as long as these artistic works are paid for by private sources.

Mr. President, I yield the floor.

CLARIFICATION OF UNANIMOUS-CONSENT AGREEMENT—S. 977

Mr. TOWER. Mr. President, I wonder if I might pose a question to the distinguished majority leader.

I note that in order No. 336 pertaining to S. 977, as printed in the calendar, it is provided that no other amendment dealing with divestiture shall be in order. I do not know whether it was intended to include in the order or not the fact that it would include no present or prospective divestiture or directly or indirectly relating to the divestiture in the colloquy between the Senator from West Virginia and the Senator from Tennessee. I would like to ask the distinguished majority leader if that legislative history is binding on the order to the extent that it is just as binding as if it had appeared in the order.

Mr. ROBERT C. BYRD. Will the Senator restate his question? I beg his pardon. I was distracted in my efforts to find the agreement on the calendar.

Mr. TOWER. In the "Provided further, that no other amendment dealing with divestiture shall be in order," not included in the printed order is the further caveat that the amendment shall not be either present or prospective in terms of divestiture, nor shall it relate directly or indirectly to divestiture. The distinguished Senator from West Virginia in posing the consent agreement engaged in a colloquy with the Senator from Tennessee, the distinguished minority leader, in the CONGRESSIONAL RECORD of August 5, page 27369.

Mr. ROBERT C. BYRD. There would be no time limitation on that amendment; provided further that no other amendment dealing with divestiture indirectly or directly be in order——

Mr. BAKER. Present or prospective.

Mr. ROBERT C. BYRD. Present or prospective—be in order.

Mr. BAKER. With that understanding, I have no objection.

I wanted to clarify with the distinguished majority leader that that is as binding as if it had appeared in the order as printed in the calendar.

Mr. ROBERT C. BYRD. Yes, Mr. President, that was the understanding of the intent of the request, the understanding on the part of both Mr. BAKER and myself, and with that understanding no objection was entered. If the intent had been otherwise, or understood to be otherwise, I am sure there would have been an objection.

Mr. TOWER. I thank the distinguished majority leader for the clarification. I was reasonably certain that was the case. But inasmuch as it was not printed in the order as it appeared in the calendar, I did want to make that clarification.

Mr. ROBERT C. BYRD. I thank the Senator. He has rendered a service by bringing up the matter at this time.

I should think—and there has been no discussion of this contingency that could arise—that there could be an amendment to the Kennedy amendment in the natural course of things, but that any such amendment to the Kennedy amendment would have to be included timewise in the overall 4-hour limitation.

Mr. TOWER. That would be included in the 4-hour limitation, and then, if the tabling motion did not bring down the amendment to the amendment along with the amendment, the time would be unlimited.

Mr. ROBERT C. BYRD. Exactly.

Mr. TOWER. I thank the distinguished majority leader.

Mr. ROBERT C. BYRD. The Senator has stated the situation precisely.

Mr. President, I would ask the Chair if he sees anything in the agreement which would rule out an amendment to the amendment by Mr. KENNEDY as long as such amendment were germane to that amendment, and that if such an amendment were offered the 4 hours would be running on such an amendment as well as on the amendment in the first degree.

The ACTING PRESIDENT pro tempore. If the intent is clear, if that is the intent, to allow other amendments to the Kennedy amendment within 4 hours, that would be proper, if that is the intent. Otherwise, the amendment would not be in order until the 4 hours had been completed.

Mr. ROBERT C. BYRD. The intent was that there be a 30-minute time limit on second degree amendments.

I am glad the Chair responded in such fashion. I think the question I really want to ask is this: Under the precedents, this language in the agreement would not rule out a germane amendment to the Kennedy amendment, with the understanding that under the agreement there would be 30 minutes additional time on such amendment to the amendment.

The ACTING PRESIDENT pro tempore. The Senator is correct.

Mr. TOWER. In further clarification, if the distinguished majority leader will yield further——

The ACTING PRESIDENT pro tempore. If that amendment were offered before the motion to table were made.

Mr. TOWER. The motion to table would take precedence at the expiration of time over another amendment; would it not?

Mr. ROBERT C. BYRD. Yes, it would.

The ACTING PRESIDENT pro tempore. That is correct.

Mr. TOWER. If, however, an amendment is offered prior to the motion to table, would the order that provided for unlimited debate in the event of the failure of a tabling motion still obtain?

Mr. ROBERT C. BYRD. Yes, it would as to the Kennedy amendment itself.

Mr. TOWER. Even if the amendment to the Kennedy amendment tended to ameliorate or in some way change or modify that amendment to the extent that it did not apply to divestiture?

Mr. ROBERT C. BYRD. It would still obtain unless otherwise changed by the Senate.

The ACTING PRESIDENT pro tempore. Is that a question to the Chair?

Mr. TOWER. It is a question of the majority leader. If he answers in the affirmative, I assume that that is the legislative history on the unanimous-consent agreement.

Mr. ROBERT C. BYRD. What I am saying is, so it will be perfectly clear, if I understood the Senator's question, in the event an amendment is offered to the Kennedy amendment, the effect of which amendment in the second degree would be to modify the Kennedy amendment to make it either more palatable or less palatable, depending upon one's viewpoint, that if a motion to table the Kennedy amendment as amended, if amended, fails, then the time agreement on the Kennedy amendment is off.

Mr. TOWER. Regardless of how the amendment to the Kennedy amendment might alter the Kennedy amendment?

Mr. ROBERT C. BYRD. Yes.

The ACTING PRESIDENT pro tempore. The majority leader is correct.

The Chair would like to clarify one point: If the amendment to the Kennedy amendment is made before the tabling motion at the end of the 4 hours, as an amendment in the second degree, it would be allowed 30 minutes under the agreement.

Mr. TOWER. I thank the distinguished majority leader.

Mr. ROBERT C. BYRD. I thank the Chair. The Chair is correct.

I thank the Senator from Texas.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. The time for morning business having expired, morning business is closed.

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of S. 977, which the clerk will state by title.

The legislative clerk read as follows:

A bill (S. 977) to require that new and, to the extent practicable, existing electric powerplants and major fuel-burning installations, in categories to be determined, utilize other than natural gas or petroleum as their primary energy source in compliance with applicable environmental requirements, and for other purposes.

The Senate proceeded to consider the bill, which had been reported from the Committee on Energy and Natural Resources with an amendment to strike all after the enacting clause and insert the following:

That this Act may be cited as the "Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977".

CONFORMING AMENDMENTS

SEC. 2. The Energy Supply and Environmental Coordination Act of 1974, as amended, is amended by striking out the table of contents and sections 1 (a) and (b), and inserting in lieu thereof, following the enacting clause, the following: "That this Act may be cited as the 'Natural Gas and Petroleum Conservation and Coal Utilization Policy Act'.

"TABLE OF CONTENTS

"Sec. 1. Short title.
"Sec. 2. Findings and purposes.
"Sec. 3. General definitions.
"TITLE I—NATURAL GAS AND PETROLEUM CONSERVATION BY NEW FACILITIES
"Sec. 101. Definitions.
"Sec. 102. Territorial application.
"Sec. 103. New electric powerplants.
"Sec. 104. New major fuel-burning installations.
"Sec. 105. Temporary exceptions.
"Sec. 106. Permanent exemptions.
"Sec. 107. Special exemptions for new electric powerplants.
"Sec. 108. Special exemption for new major fuel-burning installations.
"TITLE II—RECONVERSION AND CONVERSION OF EXISTING FACILITIES
"Sec. 201. Definitions.
"Sec. 202. Territorial application.
"Sec. 203. Coal conversion.
"Sec. 204. Existing electric powerplants and major fuel-burning installation.
"Sec. 205. Compliance reports.
"Sec. 206. Temporary exceptions.
"Sec. 207. Permanent exemptions.
"Sec. 208. Special exemption for existing electric powerplants.
"Sec. 209. Permanent exemptions for existing major fuel-burning installations.
"Sec. 210. Coal conversion compensation.
"Sec. 211. Coal conversion loans.
"Sec. 212. Loan guarantees.
"Sec. 213. Conditions and priorities.
"Sec. 214. Systems compliance.
"TITLE III—GENERAL
"Sec. 301. Administrative rules and regulations.
"Sec. 302. Judicial review.
"Sec. 303. Enforcement and penalties.
"Sec. 304. Environment requirement.
"Sec. 305. Energy efficiency and innovative technology requirements.
"Sec. 306. Assistance to regions impacted by expanded coal production.
"Sec. 307. Disruption of natural gas supply contracts.
"Sec. 308. Emergency powers.
"Sec. 309. Coal allocation.
"Sec. 310. Disclosure.
"Sec. 311. Federal facilities.
"Sec. 312. Coal price monitoring.
"Sec. 313. Report.
TITLE IV—OTHER PROVISIONS
"Sec. 401. Suspension authority.
"Sec. 402. Implementation plan revisions.
"Sec. 403. Motor vehicle emissions.
"Sec. 404. Conforming amendments.
"Sec. 405. Protection of public health and environment.
"Sec. 406. Energy conservation study.
"Sec. 407. Report.
"Sec. 408. Fuel economy study.
"Sec. 409. Reporting of energy information.
"Sec. 410. Enforcement.
"Sec. 411. Extension of clean air act authorization.
"Sec. 412. Definitions.

"FINDINGS AND PURPOSES

"SEC. 2. (a) FINDINGS.—(1) The Congress finds that the protection of public welfare and the preservation of national security require—

"(A) the furtherance of national energy self-sufficiency consistent with applicable environmental requirements;

"(B) the capability to use indigenous energy resources of the United States in lieu of imported or scarce energy supplies by the substitution of coal and other fuels in lieu of natural gas and petroleum as the primary energy sources for certain new electric powerplants and major fuel-burning installations and for certain existing electric powerplants and major fuel-burning installations; and

"(C) the conservation of natural gas and petroleum for uses for which there are no feasible alternative fuels or raw material substitutes.

"(2) The Congress finds that any electric powerplant or any major fuel-burning installation shall be deemed in compliance with the purposes of this Act if such powerplant or installation utilizes coal or other fuel in lieu of natural gas or petroleum as its primary energy source in conformance with applicable environmental requirements.

"(b) PURPOSES.—The purposes of this Act are—

"(1) to provide for a means to assist in meeting the essential needs of the United States for energy in a manner which is consistent, to the fullest extent practicable, with Federal and State commitments to protect the environment;

"(2) to foster the greater use of coal, fuels derived from coal, and other fuels in lieu of natural gas and petroleum as the primary energy sources for certain electric powerplants and major fuel-burning installations;

"(3) to require that new electric powerplants and major fuel-burning installations which propose to use fossil energy resources as a primary energy source use coal or other fuel in lieu of natural gas or petroleum except in those circumstances provided for herein;

"(4) to foster, in those instances where the use of coal or other fuel is not feasible, the replacement or modernization of existing electric powerplants or major fuel-burning installations to improve their energy efficiency;

"(5) to reduce the United States' vulnerability to energy supply interruptions; and

"(6) to regulate interstate commerce and for other purposes.

"DEFINITIONS

"SEC. 3. For the purposes of this Act:

"(1) The term 'Administrator' means the Administrator of the Federal Energy Administration established by the Federal Energy Administration Act of 1974, as amended; except that if such Administration ceases to exist such term means any officer of the United States designated as Federal Energy

Administrator by the President for the purposes of this Act.

"(2) The term 'person' includes (A) any person or individual; (B) any corporation, company, partnership, association, firm, society, trust, joint venture, or joint stock company; (C) the Federal Government, including corporations, departments, Federal agencies, and other instrumentalities thereof; and (D) any State or political subdivision thereof (including the District of Columbia), or any agency or instrumentality of either.

"(3) The term 'natural gas'—

"(A) includes—

"(i) natural gas,

"(ii) liquid petroleum gas,

"(iii) dry natural gas and casing-head gas,

"(iv) synthetic gas derived from petroleum and natural gas liquids, and

"(v) synthetic gas derived from coal, except as provided in (B)(ii) of this paragraph; "(B) but does not include—

"(i) natural gas produced from a well on land owned by the user, in commercially unmarketable quantities (by reason of quality or quantity) as determined by the Administrator,

"(ii) synthetic natural gas which is derived from coal where such gas is owned by the user when it enters a pipeline for transportation to the user, and

"(iii) synthetic gas which is derived from coal where such gas has a heat content below six hundred British thermal units per standard cubic foot at 14.73 psia. and 60 degrees Fahrenheit.

"(4) The term 'petroleum' includes crude oil, residual fuel oil, and refined petroleum products, but does not include such substances as (A) liquid petroleum gas, (B) process waste gases, and (C) waste gas, liquid and solid byproducts of refinery operations within the United States, where such fuels are of a quality or quantity as to be commercially unmarketable, as determined by the Administrator.

"(5) The term 'coal or other fuel' means coal and any fuel other than natural gas or petroleum, including, without limitation, (A) coal derivatives, including synthetic liquid or solid fuels which are derived from coal; (B) nuclear fuels; (C) solar energy; (D) geothermal energy; (E) petroleum coke; (F) combustible municipal, industrial, or agricultural waste; (G) wood or other biomass, (H) process waste gases; but does not include coal derivatives where such derivatives are produced by a person for the primary purpose of use as other than a fuel.

"(6) The term 'electric powerplant' means a fossil-fuel-fired electric generating unit, including a gas turbine unit or a combined cycle unit, that produces electric power for the purpose of sale or exchange.

"(7) The term 'peakload' when used to modify electric powerplant means a powerplant which operates the equivalent of less than one thousand five hundred full-load hours per calendar year; *Provided*, however, that hours operated by a peakload unit in an emergency situation shall not be counted against the one thousand five hundred full-load hours per calendar year limitation on peakload operation.

"(8) The term 'intermediate load' when used to modify electric powerplant means a powerplant which operates the equivalent of one thousand five hundred to three thousand five hundred full-load hours per calendar year.

"(9) The term 'base load' when used to modify electric powerplant means a powerplant which operates in excess of the equivalent of three thousand five hundred full-load hours per calendar year.

"(10) The term 'major fuel-burning installation' means a major industrial installation, which is a fossil-fired boiler, a gas turbine unit, combined cycle unit, indirect-fired unit, or internal combustion engine, but does not include (A) an electric powerplant, or (B) a pipeline where natural gas or petroleum is used in the production, gathering, transmission, storage, and distribution of gases and liquids.

"(11) The term 'indirect-fired use' means a use of fuel where the flame or the products of combustion do not come into direct contact with the material being processed.

"(12) The term 'cogeneration facility' means an electric powerplant or a major fuel-burning installation which produces—

"(A) electric energy and

"(B) other forms of useful energy (such as steam, gas or heat) which is, or will be, used for industrial, commercial, or space heating purposes."

"(13) The term 'primary energy source' means the fuel or combination of fuels used simultaneously by an electric powerplant or a major fuel-burning installation for normal operation, but does not include the minimum amounts of fuel required for startup, testing, flame stabilization, or control uses.

"(14) The term 'fuel' means natural gas, petroleum, coal or any other substance which is utilized to produce heat, but does not include natural gas, petroleum, coal or other substance which is used as a raw material or feedstock for production of other materials.

"(15) The term 'applicable environmental requirements' includes the governmental standards, limitations, or other requirements promulgated pursuant to Federal or State law applicable to emissions of environmental pollutants (including air and water pollutants) or disposal of solid waste or residues resulting from the combustion of coal or other fuels or the operation of air pollution control equipment, and includes, without limitation, any standard, limitation, or other requirement established pursuant to the Clean Air Act, as amended, the Federal Water Pollution Control Act, as amended, or the Solid Waste Disposal Act, as amended: Provided, That the term 'applicable environmental requirements' does not include any local governmental standard, limitation, or other requirement applicable to emissions of air pollutants (including any such standard, limitation, or other requirement or prohibition respecting the use of coal) that is more stringent than a State or Federal standard, limitation, or other requirement promulgated pursuant to section 110 of the Clean Air Act (42 U.S.C. 1857c-5).

"(16) The term 'cost' means total costs (both operating and capital) incurred over the estimated useful life of an electric powerplant or major fuel-burning installation, discounted the present value, as determined by the Administrator. In the case of an electric powerplant, cost shall take into account any change in the utilization of such powerplant in the relevant dispatching system and other economic factors that are included in planning for the production, transmission, and distribution of electric power within such system.

"(17) The term 'legal factors' includes all applicable Federal, State, or local governmental laws or other legal requirements but does not include any local governmental standard, limitation, or other requirement applicable to emissions of air pollutants or any local governmental standard, limitation, or other legal prohibition or requirement respecting the use of coal that is more stringent than a State or Federal standard, limitation, or other requirement promulgated pursuant to section 110 of the Clean Air Act.

"TITLE I—NATURAL GAS AND PETROLEUM CONSERVATION BY NEW FACILITIES

DEFINITIONS

"SEC. 101. For the purposes of this title:

"(1) The term 'new electric powerplant' means any electric powerplant—

"(A)(i) with respect to which an order was issued pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974, as amended, prior to the effective date of this title, or

"(ii) which, as of ninety days after the effective date of regulations implementing section 103 of this title, has not commenced the driving of the foundation piling, or other appropriate on-site structural event, as determined by the Administrator, in accordance with an approved design document for the facility; or

"(iii) which, as of the date of enactment of this title, has not been contracted for in whole or in part or can be canceled, redesigned, or rescheduled without adversely affecting electric system reliability; and

"(B) which (i) is by design capable of consuming fuel at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) in a combination of more than one such powerplant at the same site or facility which in the aggregate is by design capable of consuming fuel at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater.

"(2) The term 'planning process' means that period ending when the major fuel-burning installation can no longer reasonably be designed and constructed so as to be capable of using coal or other fuel as its primary energy source without incurring significant financial or operational detriment, as determined by rule by the Administrator.

"(3) The term 'new major fuel-burning installation' means a major fuel-burning installation—

"(A)(i) with respect to which an order was issued pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974, as amended, prior to the effective date of this title, or

"(ii) which, as of the effective date of regulations implementing section 104, is not beyond the planning process; and

"(B)(i) by design is capable of consuming fuel at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) is a combination of more than one such installation at the same site or facility which in the aggregate is by design capable of consuming fuel at a fuel input rate of two hundred and fifty million British thermal units per hour or greater.

"(4) The term 'capability to use coal or other fuel' means that a new electric powerplant or new major fuel-burning installation is designed (including the necessary equipment and facilities) to use coal or other fuel as its primary energy source.

"TERRITORIAL APPLICATION

"SEC. 102. The provisions of this title shall apply to the contiguous forty-eight States, Alaska, and the District of Columbia.

"NEW ELECTRIC POWERPLANTS

"SEC. 103. Except as provided for in sections 105, 106, and 107, any new electric powerplant shall be constructed with the capability to use, and shall use, coal or other fuel in lieu of natural gas or petroleum as its primary energy source in compliance with applicable environmental requirements.

"NEW MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 104. Except as provided for in sections 105, 106, and 108, any new major fuel-burning installation shall be constructed with the capability to use, and shall use, coal or other

fuel in lieu of natural gas or petroleum as its primary energy source in compliance with applicable environmental requirements.

"TEMPORARY EXCEPTIONS

"SEC. 105. (a) GENERAL TEMPORARY EXCEPTION.—The Administrator, upon application of the person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to use petroleum as its primary energy source, shall grant a temporary exception with respect to the use of petroleum from such requirements and prohibitions and the penalties of section 303 of this Act for up to five years, if—

"(1) such person, prior to the effective date of any such requirement or prohibition, has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation which the Administrator has approved pursuant to subsection (d); and

"(2) such person has demonstrated that during the proposed period of the temporary exception, despite diligent good faith efforts,

"(A) (i) an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to sections 103 and 104 of this title and of the quality necessary to achieve compliance with applicable environmental requirements or conformance with design requirements is not expected to be available; or

"(ii) adequate transportation facilities for such coal or other fuel are not expected to be available; or

"(iii) pollution control abatement equipment or devices, including flue gas desulfurization equipment and electrostatic precipitators, necessary to assure compliance with applicable environmental requirements are not expected to be available; or

"(iv) other equipment or other facilities necessary for the reliable operation of such powerplant or installation are not expected to be available; and

"(B) in the case of a new electric powerplant, there is no alternative supply of electric power which can be obtained from another source for the length of the temporary exception without impairing reliability of service.

"(b) SYNTHETIC FUELS EXCEPTION.—(1) The Administrator, upon application by a person owning, constructing, or proposing to construct a new electric powerplant or new major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title, proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation which the Administrator has approved pursuant to subsection (d) of this section and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by the use of synthetic fuels derived from coal or other fuel; and

"(ii) that the intention so to comply with the prohibition and the anticipated compliance date is evidenced by the existence of binding contracts for fuels or facilities that would enable the applicant to comply with the prohibition.

"(2) Temporary exceptions under this subsection may be granted for up to five years beyond the effective date of such prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(c) PUBLIC HEALTH EXCEPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct a new electric powerplant or new major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to use natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(1) (A) the Environmental Protection Agency or the appropriate State certifies to the Administrator that such use of natural gas is necessary to permit such powerplant or installation to comply with the applicable implementation plan, as defined in section 110(d) of the Clean Air Act, and

"(B) such person demonstrates why such powerplant or installation cannot comply with the applicable implementation plan without the temporary exception and establishes the probable duration of its need for such natural gas to comply with such plan.

"(2) a temporary exception under this subsection may be granted for a period up to five years and may be extended for additional periods of up to five years if the Environmental Protection Agency or the appropriate State certifies to the Administrator that the use of such natural gas is necessary to permit the air quality control region to attain the national primary ambient air quality standards.

"(d) COMPLIANCE PLAN.—(1) The Administrator shall approve a compliance plan submitted pursuant to this section only if the compliance plan sets forth—

"(A) a schedule for compliance with the applicable prohibition pursuant to this title; and

"(B) evidence of binding contracts or other commitments, for fuels or facilities that would enable the applicant to comply with such prohibition.

"(2) The compliance plan approved pursuant to this subsection shall be revised annually as required by the Administrator to reflect appropriate changing circumstances.

"(3) Failure to comply with the compliance plan approved pursuant to this subsection may result in termination or modification of the terms of the temporary exception granted under this section.

"(e) TERMS AND CONDITIONS.—Any temporary exception granted pursuant to this section shall be upon such terms and conditions as may be reasonable and necessary to carry out the purposes of this Act.

"(f) ENVIRONMENTAL COMPLIANCE.—In no event may the action of the Administrator on a request for a temporary exception under this section result in any delay in compliance with any applicable environmental requirement.

"PERMANENT EXEMPTIONS

"SEC. 106. (a) GENERAL EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or new major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title utilizing or proposing to utilize petroleum as its primary energy source shall grant a permanent exemption with respect to petroleum from such requirements and prohibitions and the penalties of section 303 of this Act, if such person has demonstrated that—

"(1) (A) despite good faith efforts an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to sections 103 and 104 of this title and of the quality necessary to achieve compliance with the applicable environmental requirements or conformance with design requirements is not expected to be available for use during a majority of the useful life of such powerplant or installation, or

"(B) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(C) other physical, environmental, and legal factors (including, but not limited to, applicable environmental requirements) exist which cannot reasonably be expected to be overcome by diligent good faith efforts by the applicant and which preclude compliance with the requirements of section 103 or 104 of this title; and

"(2) in the case of a new electric powerplant, despite good faith efforts, there is—

"(A) no reasonable alternative site (i) at which an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to section 103 of this title is or would be available for use during a majority of the useful life of such powerplant;

"(ii) at which the other resources or facilities necessary for operation of a powerplant using coal or other allowable fuel are expected to be reasonably available during a majority of the useful life of such powerplant; and

"(iii) at which a powerplant can be constructed and operated in compliance with applicable environmental requirements; and

"(B) no alternative supply of electric power which can be obtained without impairing reliability of service.

"(b) MIXTURES OF COAL AND PETROLEUM.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or new major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to utilize a mixtue of coal and petroleum as its primary energy source shall grant a permanent exemption with respect to the use of such mixture from such requirements and prohibitions, and the penalties of section 303 of this Act, if the applicant has demonstrated that he would otherwise be entitled to a permanent exemption from the requirements and prohibition of this title. Such exemption shall be conditioned on the use of petroleum in amounts no greater than necessary to maintain reliability of operation.

"(c) PUBLIC INTEREST EXEMPTION.—Any person owning, constructing, or proposing to construct a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of 103 or 104 of this title, may apply to the Administrator for a permanent exemption under this section from such requirements and prohibitions and the Administrator may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act upon a finding that—

"(1) compliance with applicable environmental standards and legal factors pursuant to Federal or State law would be feasible, but compliance with local environmental and legal requirements would not be feasible; and

"(2) compliance with the requirements and prohibitions of this title would not be in the public interest or would not be of significant value in serving the purposes of this Act.

"(d) STANDBY OPERATION EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of sections 103 and 104 of this Act, proposing to use petroleum or natural gas as a primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that such powerplant or installation shall be operated only for standby or emergency pur-

poses when the normal sources of fuel are not available.

"(e) MIXTURES OF COAL AND OTHER FUELS.—Except for peakload exemptions pursuant to section 107(a) of this title, before granting a permanent exemption pursuant to this section 108 of this title from the requirement to use coal or other fuel in lieu of natural gas or petroleum, the Administrator shall require the applicant for a permanent exemption to prove that the use of a mixture of coal or other fuel, and petroleum, or fluidized bed combustion of coal, is not feasible.

"(f) EXCLUSION.—Any new electric powerplant or new major fuel-burning installation that has had a construction order issued pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act, as amended, or section 203 of this Act reversed on the merits by judicial review or withdrawn or rescinded by the Administrator shall not thereafter be subject to the requirements and prohibitions of sections 103 and 104 of this Act.

"SPECIAL EXEMPTIONS FOR NEW ELECTRIC POWERPLANTS

"SEC. 107. (a) PEAKLOAD POWERPLANTS.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant subject to the requirements and prohibitions of section 103 of this title—

"(1) proposing to use petroleum as its primary energy source, shall grant a permanent exemption for such powerplant from such requirements and prohibitions, and the penalties of section 303 of this Act, if such person has demonstrated to the satisfaction of the Administrator that such powerplant is to be constructed or operated as a peakload powerplant; or

"(2) proposing to use natural gas as its primary energy source at sites which the Administrator of the Environmental Protection Agency or the appropriate State agency certifies to the Administrator are in air quality control regions where any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained shall grant a permanent exemption for such powerplant from such requirements and prohibitions and the penalties of section 303 of this Act if such person has demonstrated that such powerplant is to be operated solely as a peakload powerplant.

"(b)(1) INTERMEDIATE LOAD POWERPLANTS.—The Administrator, upon application by a person owning, or proposing to operate a new electric powerplant subject to the requirements and prohibitions of section 103 of this title, proposing to use petroleum as its primary energy source, may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that—

"(A) such powerplant is to be operated as an intermediate load powerplant;

"(B) such powerplant is to be constructed or operated to replace no more than the equivalent capacity of existing natural gas or petroleum fired electric powerplants in air quality control regions which the Administrator of the Environmental Protection Agency or the appropriate State agency certifies to the Administrator is in an area where any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained;

"(C) the net heat input rate for the new electric powerplant will be maintained at nine thousand five hundred British thermal units per kilowatt hour or less during the useful life of such powerplant;

"(D) such powerplant is to be constructed with the capability to use synthetic fuels derived from coal; and

"(E) the applicant in good faith intends to convert to the use of synthetic fuels derived from coal or other fuels at the earliest practicable time.

"(2) The Administrator shall review, from time to time, exemptions granted pursuant to this subsection. When he finds that a supply of synthetic fuels derived from coal suitable for use by a powerplant previously granted an exemption under paragraph (1) is available he shall terminate the exemption.

"(c) COGENERATION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new cogeneration facility requesting an exemption or temporary exception from any requirements and prohibitions of section 103 or 104 of this title, may grant a permanent exemption or temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if the Administrator finds that the applicant has fully evaluated the feasibility of utilizing coal or other fuel in such cogeneration facility and has demonstrated that the economic and other benefits of cogeneration are unobtainable unless petroleum may be used in such facility.

"(d) EXEMPTION FOR RELIABILITY.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant subject to the requirements and prohibitions of section 103 proposing to use petroleum as a primary energy source, shall grant a permanent exemption with respect to the use of petroleum from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that the permanent exemption is necessary to prevent impairment of reliability of service.

"SPECIAL EXEMPTION FOR NEW MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 108. PRODUCT QUALITY EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct a new major fuel-burning installation subject to the requirements and prohibitions of section 104 of this title, proposing to use natural gas or petroleum as its primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that—

"(a) the use of an energy source other than natural gas or petroleum is technically infeasible in indirect firing use due to the necessity to maintain satisfactory control of product quality; and

"(b) substitution of steam for indirect heat is not possible due to process requirements.

"TITLE II—RECONVERSION AND CONVERSION OF EXISTING FACILITIES

"DEFINITIONS

"SEC. 201. For the purposes of this title:

"(1) The term 'existing electric powerplant' means an electric powerplant—

"(A)(i) which is not a new electric powerplant as defined in section 101(1); or

"(ii) with respect to which an order was issued, prior to the effective date of this section, pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended; and

"(B) which—

"(i) is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) except as provided in (i) of this paragraph, is by design not capable of consuming coal or other fuels as its primary energy source at a fuel heat input rate of two hundred and fifty million British thermal units per hour or greater; or

"(iii) is a combination of more than one powerplant at the same site or facility which in the aggregate is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of two hundred and fifty million British thermal units per hour or greater.

"(2) The term 'existing major fuel-burning installation' means a major fuel-burning installation—

"(A)(i) which is not a new major fuel-burning installation as defined in section 102(2); or

"(ii) with respect to which an order was issued, prior to the effective date of the Coal Utilization Act of 1977, pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended; and

"(B) which—

"(i) is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) except as provided in (i) of this paragraph, is by design not capable of consuming coal or other fuel as its primary energy source at a fuel heat input rate of two hundred and fifty million British thermal units per hour or greater; or

"(iii) is a combination of more than one such installation at the same site or facility which in the aggregate is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of two hundred and fifty million British thermal units per hour or greater, but—

"(C) does not include an existing major fuel-burning installation for the extraction of mineral resources located (A) on or above the Continental Shelf of the United States or (B) on wetland areas adjacent to the Continental Shelf of the United States where coal storage is not practicable or would produce adverse effects on environmental quality.

"(3) The term 'capable of consuming coal or other fuel' means that an existing electric powerplant or major fuel burning installation was designed and constructed to use coal or other fuel in lieu of natural gas or petroleum as its primary energy source, but excludes an existing electric powerplant or major fuel-burning installation which (A) would require substantial modifications to any boiler or nonboiler unit in order to utilize coal or other fuel in lieu of natural gas or petroleum as its primary energy source in that unit or (B) would suffer a substantial downgrading of the rated capacity of such unit in order to utilize coal or other fuel in lieu of natural gas or petroleum as its primary energy source.

"(4) The term 'small electric powerplant' means a fossil-fuel fired electric generating unit, which by design is not capable of consuming fuel at a fuel heat input rate of greater than two hundred and fifty million British thermal units per hour.

"(5) The term 'small industrial installation' means a fuel-burning installation that by design is not capable of being operated at a total fuel heat input rate in excess of two hundred and fifty million British thermal units per hour.

"(6) The term 'air pollution control device' means equipment designed to reduce the quantity of atmospheric emissions by any electric powerplant or major fuel-burning installation using coal or other fuel as its primary energy source.

"(7) The term 'electric utility system' means a person and its affiliates which individually or in combination own, lease, operate, or control any electric powerplant subject to the requirements and prohibitions of this title.

"(8) The term 'affiliate', when used in relation to a person, means another person

which controls, is controlled by, or is under common control with such person.

"TERRITORIAL APPLICATION

"SEC. 202. The provisions of this title shall apply to the contiguous forty-eight States and the District of Columbia.

"EXISTING ELECTRIC POWERPLANTS AND MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 204. (a) NATURAL GAS PROHIBITION.—(1) Except as provided for in section 206, 207, 208, and 209 of this title, effective January 1, 1990, no existing electric powerplant shall utilize natural gas as its primary energy source: *Provided, however,* That any existing electric powerplant with the capability to use either natural gas or petroleum as its primary energy source shall be usbject to the requirements and prohibitions of paragraph (3) of this subsection.

"(2) Except as provided in sections 206, 207, 208, and 209 of this title, no existing electric powerplant using petroleum as its primary energy source on April 20, 1977, may thereafter convert to the use of natural gas as its primary energy source.

"(3) Except as provided in sections 206, 207, 208, and 209 of this title, no existing electric powerplant shall use natural gas in greater proportions than—

"(A) the average yearly proportion of natural gas that it used as a primary energy source in calendar years 1974 through 1976, or

"(B) in the case of an electric powerplant beginning operation after January 1, 1974, the average yearly proportion of natural gas that is used as a primary energy source during the first two calendar years of its operation.

"(b) MIXTURES AND COMBINATIONS OF FUELS.—Subject to the provisions of sections 206, 207, 208, and 209 of this title, the Administrator may, by order, prohibit an existing electric powerplant or major fuel-burning installation in which it is feasible to use a combination of coal or other fuel and natural gas or petroleum as a primary energy source from using natural gas or petroleum, or both, in amounts greater than is necessary to maintain reliability of service or operation.

"(c) PERMIT TO USE PETROLEUM.—The Administrator shall by rule require that no existing electric powerplant or major fuel-burning installation which, on or after April 20, 1977, uses coal as a primary energy source may increase its use of petroleum as a primary energy source unless it first obtains a permit which authorizes such increased use of petroleum. Such a permit shall be issued only if the appropriate State certifies to the Administrator that the increased use of petroleum by such powerplant or installation is necessary to permit such powerplant or installation—

"(1) to comply with the applicable implementation plan, as defined in section 110(d) of the Clean Air Act, and

"(2) if such person (A) demonstrates to the satisfaction of the Administrator that it cannot comply with the applicable implementation plan without the issuance of a permit and (B) documents the expected duration of its need for increased use of natural gas or petroleum to comply with such plan.

"COMPLIANCE REPORT

"SEC. 205. Any person owning, operating, or proposing to operate one or more existing electric powerplants or major fuel-burning installations required to come into compliance with the requirements and prohibitions of this title shall on or before January 1, 1980, and annually thereafter, submit to the Administrator a report identifying all such existing electric powerplants or major fuel-burning installations owned or operated by such person. Such report shall—

"(a) set forth the anticipated schedule for compliance with the applicable requirements and prohibitions by each such electric powerplant or major fuel-burning installation;

"(b) indicate proposed or existing contracts or other commitments or good faith negotiations for such contracts or commitments for coal and other fuels or equipment that would enable such powerplant or installation to attain compliance with such requirements and prohibitions; and

"(c) identify those electric powerplants or major fuel-burning installations, if any, for which application for temporary exceptions or permanent exemption from the requirements and prohibitions of this title may be filed.

"TEMPORARY EXCEPTIONS

"SEC. 206. (a) GENERAL TEMPORARY EXCEPTION.—(1) The Administrator, upon application of a person owning, operating or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of sections 203 and 204 of this title proposing to use petroleum as a primary energy source, shall grant temporary exceptions with respect to petroleum from such requirements and prohibitions and the penalties of section 303 of this Act for a period of up to five years, if—

"(A) such person, prior to the effective date of any such requirement or prohibition, has submitted a compliance plan to the Administrator which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated that, prior to the applicable compliance date, despite diligent good faith efforts—

"(i) an adequate and reliable supply of coal or other fuel allowable as a primary energy source and of the quality necessary to achieve compliance with applicable environmental requirements and to meet design and operation requirements is not expected to be available; or

"(ii) adequate transportation facilities for such coal or other fuel are not expected to be available; or

"(iii) pollution control equipment or devices, including the flue gas desulfurization equipment and electrostatic precipitators, necessary to assure compliance with applicable environmental requirements are not expected to be available; or

"(iv) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(v) other equipment or other facilities necessary for the reliable operation of such powerplant or installation are not expected to be available.

"(b) SYNTHETIC FUELS EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation: which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by the use of synthetic fuels derived from coal or other fuel; and

"(ii) that the intention so to comply with the requirements and prohibitions and the anticipated compliance date are evidenced by the existence of binding contracts or commitments for fuels or facilities that would enable the applicant to comply with the prohibition.

"(2) Temporary exceptions under this subsection may be granted for periods of up to five years beyond the effective date of such prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(c) INNOVATIVE TECHNOLOGY EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of the Act, if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by innovative techniques for using coal or other fuel; and

"(ii) that the intention so to comply with the prohibition and the anticipated compliance date are evidenced by the existence of binding contracts or commitments for fuels or facilities that would enable the applicant to comply with such prohibition.

"(2) Temporary exceptions under this subsection may be granted for up to five years each beyond the effective date of the requirement or prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(d) PUBLIC HEALTH EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an electric powerplant or existing major fuel-burning installation subject to the requirements and prohibition of section 203 or 204 of this title proposing to use natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibition and the penalties of section 303 of this Act if—

"(A) the Environmental Protection Agency or the appropriate State certifies to the Administrator that such use of natural gas is necessary to permit such powerplant or installation to comply with the applicable implementation plan, as defined in section 110 (d) of the Clean Air Act, and

"(B) such person demonstrates why such powerplant or installation cannot comply with the applicable implementation plan without the temporary exception and establishes the probable duration of its need for such natural gas to comply with such plan.

"(2) A temporary exception under this subsection may be granted for a period up to five years and may be extended for additional periods of up to five years if the Environmental Protection Agency or the appropriate State certifies to the Administrator that the use of such natural gas is necessary to permit the air quality control region to attain the national primary ambient air quality standard.

"(e) RETIREMENT EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or a major fuel-burning installation subject to the requirements and prohibitions of section 203

or 204 of this title, proposing to use petroleum or natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act for periods of up to five years each from the effective date of such requirements and prohibitions if such person, prior to the effectiv date of the applicable requirements and prohibitions, has submitted a retirement plan to the Administrator setting forth a retirement schedule for such facility and demonstrates that such powerplant or installation

"(A) shall be retired from service and shall permanently cease operation within five years from the effective date of such requirements or prohibitions or

"(B) shall thereafter be maintained only for standby or emergency purposes and operated only intermittently during interruptions in normal energy supplies.

"(2) Any installation with respect to which a temporary exception is granted under this subsection is no longer eligible for, and cannot be granted, any further permanent exemption or temporary exception under this title.

"(f) Any temporary exception granted pursuant to this section shall be upon such terms and conditions as may be reasonable and necessary to carry out the purposes of this Act.

"(g) COMPLIANCE PLAN.—(1) The Administrator shall approve any compliance plan submitted pursuant to this section only if the compliance plan sets forth—

"(A) a schedule for compliance with the applicable requirements or prohibitions imposed pursuant to this title; and

"(B) evidence of binding contracts or other commitments or good faith negotiation for such contracts or commitments for fuels or facilities that would enable the applicant to comply with such requirements and prohibitions.

"(2) The compliance plan approved pursuant to this section shall be revised annually as required by the Administrator to reflect changing circumstances.

"(3) Failure to comply with a compliance plan approved pursuant to this section may result in termination or modification of the terms of the temporary exception granted under this section.

"PERMANENT EXEMPTIONS

"SEC. 207. (a) GENERAL PERMANENT EXEMPTION.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title utilizing or proposing to utilize petroleum as its primary energy source shall grant a permanent exemption with respect to petroleum from such requirements and prohibitions, and the penalties of section 303 of this Act, if such person has demonstrated that—

"(1) despite good faith efforts an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to sections 203 and 204 of this title and of the quality necessary to achieve compliance with the applicable environmental requirements or conformance with design requirements is not expected to be available for use during a majority of the remaining useful of such powerplant or installation, or

"(2) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(3) other physical, environmental, and legal factors (including, but not limited to, applicable environmental requirements) exist which cannot reasonably be expected to be overcome by diligent good faith efforts by the applicant and which preclude compliance with the requirements of section 203 or 204 of this title.

"(b) MIXTURES OF COAL AND PETROLEUM.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title utilizing or proposing to utilize a mixture of coal and petroleum as its primary energy source shall grant a permanent exemption with respect to the use of such mixture from such requirements and prohibitions, and the penalties of section 303 of this Act, if the applicant demonstrates that he would otherwise be entitled to a permanent exemption under other provisions of this title. Such exemption shall be conditioned on the use of petroleum in amounts no greater than necessary to maintain reliability of operation.

"(c) PUBLIC INTEREST EXEMPTION.—Any person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, may apply to the Administrator for a permanent exemption under this section from such requirements and prohibitions and the Administrator may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act upon a finding that—

"(1) compliance with applicable environmental standards and legal factors pursuant to Federal or State law would be feasible, but compliance with local environmental requirements and legal factors would not be feasible; and

"(2) compliance with the requirements and prohibitions of this title would not be in the public interest or would not be of significant value in serving the purposes of this Act.

"(d) SPECIAL EXEMPTION.—Any person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of 203 or 204 of this title may apply to the Administrator for a permanent exemption under this subsection from such requirements and prohibitions. The Administrator shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if the applicant for such exemption demonstrates that—

"(1) the natural gas or petroleum is being obtained by the applicant under an existing contractual commitment, which the applicant has no right to terminate without financial penalties;

"(2) the prohibition of burning such natural gas or petroleum will not make it available for other uses in the United States; and

"(3) the revenues derived from the sale or transportation tariffs of such natural gas are essential to the economic viability of the pipeline system in which it is delivered to the applicant.

"(e) STANDBY OPERATION EXEMPTION.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of this title, proposing to use petroleum or natural gas as a primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person, prior to the effective date of any applicable requirements and prohibitions, demonstrates that such powerplant or installation will be maintained only for standby or emergency purposes and will be operated only for such purposes when the normal sources of energy supply are not available.

"(f) CONSIDERATION OF ALTERNATIVES.—Except for peakload exemptions pursuant to section 208(a) of this title, before granting a permanent exemption pursuant to this section and section 208 of this title from the requirement to use coal or other fuel in lieu of natural gas or petroleum, the Administrator shall require the applicant for a permament exemption to prove that the use of a mixture of coal or other fuel, and petroleum, or fluidized bed combustion of coal, is not feasible.

"(g) EXCLUSION.—Any existing electric powerplant or major fuel-furning installation that has had a prohibition order issued pursuant to the Energy Supply and Environmental Coordination Act of 1974, as amended, or section 203 of this Act reversed on the merits by judicial review or withdrawn or rescinded by the Administrator shall not thereafter be subject to the requirements and prohibitions of title II of this Act.

"SPECIAL EXEMPTIONS FOR EXISTING ELECTRIC POWERPLANTS

"SEC. 208. (a) PEAKLOAD POWERPLANTS.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use natural gas or petroleum as its primary energy source, shall grant a permanent exemption for such powerplant from such requirements and prohibitions and the penalties of section 303 of this Act, if such person has demonstrated that—

"(1) the powerplant is operated solely as a peakload powerplant; and

"(2)(A) a denial of the application for exemption is likely to result in an impairment of reliability or adequacy of service; or

"(B) modification of the powerplant to permit compliance with such requirements and prohibitions is technically infeasible; or

"(C) such modification would result in an unreasonable cost to the applicant's customers.

"(b) INTERMEDIATE LOAD POWERPLANTS.—(1) The Administator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section 203 of 204 of this title, proposing to use petroleum as its primary energy source, may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that—

"(A) such powerplant is to be operated solely as an intermediate load powerplant;

"(B) such powerplant is to be operated at a site which the Administrator of the Environmental Protection Agency or the appropriate State agency certifies to the Administrator is in an air quality control region where any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained;

"(C) the net fuel heat input rate for the existing electric powerplant will be maintained at nine thousand five hundred British thermal units per kilowatt hour or less during the useful life of such powerplant;

"(D) such powerplant is constructed with the capability to use synthetic fuels derived from coal; and

"(E) the applicant in good faith intends to convert to the use of synthetic fuels derived from coal or other fuels at the earliest practicable time.

"(2) The Administrator shall review, from time to time, exemptions granted pursuant to this subsection. When he finds that a supply of synthetic fuels derived from coal suitable for use by a powerplant previously granted an exemption under paragraph (1) is available he shall terminate the exemption.

"(c) EXEMPTION FOR RELIABILITY.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section

203 proposing to use petroleum as a primary energy source, shall grant a permanent exemption with respect to the use of petroleum from such requirements and prohibitions, and the penalties of section 303 of this Act if such person demonstrates that the permanent exemption is necessary to prevent impairment of reliability of service.

"SPECIAL EXEMPTIONS FOR EXISTING MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 209. PRODUCT QUALITY EXEMPTION.—(a) The Administrator, upon application by a person owning, operating, or proposing to operate an existing major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use natural gas or petroleum as its primary energy source, shall grant a permanent exemption from such requirements and prohibitions and penalties of section 303 of this Act if such person demonstrates to the satisfaction of the Administrator that—

"(1) the use of a primary energy source other than natural gas or petroleum is technically infeasible in indirect firing due to the necessity to maintain satisfactory control of product quality; and

"(2) substitution of steam for indirect heat is not possible due to process requirements.

"(b) COGENERATION EXEMPTION.—The Administrator, upon application by a person owning or operating a cogeneration facility requesting an exemption or temporary exception from any requirements and prohibitions of this title, may grant an exemption or temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if the Administrator finds that the applicant has fully evaluated the feasibility of utilizing coal or other fuel in such cogeneration facility and has demonstrated that the economic and other benefits of cogeneration are unobtainable unless petroleum may be used in such facility.

"COAL CONVERSION COMPENSATION

"SEC. 210. (a) The Administrator is authorized, in accordance with such rules and regulations as the Administrator may prescribe, to compensate or to make commitments to compensate any person who owns, leases, operates or controls any existing electric powerplant or major fuel-burning installation which in the absence of such compensation would otherwise be issued an order granting a permanent exemption pursuant to sections 207, 208, or 209 of this title. Such compensation shall be no greater than necessary to compensate such person for the differential capital and operating cost, if any, to such person between complying with the applicable requirements and prohibitions of section 203 or 204 of this title and the granting of such exemption.

"(b) A person receiving compensation pursuant to this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator by rule requires to protect the interests of the United States.

"(c) There are hereby authorized to be appropriated to the Administrator such sums as shall be sufficient for the purposes of this title.

"COAL CONVERSION LOANS

"SEC. 211. (a)(1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to make loans and to make commitments to loan to any person who owns, leases, operates, or controls any existing electric powerplant, or major fuel-burning installation which converts to coal or other fuel in lieu of natural gas or petroleum as its primary energy source subsequent to June 22, 1974, for the specific purpose of financing the purchase and installation of air pollution control devices at such electric powerplants or installations. The aggregate amount of loans outstanding under this section may at no time exceed $1,000,000,000. No loan or commitment to loan shall be made under this section after January 1, 1985.

"(2) An applicant for a loan under this section shall provide evidence in writing to the administrator in such form and with such content and other submissions as the Administrator shall by rule require to protect the interests of the United States.

"(3) Each loan shall be extended in such form, under such conditions and terms, and pursuant to such regulations as the Administrator deems appropriate.

"(4) The Administrator shall, from time to time as he deems appropriate and on advice of the Secretary of the Treasury, establish the interest rate or rates at which loans shall be made under this section at the current rate being paid by the Secretary of the Treasury on bonds, notes, and other obligations of comparable duration issued on behalf of the Federal Government, plus such fees and other charges as the Administrator may specify pursuant to subsection (c) of this section, not to exceed 1 per centum per annum.

"(b) The Administrator shall loan or make a commitment to loan sums under subsection (a) of this section with respect to the purchase and installation of air pollution control devices only if he finds that—

"(1) the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 212 of this title has not been obtained for such air pollution control devices; and

"(2) the acquisition of such air pollution control devices would not occur in the absence of a loan.

"(c) Loans made pursuant to this section shall not (1) exceed two-thirds of the cost of acquiring and installing such air pollution control devices; and (2) have a maturity date in excess of ten years.

"(c)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a loan, for the appraisal of properties offered as security for a loan, or for the issuance of a commitment: *Provided*, That such amounts shall not exceed one-half of one per centum of the loan amount authorized pursuant to subsection (a) of this section.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan made pursuant to this section.

"(d)(1) If there is a default in any payment by the obligor of interest or principal due under a loan entered into by the Administrator under this section and such default has continued for ninety days, the Administrator has the right to demand payment of such unpaid amount, unless the Administrator finds that such default has been remedied, or a satisfactory plan to remedy such default by the obligor has been accepted by the Administrator.

"(2) In demanding payment of unpaid interest or principal by the obligor, the Administrator has all rights specified in the loan-related agreements with respect to any security which he held with respect to the loan, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such loan or related agreements.

"(3) If there is a default under any loan or commitment to loan, the Administrator shall notify the Attorney General who shall take such action against the obligor or other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such loan shall make available to the United States all records and evidence necessary to prosecute any such suit.

"(e) There are hereby authorized to be appropriated to the Administrator such sums as shall be sufficient for the purposes of this title, but which shall not exceed the sum of $200,000,000 for each fiscal year 1978 through 1982.

"LOAN GUARANTEES

"SEC. 212. (a)(1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee the bonds, debentures, notes, and other obligations issued by or on behalf of any person who owns, operates, or controls any existing electric powerplant or major fuel-burning installation, which converts from natural gas or petroleum to coal or other fuels after June 22, 1974, for the specific purpose of financing the purchase and installation of air pollution control devices at such electric powerplants or major fuel-burning installations. The aggregate amount of outstanding indebtedness guaranteed under this section may at no time exceed $5,000,000,000. No guarantee or commitment to guarantee shall be undertaken under this section after January 1, 1985.

"(2) An applicant for a guarantee under this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator may require to protect the interest of the United States. Each guarantee and commitment to guarantee shall be extended in such form, under such terms and conditions, and pursuant to such regulations as the Administrator deems appropriate.

"(b) The Administrator may guarantee or make a commitment under subsection (a) of this section, with respect to air pollution control devices, subject to conditions and priorities pursuant to section 213 of this title, and if he finds that—

"(1) the guarantee will significantly reduce the borrowing costs associated with acquisition of capital for the purchase of air pollution control devices; and

"(2) the acquisition of such air pollution control devices would be significantly delayed in the absence of a loan guarantee; and

"(3) the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 211 of this title has not been obtained for such air pollution control devices; and

"(c) The amount of any guarantee under this section shall not exceed two-thirds of such air pollution control acquisition costs; and

"(d) The bonds, debentures, notes, or other obligations for which guarantees are made shall not have redemption dates or a maturity in excess of ten years from date of issuance.

"(e)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a guarantee, for the appraisal of properties offered as security for a guarantee, or for the issuance of commitments for a loan or other obligation guaranteed under this section, but such charge shall not exceed one-quarter of 1 per centum of the amount of the loan or other obligation.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan or other obligation guaranteed under this section.

"(f)(1) If there is a default in any payment by the obligor of interest or principal due under an obligation guaranteed by the Administrator under this section and such default has continued for ninety days, the

holder of such obligation or his agents has the right to demand payment by the Administrator of such unpaid amount. Within such period as may be specified in the guarantee or related agreements, but not later than forty-five days from the date of such demand, the Administrator shall promptly pay to the obligee or his agent the unpaid interest on and unpaid principal of the obligation guaranteed by the Administrator as to which the obligor has defaulted, using funds collected for such purpose as insurance fees pursuant to subsection (e), unless the Administrator finds that there was no fault by the obligor in the payment of interest or principal or that such default has been remedied.

"(2) If the Administrator makes a payment under paragraph (1) of this subsection, he shall have all rights specified in the guarantee or related agreements with respect to any security which he held with respect to the guarantee of such obligation, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements.

"(3) If there is a default under any guarantee or commitment to guarantee an obligation, the Administrator shall notify the Attorney General who shall take such action against the obligor or any other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such obligation shall make available to the United States all records and evidence necessary to prosecute any such suit.

"CONDITIONS AND PRIORITIES

"SEC. 213. (a) The Administrator shall guarantee or make a commitment to guarantee as authorized in section 211 of this title, or loan or make a commitment to loan as authorized in section 211 of this title, only when conditions set forth in such sections are satisfied, and if—

"(1) air pollution control devices to be acquired pursuant to this title shall satisfy any applicable environmental requirements;

"(2) the Administrator, in consultation with the Administrator of the Environmental Protection Agency, is satisfied that such air pollution control device does not duplicate or displace existing air pollution control devices with a remaining useful economic life in excess of two years; or

"(3) the Administrator has determined that there will be a continued reasonable assurance of full repayment of a loan, or that a realistic plan exists for redeeming all bonds, debentures, notes, or other obligations for which a guarantee is requested; and

"(4) the Administrator is satisfied that competition among private entities for the provision of air pollution control devices for any electric powerplant or major fuel-burning installations using coal as their primary energy source to be assisted under this title will be in no way limited or precluded.

"(b) In making guarantees or commitments to guarantee pursuant to section 212 of this title, or in making loans or commitments to loan pursuant to section 211 of this title, the Administrator is directed to—

"(1) allocate 25 per centum of available financial assistance, to the extent feasible and practicable, to existing small electric powerplants, and to existing small industrial installations; and

"(2) give priority consideration to requests for financial assistance by existing major fuel-burning installations and electric powerplants subject to, and in receipt of, a coal conversion order issued by the Administrator pursuant to section 203 of this Act.

"(c)(1) The Administrator shall require all persons receiving financial assistance or guarantees under this title whether in the form of loans, obligation guarantees, or other arrangements, to keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance was given or used, the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(2) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall, until the expiration of three years after completion of the project or undertaking referred to in subsection (a) of this section or full repayment of interest and principal on a loan made or guaranteed pursuant to provisions of this title, have access for the purposes of audit and examination to any books, documents, papers, and records of such receipts which in the opinion of the Administrator or the Comptroller General may be related or pertinent to the loans, obligation guarantees, or other arrangements referred to in such subsection.

"SYSTEM COMPLIANCE OPTION

"SEC. 214. (a) The Administrator, upon application by an electric utility company owning or operating any existing electric powerplants subject to the requirements and prohibitions of section 204 of this title and using intrastate natural gas owned or under contract to, such company prior to the date of enactment of this section, shall approve in lieu of any other provision of this Act a system compliance plan if such plan meets the following conditions:

"(1) Contains a commitment that no new base load electric powerplant constructed by the electric utility company after the date of enactment of this Act will utilize natural gas or petroleum as its primary energy source;

"(2) Provides (A) by 1990 for the reduction of the use of such intrastate natural gas to less than 20 per centum of the quantities used by the company's system during calendar year 1976; and (B) by 1995 for the elimination of the use of such intrastate natural gas;

"(3) Provides that subsequent to 1990 the use of such intrastate natural gas as the primary energy source will only be for the company's system peakload operation, defined as the total kilowatt hours generated annually by natural gas on the system of the applicant electric utility company system divided by the aggregate capacity of all the electric powerplants in such system, but not to exceed one thousand five hundred full-load hours per year;

"(4) Provides that subsequent to the date of enactment of this section that the natural gas utilized by electric powerplants on such electric utility company system will come only from existing natural gas contracts and renewals or extensions thereof under normal escalation clauses or other clauses which sets forth an objective basis on which price can be determined at or before renewal of such contracts;

"(5) Provides for an orderly progression of phasing such electric powerplants into intermediate load operation and for the construction of coal or other fuel electric powerplants for base load use; and

"(6) Contains a ten-year forecast of demand for electricity, a ten-year construction forecast, and a ten-year financial plan which provide a reasonable basis for concluding that the commitments in such plan will be carried out.

"(b) The approval of a system's compliance plan pursuant to subsection (a) of this section shall suspend the application of the requirements of section 204 of this title to the utility system submitting the plan for as long as such approval is in effect.

"(c) The Administrator shall require the utility system to reaffirm the commitments and update the information in the system compliance plan at such intervals as he shall specify, not less frequently than every two years and not more frequently than every year, and the utility system may from time to time supplement or update the information in such plan.

"(d) The Administrator may extend the deadline in paragraph (a)(2) of this section for periods of up to five years if the applicant demonstrates that despite good faith efforts to comply with such deadlines because of delays in the construction of new electric powerplants by such electric utility company is not feasible to comply with such deadlines without impairing reliability of service.

"(e) The Administrator may extend the deadline in paragraph (a)(3) of this section if he finds that it is not feasible to use any fuel other than natural gas or that such extension is in the national interest.

"TITLE III—GENERAL

"ADMINISTRATIVE RULES AND REGULATIONS

"SEC. 301. (a) Except to the extent otherwise provided in this section rules prescribed under this Act shall be made in accordance with the procedures set forth in section 553 of title 5, United States Code.

"(b) Any application filed under this Act for a permit, or a permanent exemption or temporary exception from the requirements and prohibitions of sections 103, 104, 203, and 204 of this Act shall be in such form and contain such information as the Administrator shall require by rule promulgated within one hundred and eighty days after the date of the enactment of this section. The Administrator, upon receipt of such application, shall publish a notice thereof in the Federal Register together with a detailed summary of the reasons set forth in such application for requesting such exemption, and provide a minimum of forty-five days for written comments thereon.

"(c) When an application for a permit, or temporary exception or a permanent exemption from any requirement or prohibition of this Act is based on an alleged inability to comply with applicable environmental requirements, a copy of the application shall also be filed with the Administrator of the Environmental Protection Agency and, pursuant to the requirements of section 304 of this Act, the Administrator shall request the Environmental Protection Agency to comment thereon within the period provided to the public.

"(d) Except as otherwise provided in this section, all determinations by the Administrator on such applications shall be determined on the record, subject to the procedures of section 554 of title 5, United States Code.

"(e) The Administrator, within six months after the filing of a completed application, shall issue an order granting or denying the application for a permit, or a permanent exemption or temporary exception, except that in the case of a permanent exemption, or if necessary to provide time for compliance with the National Environmental Policy Act of 1969, the Administrator may publish a notice in the Federal Register extending such period to a date certain but in no event greater than twelve months after the filing of the completed application. Such notice shall include the reasons for such an extension. Before promulgating any order granting or denying a permanent exemption or temporary exception or permit under this section, the Administrator shall publish such proposed order in the Federal Register, together with a statement of the reasons for such order. The Administrator shall include in the published statement of the reasons for such rule or order the Administrator's findings with respect to each such factor.

"(f) If the Administrator does not issue an order within the time limits stated in

subsection (e), any party to the proceeding may file a motion demanding action by the Administrator. If the Administrator does not issue an order within thirty days after the filing of such motion, the application shall be granted.

"(g) The Administrator may by rule establish criteria by which the Administrator will approve or deny an application for a permanent exemption, a temporary exception, or permit, or a stay for an electric powerplant or a major fuel-burning installation from the requirements and prohibitions of this Act.

"JUDICIAL REVIEW

"SEC. 302. (a) Judicial review of any action by the Administrator pursuant to section 301(e) of this Act shall be in accordance with the provisions of chapter 7, title 5, United States Code. At any time before the sixtieth day after the date an order is published in the Federal Register, a person entitled under such chapter may file a petition to review any such order with the United States court of appeals for the circuit wherein such person resides or has his principal place of business, or the United States Court of Appeals for the District of Columbia.

"(b) Subject to the direction and control of the Attorney General, as provided in section 519 of title 28, United States Code, attorneys appointed by the Administrator may appear for and represent the Administrator in any proceeding instituted under this section.

"ENFORCEMENT AND PENALTIES

"SEC. 303. (a) It shall be unlawful for any person to violate any provision of this Act or to violate any rule, regulation, requirement, or order issued pursuant to this Act.

"(b)(1) Whenever, on the basis of any information available, the Administrator finds that any person is in violation of any provision of this Act or any rule, regulation, requirement, or order issued pursuant to this Act, the Administrator shall issue notice of such violation and may issue an order requiring compliance with such provision, rule, regulation, requirement, or order.

"(2) Any notice issued under this section shall be in writing and shall state with reasonable specificity the nature of the violation and any order shall specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable prohibitions and requirements of this Act.

"(c)(1) Any person who violates any provision of this Act, or rule or order issued thereunder, shall be subject to a civil penalty of not more than $25,000 for each violation. Each day a violation continues shall constitute a separate violation.

"(2) Any person who willfully violates any provision of this Act, or rule or order issued thereunder, shall be subject to a fine of not more than $50,000 or to imprisonment for not more than one year, or both, for each violation. Each day a violation continues shall constitute a separate violation.

"(3) Any individual director, officer, or agent of a corporation who knowingly and willfully authorizes, orders, or performs any of the acts or practices constituting in whole or in part a violation described in paragraphs (1) and (2) of this subsection, shall be subject to penalties under this subsection without regard to any penalties to which the corporation may be subject under paragraphs (1) and (2) except that no such individual director, officer, or agent shall be subject to imprisonment under paragraphs (1) and (2), unless he also knows of noncompliance by the corporation, or has received actual notice from the Administrator of such noncompliance.

"(4) Whenever it appears to the Administrator that any person has engaged, is engaged, or is about to engage in acts or practices constituting a violation of the provisions of this Act or any rule or order issued thereunder, the Administrator may request the Attorney General to bring a civil action to enjoin such acts or practices, and upon a proper showing, a temporary restraining order or a preliminary or pemanent injunction shall be ganted without bond. In such action, the court may also issue mandatory injunctions commanding any person to comply with any provision of this Act or any rule or order issued thereunder.

"(d) Any person owning or operating an electric powerplant granted a permanent exemption under section 107 or 208 of this Act as a peakload electric powerplant which, for any calendar year operates in excess of one thousand five hundred full-load hours, shall be liable for a civil penalty of up to $10 per barrel of oil or $3 per thousand cubic feet of natural gas used in excess of one thousand five hundred full-load hours, except where such person can demonstrate that operation in excess of one thousand five hundred full-load hours was necessary to meet peakload demand and that other peakload electric powerplants within the system were unavailable for service due to unit or system outages or were also exceeding the one thousand five hundred full-load hours per calendar year limitation on peakload operation.

"(e) For purposes of subsections (c) (1), (2), and (3) of this section, the term 'person' shall not include the Federal Government, including corporations, departments, Federal agencies, and other instrumentalities.

"ENVIRONMENTAL REQUIREMENTS

"SEC. 304 (a) CONSULTATION.—For the purposes of this Act, in order to ascertain environmental control equipment and fuel requirements necessary to comply with applicable environmental requirements, the Administrator shall consult, as appropriate, with the Administrator of the Environmental Protection Agency or appropriate State authorities.

"(b) APPLICABILITY OF NATIONAL ENVIRONMENTAL POLICY ACT.—The grant or denial of an application for a permit, or a temporary exception or permanent exemption or permit from the requirements and prohibitions of sections 103, 104, 203, and 204 of this Act shall not be deemed to be a major Federal action for purposes of section 102 of the National Environmental Policy Act of 1969, except when such application relates to a new electric powerplant or new major fuel-burning installation which otherwise involves a major Federal action. In such cases the environmental impact statement otherwise prepared for such action shall be deemed a sufficient statement for the Administrator's action on the application, if such statement adequately considers the fuel uses involved in the grant or denial of the application.

"ENERGY EFFICIENCY AND INNOVATIVE TECHNOLGY REQUIREMENTS

"SEC. 305. For the purposes of this Act, in order to ascertain appropriate efficiency requirements and technological feasibility of converting any electric powerplant, or any major fuel-burning installation, subject to the requirements or prohibitions of this Act, the Administrator shall consult, as appropriate, with the Administrator of the Energy Research and Development Administration.

"ASSISTANCE TO REGIONS IMPACTED BY EXPANDED COAL PRODUCTION

"SEC. 306. (a) When the Governor of any State or chairman of any Indian tribe determines that coal production will expand above 1976 production levels in an area which will require the provision of additional public facilities and services or housing, the Governor or chairman may designate such an area within his jurisdiction as an 'energy-impacted region.' The Governor or chairman shall notify the Administrator of this designation, setting forth the boundaries of the impacted region and describing existing and anticipated socioeconomic impact.

"(b) Upon designation of an energy impacted region by a Governor or chairman, the Administrator shall—

"(1) make available from available appropriations one hundred per centum federally funded planning grants for such regions for the purpose of developing a growth management and housing plan for the impacted region. Such plan shall identify anticipated levels of coal development within the region, the nature and extent of projected socioeconomic impacts and the need for temporary and permanent housing sites and facilities. If the Governor concurs, such grants may be made directly to counties or other appropriae political subdivisions. If the Administrator finds in writing after consultation with the Governor and local officials that particular grants are unnecessary, the Administrator may veto grants on a case-by-case basis;

"(2) transfer funds authorized for this section to the Farmers Home Administration to—

"(A) subject to the approval of the Governor or chairman, acquire land by purchase, donation, or condemnation, and develop and transfer acquired land to any State or to a political subdivision thereof, or to any qualified housing contractor if he determines that such transfer is an integral and necessary element of an economically feasible plan for the development of housing in the energy impacted region. Such activities shall be accomplished under such terms and conditions as the Administrator shall require, which may include transfer of land with or without monetary consideration: *Provided*, That, after completion of the housing project, the recipient of the transferred land shall pay to the Administrator the fair market value of the land prior to development. Land development shall be limited to site preparation work and construction of access roads and off-site improvements such as sewers and water extensions which the Governor or chairman determines are necessary or appropriate to the economic feasibility of a project; and

"(B) provide technical assistance to any State or political subdivision thereof for the development of housing, sewers, water systems, and other public facilities.

"(c) In selecting land pursuant to paragraph (b)(2)(A) of this section for acquisition and development, the Administrator shall give priority to acquiring tracts of land which were uninhabited or which were previously mined prior to the date of enactment of this Act. No part of the funds provided under this section may be used to pay the actual construction costs of housing.

"(d) The Administrator of the Farmers Home Administration may carry out the purposes of subsection (b) of this section directly or may make grants and commitments for grants and may advance money under such terms and conditions as he may require to any State, or any department, agency, or instrumentality of a State, or any public body or nonprofit organization designated by a State.

"(e) To expedite the construction or rehabilitation of housing in designated energy-impacted regions, the Administrator of the Farmers Home Administration or his designee shall convene a strike force in each designated energy-impacted region made up of representatives of the Governor or chairman, local political subdivisions, and each of the Federal agencies or departments which have existing programs relating to housing, public facilities, reclamation of abandoned mined lands, flood insurance, and such other programs as the Administrator deems relevant. The strike force shall be

empowered to waive eligibility requirements for assistance under such programs on a case-by-case basis for applicants from the energy-impacted regions: *Provided*, That, no eligibility requirements relating to civil rights or to protection of the environment may be waived. The Administrator of the Farmers Home Administration or his designee shall serve as the Chairman of the strike force and shall prescribe the terms and conditions under which waivers are approved.

"(f) Within three months of designation of an energy-impacted region, all coal-related companies operating within the region or transporting large quantities of coal through the region, shall prepare a report to the Administrator. Such report shall include projected employment demand over the life of the operations, annual projected influx of employees from outside the region, and projected annual coal production. Copies of the report shall be filed with the Governor or Indian tribe, the Administrator of the Farmers Home Administration or his designee, and appropriate county or local officials and shall be available for public review at each county courthouse within the energy-impacted region.

"(g) There is authorized to be appropriated annually for eight years to the Administrator the sum of $150.000,000, beginning with fiscal year 1978, which shall remain available until expended for the purposes of this section.

DISRUPTION OF NATURAL GAS SUPPLY CONTRACTS

"SEC. 307. (a) RETENTION OF TITLE.—Whenever the application of any of the provisions of this Act to any electric powerplant or any major fuel-burning installation would result in prohibiting the use of natural gas or petroleum under contract, as of the date of enactment of this section, by any facility as its primary energy source, the sale, exchange, or other transfer of such natural gas or petroleum by any such powerplant or installation shall not be prevented or otherwise impaired by the force majeure or other clauses of such a contract.

"(b) COMPENSATION.—(1) Whenever the application of the requirements and prohibitions of sections 103 and 104 of this Act to any new electric powerplant or any new major fuel-burning installation would result in prohibiting any person from utilizing natural gas for which such person contracted prior to the date of enactment of this section, then such person shall be eligible for just compensation from the person or persons to whom such gas is sold. The person or persons to whom such natural gas is delivered shall make payment of just compensation to the person to whom the prohibition applies and to any person who but for such prohibition would have transported such natural gas to such facility. The person or persons who pay such just compensation shall, upon payment thereof, be entitled to assume any contractual rights which the person to whom the prohibition applies may have with respect to such natural gas. If the charges for transportation or sale of natural gas delivered pursuant to such a contract were not regulated under the Natural Gas Act prior to its assumption under this subsection, the assumption of such contract under this subsection and transportation or sale of such natural gas under such contract after its assumption shall not be subject to the Natural Gas Act.

"(2) For purposes of this subsection, the term 'just compensation' means compensation for—

"(A) increased fuel costs, if any, including transportation and handling costs, incurred by the electric powerplant or major fuel-burning installation to which the prohibition applies; and

"(B) loss of revenue, if any, incurred by the person who transported gas to such powerplant, to the extent such loss would not have occurred but for such prohibition.

"(3) In the event of a dispute between or among the parties, the amount of such compensation, as between those parties disagreeing, shall be determined on the record after agency hearing by the Administrator. A prohibition on the use of natural gas under this Act may take effect before the amount of such compensation is finally determined by the Administrator. The Administrator may order any person to pay the amount of compensation established by the Administrator or to adjust rates of payment to reflect underpayment or overpayments.

"(c) No action taken pursuant to this section and no permanent exemption granted pursuant to any other section of this Act shall be construed to—

"(1) permit a person to receive more natural gas from a pipeline company or distribution company than the maximum quantities permitted such person under the curtailment plan in effect for such pipeline company or distribution company; or

"(2) require suppliers of natural gas which is subsequently sold, exchanged, or otherwise transferred by electric powerplants or major fuel-burning installations as provided under subsection (a) to supply an annual amount exceeding the lesser of (A) the volume specified in the contract, or (B) the volume which would actually have been delivered to the electric powerplant or major fuel-burning installation but for the application of section 103, 104, 203, or 204 of this title; or

"(3) limit in any way the power of the Federal Power Commission or of the States to regulate the allocation of natural gas.

"EMERGENCY POWERS

"SEC. 308. (a)(1) In the event the President declares a severe energy interruption, as defined in section 3(8) of the Energy Policy and Conservation Act, as amended, the Administrator may, by order, prohibit an electric powerplant or major fuel-burning installation using natural gas or petroleum as a primary energy source from so using natural gas or petroleum for the duration of such interruption, notwithstanding applicable implementation plans as defined in section 110(b) of the Clean Air Act or other State or local government standard, limitation, or other requirement, so long as such prohibition are not likely to result in a violation of any national primary ambient air quality standard.

"(2) In the event the President determines that such supply interruption is likely to be of sufficiently grave scope and duration that, in his judgment, it is necessary to issue orders under paragraph (1) of this subsection which are likely to result in a violation of any national primary ambient air quality standard, the President my issue such orders but may not delegate the authority to do so.

"(b) A person operating a peakload electric powerplant for the purposes of supplying power in an emergency situation shall notify the Administrator within twenty-four hours of startup of such operation. The Administrator may order the cessation of the operations of such powerplant at any time if in his judgment the emergency does not justify such operation. Hours of operation accumulated after such order shall be included in the peakload powerplant's operating hours for the purposes of the penalties in section 303(d).

"(c) The Administrator may stay or otherwise exempt for such period as the Administrator deems appropriate, the application of the requirements, prohibitions, and penalties of section 103, 104, 203, or 303 of this Act—

(1) in the event of national, regional, or systemwide shortages of coal or other fuel supplies or of coal transportation facilities or other necessary facilities which may or will affect reliability of service of new electric powerplants subject to such requirements and prohibitions; or

"(2) otherwise as necessary to alleviate or prevent any emergencies directly affecting the public health, safety, or welfare, which would result from electric power outages.

"(d) The Administrator shall stay the application of the requirements, prohibitions, and penalties of section 103, 104, 203, 204, or 303 of this Act for such periods as necessary to implement enforceable air pollution requirements.

"(e) Any allocation of coal or coal transportation facilities or equipment must be documented and a report stating the need, justification, and results of such allocation must be filed with the Administrator and available as public information.

"(f) Persons experiencing temporary emergency conditions which render it infeasible to use coal or other fuel or which require immediate action to forestall injury to life or property may commence the use of fuels other than coal or other fuel, notwithstanding any order or obligation otherwise imposed by or pursuant to this Act, but must notify the Administrator within twenty-four hours of such use. Such use of fuels may continue for the duration of the temporary emergency condition unless the Administrator, by order, directs that the use of such replacement fuels halt. Within one hundred eighty days after the enactment of this section, the Administrator shall by rule issue regulations prescribing the form and content of such notices and specifying the conditions which may constitute a temporary emergency, which shall include:

"(1) temporary unavailability of sufficient supplies of coal or other fuel;

"(2) disruption in transportation facilities needed to deliver sufficient quantities of coal or other fuel to users; and

"(3) severe weather conditions which render the use of coal or other fuel infeasible.".

CONFORMING AMENDMENTS

SEC. 3. (a) Sections 2 (a), (b), (c), (e), and (f) of the Energy Supply and Environmental Coordination Act of 1974, as amended, are hereby designated as sections 203 (a), (b), (c), (d), and (e), respectively, of this Act.

(b) Section 2(d) of the Energy Supply and Environmental Coordination Act of 1974, as amended, is hereby designated as section 309 of this Act.

(c) Insert following the redesignated section 203(e) the following:

"(f) OTHER PROVISIONS.—(1) Orders outstanding under the Energy Supply and Environmental Coordination Act of 1974, as amended, as of the effective date of this Act shall remain in effect. Any proceedings in process pursuant to any such orders shall continue under the provisions of the Energy Supply and Environmental Coordination Act of 1974, as amended, and as in effect immediately prior to the passage of this Act: Provided, however, That the Administrator, on his own initiative or on motion of any interested person, shall rescind or modify any order, including any order issued pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended, issued prior to the effective date of this Act, if the order is inconsistent with any provision of title II of this Act so that such order, as rescinded or modified, complies with this Act.

"(2) Before modifying or rescinding any such order the Administrator shall give notice to the public and the recipient of the order and afford interested parties an opportunity for a public hearing with appropriate procedural rights including oral and written presentation of data, views, and arguments.

"(3) No provision of any such order (or modification thereof) that prohibits the utilization of petroleum or natural gas shall

become effective until the date which the Administrator of the Environmental Protection Agency has certified pursuant to section 119(d)(1)(B) of the Clean Air Act is the earliest date that such powerplant or installation will be able to utilize coal or other fuel in lieu of petroleum or natural gas and comply with all applicable environmental requirements. The Administrator of the Environmental Protection Agency shall give the Administrator the notice described herein within two hundred and seventy days of the date on which the notice under paragraph (2) of this subsection was issued.

CONFORMING AMENDMENTS

SEC. 4. The Energy Supply and Environmental Coordination Act is further amended by inserting following redesignated section 309 of this Act, the following:

"DISCLOSURE

"SEC. 310. The Administrator shall require the disclosure of the extent, characteristics, and productive capacity of coal reserves held by any private, corporate, public, or Government owner, or interest-holder in such reserves, as necessary, pursuant to section 409 of this Act, and shall publish a summary of such information: Provided, That the Administrator may exempt small reserves from the requirements of this section where the Administrator finds that the imposition of the requirements of this section would impose an unreasonable economic burden on the owner or would not be of significant aid to achievement of the purposes of this Act.

"FEDERAL FACILITIES

"SEC. 311. (a) Each department, agency, and instrumentality of the executive, legislative, and judicial branches of the Federal Government having jurisdiction over any electric powerplant, or major fuel-burning installation subject to the requirements and prohibitions of this Act, shall comply with the requirements and prohibitions of this Act.

"(b) The President may exempt from the requirements of subsection (a) any electric powerplant or major fuel-burning installation of any department, agency, or instrumentality in the executive branch from compliance with such requirement or prohibition, if the President determines it to be in the paramount interest of the United States to do so. No such exemption shall be granted due to lack of appropriation unless the President shall have specifically requested such appropriations as a part of the budgetary process and the Congress shall have failed to make available such requested appropriation.

(c) The President shall report each January to the Congress all exemptions granted under this section from the requirements and prohibitions of this Act during the preceding calendar year, together with his reason for granting each such exemption.

"COAL PRICE MONITORING

"SEC. 312. (a) The Administrator is directed to make a study of the costs of mining coal in various regions of the country by various mining techniques. The Administrator shall submit his study to the Congress no later than twelve months after enactment.

"(b) The Administrator is authorized and directed to monitor the price of significant amounts of coal committed to contract after enactment of this section and to provide the Congress with semiannual reports summarizing the data collected under this subsection and analyzing the factors influencing changes in coal prices, including but not limited to the impact of the provisions of this Act.

"REPORT

"SEC. 313. Beginning one year after the date of enactment of this title, the Administrator shall report annually to the Congress on the implementation of this title. Such report shall identify the permanent exemptions granted or denied pursuant to sections 107(b) and 208(b) of this Act.".

CONFORMING AMENDMENTS

SEC. 5. (a) The Energy Supply and Environmental Coordination Act of 1974 is amended—

(1) by redesignating sections 3 through 14 (and all references thereto) as sections 401 through 412, respectively, of this Act, and

(2) by inserting before section 401 (as to redesignated) of this Act, the following:

"TITLE IV—OTHER PROVISIONS"

(b) The Energy Supply and Environmental Coordination Act of 1974 is amended in section 412 (as redesignated) by inserting before the word "Act" wherever it appears "section 203, 309, and 401 through 412 of this".

TRANSITIONAL PROVISIONS

SEC. 6. (a) All orders, determinations, rules, regulations, permits, contracts, certificates, licenses, and privileges—

(1) which have been issued, made, granted, or allowed to become effective by the President, by any Federal department or agency or official thereof, or by a court of competent jurisdiction, in the performance of functions which are transferred under this Act, and

(2) which are in effect at the time this Act takes effect,

shall continue in effect according to their terms until modified, terminated, superseded, set aside, or revoked by the President, the Administrator, other authorized officials, a court of competent jurisdiction, or by operation of law.

(b) The provisions of this Act shall not affect suits commenced prior to the date this Act takes effect, and in all such suits proceedings shall be had, appeals taken, and judgments rendered, in the same manner and effect as if this Act had not been enacted.

EFFECTIVE DATE

SEC. 7. The amendments to the Energy Supply and Environmental Coordination Act of 1974 made by this Act shall take effect one hundred eighty days after enactment except that the Administrator is authorized to issue rules pursuant to this Act at any time after enactment of this Act, which rules may take effect no earlier than one hundred eighty days after enactment of this Act.

The ACTING PRESIDENT pro tempore. The time for debate on this bill is limited to 2 hours, to be equally divided and controlled by the Senator from Washington (Mr. JACKSON) and the Senator from Wyoming (Mr. HANSEN), with 1 hour on any amendment in the first degree, except a Kennedy amendment, on which there shall be 4 hours; provided that, if a motion to table the Kennedy amendment fails, there shall be no time limitation on the Kennedy amendment; provided further, that no other amendment dealing with divestiture shall be in order; with 30 minutes on any amendment in the second degree, and with 20 minutes on any debatable motion, appeal, or point of order.

Who yields time?

Mr. HASKELL. Mr. President, I suggest the absence of a quorum to be charged to the time on the bill and equally divided between the two sides.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HASKELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HASKELL. Mr. President, during Senate consideration of S. 1977, the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977, I ask unanimous consent that members of the staff of the Committee on Energy and Natural Resources be granted privilege of the floor: Grenville Garside, Mike Harvey, Dan Dreyfus, Richard Grundy, Thomas Laughlin, and Doris Winkler; and that Mr. Rob Liberatore of my personal staff be granted privilege of the floor during the debate and vote on this measure.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that the following members of my staff and the staff of the Committee on Environment and Public Works be granted privilege of the floor during the debate and votes on S. 977: Phil McGance, John Yago, Ric Fenton, Richard Harris, and Phil Cummings.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that Fred Craft, Ted Orf, and Carol Sacchi of the Senate Energy and Natural Resources Committee be granted privilege of the floor during debate and all votes on S. 977; and on behalf of Senator SCHMITT I ask unanimous consent that the privilege of the floor be accorded Dick Burdett and Hayden Bryan of his staff.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HASKELL. Mr. President, the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977 is a cornerstone for a national energy policy for the United States of America. Other cornerstones are energy conservation, energy research and development, and energy production.

Greater utilization of coal in lieu of natural gas and oil must play a significant role in our country's quest for greater energy self-sufficiency.

Energy conservation can significantly reduce the rate of growth in our consumption of energy. Energy conservation also can foster more efficient use of our Nation's nonrenewable energy sources, such as natural gas and petroleum. But until such renewable energy sources as solar and geothermal energy are able to achieve their promise for the future, greater coal utilization will remain our principal alternative to oil imports. Nuclear power is available for the generation of electricity, but industry as well as utilities must rely on coal for the production of steam. For this reason, it is essential that we assure, and indeed insist on, the environmentally acceptable production and utilization of coal. This is a statutory requirement of S. 977.

Experience with the Energy Supply and Environmental Coordination Act of 1974—ESECA—has shown that, in many cases, significant consumer cost savings can be achieved through the reconversion of existing facilities from petroleum back to coal. However, as Federal Energy Administrator, John O'Leary, outlined for the committee on March 21,

1977, under the present Federal coal conversion program:

From the beginning of the current process until coal is actually burned, it could take from two to eight years.

Mr. O'Leary added that—

Nearly three years of operation with this program have led us to conclude that there are many problems . . .

Precisely for this reason, the committee and the administration support "the strengthening and expansion of current authorities and the establishment of clear guidelines and ground rules to all current and potential new users of oil and gas." These policies are set forth in S. 977.

This measure is the product of a legislative effort begun in 1973 by the Senate's National Fuels and Energy Policy Study.

Legislative initiatives in the Senate to foster greater coal utilization date to the 93d Congress, to S. 2589 and S. 2652. During the 94th Congress features of these measures were eventually incorporated in the Energy Supply and Environmental Coordination Act of 1974 (Public Law 93–319), which was further refined in S. 622, the Energy Policy and Conservation Act of 1975 (Public Law 94–163).

Legislative proposals before the Subcommittee on Energy Production and Supply during this Congress are S. 977, the Coal Utilization Act of 1977, as introduced by Senator JACKSON and cosponsored by Senators FORD, HUDDLESTON, HUMPHREY, and RANDOLPH; and S. 273, the Natural Gas and Petroleum Conservation and Coal Utilization Act of 1977, and S. 272 as introduced by Senator RANDOLPH and cosponsored by Senators HUMPHREY, HUDDLESTON, and JACKSON.

Four days of hearings were held on these measures by the subcommittee. Subsequently, the coal conversion proposals contained in President Carter's national energy plan were received by the committee and additional hearings convened.

Mr. President, the measure before us has been refined and perfected over a period of 4 years. S. 977 sets forth a revised and more simplified regulatory program, than the present ESECA program, to foster greater coal utilization by certain new and existing electric powerplants and major fuel-burning installations.

This measure, Mr. President, represents a bipartisan effort by the committee, being reported by a vote of 15 to 1.

I wish to take this opportunity to express my appreciation to my chairman, the Senator from Washington (Mr. JACKSON), to our ranking minority member, and the Senator from Wyoming (Mr. HANSEN), as well as my other colleagues on the committee who have contributed their ideas and energies to the formulation of this comprehensive and rational national coal utilization policy.

Mr. President, I ask unanimous consent that a summary of the committee's action on S. 977 be printed in the RECORD at this point in my remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY

MAJOR PROVISIONS

(Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977 (S. 977, S. Rept. No. 95–361))

PURPOSE

The Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977 (S. 977) is an amendment to the Energy Supply and Environmental Coordination Act of 1974, as amended. The purpose of this Act is to foster greater national energy self-sufficiency, consistent with applicable environmental requirements, by requiring certain new and existing electric powerplants and major fuel-burning installations, including Federal facilities, use indigenous coal and other fuel resources in lieu of natural gas or petroleum.

NEW FACILITIES—TITLE I

Certain new electric powerplants (Sec. 103) and new major fuel-burning installations (Sec. 104) are prohibited, with specified temporary exceptions and permanent exemptions, from using natural gas or petroleum as their primary energy source. These prohibitions apply to boilers, gas turbines, and combined cycle units, but the restrictions do not include the fuel required for start-up, testing, and flame stabilization.

In the case of industrial facilities (referred to as major fuel-burning installations) these prohibitions apply to the generation of steam or electricity, as well as indirect-fired uses, but the rstrictions do not apply to certain process and feedstock uses or to direct-fired uses (See S. Rept. 95–361, p. 43).

The prohibitions apply to new electric powerplants and new major fuel-burning installations that by design are capable of a fuel heat rate input of 100 million Btu's per hour (roughly) equivalent to one 10 megawatt boiler), or an aggregation of units which together are capable of a fuel heat rate input of 250 million Btu's per hour.

Temporary Exceptions—Section 105

Temporary exceptions (up to five years) from these prohibitions permitting the use of petroleum by new electric powerplants and major fuel-burning installations are to be granted by the FEA Administrator (a) if coal or other fuels than natural gas or petroleum are not available, or (b) if adequate fuel transportation facilities are not available, or (c) if the necessary air pollution control equipment and other equipment and facilities are not available. Temporary exceptions permitting the use of petroleum and natural gas are to be granted if synthetic fuels derived from coal will be employed by the facility. Such exceptions are conditioned on an approved compliance plan.

Temporary exceptions also are to be granted new facilities permitting the use of natural gas where a national primary (health) ambient air quality standard cannot be attained or maintained without the express use of natural gas.

No exception can result in delays in compliance with applicable environmental requirements.

Permanent exemptions—Sections 106, 107, and 108

Permanent exemptions from these prohibitions permitting the use of petroleum by new facilities are to be granted by the FEA Administrator if (a) coal or other fuels than petroleum or natural gas are not available; or (b) if the cost of using coal or other fuels substantially exceeds the cost of using imported oil, or (c) if physical, environmental or legal factors preclude compliance with the statute. In the case of new electric powerplants, the applicant for a permanent exemption to use petroleum also must consider (a) construction at an alternative site where coal or other fuels could be used and (b) must consider the purchase of electric power as an alternative to using petroleum.

In the case of new electric powerplants, peak-load powerplants are to be granted permanent exemptions (a) from the petroleum prohibition if the facility will be operated only for peak-load purposes, or (b) from the natural gas prohibition if located in an area where a national primary (health) ambient air quality standard has not been attained or will not be attained. Intermediate-load powerplants may be exempted from the petroleum prohibition if constructed in non-attainment areas, if greater than 36 percent efficient, and if convertible to coal derived fuels when available.

Permanent exemptions to permit the use of petroleum may be granted for certain cogeneration facilities where its economic and other benefits cannot be obtained if coal or other fuels are used. Authority is provided for permanent exemptions to facilities constructed for only standby or emergency operation.

Permanent exemptions also may be granted to permit the use of natural gas or petroleum where such use would not be allowed except for consideration of the public interest.

New major fuel-burning installations are to be granted permanent exemptions to use petroleum where satisfactory control of product quality or process requirements cannot be met with the use of coal or other fuels in in-direct firing.

Before a new electric powerplant or major fuel-burning installation, other than a peak-load electric powerplant, can obtain a permanent exemption from the statutory requirement to use coal or other fuel, the applicant must demonstrate that the use of a mixture of coal or other fuel, and petroleum, or fluidized bed combustion of coal, is not feasible. Permanent exemptions are available for the use of mixtures of coal and other fuels, and petroleum, where the use of only coal and other fuels is not feasible.

EXISTING FACILITIES—TITLE II

Existing electric powerplants and major fuel-burning installations are defined to include units capable of a fuel heat input rate of 100 million British thermal units per hour or greater or aggregations of coal capable units of fuel heat input rates of 250 million British thermal units per hour or greater. Individual non-coal capable units must be capable of fuel heat input rates of 250 million British thermal units per hour or greater.

Requirements and Prohibitions—Section 204

Under S. 977, existing electric powerplants are prohibited from using natural gas as their primary energy source after January 1, 1990.

Existing electric powerplants also are prohibited from increasing their proportional use of natural gas compared to the base period set forth in S. 977.

Discretionary authority is provided to order existing electric powerplants or major fuel-burning installations which are capable of using mixtures or combinations of coal or other fuel, natural gas or petroleum, to use the minimum amounts of natural gas or petroleum in combination with coal necessary to maintain reliability of operation. In addition, existing electric powerplants or major fuel-burning installations using coal on April 20, 1977, would be required to obtain a Federal permit to increase their use of petroleum.

In addition, the coal conversion provisions of the Energy Supply and Environmental Coordination Act of 1974, are extended. Under these provisions from existing law electric powerplants and major fuel-burning installations capable of using coal may be ordered (with the burden of proof on the Administrator) to cease using natural gas or petroleum. (The basis for temporary exceptions and permanent exemptions contained in S.

977 shall apply to such orders and outstanding orders may be conformed, accordingly.)

Compliance reports are required annually beginning with January 1, 1980, from those existing electric powerplants and major fuel-burning installations which must act to come into compliance with the requirements and prohibitions of S. 977.

Temporary Exceptions and Permanent Exemptions—Sections 206, 207, 208, and 209

Existing electric powerplants and major fuel-burning installations are eligible for similiar temporary exceptions and permanent exemptions as those available to new facilities.

In addition, temporary exceptions are to be granted to existing electric powerplants or major fuel-burning installations which need additional time to employ synthetic fuels or innovative technologies, such as fluidized bed combustion of coal, to comply with the requirements of S. 977.

Provision is made for retirement of facilities as an option to compliance with the statutory requirements and prohibitions.

OTHER PROVISIONS

Systems Compliance Option—Section 214

S. 977 provides that electric utility systems using intrastate natural gas may submit a system's compliance plan to the Administrator, rather than submitting individual plans or other applications for each existing electric powerplant on the system.

Coal Conversion Compensation—Section 210

Under S. 977 the Administrator is empowered to compensate existing facilities for the differential costs necessary for the Administrator to deny applications for permanent exemptions from the requirement to use coal or other fuel.

Loans and Loan Guarantees—Sections 211 and 212

S. 977 authorizes loan and loan guarantees for existing electric powerplants or major fuel-burning installations unable through normal financing means to finance the necessary air pollution control equipment to use coal in compliance with applicable environmental requirements.

Disruption of natural gas contracts—Section 307

The bill provides that a new electric powerplant or major fuel-burning installation unable to use natural gas under contract may sell its rights at a price to be determined, including an amount to compensate a pipeline or distribution company entitled under the contract to transport the gas.

Emergency powers—Section 308

In certain emergency situations, S. 977 authorizes temporary use of petroleum by certain electric powerplants and major fuel-burning installations, as well as stays of the prohibitions of the statute in order to permit the use of natural gas and petroleum to deal with supply interruptions and shortages.

Regional impact assistance—Section 306

Assistance is authorized for additional public facilities, services, and housing in regions impacted by expansion of coal production.

Coal price monitoring—Section 312

The Administrator is directed to monitor coal prices and report annually to the Congress on trends in coal prices.

Administrative and judicial review provisions—Sections 201 and 302

Administrative and judicial review provisions are included to assure timely action on applications for temporary exceptions (within 6 months) and permanent exemptions (within one year).

Effective date

The provisions of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977 take effect 180 days after the date of enactment. Prior to that time, the Federal Energy Administration is empowered to promulgate regulations to S. 977.

Mr. HASKELL. Mr. President, S. 977 sets forth a regulatory program to foster greater utilization of coal and other fuels in lieu of natural gas and petroleum by electric utilities and major industrial installations. The bill emphasizes construction of new facilities which rely on coal and other fuels, such as biomass, geothermal energy, and solar energy.

The provisions affecting existing facilities emphasize electric powerplants. Existing major fuel-burning installations are affected only if they propose to increase their proportional use of natural gas, with respect to petroleum, or propose to switch from coal to petroleum. As long as existing industrial installations continue their current fuel uses they are not affected by S. 977.

Before reviewing the potential for conversion of natural gas and petroleum under S. 977, it is appropriate that I outline the coal conversion provisions of the President's National Energy Act. It includes regulatory provisions, oil and gas consumption taxes, and the tax refunds for construction of new coal-fired facilities. According to the administration, this will save some 3.3 million barrels of oil equivalent—oil plus gas—per day in 1985, 1.1 million of which will be saved in the utility sector and 2.2 million of which will be saved in the industrial sector.

In the utility sector, the regulatory program is designed to insure that current utility construction programs, which emphasize nonoil and nongas facilities, are actually carried out.

In the industrial sector, the regulatory program will, according to the administration, save 770,000 barrels of oil equivalent per day, 700,000 of which will be the result of requiring new facilities to burn coal or other nonoil or nongas fuels.

Both the Congressional Budget Office and the Congressional Research Service have questioned whether the administration's proposed coal program will achieve the target levels of oil and gas savings. Their concerns are based on judgments about future levels of economic activity and on the economics of coal use, however, and not on the effectiveness of the administration's proposed regulatory mechanisms.

Mr. President, the provisions of S. 977 differ from the administration's proposed regulatory mechanisms. These differences are expected to slightly reduce the natural gas and petroleum savings under S. 977 compared to the administration proposal. This is the case regardless of the assumptions used with respect to economic activity levels and coal use economics.

In the utility sector, S. 977 provides a mechanism by which intermediate-load generating facilities may be granted permanent exemptions to use petroleum provided such units are constructed to replace existing oil- or gas-fired units located in areas that are nonattainment areas from the standpoint of air pollution standards based on the protection of public health. But such facilities must be capable of using coal derived fuels when available.

This provision could reduce the oil and gas savings under S. 977 by as much as 160,000 barrels of oil per day in 1985, compared to Part F of S. 1469. This discretionary authority is provided to allow utilities some degree of flexibility in meeting their required reliability of service.

In the industrial sector, S. 977 excludes direct-fired combustors, whereas S. 1469 provided discretionary authority for the Administrator to include any industry process use of natural gas and petroleum. By the exclusion of new direct-fired combustors, petroleum consumption could be 70,000 barrels of oil per day greater in 1985 than might occur under S. 1469 if implemented.

Other exclusions of major fuel-burning installations could reduce oil and gas savings by up to 40,000 barrels of oil equivalent per day.

These exclusions were provided in order to significantly reduce the administrative burden of this program.

For this reason among others, the committee deferred consideration of a comprehensive coal conversion program for existing major fuel-burning installations. In the future, however, the committee will review these exclusions and other uses of natural gas and petroleum which are not covered by S. 977.

Mr. President, at this time I would like to point out an error in the committee report. The presentation of committee views on rail rehabilitation on page 40 should read:

The Committee believes that any plan for coal conversion must include considerations of the problems of coal transportation. Railroads have always been and will in the immediate future continue to be a major carrier of coal in this country. While main rail lines close to the source of coal (mines) may have sufficient volume to attract private financing to upgrade lines, main and branch lines in more remote consuming areas of the country may not have the volume of coal traffic needed to attract private improvement funding. Nevertheless, these areas will have the majority of the nation's utilities and factories which would be expected to convert to coal. In order for coal conversion to be meaningful, these existing plants and new facilities to be built to use coal throughout the country must be serviceable by rail. In practical effect, this will mean rail lines to bring the coal to the users. These lines are presently in deteriorated condition and will need financing help from the government in order to upgrade to carry the coal.

The Title V program of the 1976 Railroad Act was specifically enacted to finance and support rail rehabilitation upgrading where it is in the public interest to do so. Clearly, in the presence of a coal conversion act, it is in the public interest to upgrade rail to carry this coal. The linking up of a coal conversion program and improved rails to carry this coal is a natural one. The Committee thus looks favorably on proposals to encourage a rail rehabilitation program as part of its comprehensive coal conversion bill.

Mr. President, I will mention a few items on this particular bill that I think are important.

First, I stress that this coal utilization bill goes back to a recommendation made by the Senate's national fuels and energy policy study in 1973. I further call to the attention of my colleagues who may

be here or may have staff persons here that this also builds upon a provision of the Energy Supply and Environmental Coordination Act of 1974 as well as on the Energy Policy and Conservation Act of 1975.

In other words, Mr. President, we are not talking about something new. We have recognized for many years in our Nation that there is a shortfall of oil and gas, that there is an abundance of coal in the Nation, and we have recognized that we must use coal basically as a bridge from an oil and gas to geothermal, solar, and other new resources which will keep the Nation going, as far as energy goes, in future generations.

Mr. President, this bill basically says that new plants, that is, whether they be utility or whether they be industrial plants, absent a very high showing, a very stringent burden of proof, will not use oil and gas.

This, however, applies to the boiler fuel aspect of the plants. It does not apply to nonboiler uses.

The bill also builds on previous legislation which required conversion of existing plants that have a standby capability of using coal and it builds on the legislation passed in 1975.

Mr. President, I should state that the administration wanted the authority to convert all existing plants, be they utility or be they industrial plants, from natural gas and oil to coal and, in my view and in the view of the committee, the basic information upon which to make a determination did not exist and, to my knowledge, does not at the present time.

The basic information, of course, is how much savings there would be by such a conversion, the cost of such a conversion, and the environmental impact of such a conversion on a region-by-region basis.

When such information is forthcoming, I am sure that my subcommittee and I feel that the Energy Committee as a whole, would clearly be very pleased to build and expand upon this particular piece of legislation.

With that. Mr. President, I yield to our distinguished colleague, the Senator from Wyoming.

Mr. HANSEN. Mr. President, I thank my distinguished colleague, the floor manager of the bill, the Senator from Colorado, for yielding to me. I have appreciated working with him on this piece of legislation.

Mr. President, S. 977, the coal conversion bill, is before the Senate. In a day when we are faced with dwindling supplies of the resources that we have used for energy over the past half century we must look for continued economic survival to those sources of energy that we have in abundance.

The statistics on energy supply speak for themselves. The severe curtailments that the Nation's gas users faced last winter will be repeated in the next cold snap. The effect on balance of payments of increasing imports of oil as well as the adverse effect on our national security make it imperative that we somehow decrease our imports of oil.

S. 977 as reported by the committee will go a long way toward meeting these problems. It will mandate what is already occurring in industry, that is a switch to the greater use of coal and a greater use of our nuclear resources.

The bill as reported by the committee takes a balanced approach to the problem. We will not force conversions on existing facilities that do not have the capability to utilize coal. This will protect the economy from the dislocations that will surely follow from an attempt to replace most of the basic industrial plant in this country. We have enough economic problems without forcing more industry into bankruptcy.

We will require utilities to phase out their gas burning equipment over a gradual period. This will allow these utilities to convert with minimal disruptions, and increases in the prices that the consumers must pay for a basic commodity: electricity.

The committee has chosen to place most of its emphasis on future installations where the most benefits can be achieved for the expenditure of a dollar in capital funds. All industrial plants and all electric utilities that are constructed after the date of this act will be required to utilize coal wherever possible. The exemptions that can be obtained from this requirement are minimal and we fully expect that new facilities will be granted few extentions.

Existing electric powerplants are forbidden to use gas after 1990. Unless they come under the provisions of the systems compliance option. The existing industrial installations will come under the current provisions of epeca and the secretary can force conversion of these utilities to coal where such conversion is practical.

There are those of my colleagues who feel that this act is not strong enough and does not force conversions quickly enough. The committee very carefully considered each of these points. We have a three-volume hearing record full of problems, many insolvable, relating to the effects of quick conversions, or attempted conversions where insufficient study has been made. We feel that this bill is balanced and that a drastic increase in the scope of the bill would cause economic dislocations that would be too high a price to pay for the limited supplies of gas and oil that would be made available to other sectors of the economy.

An amendment to be offered by Senator HASKELL will study the effect of forced conversions on major industrial installations. If this study is completed we will have a better idea of the economic effect of such forced conversions. Until that time I cannot support regulations of these industries.

By the same token, earlier application of the natural gas prohibition would cause severe economic dislocation, and bring but a small amount of gas upon the market. I cannot support an amendment to accelerate this deadline.

This bill as reported by the committee will provide a balanced approach toward conversion of our industrial plant from oil and gas to coal and other fuels.

Mr. President, it is unfortunate, in my opinion, that we are forced to present to the Senate for its consideration this kind of legislation.

I call attention to the fact that when the Federal Government, as a consequence of a court decision and further action by the FPC, started controlling the price of natural gas at the wellhead, we then set the stage that makes necessary the action we are considering today.

In my opinion, the utilities of the United States would be taking on their own the actions that we contemplate taking here if we had permitted the marketplace to perform the function that historically it has been performing. Because we have interfered with the operation of the marketplace, because we arbitrarily held down the price of natural gas, as was done by the FPC for some 20-odd years, and because well-intentioned environmentalists insisted that we should clean up the air overnight, we were, not many years ago, converting coal-fired plants.

I took an action a few years ago to prevent the veterans hospital in Sheridan, Wyo., from being converted from a coal-fired operation to a gas-fired operation, because it did not take very much foresight to anticipate that very shortly we were going to have inadequate supplies of natural gas to perform all the functions that we are asking natural gas to perform. It took me more than half a year, as I recall, finally to persuade the Veterans' Administration, with some assistance from the White House, that they were moving in the wrong direction. Yet, that is precisely what was happening in major cities, one after another, and towns throughout the United States, in our efforts to clean up the air.

We all support the efforts to clean up the air, but it simply underscores the fallacy in having Government step in to do some of the things we have gotten ourselves into, because of an interference with the marketplace.

I make these observations, because it seems to me to underscore the realism in deregulating the prices of natural gas and oil. If we take those actions which I think we should take, which are long overdue, we will not have to admonish industry about the need to convert to coal wherever it can.

On the other hand, where and if investment has been made in a gas-fired plant where new equipment has been installed, I do not think it makes sense to say to such an operation, "You have to junk all that equipment right now and convert to coal."

I say that, because I think that all public utilities will make the right decisions if they can have the benefit of the right signals from the marketplace.

Mr. SCHMITT. Mr. President, will the Senator yield

Mr. HANSEN. I yield.

Mr. SCHMITT. Mr. President, I compliment the Senator on expressing his concerns about this legislation at this time. I do not know the answer, and I hope that in the course of the debate, some of the issues can be resolved. It is clear that we are dealing with an extremely distorted market with respect to the energy industry. It has been dis-

torted, as the Senator from Wyoming has said, for 25 years. The major distortion occurred with the Permian basin decision in the early 1960's, and that related to natural gas.

The question is, is this bill going to resolve some of those distortions or is it going to perpetuate and enhance the distortions? I am tremendously concerned that we may be doing something that is unnecessary.

In my part of the country, the conversion to coal is already taking place. The market forces that are there now, the undistorted market forces, are forcing that conversion from natural gas to coal—at least in the construction of new plants.

I think we must find an answer to the question, in the course of this debate, as to whether or not the natural forces that still remain within the marketplace are going to result in the same thing that this bill is attempting to do. If, in fact, the natural forces will result in this conversion proceeding at a reasonable pace, then I see no need for this type of legislation at this time.

I think those are some of the questions that must be answered, and I compliment the Senator for raising them at this point. I hope that in the course of the next day or 2 or 3, we will find a resolution of those questions.

Mr. HANSEN. Mr. President, I thank my distinguished colleague from New Mexico for his very perceptive observations. Among his many qualifications, of course, is the fact that he is a distinguished geologist. He knows far better than most of us what the finite limits are of the various kinds of fossil energies we have in this country, how quickly we can move from one source of energy to another, and the important role that the marketplace should play in making those conversions or in making those changes.

I compliment him for his perception, for his interest, and for his leadership.

(Mr. SASSER assumed the chair.)

Mr. DECONCINI. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. HASKELL. I yield.

Mr. DECONCINI. Mr. President, I ask unanimous consent that Jim Magner, of my staff, have the privilege of the floor during the debate and votes on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FORD. Mr. President, I ask unanimous consent that Jim Fleming, of my staff, have the privilege of the floor during the debate and votes on S. 977.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHMITT. Mr. President, I ask unanimous consent that Dick Getzinger, of Senator DOMENICI'S staff, and Mike Crisp, of Senator BAKER'S staff, have the privilege of the floor during the consideration of and votes on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HASKELL. Mr. President, before I offer some technical amendments to the bill, I should like to yield to my distinguished friend from West Virginia, Senator RANDOLPH, who long has been active in this field and was a member of the original Senate study group on energy.

Mr. RANDOLPH. Mr. President, I am appreciative of the thoughtful reference just made by the able Senator from Colorado (Mr. HASKELL) who is managing this important coal conversion bill, with the cooperation of the diligent Senator from Wyoming (Mr. HANSEN).

Mr. President, the measure before us today, the Natural Gas and Petroleum Conservation and Coal Utilization Act of 1977 emphasizes coal conversion. Utilization of coal in large industrial and utility plants is the single most effective method that can be used in an effort to conserve other fossil fuels now rapidly being depleted.

S. 977 is legislation that will establish part of the policy necessary to make widespread coal use a reality and establishes coal as the direct successor to oil and natural gas. It incorporates, I believe, about 80 percent of the provisions included in S. 273 which I introduced on January 14, 1977.

On October 18, 1973, Senators JACKSON, MAGNUSON, and I introduced S. 2589, of which many provisions were eventually incorporated into the Energy Supply and Environmental Coordination Act of 1974. On May 20, 1975, I introduced S. 1777 after conducting extensive hearings to determine the feasibility of substituting coal for oil and gas in a broader range of utility and industrial boilers than required under ESECA.

As a further effort to establish a national coal policy using domestically produced coal to the greatest extent possible, introduced S. 273. As mentioned earlier many of the provisions of that bill are included in this coal conversion legislation. We have been at work on these issues for many years, and I applaud the administration for its recognition and support of increased coal utilization policy and this legislation.

I believe that Senators HASKELL and JACKSON have developed this coal utilization measure, mindful of the historical constraints to increased coal substitution. Coal production development has always been an investment subject to fluctuations, but more recently this development has been hampered by major uncertainties about Government policies. Uncertainties about future regulations, in the past have deterred development of new mines, and caused passthrough of certain costs to certain segments in coal industry complex, especially equipment manufacturers and transportation concerns.

Earlier this year the Senate took action establishing new mining and restoration practices, as well as adopting new requirements related to health and safety in the mining environment. These measures should aid those in industry responsible for production of coal in making decisions and defining problems associated with assured coal markets of specific dimensions.

The Coal Utilization Act begins to clarify Federal policy for those who will consume the coal from the mine. It sets forth a revised and simplified regulatory program for converting certain existing electric powerplants and major fuel burning legislation. Requirements that certain new electric powerplants and major industrial installations be built with the capacity to use coal and other fuel are also spelled out. The act clearly establishes the Federal position on a fuel utilization policy, and thus answers a question which had to be resolved before definite markets for coal could become clear.

Of course, the measure that most affects coal substitution is the Clean Air Act Amendments of 1977 signed into law by the President on August 7. I believe the policies adopted with regard to coal conversion in this conference are consistent with the President's coal use program. The conference position provides the flexibility necessary in allowing conversion to coal and the building of new coal-burning facilities. Specifically:

First. Incorporates, in the delayed compliance order, an extension—December 31, 1980—for any source that cannot meet State implementation plan requirements because of an order to convert to coal, with authority for additional delay of up to 5 years, if needed.

Second. Allows sources ordered to convert to actually begin to burn coal only when they can do so without causing or contributing to concentrations of any pollutant in excess of primary air quality standards.

Third. Requires the Administration of EPA to certify the date on which the primary standard condition can be met, subject to disapproval by the State.

Fourth. Eliminates special showing that conversion will not pose a significant risk to public health from noncriteria pollutants.

Fifth. Makes the current law's limitation on conversion in any part of an air quality control region in which an air quality standard is violated—the "regional limitation"—a rebuttable presumption rather than an absolute.

In conjunction with this I, also, wish to commend the members of the Subcommittee on Energy Production and Supply for inclusion of provisions which may provide loan guarantees, loans, and/or compensation for the purchase of scrubbers and other devices which will enable utilities and industries converting to coal with financial abilities to do it cleanly.

There are those who will contend that increased coal use it incompatible with Clean Air Act requirements and will affect the health and safety of our citizens.

In discussing the provisions for converting existing powerplant facilities to coal, a question was raised with regard to an article of July 4 on the front page of the Washington Post. Its headline read: "Premature Deaths Linked to Coal and Oil Burning." The story, by staff writer Thomas O'Toole, said that 21,000 people died prematurely each year east of the Mississippi River because of pollutants exhausted by powerplants burning coal and oil. Citing findings allegedly concluded from a study by the Brookhaven National Laboratory in New York and Carnegie-Mellon University of Pittsburgh, the article warned that conversion to coal to produce electricity

would result in as many as 35,000 premature deaths annually from power-plant pollution by the year 2010.

The question was properly raised during the Energy Committee's meeting: "Why has no one bothered to refute these findings?"

Mr. President, I did not accept the figures reported by the Post. Immediately after it appeared, I asked officials of the Energy Research and Development Administration to arrange a meeting with me and the Brookhaven researchers, with representatives of the President's Energy Policy and Planning Office.

On Friday, July 8, we received a briefing on the preliminary results of the Brookhaven study, which is still underway. I asked for a report on the methodology applied to obtain estimates of the energy impacts of the national energy plan. This report was delivered on Tuesday, July 12, and promptly delivered to the news media. I regret that our efforts to convey this information did not result in local media atteniton. I fear that the 35,000 mortality figure, which is subject to wide variance with the final impact results, will be "set in concrete" unless it is publicly questioned.

For this reason, I ask unanimous consent that the original Post article, together with the press release issued from my office following the July 8 meeting with Brookhaven officials, and the report from the Office of Energy Policy and Planning, be printed again in the RECORD.

There being no objection, the article and report were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 4, 1977]

PREMATURE DEATHS LINKED TO COAL AND OIL BURNING

(By Thomas O'Toole)

As many as 21,000 people die prematurely east of the Mississippi River every year because of pollutants exhausted into the air by power plants burning coal and oil.

These people die at least one and as many as 15 years short of their expected lifespans, due mostly to heart and lung failure brought on by chronic respiratory diseases such as bronchitis and emphysema. The lung diseases are believed caused by sulfur dioxide gas and microscopic sulfate particles, combustion products of coal and oil that settle in the lungs of people inhaling them.

These are some of the conclusions of scientists at the Brookhaven National Laboratory in New York and the Carnegie-Mellon University in Pittsburgh, who have been at work for two years on a portion of a still-secret energy study for the National Academy of Sciences.

Financed by a $3 million grant from the Energy Research and Development Administration, the study was designed to take a long and comprehensive look at the pros and cons of nuclear power and the alternatives to it. The study has involved the work of more than 200 scientists and economists and more than 50 institutions coast to coast.

The Brookhaven and Carnegie-Mellon findings warn that if the nation turns to coal as its principal alternate source of electricity, it can expect as many as 35,000 premature deaths by the year 2010 instead of the estimated 21,000 taking place right now. The study predicts the 35,000 deaths from lung disease even if electric power plants install expensive devices to scrub out 80 per cent of the sulfur exhausted by their smokestacks.

One of the most striking findings of the study is that the stack gases exhausted by power plants in the Midwest are roughly 10 times more harmful to people on the East Coast than to Midwesterners living within 50 miles of the power plants.

The main reason is that the tall (up to 900 feet) smokestacks built in the last 10 years to carry air pollutants away from the power plants discharge them so high they're caught by prevailing westerly winds and brought to the East Coast. The study identifies power plants in Ohio, Illinois and western Pennsylvania as polluters of New York and New Jersey.

Another reason is that the sulfur dioxide that makes up most of the sulfur exhaust coming out of the tall stacks stays in the atmosphere a longer time. This gives the sulfur dioxide more opportunity to combine with moisture, aerosols and dust to form sulfates, which scientists now believe are more toxic than the sulfur dioxide.

"When somebody breathes in a sulfate it would be in the form of something like sulfuric acid," Brookhaven's Ronald Meyers said in a telephone interview. "Humans have a chance to exhale the sulfur dioxide gas. Things like sulfuric acid stick to the lungs and cause more damage."

The Brookhaven-Carnegie-Mellon part of the study discusses the pollutants exhausted into the air by 266 power plants in the eastern half of the United States because they burn more sulfur-bearing fuels and because the population is denser than it is in the west.

The study says that the 266 power plants polluted the air in a year as recent as 1973 with 17 million tons of sulfur dioxide. About 75 per cent of the sulfur pollutant came from coal-burning plants, the rest from oil burners. The plants most responsible for the pollution are in Illinois, Indiana, Michigan, Wisconsin and Ohio.

The study emphasizes that its figure of 21,000 premature deaths from sulfur pollutants is nothing more than an estimate. The study says it can only infer that the deaths were due to air pollution and not some unexplained cause.

But scientists involved insist it is the most careful study done so far on the health effects of air pollution. They say they have analyzed death rates and air pollution in more than 100 Eastern U.S. cities where they have identified increases in the death rate with increases in air pollution.

Scientists said they have also monitored weather and wind patterns in the same cities and have shown that increases in death rate came at the same time that winds carried more air pollution to the cities suffering higher death rates.

The study will recommend that if U.S. power plants are ordered to switch to coal, as President Carter has suggested, they be ordered to burn coal with the lowest sulfur content. The study will also recommend that the Environmental Protection Agency insist that all power plants burning coal be equipped with scrubbers to take out at least 80 per cent and as much as 90 per cent of the sulfur before it leaves the smokestack.

"The implications for the increased use of coal are grim," the study states. "We recommend that these implications be viewed and studied at the highest levels of government."

FROM THE OFFICE OF SENATOR JENNINGS RANDOLPH

WASHINGTON.—Senator Jennings Randolph has charged that a premature news report of results of a long-term study of health hazards in burning fossil fuels is "incomplete, inaccurate, and selectively slanted."

Randolph, chairman of the Senate Environment and Public Works Committee, said the conclusions drawn from the study "apparently were leaked by some one involved in the study who seeks to discredit coal and favors greater emphasis on nuclear production of electricity."

The West Virginia senator vigorously supports the Carter energy program's focus on increased utilization of coal. The committee he heads acquired jurisdiction over nuclear regulatory matters in the Congressional reorganization earlier this year.

"Even though the study involves the utilization of all fossil fuels," Randolph commented, "the news reports emphasized only coal as a potential pollution hazard to public health."

He noted further that the study will not be completed for several more months. A summary leaked last week uses as its base, Randolph said, "the worst case of pollution by coal burning." He explained that the study centers on sulfur oxides and sulfates emissions from power plants in the state of Ohio. "Air pollution control requirements in Ohio," he added, "are far below those currently imposed in West Virginia, or under existing Federal law."

Randolph, whose state is a major coal producer, said he feels the preliminary results as reported "are neither scientifically accurate nor environmentally helpful."

One of the keystones of the Carter energy program is the increased use of coal for the production of electricity. His long-range plan involves the doubling of current coal consumption to 1.2 billion tons by 1985, and to 2 billion tons by the year 2000.

Environmental concerns prompted the Energy Research and Development Administration to commission, in 1975, a scientific study of the health impact of burning fossil fuels. The study, being conducted under the auspices of the National Academy of Sciences, receives technical support from Brookhaven National Laboratory, of Upton, New York.

The $3 million study, funded by ERDA, reportedly points to the possibility of increased pollution-related deaths resulting from the increased use of fossil fuels. Stories appearing last week cited a preliminary projection of up to 35,000 annual pollution-related deaths by the year 2010, compared to the present 21,000 deaths attributed to environmental pollution. The study covers only the Eastern half of the United States.

"As chairman of the committee concerned with environmental pollution," Randolph said, "I feel these figures—if substantiated by scientific analysis—would have a great bearing on our efforts to effect the Carter energy program and on our upcoming consideration of coal-conversion legislation."

Questioning the projected mortality assumptions, Randolph called a meeting last Friday of Brookhaven officials, ERDA administrators and Administration experts representing energy chief, Dr. James Schlesinger.

"I learned that the projections which were published are premature and inaccurate," Randolph said. "I was told that they are based on existing laws and do not reflect the additional air pollution standards resulting from the Administration's energy proposals." New air quality standards are now being worked out by House-Senate conferees considering the Clean Air Amendments of 1977.

"I believe that the preliminary findings were leaked to the press in an effort to make a convincing case for the proliferation of nuclear power plants," Randolph asserted. "The facts of the complete study will show, I hope, conclusively, that the burning of fossil fuels can be conducted with greater safety and the protection of public health in the future."

Randolph criticized the preliminary report as being based on an assumption that, by the year 2010, only 80 percent of the airborne pollutants from power plants would be controlled. "Even a 10 percent increase in pollution control efficiency over the next 30 years would reduce the study's assumption on pol-

lution-related mortality to 18,000 annually," the Senator declared. "That's less than two percent of all deaths. Cigarette smoking contributes to 17 percent of all deaths each year."

Randolph also noted that the present mortality rate of pollution-related deaths would continue whether or not utilities burned coal, oil, natural gas, or any fossil fuel. "That is the purpose of our clean air legislation, to insure that whatever fuel is burned we will reduce the hazards to public health," he added.

He announced that a more objective analysis of the ongoing air pollution study can be expected this week, when the Senate Committee on Energy and Natural Resources begins marking up its coal-conversion legislation.

"I can understand the motives of the pronuclear people in leaking a report that is, on its face, highly critical to fossil fuels," said Randolph. "But I think that such a vital subject must be explored on a rational basis, not subject to the emotional slanting of statistics which ignore any pretense of responsible scientific evaluation."

EXECUTIVE OFFICE OF THE PRESIDENT, ENERGY POLICY AND PLANNING,

Washington, D.C., July 12, 1977.

DEAR SENATOR RANDOLPH: Last Friday, July 8, 1977, you hosted a group from Brookhaven National Laboratory to discuss some preliminary estimates derived from some of Brookhaven's "research-in-progress" on the health effects attributable to sulfates produced by increased electric generation using fossil fuels. You posed several questions that the Brookhaven analysts promised to analyze and provide answers. The note that they prepared is enclosed.

We are pleased to respond to your request to apply the Brookhaven methodology to estimates of the energy impacts of the National Energy Plan, but I emphasize that the methodology used by the Brookhaven analysts is not necessarily endorsed by this office. There are major uncertainties associated with predicting air quality concentrations of sulfates because neither the chemical interactions in the atmosphere nor the mechanisms for long-range transport of sulfates are well understood. In addition, the damage functions that the Brookhaven analysts used to calculate health impacts from sulfates have been questioned by some authorities. Because of these uncertainties and because the Brookhaven model has not undergone official review, any results from this model should be utilized with extreme care and regarded as preliminary.

Thank you for this opportunity to provide information about Brookhaven's research-in-progress. If I can be of any further assistance, please contact me.

Sincerely,

ALVIN L. ALM.

THE HEALTH COSTS OF POLLUTION FROM FOSSIL FUEL POWER PLANTS [1]

This note responds to inquiries Senator Randolph, Chairman of the Committee on Environment and Public Works, and a joint letter from Senator Henry M. Jackson, Chairman of the Committee on Energy and Natural Resources and Senator Floyd K. Haskell, Chairman of the Subcommittee on Energy Production and Supply. The Senators asked about the work of Brookhaven scientists on the health effects of increased fossil fuel use in electric power generation and particularly about work in progress on the long-range transport of air pollutants and its effect on health. The Senators' inquiries were generated by a July 4, 1977 Washington Post article "Premature Deaths Linked to Coal and Oil Burning," which quoted specific estimates of premature deaths (1 to 15 years earlier than expected) due to atmospheric sulfur pollution from fossil-fuel burning power plants. The Post article was apparently drawn from a preliminary draft working paper on the long-range transport of pollution. This draft was submitted by Brookhaven meteorologists (Myers) for consideration by the Risk Impact Panel of the National Academy of Sciences—National Research Council Committee on Nuclear and Alternative Energy Sources (the CONARS Study).[2]

Although the Washington Post article made it clear that the draft emphasized that the figures of deaths from pollutants were estimates, it gave no feeling of the uncertainties surrounding the present long-range pollution transport work or the uncertainties in the health damage functions. This left the reader to infer much greater scientific accuracy in the estimates than actually exists. The draft used by the Post has not been released to the public and will not be available until the study is finished and all professional reviews are completed. Until a final version is released, all estimates are subject to change and revision.

This note now addresses four specific questions posed by Senator Randolph.

Q1: If the Brookhaven meteorology model and health effects assessment methods were applied to the National Energy Plan, what would be the impact in 1985?

A: The estimate is that the NEP would reduce the number of premature deaths due to the generation of energy by fossil fuels by about 2,000 persons per year.

The uncertainties associated with these calculations are so large that one must question the significance of any specific number; however, the Brookhaven long-range transport air quality model was used to estimate the health impacts of sulfur air pollution from fossil fueled power plants. The long-range transport air quality model estimates the atmospheric concentration of pollutants. These concentrations are then multiplied by the population exposed and by a dose/response health effects damage function to estimate deaths associated with pollution.

The results of the model calculation for 1975 in the population east of the Mississippi (131 million) were approximately 21,000 deaths. These estimates reflect the number of people that died prematurely due to exposure to air pollutants. Because of uncertainties associated with the model, the actual number could have ranged from 0 to about 50,000.

Using the same methodology, the model predicts approximately the same level of effects associated with the 1985 base case for fossil fuel power plants in this region. This is due to a 10 percent increase in population in 1985 (144 million) that outweighs the projected decrease in SO_2 emissions in this region over 1975–1985. The model projects a decrease of 2,000 deaths under the President's program as compared to the base case in 1985.

Q2: How do the deaths that Brookhaven attributes to using fossil fuels compare to deaths from other causes?

A: Approximately one percent of the population dies each year. Thus, in 1975 there were approximately 1.3 million deaths east of the Mississippi. The premature 21,000 deaths associated with the sulfur air pollutants of fossil fuel power plants would thus have constituted 1.6 percent of total deaths.

The 19,500 deaths associated with sulfur air pollutants from fossil fuel power plants predicted under the President's program would constitute 1.4 percent of the total 1.4 million deaths expected in 1985 in this region. One may compare these figures with the 17 percent of total deaths which are associated with smoking and the 5 percent of total deaths which are a result of car accidents, half of which were due to drunken drivers.

Q3: What difference would it make if oil were burned rather than coal?

A: Substitution of coal for oil would not necessarily increase mortality rates and could conceivably decrease them.

The health effect depends primarily on sulfur dioxide sulfates which are directly related to emissions as determined by the sulfur content of the fuel and control technology. Current standards allow 50 percent more sulfur dioxide emissions from coal than oil for equivalent heat content of the fuel. There is some evidence that oil has a higher rate of primary sulfate emissions from the stack and a higher rate of conversion of sulfur dioxide to sulfate in the plume close to the power plant. Therefore, there is the possibility that for the same sulfur emission rate the oil-fired plant could produce greater effects. It is unclear how much these considerations would affect the results in the long-range transport model. This has yet to be evaluated in the long-range air quality model, and indeed, present lack of understanding of the relevant atmospheric processes precludes this further analysis at this time.

Q4: The "premature death" statistics in the Washington Post article were quite specific. How confident are you that these are accurate predictions of premature deaths due to sulfur pollutants from fossil-fuel power plants?

A: The uncertainties are large. The method for estimating premature deaths assumes a direct relationship between the amount of sulfates in the atmosphere and the number of premature deaths. This is reasonable when one is estimating the effects of small additions in amounts of sulfate to a substantial background level of ambient sulfates.

However, when one is estimating the effects of a large increase in the amount of sulfates in circumstances where this addition is itself a substantial part of the ambient sulfate concentration (as was done in the preliminary working draft for fossil fuel plants in the eastern United States), there is great uncertainty associated with estimates produced by the use of this method.

It is a matter of common sense that the further from the source of pollution, the greater the uncertainty in estimating its effects. But if one addresses oneself to estimates of effects that can be made within a 50 mile radius of a fossil-fuel power plant, there is a 10 percent possibility that the effects may be zero and a similar possibility that they may be as much as five times greater. Obviously, there is an increasing possibility that the effects from a particular source are zero as one goes from distance of 50 to 1,500 miles and a similarly decreasing possibility that the health effects are greater than those calculated. Thus, the uncertainties in these numbers are very high. The interrelationship of the health damage func-

---

[1] Note by L. D. Hamilton, M.D., Ph. D., Biomedical and Environmental Assessment Division, National Center for Analysis of Energy Systems and R. E. Meyers, B.S. Atmospheric Sciences Division, Department of Applied Science, Brookhaven National Laboratory, Upton, New York 11973.

[2] This study was commissioned by ERDA in 1975; its report is expected late this August. The health damage functions used were derived by Brookhaven's health effects assessment group (Hamilton) from reanalysis of epidemiological data published in the open literature. The research on the long-range transport of pollutants has been in progress for about two years and requires several years more work. The assessment of the health effects of alternative energy sources has been in progress for four years, and will be a continuing activity, designed to remove the uncertainties in the assessments as gaps in knowledge are filled and estimates improved.

tion and the long-range transport air quality model in going from individual plant impacts to multistate impacts is under further examination.

Mr. RANDOLPH. I have also seen articles talking about the levels of carbon monoxide and carbon dioxide being increased because of direct utilization of coal. What all fails to take into consideration is that in another 6 to 10 years synthetic fuels derived from coal will be well advanced. These technologies along with solar, nuclear, and other energy forms will assure that coal can be utilized while still maintaining a clean and healthy environment. However, I feel these allegations might want to be examined more thoroughly, perhaps as a subject of hearings for public record. I will also, at a later point in this debate, offer an amendment asking for a coal policy study to address these questions.

Resolution of air quality requirements combined with the provisions of this act assures that the market will exist for coal and demands a continuing supply must be maintained because of the needs of utilities and industries in both the short and long term.

Other actions involving energy pricing policy, conservation, incentives, and transportation will have to be dealt with principally by the Energy and Natural Resources Committee and the Finance Committee in the near future to solidify a complete national policy on energy for the United States. On the issue of transportation, I have mentioned on several occasions that the administration's energy plan neglects the problems of coal transportation. Therefore, I will cosponsor Senator DURKIN's amendment to add $100 million to title V of the 1976 Railroad Act for rehabilitation of branch and weaker rail lines to carry coal and coal products.

The Natural Gas and Oil Petroleum Conservation and Coal Utilization Act of 1977 is a first step in the Senate consideration of an effective energy package which recognizes that decisions must be made now if the Nation is to rely on increased coal use in the future. Also, as Senator JACKSON stated at sessions during the markup of the act, further investigation requiring existing industries to switch to coal will be necessary once the data to make these decisions is collected by the Federal Energy Administration, and accurate projections of gas and oil reserves are more than guesstimates.

Mr. President, the answers given today by my colleagues in the Senate to the issues raised by S. 977, and financial incentives involving coal-related programs at a later date, will do much to determine the use of the coal substitution option in the next decade.

So I am very appreciative for the opportunity of speaking in this way at the very opening of the discussion, realizing as I have realized and other Senators have well understood that this legislation being considered here this week will have a very definite answer to the American people at least in a very substantial degree as to what they can expect in connection with the use of coal, the abundant fuel, ready for many markets. And I just hope as the legislation moves with possible amendments being added—and I shall offer an amendment that has to do with a further study—that we will pass hopefully within the 2-day period set for debate on amendments a measure that will do the job, a job that needs to be done and in fact is long overdue.

I thank my chairman.

Mr. HASKELL. Mr. President, I congratulate the distinguished Senator from West Virginia on his statement. He was, as I mentioned in my opening statement, in at the birth of this legislation some 4 years ago, and it is a great pleasure and honor to have him speak to us today.

UP AMENDMENT NO. 752

Mr. President, I send to the desk an unprinted committee amendment.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL), for himself and Mr. HANSEN, proposes unprinted amendment No. 752.

Mr. HASKELL. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 55, line 19, for "CONFORMING AMENDMENTS" substitute "SHORT TITLE".

On page 56, Section 204, substitute "installations" for "installation".

On page 56, Section 214 should be entitled "Systems compliance option."

On page 56, Section 301 should read "Administrative rules and regulations."

On page 56, Section 304 should be entitled "Environmental requirements."

On page 57, Section 411, should be entitled "Extension of Clean Air Act authorization."

On page 58, line 8, strike "to provide for a means".

On page 58, line 20, after "petroleum" insert a comma.

On page 58, line 24, after "of" insert "certain".

On page 59, line 7, before "DEFINITIONS" insert "GENERAL".

On page 60, strike lines 10 through 13, insert in lieu thereof, "(i) natural gas which is commercially unmarketable (either by reason of quality or quantity) as determined under rules prescribed by the Administrator,"

On page 61, line 10, after "bio-mass," insert "and".

On page 64, line 5, delete "1857c-5" and insert "7410".

On page 64, line 21, strike "prohibition or".

On page 64, line 22, after "ment" insert "applicable to emissions of air pollutants".

On page 66, line 20, after "(B)" insert "which", and on line 20, move "is" in front of "by".

On page 67, line 20, make "section" plural.

On page 68, line 15, strike the second "such".

On page 69, line 1, after "design" insert "and operation".

On page 69, line 6, strike "abatement".

On page 69, line 8, delete "electrostatic precipitators" and insert in lieu thereof "particulate control equipment".

On page 69, line 22, strike "new".

On page 70, line 5, strike the second "such".

On page 70, line 24, insert "(1)" before "The".

On page 71, line 2, strike "new".

On page 71, line 7, strike "(1)".

On page 71, line 18, capitalize "a".

On page 72, line 4, after "applicable" insert "requirements and".

On page 72, line 5, make "prohibition" plural.

On page 72, line 8, after "such" insert "requirements and" and make "prohibition" plural.

On page 73, line 2, after "GENERAL" insert "PERMANENT".

On page 73, line 5, strike "new".

On page 73, line 14 between "103" and "104" delete "and" and insert "or".

On page 75, line 3, strike "new".

On page 75, line 6, after "source" insert a comma.

On page 75, line 8, strike the comma.

On page 75, line 11, make "prohibition" plural.

On page 75, line 17, strike the comma.

On page 76, lines 12 and 13, strike "and 104 of this Act" and insert "or 104 of this title".

On page 82, line 13, strike "and".

On page 76, line 18, for "fuel" substitute "energy supply".

On page 76, line 23, delete "this section or section" and insert "section 106, 107, or".

On page 77, line 4, strike the second "new".

On page 77, line 13, before "PEAKLOAD" insert "NEW" and before "POWERPLANTS" insert "ELECTRIC".

On page 77, line 21, strike the first comma and on lines 22 and 23, strike "to the satisfaction of the Administrator".

On page 78, line 1, substitute "a site" for "sites".

On page 78, line 6, after "maintained" insert a comma.

On page 78, line 12, move the "(1)" to before the "The".

On page 79, line 3, for "an area" substitute "a region".

On page 82, strike lines 3 through 7, and insert in lieu thereof:

"(ii) is by design not capable of consuming coal or other fuel as its primary energy source but is capable of consuming natural gas or petroleum at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater; or".

On page 83, line 15, strike "and".

On page 83, strike lines 5 through 9, and insert in lieu thereof:

"(ii) is by design not capable of consuming coal or other fuel as its primary energy source but is capable of consuming natural gas or petroleum at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater; or".

On page 84, line 15, strike "and".

On page 84, line 20, strike "and".

On page 89, line 22, delete "electrostatic precipitators" and insert in lieu thereof "particulate control equipment".

On page 90, line 17, for the semicolon substitute a comma.

On page 92, line 12, strike "each".

On page 92, line 19, after "an" insert "existing" and strike the "existing" in the line currently.

On page 92, line 21, make "prohibition" plural.

On page 92, lines 23 and 24, make "prohibition" plural.

On page 93, line 17, make "standard" plural.

On page 94, line 1, after "for" insert "a", make "periods" singular, and strike "each".

On page 96, line 3, make "sections" singular and substitute "or" for "and".

On page 97, line 1, strike the comma.

On page 99, line 14, strike "this section and section 208" and insert in lieu thereof "sections 207, 208, and 209".

On page 102, line 23, strike "203 or".

On page 103, line 2, strike "to the satisfaction of the Administrator".

On page 103, line 22, strike "The" and in-

sert in lieu thereof, "To the extent provided in appropriations acts, the".

On page 103, line 25, strike out ", leases," and ", or controls" and after the word "owns" insert "or".

On page 104, lines 23 and 24, strike out the ", leases," and ", or controls" and after the word "owns" insert "or".

On page 108, line 12, strike out after the word "owns" and ", and insert "or", and strike out ", or controls".

On page 114, line 11, after "owned" insert "by,".

On page 114, line 14, strike "meets the following conditions".

On page 117, line 6, and page 118, line 8, capitalize "title".

On page 117, line 8, strike "or".

On page 117, line 12, strike "and".

On page 118, line 5, strike "Except as otherwise provided in this section," and capitalize "all".

On page 118, line 6, strike "such applications" and substitute in lieu thereof "those applications submitted in accordance with Section 301(b) of this Title".

On page 118, line 23, strike "The" and insert in lieu thereof "Whenever the Administrator is required to take into account certain factors prior to issuing any rule or order, the".

On page 118, line 11, substitute "such" for "the" and on lines 11 and 12, strike "for a permit, or a permanent exemption or temporary exception".

On page 118, line 20, insert a comma for the second "or" and insert a comma after "exception".

On page 119, line 12, strike "an".

On page 119, line 18, capitalize "chapter" and "title".

On page 121, line 19, make "paragraphs" singular and strike "(1) and".

On page 122, line 11, strike "which" and the comma; strike line 12; and on line 13 strike "hundred full-load hours", and insert in lieu thereof a comma and the following: "under section 107(b) or 208(b) as an intermediate-load electric powerplant, under section 106(d) or 207(e) for standby operation, or temporary exception under section 206(e) under a retirement plan, which operates in violation of the terms and conditions of such exception or exemption,".

On page 122, lines 15 and 16, strike out the words "one thousand five hundred full-load hours, except" and insert in lieu thereof "such terms and conditions. In the case of a peakload electric powerplant, the civil penalties shall not apply."

On page 123, line 12, after "application" insert "filed under this Act".

On page 123, line 12, after "for" insert "(1)"; on line 13 after "permit, or" insert "(2)"; and on line 14, strike "or permit."

On page 125, line 22, insert a "dash" between "energy" and "impacted".

On page 132, line 11, for "startup" substitute "commencement".

On page 133, line 21, after "or" insert "issued".

On page 135, line 8, for the comma before "including" substitute an open parenthesis and on line 11, substitute a closed parenthesis for the comma.

On page 136, line 5, strike the "and".

On page 136, line 10, after "Act" insert "of 1974, as amended,".

On page 139, line 5, after "1974" insert ", as amended,".

Mr. HASKELL. Mr. President, this is a technical amendment, restricted to technical matters of a nonsubstantive basis, clarifying language in the committee reported bill.

It is my understanding that the distinguished Senator from Wyoming concurs in this amendment.

Mr. HANSEN. Mr. President, that is an accurate statement.

I wish to yield such time as the Senator from New Mexico may require. Does he wish to speak on this amendment?

Mr. SCHMITT. Not on this amendment. Why do we not proceed with the amendment and then I will speak?

Mr. HANSEN. Fine.

Mr. HASKELL. Mr. President, I ask unanimous consent that the amendment be adopted.

The PRESIDING OFFICER. Do the Senators yield back their time on the amendment?

Mr. HASKELL. I yield back the remainder of my time.

Mr. HANSEN. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HANSEN. Mr. President, I yield such time as may be required to the distinguished Senator from New Mexico.

Mr. SCHMITT. Mr. President, I thank the Senator from Wyoming.

This will not take a great deal of time, but I think it is important at this early stage in our debate of a measure that will have a great impact if passed on the future of coal and coal utilization in this country to recognize that there are still large quantities of crude oil and natural gas yet to be found. It is available to our domestic sector from deep zones within the contiguous United States, from offshore and from Alaska. We should not forget that our problem is a problem of supply, not really a question of the potential availability of resources of oil and gas.

In the real world of regulation it may be well to consider more rapid conversion to coal utilization by the facilities covered by S. 977.

However, I think it is important for our colleagues to realize that there is a very great potential for future production of oil and natural gas. That is not to justify its use as a fuel. I have been one among many who feel that even though there are large potential resources of crude oil and natural gas it is a crime to be burning this unique natural chemical as a fuel. Unfortunately, the technology that we use today in our energy intensive society requires oil and natural gas and their byproducts in order to operate.

The amount of crude oil, for example, that is potentially available can be illustrated by some very simple, very broad geological arguments. In the volume of rock from which we have found and produced crude oil to date we have identified and largely produced 300 billion barrels of crude oil.

That means that we probably have identified a total amount of oil in rocks of about 900 billion barrels. With present technology and past technology we have produced about one-third of that. With additional technology and secondary and tertiary recovery, we can expect to produce a fairly large quantity, maybe another 300 billion barrels of this oil we have already identified.

Mr. HANSEN. Will the Senator yield for one question?

Mr. SCHMITT. I yield.

Mr. HANSEN. Just for the edification of Senators, does the Senator from New Mexico refer to the total that has been produced worldwide?

Mr. SCHMITT. No. I am only referring to domestic oil. I appreciate the clarification. That is a very important clarification. I am only speaking of oil produced from domestic sources which are in the contiguous or underlie the contiguous United States.

From that volume of rock, then, we have, without large degree of secondary and tertiary recovery being applied, identified, and produced about 300 billion barrels of crude oil. The volume of rock that is left and yet to be explored, in the deep portions of the contiguous United States, offshore, and in Alaska, constitute approximately the same volume as that from which we have produced 300 billion barrels. These are favorable rocks. They are favorable zones where we can expect to have oil and gas in abundance.

I believe it is important to realize that we have a great deal left to do in the identification and potential production of crude oil. This is also true for natural gas, because the same arguments would apply; maybe even to a greater extent for natural gas. As we go deeper into the Earth's crust, natural gas tends to be generated in greater abundance because of the heat involved. Also, as we go offshore there tends to be more natural gas because leakage does not occur to the same extent as onshore.

We could imagine with a great deal of confidence that if the proper economic incentives existed, we would fairly rapidly identify about 300 billion barrels of crude oil in rock to be yet explored, and very possibly as much as 1,500 trillion cubic feet of natural gas in these same rocks.

As we debate this measure that would attempt, at least, to accelerate conversion from natural gas to coal, and hopefully from oil to coal, let us remember we are not debating the issue of how much oil and natural gas is yet to be found. We probably should be, but that is not the issue being debated here. The remaining quantities of oil and natural gas are the foundation on which we stand to solve our temporary energy supply problem. We do have these vast, as yet undiscovered, potential resources of oil and natural gas that we must remember are there. We must also consider very strongly providing the economic incentive to actually find these resources. I thank the Senator.

Mr. HANSEN. Mr. President, I yield myself such time as I may require. Let me compliment the distinguished Senator from New Mexico for the comments he has just offered. I think if there is one subject matter upon which greater misunderstanding exists than the one he has just discussed, I fail to realize it.

I believe it is extremely helpful to get things into perspective that we understand what professionals believe the situation is regarding energy supplies in the United States. If we have the facts before us, and certainly no one I know is more competent to outline the parameters of

the quantities of oil and gas yet to be discovered than is my friend from New Mexico, we certainly are going to come up with better answers to these top priority problems we are grappling with now.

I compliment the distinguished Senator from New Mexico for the observations he has just made.

Mr. SCHMITT. Will the Senator yield further?

Mr. HANSEN. I yield.

Mr. SCHMITT. To reemphasize what I said in the beginning, I do not think anybody in his right mind feels that we should use petroleum products, oil and natural gas, any longer than we absolutely have to. But also I do not think anybody in his right mind will deny that we are going to have to use them, not only to buttress our economy but to buttress our national defense, for a fairly extended period of time into the future. Our main points of discussion in the legislation before the Senate today, and which will be before the Senate in future weeks, is how do we solve the problem of transition; how do we get from the time of a crisis of inadequate domestic supply to the time when we have alternative energy being produced from coal, from uranium, solar, geothermal, fusion, or whatever process we can foresee in the future?

I believe it is unwise, however, to underestimate our ability to buy time in order to make this transition with the least impact to the consumer, and with the greatest preservation of that unique free enterprise system which has made this country great up until now and I think can, in fact, perpetuate the system for many, many decades if not hundreds of years into the future.

Let us make sure that point is clear, that we should not be wasting this unique natural chemical any longer than we have to, but we should take advantage of it so long as we can in order to ease this transition period. I thank the Senator for his time and his comments.

Mr. FORD. Will the Senator from Colorado yield?

Mr. HASKELL. I have a couple of committee amendments which I would like to offer. We had informed the Senator from New Hampshire (Mr. DURKIN) that he would then follow. Could the Senator follow the Senator from New Hampshire?

Mr. FORD. I would be glad to, if the Senator can give me some sort of time schedule.

Mr. HASKELL. The amendments that I have should not take more than 15 minutes in the aggregate. I cannot speak for the Senator from New Hampshire.

The Senator's amendments are acceptable, as I understand it.

Mr. FORD. Both amendments have been accepted by the majority and minority floor leaders and would require not over 5 minutes.

Mr. HASKELL. Then I will put in my three amendments, which I hope will meet the same fate, and then yield to the Senator from Kentucky.

Mr. FORD. I appreciate that.

UP AMENDMENT NO. 753

Mr. HASKELL. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL), for himself and Mr. HANSEN, proposes unprinted amendment No. 753.

Mr. HASKELL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 138, after line 19, insert the following new section:

"STUDY

"SEC. 314. (a) The Administrator shall conduct a detailed study of the uses of petroleum and natural gas by major fuel-burning installations. Such study shall—

"(1) identify those categories of major fuel-burning installations, including the specific process, in which the substitution of coal or other fuels for petroleum and natural gas is economically and technically feasible;

"(2) distinguish between in-direct and direct-fired uses of natural gas and petroleum;

"(3) distinguish between new and existing major fuel-burning installations; and

"(4) include estimates of the savings of natural gas and petroleum expected from such substitution.

"(b) The results of such study shall be transmitted to the Congress within one year of enactment of this section, together with any recommendations for legislation the Administrator may consider appropriate."

Mr. HASKELL. Mr. President, this amendment authorizes a 1-year study of nonboiler uses of natural gas and petroleum by major fuel-burning installations.

S. 977 concentrates on those fuel uses with the greatest immediate potential for natural gas savings and reduction in oil imports; these are new and existing electric powerplants and new major fuel-burning installations.

EXISTING MFBI'S

One of the most important aspects of greater coal utilization is its potential effect of conversion on air quality. The administration has estimated that on a gross national basis increased air pollution from coal conversion will be offset by decreased air pollution from the conservation measures proposed by the administration.

But gross figures do not give us an intelligent basis from which to legislate. Rather it is necessary to know within a given air quality control region what the potential effect would be, for example, how much of what type of pollutants would be added to the air by coal. And how much can we expect pollution to decrease from conservation in the same area?

Unfortunately, the EPA does not yet have these figures available on the increase in pollutants on the basis of air quality control regions nor apparently does the FEA yet have the figures on the effects of energy conservation within a given air quality area. At least those figures were not available at our last hearing or during markup.

Ms. Barbara Blum, Deputy Administrator of the EPA, revealed that the EPA would need several more weeks, 6 to 8 weeks as of 4 weeks ago, to finish its work on those figures. We do not have the information base upon which to intelligently legislate.

The EPA has said that they do not yet have an analysis of emission effects by air quality control area. That analysis in my view is essential before we could proceed. It is all well and good to say that on a national basis we could convert, but we might find that in New Orleans, Cleveland, Denver, or Albuquerque, you can only convert half of the plants because of clean air requirements.

In my view, the administration has not yet provided us with the necessary information base upon which to legislate regarding existing industrial installations. For example, there have been several studies and articles on the potential increases in air pollution that can result from greater coal utilization. I asked the administration how they were going to offset that, so that there would not be wide-scale pollution.

The answer that I received was that on a national basis they estimated that the increased pollution from coal would be offset by the decrease in pollution resulting from their other conservation efforts.

I then asked do you have this on an air quality basis so that we know in Chicago we can convert an existing plant and we will make up the additional pollution by savings. The answer was "No." This hearing was approximately 4 weeks ago and at that time the Deputy Administrator of EPA said she would have this information in 6 to 8 weeks.

It is my view that until we know whether this can be done, all we are doing by legislating is forcing a tremendous paperwork burden on Government and really expensive burden on industry, without knowing if we are getting anything out of it.

As chairman of the Subcommittee on Energy Production and Supply, I thus could not recommend legislation forcing replacement of existing gas- and oil-fired burners with coal without knowing the impact.

Although S. 977 specifically grants exemptions in the event of a potential adverse environmental impact, I do not think exemptions are an adequate substitute for legislating from firm knowledge in the first instance.

If in fact only a few or no existing plants can be converted to coal without adverse environmental effects, then it would seem that we would be imposing a needless burden on industry to come forward on a case-by-case basis to prove an exemption. This would only add further to bureaucratic confusion and redtape.

The legislation thus does not deal with conversion of existing major industrial installations from one fuel to another. It is not possible at this time to deal with existing industrial facilities on the basis of presently available information.

This is not to say that when we finally get the information we should not legislate. My point is that at this particular stage of the game, it is not appropriate to legislate.

There are potential energy savings for nonboiler uses by major fuel burning installations; however, these savings are poorly understood. In order to affect the substitution of coal or coal-derived fuels for these uses would require consideration of indiviudal industrial processes or manufactured products.

The National Energy Plan proposes that the Administrator of the Federal Energy Administration be provided discretionary authority to regulate such process uses. However, S. 977 does not contain such authority. The reasons for this omission, at this time, are set forth in the committee report. I ask unanimous consent that the relevant discussion be printed in the RECORD at this point.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Non-boiler use of oil and gas represents a substantial portion of the potential impacts for coal conversion. The potential natural gas and petroleum savings by 1985 are the equivalent of 4.1 million barrels of oil per day. Approximately 58 percent of the potential savings (out of 9.5 million barrels per day) in the industrial sector are from non-boiler uses.

Some convertible non-boiler uses can be defined currently, while others will require individual process studies to identify. The non-boiler combustion uses of and gas (use of fuels for burning rather than as a feedstock) can be divided into three categories:

(1) Uses where coal is now used or has been used historically (cement kilns, lime kilns, etc.).

(2) Uses where coal probably cannot be used directly due to technical infeasibility (such as product specifications, temperature control requirements, etc.), but where coal derivatives could be used.

(3) Uses where coal can be used, but where technical modifications will be necessary.

The first category can be fairly well defined at the present time. The second and third groups cannot be neatly distinguished; specific process engineering studies would be needed to differentiate coal potential within industries. Thus, the restrictions of this measure as reported, while extending to non-boiler use, only include indirect-firing uses, as opposed to direct firing uses.

A direct-fired fuel use involves direct contact between the flame or products of combustion and the material being processed. Such fuel uses require a clean-burning fuel, such as natural gas, in order to avoid contamination of the material with carbon monoxide, and other products of incomplete combustion. In addition, these direct-fired processes often require precise flame control which can only be obtained with a gaseous fuel. Examples of direct-fired process uses include:

Heat treating—for metallurgical products;
Metal forming, shaping or bending;
Forging—hammer or press shaping of hot metals;
Paint Ovens—paint baking or drying;
Brazing and Soldering;
Supply Air—for paint spray booths and exhausts;
Plastic and Rubber Forming;
Non-Ferrous Metals Forming—copper, aluminum;
Foundry Operations—metals casting;
Glass Forming and Annealing; and
Oven Fume Incineration (afterburners).

In contrast to direct-fired process uses, indirect flame applications are generally, although not always, susceptible to coal conversion since a medium separates the flame and the products of combustion from the material being processed; for example, "process heaters" in the chemical industry indirectly heat liquids or gases as they pass through tubes in a furnance.

By concentrating coal conversion efforts on indirect fired uses, the program would focus the regulatory effort upon the category of fuel use with the greatest immediate potential for coal conversion and the optimum opportunity for conservation of scarce energy resources. This will provide additional time for the Committee to evaluate appropriate measures to encourage the use of coal and other fuels in lieu of natural gas and petroleum for direct fired uses by industry.

Mr. HASKELL. Mr. President, according to information furnished the committee, before such potential uses of coal can be accurately defined process specific engineering studies will be needed. For this reason, at this time, it is difficult to formulate appropriate legislation without simply giving the Administrator unlimited discretion.

Also because of concern for the apparent administrative complexity required for regulation of individual industrial processes the committee has deferred action. However, because of the significant quantities of natural gas and petroleum consumed by industrial processes the committee proposes that a study be authorized by this amendment. This would be the first comprehensive analysis on the potential substitution of coal, including coal-derived fuels, for natural gas and petroleum in industrial process uses.

When the results are available the committee will examine further the appropriateness of and need for Federal regulation of process uses of natural gas and petroleum.

Mr. HANSEN. Mr. President, if the distinguished Senator from Colorado will yield to me so that I can speak on my time, let me say that we decided in the committee not to regulate direct-fired uses of natural gas by existing facilities. I believe the hearing record indicated that to do so would cause economic chaos.

This study proposed by the distinguished Senator from Colorado would help to determine if it is possible to regulate these industries and the cost of doing so. I would support this study in lieu of an amendment to the bill to regulate those industries. I think the amendment offered by the Senator from Colorado is very meritorious and I support it.

Mr. HASKELL. Mr. President, I thank the distinguished Senator from Wyoming. I yield back the remainder of my time on this amendment.

Mr. HANSEN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT 754

Mr. HASKELL. Mr. President, I propose and send to the desk an unprinted committee amendment.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL), for himself and Mr. HANSEN, proposes unprinted amendment No. 754.

Mr. HASKELL. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 71, revise lines 9 through 12 to read: "such use of natural gas is necessary—

"(1) to enable the air quality control region to attain or maintain compliance with a national primary ambient air quality standard, and

"(11) to permit such powerplant or installation to comply with the applicable implementation plan, as defined in section 110 (d) of the Clean Air Act, as amended; and"

On page 93, revise lines 2 through 5 to read: "such use of natural gas is necessary—

"(1) to enable the air quality control region to attain or maintain compliance with a national primary ambient air quality standard, and

"(11) to permit such powerplant or installation to comply with the applicable implementation plan, as defined in section 110 (d) of the Clean Air Act, as amended; and"

Mr. HASKELL. Mr. President, this amendment will clarify the basis of public health exemptions from the requirement to use coal to permit the use of natural gas. The appropriate State air pollution control agency or the Environmental Protection Agency would have to certify that the use of such gas is necessary to enable the air quality control region to attain or maintain compliance with applicable public health standards.

The Clean Air Act defines such standards as a national primary ambient air quality standards.

The requirements for similar certification regarding compliance with applicable implementation plans is contained in the committee reported bill. Because the implementation plan could contain requirements more stringent than necessary to protect public health, this amendment would restrict the public health exemption to permit the use of natural gas to those air quality control regions where public health is at risk.

Mr. President, it is my understanding that the distinguished Senator from Wyoming concurs in this amendment.

Mr. SCHMITT. Yes, he does. We yield back the remainder of our time.

Mr. HASKELL. I yield back the remainder of my time and ask that the amendment be accepted.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT 755

Mr. HASKELL. Mr. President, I propose and send to the desk an unprinted amendment.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL) proposes unprinted amendment 755.

Mr. HASKELL. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 61, line 10, after "waste:" insert "(G) oil extracted from shale or products derived from such oil;" and redesignate "(G)" and "(H)" as "(H)" and "(I)", respectively.

Mr. HASKELL. Mr. President, it is my understanding that the distinguished Senator from Wyoming concurs in this amendment. I think I should describe it to the Senate.

The bill provides that on new plants and, to a limited extent, on plants that have standby coal burning facilities, oil and gas not be used, but that coal or other fuels be used. The basic purpose of the bill, of course, is to take the country off the conventional petroleum and natural gas base. This amendment states that oil shale would be included in the definition of coal or other fuels. It is my reading of the bill that this was the intent. However, in view of the fact that I come from Colorado where there is a considerable amount of shale, I wanted to call this particularly to the Senate's attention.

I yield to my friend from Wyoming.

Mr. HANSEN. Mr. President, I support the amendment offered by the Senator from Colorado.

Mr. HASKELL. Mr. President, I yield back the remainder of my time.

Mr. HANSEN. I yield back the remainder of my time.

Mr. HASKELL. Mr. President, I ask unanimous consent that the amendment be agreed to.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 756

Mr. HASKELL. Mr. President, under the previous agreement, I yield to the distinguished Senator from Kentucky.

Mr. FORD. I thank the distinguished Senator from Colorado.

I call up an unprinted amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kentucky (Mr. FORD) proposes an unprinted amendment No. 756.

On page 125, line 9, insert the following: before the period "including areawide councils of local government and designated substate planning and development clearinghouses".

Mr. FORD. Mr. President, this amendment has been cleared on both sides of the aisle. The amendment would fill what I believe is a gap in direct aid. Many of our coal communities are small. Many of them are unincorporated. Impacted areas cross county lines. My amendment would simply allow, under the provisions of the bill, aid to go to areawide councils of local governments.

If there are no questions or objections, I yield back the remainder of my time.

Mr. HASKELL. Mr. President, this amendment is acceptable to the majority.

Mr. HANSEN. The amendment is acceptable to the minority manager.

Mr. HASKELL. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 757

Mr. FORD. Mr. President, I call up an unprinted amendment and ask that it be considered.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kentucky (Mr. FORD), for himself, Mr. HUDDLESTON, and Mr. ROBERT C. BYRD, proposes unprinted amendment No. 757.

Mr. FORD. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 139, between lines 7 and 8 insert the following:

"SEC. 6. The Energy Policy and Conservation Act of 1975 in Section 102 by adding at the end of subsection (c) the following new paragraph:

(4) The term 'developing new underground coal mine' includes construction of a coal preparation plant which is designed to reduce the sulfur content of coal produced from any coal mine."

And on page 139, line 9, and page 140, line 7, by renumbering "Sec. 6" to read "Sec. 7" and "Sec. 7" to read "Sec. 8".

Mr. FORD. Mr. President, I ask unanimous consent that the distinguished Senator from West Virginia (Mr. RANDOLPH) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FORD. The omnibus energy bill, Public Law 94–163, adopted on December 22, 1975, included a very important coal loan guarantee program. It is a highly directed Federal effort to encourage the production of environmentally acceptable low-sulfur coal using underground mining methods by providing financial incentives to small coal producers. Since its enactment, regulations have been printed and the period for public comment has passed. Slowly, the program is being implemented and applications for loans will soon be processed. I do not have to point out the critical need for such a program. At a time when clean air regulations are being enforced, thus requiring greater amounts of low-sulfur coal, many small coal producers in my State and in central Appalachia, in general, are unable to secure the needed capital to open new or expand existing coal mines.

Bureau of Mines data indicate that over 5.2 billion tons of low-sulfur coal reserves eligible for this program lie east of the Mississippi River. Eighty percent of this coal is located in States where small producers predominate. Much of this coal could be mined by producers eligible for this program.

While the coal industry as a whole may be attractive from an investor's point of view, the sector addressed by the coal loan guarantee program is not. Development of small underground mines is considered an extremely risky area and very few banks will provide the type of loans which this program will guarantee. Typical financing for small producers is restricted to equipment and accounts receivable financing. Loans are more readily available to large and/or surface mine operators.

Some small producers can obtain financing from equity investors by giving up control of the company or trading away substantial equity. The increased concentration of large companies in the coal industry occurred partly because small producers, who could not obtain capital to expand, sold out. In some areas, the number of small operators has declined drastically because large producers have acquired them.

Because of the geography of Appalachia, much of the low sulfur coal reserves are available in small blocks, which can be mined economically only by small operators. A larger producer's higher capital and operating costs will not permit sufficient return on capital investment, making the project uncompetitive with larger alternative project investments. Without adequate financing for small producers, much of these coal reserves may never be mined.

The amount of coal produced under the loan guarantee program is estimated at between 20 and 40 million tons per year by 1982. Despite this new amount of compliance coal by that time, there will still exist a very substantial "clean fuels" gap. Even greater utilization of scrubbers will not eliminate this need for the clean coal.

My amendment seeks to expand that amount of "clean fuels" by giving financial assistance to companies that intend to construct coal cleaning plants. As you know, the pyritic sulfur which attaches itself to the surface of coal can be removed by mechanical means. This sulfur could comprise about 40 percent of the total amount of sulfur content of that coal. Therefor, coal with a 2 percent sulfur content could be washed down to 1.2 percent, a very favorable coal from an environmental perspective.

I am aware of several companies who want to open such cleaning plants but are unable to secure the necessary financing. My amendment would assist them in overcoming this impediment and, in doing so, provide more of the essential clean coal for utilities and industrial demands.

The qualified candidates for loans under my amendment will be the same as those under the coal mine loan guarantee program. The parameters will not change and the same focus on small operators will prevail. Only the list of qualified projects will be expanded by this amendment.

I urge my colleagues to adopt this amendment so that we can get on with the essential task of providing this Nation with the tremendous abundance of energy represented in our coal reserves.

I understand that the amendment is acceptable on both sides.

Mr. ROBERT C. BYRD. Will the Senator yield?

Mr. FORD. I am glad to yield.

Mr. ROBERT C. BYRD. Section 102 of the Energy Policy and Conservation Act provides loan guarantees for the purpose of developing low-sulfur underground coal mines. Congress, in the bill, recognized the importance of coal as a major component of our national energy supply. While strengthening this emphasis on coal as a major resource, S. 977 does not provide loan guarantees for the treatment of high-sulfur coal to make it environmentally acceptable.

The amendment that has just been introduced by our distinguished friend from Kentucky (Mr. FORD), supported and cosponsored by his distinguished colleague (Mr. HUDDLESTON) and the two West Virginia Senators (Mr. RANDOLPH and myself), would provide loan guarrantee eligibility for those mining companies which are willing to prepare high-sulfur coal to make it conform to the environmental standards of the Clean Air Act. From the earliest days of coal mining, some degree of attention has been given to the cleaning and preparation of coal to remove impurities. Over the past several years, a large amount of research has gone into the problem of removing sulfur from coal. Today, there are processes which do this satisfactorily, but which have not yet been proven economically viable. This amendment would provide the needed incentive to assure that we maximize our overall coal production while, at the same time, assuring compliance with clean air standards.

Mr. President, meeting our goals of additional coal production will indeed be a difficult task. Without the incentive I propose, we limit our opportunities for greater coal production; this is a loss we can ill afford.

I urge the Senate to adopt the amendment as it has been called up.

Mr. RANDOLPH. Mr. President, I am gratified to join with my colleagues from Kentucky (Mr. FORD and Mr. HUDDLESTON) and the Senator from West Virginia (Mr. BYRD) in offering this amendment. It is important that an adequate supply of coal be available if S. 977 is to be implemented to the fullest extent possible. This amendment aids in assuring that supply.

As the able Senator from Kentucky (Mr. FORD) stated, the bill being considered provides loan guarantees for the purchase of scrubber devices for coal-burning installations. This allows for the burning of coal with a higher sulfur content. It is also necessary to provide similar authority for coal-cleaning plants which wash coal to reduce the sulfur content. Loan guarantees for both of these purposes will assure that larger quantities of high-sulfur coal are available so that applicable environmental requirements can be met even with the increased use of coal mandated by this legislation.

Mr. President, this amendment is intended to insure that coal from all regions of the country will be used. I urge the adoption of this amendment.

Mr. DURKIN. Will the Senator yield for a question?

Mr. FORD. Yes.

Mr. DURKIN. Will this in any way preclude mine operators from entering into joint ventures with people involved in removing sulfur in the refined coal process, or does this, in fact, make it easier for mine operators to—

Mr. FORD. This gives the ability for the expansion of cleaning coal. Whatever is available to one or more, they get into the loan guarantee area and it helps insure that we are going to get a lower sulfur content of our coal simply by installing the washing procedures and that we are extending to them the loan guarantee provisions of the bill. It broadens it rather than reduces it.

Mr. DURKIN. As the Senator knows, we have a New Hampshire concern that is involved in the State of Kentucky in a refined solid coal process for taking sulfur out of the coal at the mine site.

Mr. FORD. And returning it to solid form to be shipped. Yes, I am very aware of it.

Mr. DURKIN. Am I correct in my understanding that this would provide loan guarantees for that type of operation as well?

Mr. FORD. I am not sure. I am not qualified, I think, to answer that question. This is a removal of sulfur from the coal. It turns it into a liquid form and then it becomes solid. Then it is shipped in solid form to be used at a later date. The loan guarantee provision, as I understand it, will be applied to this process.

What I am trying to do is extend it to the small operator here, which would not interfere with the Senator's concern at all, where he can build and go ahead with his washing process, to eliminate the sulfur on the outside of the coal and reduce it by 40 percent.

Mr. HASKELL. Will the Senator yield?

Mr. FORD. Yes.

Mr. HASKELL. It is my understanding that the provision of the existing bill which he is seeking to amend applies to loans only to small operators who are not affiliates.

Mr. FORD. That is correct. It does not interfere with any other provision under the bill.

Mr. SCHMITT. Will the Senator yield for another question?

Mr. FORD. I will do my best.

Mr. SCHMITT. I am sure he can yield. The other question is whether he can find an answer to the question.

Has the Senator looked at any impact of possible distortions of the competitive market of eastern coal versus western coal?

Mr. FORD. I have looked at the difference in the competition. I did not know that we are getting into the competition between East and West. I was trying to help a small operator to be able to put in the type of equipment that is necessary to keep him in business so he can remove the sulfur from the coal through this process. Through this process, we get a cleaner burning fuel, which is important not only to the Senator and me, but is very much the concern of environmentalists.

I am very hopeful we will not get into East-West conflict. If it is good in the East, it ought to be good in the West. If it is good in the West, it ought to be good in the East. We should cooperate to see that both of us flourish.

Mr. SCHMITT. I agree completely with everything the Senator has said. I am just asking if the economic impact of this has been examined on those operators in the West that would not be able to benefit from such a proposal, such a guarantee, because the sulfur content——

Mr. FORD. I say to the Senator from New Mexico, if he would look at the latest report from the coal industry, there is more money made on the less than $6 per ton coal in the West than there is on a $14 ton of coal in the East. And if we get down to it, there is no really small operator in the West. They are all big operators.

Mr. SCHMITT. I thank the Senator.

Mr. FORD. Are there any other questions?

Mr. HASKELL. I am prepared to yield back my time.

Mr. FORD. Mr. President, I yield to the Senator from West Virginia (Mr. RANDOLPH) for a comment.

Mr. RANDOLPH. Mr. President, what the able Senator is saying is that by the provisions, this would be applicable to all coal?

Mr. FORD. That is correct.

Mr. RANDOLPH. That is exactly what we are doing.

Mr. FORD. But primarily to the small.

Mr. RANDOLPH. I understand, but it goes to the coal of the West, the East, the South, the North. It is inclusive.

Mr. FORD. The Senator is absolutely correct.

Is the Senator from Colorado ready to yield back his time?

Mr. HASKELL. Yes.

Mr. FORD. If there are no further questions, I am ready to yield back the remainder of my time and call for the question, Mr. President.

The PRESIDING OFICER. The question is on agreeing to the amendment of the Senator from Kentucky.

The amendment was agreed to.

Mr. HASKELL. Does the Senator from Kentucky have anything further?

Mr. FORD. No, it has been taken care of. The Senator from New Hampshire is to follow me.

AMENDMENT NO. 770

Mr. DURKIN. Mr. President, I ask unanimous consent that Reid Ashinoff and Ed Tanzman of my staff be granted privilege of the floor during consideration and voting on the pending measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DURKIN. Mr. President, I call up my amendment No. 770.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Hampshire (Mr. DURKIN), for himself and others, proposes amendment No. 770.

Mr. DURKIN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment is as follows:

On page 58, line 22, change (4) to (5).

On page 58, insert between lines 21 and 22 a new subsection to read as follows:

"(4) to encourage the full utilization of coal and energy sources derived from coal through the rehabilitation and upgrading of railroad service and equipment necessary to transport coal or coal products to regions or States which can use these resources in greater quantities.".

On page 59, lines 3 and 5, change "(5) and (6)" to "(6) and (7)", respectively.

On page 138, after section 313, and in the table of contents add a new section 314 which would read as follows:

"RAILROAD REHABILITATION FOR CARRIAGE OF COAL

"SEC. 314. (a) AUTHORIZATION.—In order to facilitate and encourage the use of and conversion to coal as an energy resource in regions and States which can use coal in greater quantity as a substitute for imported oil and depleted domestic fuel supplies, there is hereby authorized to be appropriated, for deposit in the Railroad Rehabilitation and Improvement Fund established under section 502 of the Railroad Revitalization and Regulatory Reform Act of 1976 (45 U.S.C. 882), not more than $100,000,000.

"(b) PURPOSES.—The money authorized to be appropriated to the Railroad Rehabilitation and Improvement Fund by subsection (a) shall be expended by the Secretary of Transportation, in the same manner as other money in such Fund, to provide financial assistance to railroads for maintenance, rehabilitation, improvements, and acquisition of equipment and facilities (1) designed generally but which will be used for, or (2) designed specifically for, the rail transportation of coal or coal products to regions or States which can use coal in greater quantity as a substitute for imported oil and depleted domestic fuel supplies.

"(c) CONFORMING AMENDMENTS.—Title V of the Railroad Revitalization and Regulatory Reform Act of 1976 (45 U.S.C. 821 et seq.), as amended, is amended as follows:

"(1) Section 501(2) of such Act (45 U.S.C. 821(2)) is amended by inserting '(except as provided in section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act).' immediately after 'or other features.'

"(ii) Section 502(b) of such Act (45 U.S.C. 822(b)) is amended by inserting at the end thereof the following: 'Money deposited in the Fund as authorized in section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act shall be used to provide assistance necessary for the purposes of facilitating and encouraging the rail transportation of coal and coal products to regions or States which can use coal in greater quantity as a substitute for imported oil or depleted domestic fuel supplies, as specified in section 314 of such Act.'.

"(iii) Section 502(f) of such Act (45 U.S.C. 822(f)) is amended by: (1) striking out 'and' at the end of clause (5) thereof; (2) inserting between clauses (5) and (6) the following new clause: '(6) funds as may hereafter be appropriated to the Fund as authorized under section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act; and'; and (3) renumbering clause (6) to '(7)'.

"(iv) Section 502(1) of such Act (45 U.S.C. 822(1)) is amended by (1) striking out 'and' at the end of clause (4) thereof; (2) striking out 'Treasury.' at the end of clause (5) thereof and inserting in lieu thereof the language 'Treasury, and'; and (3) adding at the end thereof the following new clause: '(6) to carry out the purposes of section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act.'

"(v) Section 505(b)(2) of such Act (45 U.S.C. 825) is amended by inserting between the fourth and fifth sentences thereof the following new sentence: 'With respect to funds appropriated for financial assistance under this section which were authorized pursuant to section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act, applications for such funds for the purpose of coal transportation shall be deemed to be for the provision of essential freight services.'

"(vi) Section 505(d)(3) is amended by changing the figure in the first sentence from $600,000,000 to '$700,000,000.', and the figure in the second sentence from $100,000,000 to $150,000,000.".

Mr. DURKIN. Mr. President, I point out that the amendment I offer at the present time is cosponsored by Mr. JACKSON, Mr. MAGNUSON, Mr. RANDOLPH, Mr. HASKELL, Mr. FORD, Mr. MATSUNAGA, Mr. ABOUREZK, Mr. HATHAWAY, Mr. WEICKER, and Mr. MCINTYRE, and, since being printed, by Mr. PELL, Mr. BAYH, and Mr. LEAHY.

Mr. President, I am pleased to call up at this time my amendment to the coal utilization bill, amendment No. 770, for consideration by my colleagues. This amendment has been submitted for printing and I understand copies are available. In addition, I have taken the liberty of distributing to each of my colleagues on the Senate floor a short letter explaining the basic thrust of this amendment.

The purpose of this amendment is to authorize an additional $100 million for rehabilitation of branch and weaker rail lines to carry coal and coal products.

We are not talking about main lines, but about branch lines.

The manner in which the amendment accomplishes this is to add this authorization directly to the title V railroad rehabilitation program established under the 1976 Railroad Revitalization and Regulatory Reform Act (4 R Act). Thus, the funds would be able to be made available to railroads applying for them without any additional bureaucratic creation or delay. The amendment as drafted fits comfortably into the administrative program set up at the Federal Railroad Administration, and would not require any additional bureaucracy.

In addition to my 11 esteemed colleagues listed in the dear colleague letter you have each received, I have been able to add as further cosponsors to this amendment today Senators CLAIBORNE PELL and BIRCH BAYH, the chairman of the Transportation Subcommittee of the Senate Appropriations Committee.

This amendment has been considered and endorsed by the full Energy and Natural Resources Committee during its markup of the coal conversion bill. Specific committee report language was adopted at that time, and well expresses my sentiments on the issue of providing adequate transportation to required users of coal. I have been informed that the committee report as printed contained typographical errors, and therefore I would like to read the committee report language as adopted, which I believe argues strongly for this amendment.

Mr. President, I ask unanimous consent that the report language be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE REPORT LANGUAGE SUPPORTING RAIL REHABILITATION PROPOSAL

The Committee believes that any plan for coal conversion must include considerations of the problems of coal transportation. Railroads have always been and will in the immediate future continue to be a major carrier of coal in this country. While main rail lines close to the source of coal (mines) may have sufficient volume to attract private financing to upgrade lines, main and branch lines in more remote consuming areas of the country may not have the volume of coal traffic needed to attract private improvement funding. Nevertheless, these areas will have the majority of the nation's utilities and factories which would be expected to convert to coal. In order for coal conversion to be meaningful, these existing plants and new facilities to be built to use coal throughout the country must be serviceable by rail. In practical effect, this will mean rail lines to bring the coal to the users. These lines are presently in deteriorated condition and will need financing help from the government in order to upgrade to carry the coal.

The Title V program of the 1976 Railroad Act was specifically enacted to finance and support rail rehabilitation upgrading where it is in the public interest to do so. Clearly, in the presence of a coal conversion act, it is in the public interest to upgrade rail to carry this coal. The linking up of a coal conversion program and improved rails to carry this coal is a natural one. The Committee thus looks favorably on proposals to encourage a rail rehabilitation program as part of its comprehensive coal conversion bill.

Mr. DURKIN. Mr. President, I would like to paraphrase the statement of the committee.

The committee believes that any plan for coal conversion must include considerations of the problems of coal transportation. Railroads have always been and will in the immediate future continue to be a major carrier of coal in this country. While main rail lines close to the source of coal (mines) may have sufficient volume to attract private financing to upgrade lines, main and branch lines in more remote consuming areas of the country may not have the volume of coal traffic needed to attract private improvement funding. Nevertheless, these areas will have the majority of the nation's utilities and factories which would be expected to convert to coal. In order for coal conversion to be meaningful, these existing plants and new facilities to be built to use coal throughout this country must be serviceable by rail. In practical effect, this will mean rail lines to bring the coal to the users. These lines are presently in deteriorated condition and will need financing help from the Government in order to upgrade to carry the coal.

For example, in many areas of New England, and in my own State, the rail lines are presently inadequate to get the coal, and most coal would have to come by sea, or some other means.

The title V program of the 1976 Railroad Act was specifically enacted to fi-

nance and support rail rehabilitation upgrading where it is in the public interest to do so. Clearly, in the presence of a Coal Conversion Act, it is in the public interest to upgrade rail to carry this coal—which is part of the President's national energy program. The linking up of a coal conversion program and improved rails to carry this coal is a natural one. The committee thus looks favorably on proposals to encourage a rail rehabilitation program as part of its comprehensive coal conversion bill.

There is little I can add to the force of the committee's very cogent language. I would point out, however, that this amendment is not a wholesale shot in the arm for the railroad industry, which is quite confident of its ability to make massive coal movements from one region of the country to another. The thrust of this amendment is rather to make Federal funding available to smaller main and branch lines which are marginally profitable, and which otherwise would not be able to obtain financing needed to carry coal to the numerous factories and other users throughout this country. Also, they would not be able to carry the coal which is going to be needed to implement any coal conversion programs.

Significantly, a June 1977 Congressional Budget Office analysis of the President's energy plan took note of "Problems that may arise with transporting coal to the factory." (Chapter V—Coal Conversion, p. 39.) Similarly, an internal Federal Energy Administration report done in the spring of this year, entitled "the role of transportation in achieving the national energy plan—coal" stated that,

> The general conclusion . . . that the railroads can handle the increased coal traffic . . . has largely been based on a macro look of the railroad system, and is, in the main, based on information provided by the railroads themselves. Such a view tends to overlook the problems of individual railroads. . . .

It is vitally important that the Senate make clear its intention to provide adequate transportation for the coal which it is going to require businesses to use with this bill. I believe, as do my colleagues cosponsoring this amendment, that it is better to spend money on rails to carry coal, than on a bloated FEA bureaucracy to process streams of exemption applications from facilities which have no way to get coal transported to them.

As a final note, I would add that this amendment has the endorsement of the distinguished Senator from Washington, Senator MAGNUSON, the chairman of the Committee on Commerce, Science, and Transportation. Senator MAGNUSON has provided a statement of support which he wishes to insert in this debate, and I will submit this statement for the RECORD. As Mr. MAGNUSON notes in his statement, a focus of this amendment is to fulfill the potential need at the consuming end of coal transportation. The Northeast particularly can use this help as can various smaller rail lines scattered throughout the country.

Mr. President, I request that this amendment be accepted as a friendly amendment by the Energy Committee floor managers, and I move its adoption. At this point, I will be glad to answer any questions which my colleagues might have on this amendment.

Mr. RANDOLPH. Mr. President, will the able Senator from New Hampshire yield?

Mr. DURKIN. I am happy to yield.

Mr. RANDOLPH. Mr. President, this is a very important amendment. I am pleased to cosponsor Senator DURKIN'S amendment providing $100 million of additional funds under title V of the 1976 Railroad Act. By providing this type of aid many permanent exemptions can be avoided while putting people to work to rehabilitate rail lines to carry coal and coal products.

Transportation at the present time represents a significant constraint to the achievement of at least a twofold in coal production. There is no question that a national policy concerning the domestic use of coal will have to be aided by a national transportation policy.

In recent years, because of conversion by electric utilities and industrial plants away from coal to other boiler fuels, domestic coal movements have varied considerably, especially in the Eastern States. This trend away from coal has caused a reluctance by rail and water carriers, especially, to commit their resources to a major expansion in fleets and equipment for moving coal. It has also led to the disuse of many branch lines that have subsequently fallen into disrepair. In West Virginia, it has brought about the disuse of many branch lines, and repairs that should be made are long overdue.

Mr. President, the Nation's railroads will play a central role in determining our ability to achieve the President's coal production goals. Presently, the great bulk of coal transportation in the United States is by rail. Therefore, we must first concern ourselves with the ability of our rail system to respond to a large-scale increase in coal demand. Among the factors to be considered are the line-haul capacity for moving coal. We must also look at the need for line expansion in the West and in the traditional Eastern and Midwestern mining areas, and the need in those areas for improved track and signal systems. To reduce the possibility of a shortage of hopper car fleets we must also consider more coordination and planning in movement of rail cars. We must assure more rail equipment is allocated for coal loading, and we must see to it that there is reduced free time on cars so as to assure minimum turnaround time.

The most important issue in rail transportation is the one to which this amendment addresses itself—to provide for rehabilitation and then better maintenance of roadbeds.

As Secretary of Transportation stated before the House Committee on Interstate and Foreign Commerce last May.

> To the extent that constraints on the shipment of coal by rail do emerge, they are likely to involve the inability of financially marginal railroads to secure the financing required to make the necessary investments.

As Senator DURKIN has pointed out this $100 million increase in authorizations for replacing tracks and roadbeds will help weaker lines which cannot privately finance the rehabilitation needed to serve customers.

Mr. SCHMITT. Mr. President, will the Senator from West Virginia yield?

Mr. RANDOLPH. I yield.

Mr. SCHMITT. Mr. President, I ask for the yeas and nays on this amendment.

The PRESIDING OFFICER (Mr. ZORINSKY). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SCHMITT. I thank the Senator.

Mr. RANDOLPH. I think the yeas and nays are important.

Mr. President, I commend to all our colleagues the importance and the support of this amendment, and I congratulate the Senator from New Hampshire (Mr. DURKIN), for offering this valuable amendment.

Mr. HASKELL. Mr. President, the distinguished Senator from New Hampshire brought up this amendment in committee, and at that time it was decided not to vote on it in committee because it fell within the jurisdiction of the Commerce Committee. However, I support the amendment; I am a cosponsor of the amendment. I agree with the statements of the Senator from New Hampshire and the Senator from West Virginia.

It is my recollection that the amendment had a very favorable reception overall within the Energy Committee; that the sole reason it was not adopted was because of the jurisdictional problem.

I notice that Senator MAGNUSON is a consponor, so I merely wish to express myself in support of the amendment.

Mr. SCHMITT. Mr. President, will the Senator from Wyoming yield me 3 or 4 minutes?

Mr. HANSEN. I am happy to yield.

Mr. SCHMITT. Mr. President, I requested the yeas and nays on this amendment because of the issue raised by the Senator from Colorado, and that is one of jurisdiction.

I have no doubt that there is need, in branch lines, for example, for assistance in carrying out the intentions of this act.

However, I do think that the amount of dollars involved, $100 million, as well as the complexities of the coal transportation issue would be better served if this were considered by the Commerce Committee and the Transportation Subcommittee of that committee, of which I am a member.

Mr. DURKIN. Mr. President, will the Senator yield?

Mr. SCHMITT. I yield.

Mr. DURKIN. As a member of the Commerce Committee and a member of the Surface Transportation Subcommittee, I say that the reason we proceeded the way we did in getting the endorsement of the Energy Committee was because of the jurisdictional conflict to which the Senator has referred. That is why we worked very closely with Senator MAGNUSON.

The Senator will note that Senator

MAGNUSON not only has joined as a cosponsor but also has given me a statement to submit in the RECORD, indicating his appreciation of the jurisdictional problem and his support for the amendment.

Mr. President, I ask unanimous consent to have printed in the RECORD at this time Senator MAGNUSON's statement. I apologize for not giving the Senator from New Mexico a copy sooner.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MAGNUSON

The Committee on Commerce, Science and Transportation endorses this amendment. Because we have jurisdiction over transportation matters, it might be helpful for the Senate to have my views with respect to the purposes and needs for the amendment and its significance.

It is important that the Senate realize that the purpose of this amendment is not to give assistance to the rail carriers who are the important haulers of coal. These railroads are in relatively healthy financial condition today, and will have no trouble financing in the private sector whatever plant improvements or equipment are needed to carry all of the coal that is predicted to move under even the most optimistic estimates that have been put forward. Their mainlines are in many instances in good condition today, and the railroad supply industry is completely capable of producing more than enough equipment to adequately move all of the coal that will be transported. The only possible area where financial assistance might be needed in the future would be for a national program relating to railroad electrification.

The need for this amendment is therefore not for the rail transportation of coal by the major lines that haul the bulk of the coal traffic today; instead, it is to fulfill a potential need at the consuming end of the trip, particularly in the Northeast. In the Northeast, many light density "branch" lines exist which are not in good condition because they have not had sufficient traffic over them to justify adequate maintenance or because of the depressed financial condition of the Northeastern railroads. In other words, the need for this amendment might arise in areas where the carriers are in poor financial health and the right of way has deteriorated over time. This need is particularly pronounced in areas outside of the Conrail system.

As most of my colleagues in the Senate are aware, Conrail is in the middle of a massive rehabilitation program in the Northeast right now, which is partially funded by Federal loans. But there are several carriers which are in this region and which are not part of the Conrail system and which may not be able to obtain private sector financing for necessary rehabilitation of lines needed to actually deliver the coal to its ultimate destination. This may also be true outside of the Conrail system in the South and West in a few instances.

Conrail is presently receiving financial assistance in the form of loans pursuant to the Regional Rail Reorganization Act of 1973 as amended and under terms set forth in the Financing Agreement between Conrail and the United States Railway Association. Accordingly, Conrail, while eligible for funds pursuant to Title V, Railroad Revitalization and Regulatory Reform Act of 1976, has made no attempt to avail itself of this additional assistance. Because Conrail has not sought funds under Title V there has been some confusion as to its eligibility for those funds.

I am raising this issue because I want to make clear that the funds provided under this amendment be available to Conrail as well as other railroads to improve coal hauling facilities. I do not believe that the coal hauling capacity which may now be required by our coal-oriented energy policy was anticipated in the Final System Plan setting forth Conrail's financial needs. Thus, the funds which would be made available under my amendment should be also made available to Conrail to the extent that it determines that investments in additional coal hauling facilities and equipment would warrant seeking aid beyond that now presently provided pursuant to the Regional Rail Reorganization Act.

One further point should be made. Because this amendment really is not part of any program to deliver coal from source to user by the rail mode except at the delivery end—that is, it is not a program that the major coal hauling railroads of the United States will be able to take advantage of—it is likewise not a precedent to consider any amendments which relate to coal slurry pipelines. There are better reasons not to consider coal slurry pipelines at this time. For one thing, we have not yet had the benefit of the comprehensive study now underway by the Office of Technology Assessment on coal slurry pipeline transportation. For another thing, coal slurry pipelines have not yet had the benefit of consideration by the Committees with jurisdiction.

The Committee on Commerce, Science and Transportation, for instance, intends to hold hearings on this issue at an appropriate time which will focus on the important transportation issues that are involved in this new mode of transportation. Obviously, the use of water also has to receive serious consideration by the appropriate Committee. Approval of this amendment will not affect the fact that it is inappropriate to consider coal slurry pipelines as part of this bill. With the qualifications and explanation I have offered, I am prepared to support the amendment as Chairman of the Commerce Committee. It could help solve a possible need, and I urge my colleagues to support it, also.

Mr. SCHMITT. Mr. President, I appreciate the inclinations of the distinguished chairman of the Commerce Committee in this matter. However, it is not a matter that has been discussed within the Transportation Subcommittee. It is one of considerable impact on at least a portion of the rail system under that subcommittee's jurisdiction, and I feel very strongly that it is one that would be well served by additional debate and consideration within that subcommittee.

So I will have to vote in opposition to the amendment of the Senator from New Hampshire, not necessarily because, in the long run, it would not turn out to be the right thing to do, but because we have not examined fully the issues involved in this matter. I hope that other Senators also will vote to defeat the amendment, so that the Commerce Committee, at some later time, can examine fully the implications of not only the numbers of dollars involved, $100 million, but also the implications of this particular proposal on the entire rail industry and on the transportation of coal.

Obviously, it would possibly compete, under other circumstances, with coal slurry pipelines, an issue that is yet to come before the Commerce Committee, but will. I think it is a broad enough issue that we must defer action on it until some later time.

Mr. HANSEN. Mr. President, I yield myself such time as I may require.

Let me observe that the amendment offered by the distinguished Senator from New Hampshire is another recognition of the recurring problems Congress encounters as it seeks to ameliorate problems it has been guilty of creating.

The railroads have been regulated more or less greatly or to a smaller extent, however one wishes to characterize it, for more than 100 years. I know when we have discussed changes in work rules, when we have discussed the whole gamut of regulation of the railroads, we have been witness to for a long time—we cannot help but be aware of the fact—that we have made it terribly difficult, almost impossible, for the railroads, among other industries in this country, to take those steps that would have resulted in their continuing ability to survive.

I have supported on occasion legislation that made possible loans to railroads in the East in order that they could continue to be part of a system that I think is vital to the United States.

I make these observations simply to say it would not be a bad idea if the Congress of the United States were to take recognition of the fact that it not only solves some problems but it also creates a lot of problems.

I think what was said earlier by the distinguished Senator from New Mexico with respect to the oil and gas industry could be said with respect to the rail industry. We have regulated them to death.

The reason why it is necessary in the opinion of the distinguished Senator from New Hampshire to help them out in order that the smaller lines can carry coal to communities that otherwise might have extreme difficulty in getting coal results from the fact that we have imposed rules, regulations, and laws that have made it nearly impossible for this one very vital and important segment of our transportation system which, I think, it still should be and, indeed, I believe it still is, to operate in a fashion that is self-supporting.

I say this, because it just seems to me we ought to recognize that the free marketplace and the business decisions industry can and would make on its own might be a better answer for solving our problems than those answers we improvise here on the floor of the Congress from time to time.

Mr. HASKELL. I would be willing to yield back the remainder of my time if the Senator from New Hampshire would.

Mr. DURKIN. I would only like to make one or two comments very, very quickly. I ask unanimous consent that Senator PELL, Senator BAYH, and Senator LEAHY be added as cosponsors, if I have not already done so.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DURKIN. Furthermore, I think I ought to stress very, very clearly that this has no connection with the slurry. The slurry is a definite, distinct, clearly separated issue, and this amendment in no way impacts on the question the Senate will have to decide at some time with respect to the coal slurry.

As the Senator from West Virginia so aptly put it, the coal-producing States can produce the coal. But if we are going

to convert to coal, if we are going to shift utilization, if we are going to reduce our dependence on that expensive OPEC, imported oil, then we are going to have to have some way to get coal from the mine to the factory.

In talking to the utility people in the State of New Hampshire, you can now get coal by sea, you can bring it in by collier and, quite possibly, the C–5A can be adapted to haul coal. Other than that there is very little way to get coal to the factories and to the utilities, and without this amendment and without the rehabilitation of those coal lines, the Coal Conversion Act in many respects will be an exercise in futility.

I thank the distinguished manager of the bill, and I thank him for his support.

Again, I would point out to this body that Senator JACKSON, the chairman of the Energy Committee, is a cosponsor, as well as Senator MAGNUSON, the chairman of the Commerce Committee, who is also a cosponsor. Both are fully cognizant and fully appreciative of the nuances of the jurisdictional problem.

Mr. President, at this time I would be willing to yield back the remainder of my time, assuming there is no further debate.

Mr. HASKELL. I yield back the remainder of my time.

Mr. SCHMITT. The minority yields back the remainder of its time.

ADDITIONAL STATEMENT SUBMITTED

Mr. ANDERSON. Mr. President, I believe that the coal utilization requirements being discussed today illustrate America's recognition that we are going to have to make better use of our own natural resources in order to continue to grow and prosper. Only then can we begin to alleviate the problems we face, because of the energy shortage. We must use caution, however, not to create new problems for our citizens in our efforts to solve the existing ones.

Senator DURKIN's amendment to provide funds to upgrade rail lines and equipment where needed to facilitate coal transport is a good one. It recognizes that the increased mining of coal resulting from the Natural Gas and Petroleum and Coal Utilization Act of 1977 will place additional burdens on America's rail system and that many of these systems do not have the financial ability to prepare to meet that burden.

But there is a serious additional problem resulting from the increase in coal-carrying railcars which should, at least, be recognized here today. I refer to the rail-highway grade crossing conflicts aggravated by the increased production of Western coal.

The economics of rail transport necessitate the use of exceptionally long trains to carry coal from the mines in the West to the markets in the East. These trains often reach 1 or 2 miles in length. Rural communities which once prospered as they grew adjacent to mainline tracks now find their highway traffic severely disrupted by unit coal trains. Population centers dependent upon one major highway in the countryside are severed from emergency services and medical assistance. The county engineer in Lancaster County, Nebr., reports that some rural Nebraska communities are suddenly exposed to 80 trains traveling at 60 miles per hour each day.

In Minnesota, rural communities are especially burdened by the unit coal train problem. If we continue to neglect the problem, it will only worsen. The city of Moorhead, Minn., provides an excellent, albeit unfortunate, illustration of the trouble I refer to.

Moorhead has recently completed a successful urban renewal project in which $30 million of capital was reinvested in the city from many levels of funding—private and public. However, instead of experiencing the anticipated growth from the renewal plan, the city is watching its central business district slowly suffocate. Why? Because train traffic, increasing, because of the shipment of western coal from west to east, runs through the middle of town, ties up vehicular traffic for the better part of an hour at a time, and encourages shoppers to avoid the central business district and go elsewhere.

According to Mr. Donald Richards, the Clay County engineer, Moorhead city officials conducted a study to determine the cost of an adequate grade separation. They found that it would cost at least $11 million for one grade separation, far beyond the financial means of the city and county. Furthermore, building the separation would necessitate the dislocation of several key tax base businesses. One alternative would be to build a rail bypass of the city. That option, however, would cost an estimated $25 to $30 million.

Something must be done. In 1975, Burlington Northern, whose trains use the tracks through Moorhead, estimated that there would be a 5-percent rate of growth in rail traffic per year for 5 years. Burlington Northern is now predicting a 40-percent growth rate over the next 4 years. Even these figures are conservative, according to Moorhead's community development director, because Burlington Northern only estimates on the basis of existing contracts when talking about growth projections.

Attempts are being made on the State level to address the problem of unit coal train traffic, but it is becoming obvious that Federal assistance must be forthcoming. For example, Moorhead is a member of the rail-traffic task force, an alinement of communities from Bismarck, N. Dak., to St. Cloud, Minn. The task force is investigating various ways that the railroad traffic problem can be solved. But in this one corridor alone, it is estimated that it would cost in excess of $100 million just to alleviate the existing rail-traffic problem. When you consider that there are about 220,000 public highway-rail grade crossings in these United States the scope of the problem becomes apparent.

The U.S. Department of Transportation has just completed a task force study of the unit coal train problem. I understand that it will be available by the end of the month. The report should assist the Congress in understanding the full scope of the coal trains' impact and to determine what steps we in Congress can effectively take to alleviate the problem. Until then, however, we must realize that the actions we take today to encourage coal utilization will have serious consequences outside the realm of energy production which must be addressed.

We need to encourage coal utilization. We need to decrease our dependence on petroleum and natural gas. We need to do these things to assure the prosperity of America's future generations. But we must not rush to achieve our goals without considering the needs of rural Americans being asked to sacrifice their ready access to the hospitals, police, fire protection, and markets for agricultural products upon which the public safety and economic health of their communities depend.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Hampshire. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Missouri (Mr. EAGLETON), the Senator from Ohio (Mr. GLENN), the Senator from Alaska (Mr. GRAVEL), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Washington (Mr. MAGNUSON), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), the Senator from New York (Mr. MOYNIHAN), and the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

I further announce that, if present and voting, the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Ohio (Mr. GLENN) would each vote "yea."

Mr. BAKER. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Nebraska (Mr. CURTIS), the Senator from Arizona (Mr. GOLDWATER), the Senator from Oregon (Mr. HATFIELD), the Senator from New York (Mr. JAVITS), the Senator from Oregon (Mr. PACKWOOD), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

I further announce that, if present and voting, the Senator from Massachusetts (Mr. BROOKE) would vote "yea."

On this vote, the Senator from Oregon (Mr. HATFIELD) is paired with the Senator from Alaska (Mr. STEVENS). If present and voting, the Senator from Oregon would vote "yea" and the Senator from Alaska would vote "nay."

The result was announced—yeas 60, nays 21, as follows:

[Rollcall Vote No. 347 Leg.]

YEAS—60

Allen	Cranston	Jackson
Anderson	Culver	Kennedy
Baker	DeConcini	Leahy
Bayh	Dole	Long
Bentsen	Durkin	Mathias
Biden	Eastland	Matsunaga
Bumpers	Ford	McGovern
Burdick	Hart	McIntyre
Byrd, Robert C.	Haskell	Melcher
Cannon	Hathaway	Metzenbaum

NOT VOTING—19

Abourezk	Gravel	Metcalf
Brooke	Hatfield	Moynihan
Chafee	Humphrey	Packwood
Curtis	Javits	Stevens
Eagleton	Johnston	Williams
Glenn	Magnuson	
Goldwater	McClellan	

So Mr. DURKIN's amendment was agreed to.

Mr. DURKIN. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The following Senators requested and, by unanimous consent, the privilege of the floor was granted in behalf of the following staff members: Mr. HANSEN: Perry Pendley and Nolan McKean; Mr. WALLOP: Rob Wallace; Mr. BARTLETT: Erich Evered; Mr. LEAHY: Judy Heffner; Mr. HARRY F. BYRD, Jr.: John I. Brooks; Mr. HEINZ: Bill Reinsch; Mr. HATCH: Mary Ann Hanson.

UP AMENDMENT NO. 758

Mr. RANDOLPH. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. RANDOLPH) proposes unprinted amendment No. 758.

The PRESIDING OFFICER. The Senate is not in order. Will Senators please take their seats.

The amendment will be stated.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 140, line 6, insert the following and renumber subsequent sections accordingly:

"NATIONAL COAL POLICY STUDY

"SEC. 7. (a) The President is hereby requested to make a full and complete investigation and study of the alternative national uses of coal available in the United States to meet the Nation's energy requirements consistent with national policies for the protection and enhancement of the quality of the environment and for economic recovery and full employment. In particular the study should evaluate—

(1) current and prospective coal requirements of the United States;

(2) current and prospective voluntary and energy conservation measures and their potential for reduction of the United States coal requirements;

(3) current and prospective coal resource production, transportation, conversion, and utilization requirements;

(4) the adequacy of coal research, development, and demonstration programs being carried out by Federal, State, local, and nongovernmental entities, including the ability (including financial resources, manpower, and statutory authority) of such Federal, State, local and nongovernmental entities to implement such programs;

(5) programs for the development of all new coal mining technologies which increase coal production and utilization;

(6) alternative strategies for meeting anticipated United States coal requirements, consistent with achieving other national goals, inculding national security and environmental protection;

(7) existing and prospective governmental policies and laws affecting the coal industry with the view of determining what, if any, changes in and implementation of such policies and laws may be advisable in order to consolidate, coordinate, and provide an effective and equitable national energy policy, and

(8) the most efficient use of the nation's coal resources considering economic (including capital and consumer costs, and balance of payments), social (including employment), environmental, technological, national defense and other aspects.

(b) Within one year of enactment, the President shall submit to the Congress a report with respect to the studies and investigations, together with findings and recommendations in order that the Congress may have such information in a timely fashion. Such report shall include the President's determinations with respect to—

(1) the Nation's projected coal needs, broken down into regional areas, for the next two decades with particular reference to electric power;

(2) the coal resources available or which must be developed to meet those needs, including, as applicable, the programs for research, development, and demonstration necessary to provide those major technological advances which may greatly enhance the Nation's ability to efficiently and economically utilize its fuel resources;

(3) the air, water and other pollution created by coal requirements, including any programs to overcome promptly and efficiently any technological or economic barriers to the elimination of such pollution; and

(4) the existing policies and programs of the Federal Government and of State and local governments, which have any significant impact on the availability, produciton or efficient and economic utilization of coal resources and on the ability to meet the Nation's energy needs and environmental requirements, including proposals, policies, and programs for reconciling the Nation's environmental quality requirements with energy needs.

(c) There is hereby authorized to be appropriated for use in carrying out the purpose of this section not to exceed $18,000,000.

Mr. RANDOLPH. Mr. President, we are now engaged in deliberations which respond to a crisis situation. A majority of us recognize that action is crucial. The problem is not synthetic. It is not one which has been fabricated and has developed with the growth of our complex society.

The attitude of the administration with respect to the Nation's critical fuels and energy is now encouraging. The newly created Department of Energy, this legislation, and the total energy package developed by the Congress will bring into sharper focus our energy needs thus making decisions more compatible with current, and hopefully, future events.

The administration's proposal is a start toward this urgently needed balance between a coordinated, comprehensive national energy policy, and national economic and environmental policies. These proposals on energy conservation, energy contingency planning, Federal leasing policies, and energy research and development will add to, delete, and in some cases combine with some 71 measures affecting energy policy that have been enacted into law over the last 5 years. The President's plan, however, does not include clearcut goals to increase coal production, and advance the utilization of coal for the production of synthetic fuels to supplant oil and natural gas.

To assure that the National Energy Policy to be enacted later this year does indeed expedite the creation of a nonfragmented and comprehensive coal use policy, I wish to see the President, Mr. Carter, conduct a complete investigation of how we as a nation will go about implementing a national coal policy for efficient and economic utilization, full employment and for the protection and enhancement of the quality of the environment.

This study would make a detailed investigation of the national energy requirements on coal and policies of the United States with respect to coal. A report to the Congress is mandated and would focus on several factors. First, the Nation's projected coal needs for the next two decades with particular reference to electric power. Second, the coal available or to be developed to meet those needs, including, as applicable, the programs for research, development, and demonstration necessary to provide major technological advances to enhance the Nation's ability to efficiently and economically utilize its coal resources. Third, the air, water, and other pollution created by coal requirements, including programs necessary to overcome promptly and efficiently any technological or economic barriers to the elimination of such pollution.

I emphasize that this proposal is not a call for the establishment of a commission as when I introduced S. 4092 on July 16, 1970, to establish a Commission on Fuels and Energy, and reintroduced on March 15 of this year as S. 1007. Establishment of a Commission on Fuels and Energy is still an issue with merit, which I will continue to pursue. There is a need for prompt and careful attention to coal policy and the short- and long-term role it can safely play in our emerging energy doctrine. We must be convinced the objectives set for coal in assuring national security and economics as an individual fossil fuel are also policies which are consistent with total energy policy, or with those of our national policy on the environment. I would recommend an authorization of $18 million for the study and report.

I do not want energy industries in this Nation to continue to be unsure of how the production, utilization of coal resources, and environmental requirements associated with this fuel will affect supplies of coal which they can rely on. Coal is the cornerstone of the energy proposal we have before us, and I want to see that there will be no hesitation or questions

that remain concerning its viability and versatility as our greatest natural resource.

That is the reason, Mr. President, for this study of 1 year, which is mandated in the amendment pending.

The PRESIDING OFFICER. Who yields time?

Mr. FORD. Mr. President, I have no objections on this side of the aisle to the Senator's amendment. I have no questions. I am ready to yield back the remainder of my time.

Mr. HANSEN. Mr. President, I am unaware of any objections on this side of the aisle. If there are none, I shall be happy to yield back my time.

Mr. FORD. Mr. President, I yield back the remainder of my time.

Mr. HANSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 759

Mr. RANDOLPH. Mr. President, I send to the desk a second amendment.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. RANDOLPH) proposes unprinted amendment No. 759.

On page 124, line 13, strike all after the word "determines" through the word "area" on line 14 and insert the following: "that employment in the coal-mining industry and in coal-related industries in an area has increased by 8 percent or more over the 1976 level of employment in coal mining and coal-related industries in that area".

Mr. RANDOLPH. Mr. President, we have had a rash of wildcat strikes that have taken place in several States; perhaps most notably in West Virginia and Kentucky. The 1977 production levels, because of these wildcat strikes and other causes as well—the very cold winter last year, the floods in the areas where this mining takes place—will be well below our 1976 level.

Under the bill as it comes from the committee, aid to areas impacted by expanded coal development is triggered by increases in annual production levels over the 1976 level. This amendment which I offer provides aid based instead on increases of 8 percent or more in employment in the coal and coal-related industry in an area.

There are four major advantages to the approach which I offer. First, tying assistance to coal production levels fails to recognize the fact that impact is caused by expansion of the workforce and related service employment rather than by increases in coal production per se. It is this increased demand on limited community facilities that creates the need for Federal impact assistance. Wildcat strikes create a problem in this regard in that they curtail production but do not curtail the impact on communities. An employment related trigger will reflect the real increase in impact caused by coal development.

A second advantage of the amendment that I believe is inherent is that it is a better indicator of when the impact will strike a community. Relating aid to changes in production will mean that communities which have been impacted by the influx of constructon crews laying rail spurs, constructing draglines, and carrying out other site development work for new mines would not be eligible for aid until later when production levels rise. The employment-related trigger will allow funding and aid to be brought to bear at an earlier stage than would be the case with the production-related trigger.

Third, in the eastern and midwestern coal fields, production is shifting from surface mining to deep mining which requires nearly four times the number of workers to produce the same amount of coal as surface mining. While production may not change dramatically, the impact on communities is substantial. The amendment will insure that areas facing this kind of change will be eligible for aid.

Finally, the committee language is, I believe, perhaps too broad, allowing virtually any coal producing area to eventually qualify for impact aid. Since funds for such activities are lmited, aid should be targeted to those areas facing the greatest impacts. A shift to an employment-related basis for aid will narrow the number of areas eligible for aid and thereby target the aid more effectively.

Mr. President, the 8-percent increase in employment figure was developed as a result of examining coal employment data for the States of West Virginia, Colorado, and New Mexico.

I wish to state for the record that it was my privilege and responsibility to join with Senator DOMENICI during the recess in a 1-day hearing in Albuquerque starting early and continuing uninterrupted for many hours. The problem there is as in other areas, development of new mines with no community facilities to take care of the people that are attracted to the area for employment opportunities.

I was struck by the fact that New Mexico is first in the production of uranium and ranks high in the other categories such as oil and gas. A large amount of coal is also produced in that Western State.

This 8-percent level of increase will insure that aid is funneled to those areas which have the greatest need for assistance. I ask unanimous consent that this data compiled by the State of West Virginia used in arriving at the 8-percent figure be made part of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA COAL PRODUCTION AND EMPLOYMENT, BY COUNTY

County	Production	Percent change	Employment	Percent change

Mr. RANDOLPH. I emphasize again, Mr. President, that we worked in the States of Colorado, New Mexico and West Virginia to develop the figure of 8 percent and know that this amendment will address all areas of the country in the same manner.

Mr. BARTLETT. Mr. President, I know of no objection to the amendment. In fact, I think it is a good amendment. It might hold down the number of areas eligible and I think it confines the definition in comparison to the definition already in the bill to make an improvement in impact aid.

So, Mr. President, I do support the amendment. I know of no objection on this side.

Mr. FORD. Mr. President, I agree with my distinguished colleague from Oklahoma. The majority has no objection. We feel this will pinpoint the problem and see that the amendment goes to the areas in which it is needed most.

We have no objection and I know of no objection on this side. I am ready to yield back the remainder of my time and proceed with other amendments.

Mr. BARTLETT. I yield back the remainder of my time.

Mr. FORD. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from West Virginia.

The amendment was agreed to.

Mr. RANDOLPH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. FORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 636

Mr. HEINZ. Mr. President, I call up my amendment No. 636.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Pennsylvania (Mr. HEINZ) proposes amendment No. 636:

On page 85, line 16, strike "January 1, 1990" and insert in lieu thereof "January 1, 1985".

Mr. HEINZ. Mr. President, last winter, hundreds of thousands of Americans were laid off as a result of widespread shortages of natural gas.

I am offering an amendment that will prevent the waste of nearly 4 trillion cubic feet of that irreplaceable commodity, natural gas. That is enough natural gas to meet the needs of the northeastern quarter of the United States for an entire year.

To give some idea of the extent to which that much gas could be valuable in preserving American jobs, last winter's unemployment, which struck particularly heavily in the Eastern United States, included at the end of the week of January 27 some 50,000 people in western Pennsylvania alone, unemployed as a direct result of natural gas shortages which resulted in 43 plants being shut down at that time. Had there been available just a small fraction of the natural gas which would be provided by the amendment I am offering, we could have avoided untold personal hardships on the part of hundreds of thousands of Americans during that very tight January and February period.

Mr. President, the specifics of my amendment are quite simple. I seek to amend the pending bill by advancing the effective date of the prohibition on the combustion of natural gas in electrical generation plants from January 1, 1990, to January 1, 1985. This provision does not alter the categories of plants covered and does not affect recourse to the temporary exceptions and permanent exemptions provided in the bill now.

I believe that the most immediate and pressing energy problem that confronts this Nation is the growing shortage of natural gas supplies to meet our peak residential and industrial needs in the winter. We should not need to be reminded of the personal and economic hardships, suffered only 7 months ago, that were aggravated by the combination of harsh weather and inadequate gas supplies. The Federal Power Commission has estimated that natural gas curtailments during those exceptional months totaled 1.53 trillion cubic feet or 21 percent of industrial requirements over that period. By comparison, assuming only normal meteorological conditions this winter, the FPC has projected an increase in curtailments to 1.66 trillion cubic feet or 23 percent of total industrial requirements. While these shortages are exacerbated and the prospect of repeated industrial work stoppages becomes more certain each winter, the risk of losing supplies for essential uses in residences and social institutions grows as well. In the long run, changes

in the pricing of natural gas will shift the economics of fuel combustion in favor of alternative energy sources. This may make available additional supplies for these important uses. But the shortages we now face require a stronger and more expeditious approach to natural gas conservation.

The administration's program to conserve natural gas is built upon three interdependent provisions: a fuel tax on industrial gas use; tax credits and rebates for investment in alternative energy systems; and regulatory prohibitions. These provisions focus on reducing the inappropriate and indiscriminate use of natural gas in both utility and industrial facilities.

Great emphasis has been placed on the fuel tax to be added incrementally to the cost of natural gas to major utility and industrial customers. This tax, in theory, will induce the major customers to either convert to alternative fuels in existing facilities or accelerate their retirement and the construction of new alternative fuel-burning plants. The investment tax credit or rebate of the fuel tax liability will be made available for assisting in the investments in necessary alternative facilities.

For the utilities, however, the fuel tax/rebate program will not become effective until 1983. The taxes are scheduled to rise to a maximum level by 1988. The House, in the version of the energy program passed in August, weakened these taxes on gas combustion in electrical generation by setting a flat rate that levels off at $0.75 per million Btu in 1985. The Senate Committee on Finance, in hearings conducted during the recess, expressed its fundamental concerns with fuel taxes and suggested that the administration's proposals will be significantly rewritten.

In many respects, the actual structure and level of fuel taxation are moot issues with regard to fuel conservation. I believe that any reasonable level of utility fuel tax will be inadequate alone to meet the need for conservation of domestic gas supplies. It appears likely that the utilities will, instead of converting to alternative fuels in existing plants, incur whatever tax liability is legislated here and pass the additional cost through to electricity customers in fuel rate adjustments. Further, rebates will be banked until the utility is ready to build new coal or nuclear base load plants rather than employed to convert existing gas boilers. The net effect of the tax/rebate scheme on existing plants and current utility rates will be more inflationary than conserving.

The purpose of this amendment, then, is to expedite the conservation of natural gas in existing utility plants by mandating a stronger and more immediate prohibition on its use in generation. The Federal Energy Administration has inventoried 660 plants that could be affected by this amendment. They burn nearly 3.2 trillion cubic feet of gas per year amounting to 15 percent of national gas use. Many of these plants will properly be exempted from the prohibition for environmental reasons. But even if only one-half of the plants could be shifted from gas in the nearer term, and those supplies redistributed to superior uses, the current specter of winter curtailments and work stoppages could be completely dispelled. Rather than defer this potential for gas conservation in electric utilities to 1990, we should legislate a more urgent agenda for the conversion of these facilities and incur the costs now. The alternative is the uncertain and bleak prospect of repeated energy shortages and seasonal economic hardships that we have already suffered too many times.

Mr. President, I ask unanimous consent that the name of the Senator from North Dakota (Mr. YOUNG) be added as a cosponsor of both this amendment and amendment 637, which I will offer subsequently.

The PRESIDING OFFICER (Mr. RIEGLE). Without objection, it is so ordered.

Mr. HEINZ. Mr. President, I reserve the remainder of my time.

Mr. BARTLETT. Mr. President, does the Senator from Colorado desire recognition?

Mr. HASKELL. Yes. If the Senator from Oklahoma is going to speak for the amendment, could he speak on the time of the Senator from Pennsylvania?

Mr. BARTLETT. The Senator from Oklahoma will speak against the amendment.

Mr. HASKELL. Then, the Senator from Colorado is delighted to yield time to the Senator from Oklahoma.

Mr. BARTLETT. I thank the distinguished Senator from Colorado.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized. Is there any time agreement?

Mr. HASKELL. I yield 10 minutes to the Senator.

Mr. BARTLETT. I thank the distinguished Senator from Colorado.

Mr. President, the major thrust of this bill with respect to existing facilities is against electric generating plants which burn natural gas as their primary fuel. The bill flatly prohibits the use of gas for this purpose beyond the year 1990. There is no similar provision with respect to the burning of petroleum.

Existing natural gas fired electrical generating facilities cannot be physically converted to the use of coal. If diverted from the use of natural gas, these plants can only burn oil. But in doing so, their capacity to generate electricity is seriously and significantly reduced.

First, oil furnishes a much lower heat output than does gas. Second, due to the soot and sludge buildup that oil produces and gas does not, the plant must be shut down often for cleanup. The net result is less electricity and impaired system reliability.

Electric utilities in the Southwest are already hard pressed just to meet construction requirements for expanding electrical demand. It will simply not be possible for many of them to meet the 1990 prohibition on the burning of natural gas and at the same time furnish electricity to meet the demand of consumers in that region.

These utilities are doing everything in their power to bring on new capacity fired by coal or nuclear energy. Construction delays, similar to those experienced elsewhere in the country, have repeatedly pushed back the scheduled startup of new coal and nuclear plants. Just as important, this construction has stretched the financial capacity of the utilities to the limit.

I point out that there are no plans for new starts of major plants fired by natural gas, nor have there been for 2 years.

Burdening these utilities with the requirement of switching to fuels other than natural gas by 1990 is an excessive and unfair demand.

Accelerating that date to 1985 is just out of the question. It is trying to force on the energy industry the impossible, being totally unfair in the process.

Requiring utilities to be off natural gas by 1985 just leaves them 7 years, and that is less than the amount of time it takes to build a new coal-fired plant, and half the time required to build a nuclear one.

The Southwestern States and, in particular, the utility companies are very much aware of the unemployment problems of Pennsylvania and other Northwestern States. In fact, they are so well acquainted with it because they helped relieve the problem last year. They provided considerable gas to the northeastern part of the country, all they could legally and physically provide, in order to relieve the dire situation there.

The companies in the Southwest and the individual citizens there have been urging the people in the Northeast for quite a number of years to support the deregulation of natural gas, so that consumers in non-producing States would pay the same price for gas as is paid by the consumers in the Southwest. In doing so, they would have increased the amount of gas available to them, so there would not have been the shortage of natural gas this last winter in the northeastern part of the country.

The proposal by the distinguished Senator from Pennsylvania hits hardest, of course, the consumers in the producing States who have paid an extra price for gas for quite a number of years in order to have an adequate supply. Now to come along and say, "The only fair and just thing is to take this gas away from you southwestern consumers and to provide it to us; we who have done nothing to eliminate the shortage, in fact, we who have created the shortage, should benefit from your generosity." Well, this kind of legislative pressure is unjust, unfair, and certainly is not in the interest of solving the problem of sufficient energy.

There are programs that can reach effectively the problem of insufficient natural gas, but it is not to be found in the proposal by the Senator from Pennsylvania. The Senator from Pennsylvania, I think, knows that there is going to be great difficulty on the part of the utility companies to make the conversion by 1990 for several reasons. One, is the immense cost of this switchover. Secondly, it is just the time it takes to build a new plant and to make the conversion.

If his amendment were successful it

would then create in the producing States a real shortage of energy. These producing States are those which have been increasing their output from year to year because of expanding demand, and it would be very unfair forcing down the throats of the producing States this kind of obligation they would be unable to fulfill.

It is my understanding that this amendment is opposed by the Administration, I assume for reasons similar to those which I have expressed.

I say to the Senator from Pennsylvania I do have concern over shortages of energy in any State, and I have spoken on the subject many, many times, encouraging steps to be taken which would increase the amount of domestic energy available in this country. But to transfer energy from one area of the country to an area of shortage and create a shortage in the area from which that is transferred is not a solution to the problem.

Certainly there is no debt owed by the Southwest to the Northeast as far as energy is concerned. If there is a debt owed, it is in the other direction.

I am sorry the Senator has picked a date that would be impossible to achieve, and which would provide very, very great hardship on another part of the country.

I thank the distinguished Senator from Colorado for giving me the time to speak, and I appreciate this opportunity to speak in opposition to the amendment.

Mr. HASKELL. I thank the Senator from Oklahoma.

Briefly, Mr. President, what we are talking about, it seems to me, is the following: The bill specifies that existing plants may not use gas after the year 1990. They could use oil or they could use any other form of fuel.

The Senator from Pennsylvania would like to accelerate that date 5 years; he would like to make it 1985.

This was discussed in committee, and it is clearly a matter of judgment. The administration favored the 1990 date, saying that any earlier date would bring a flood of applications for special exemptions because of the great difficulty and the financial burden of converting 5 years earlier, that is, 1985.

Based upon the testimony in the hearing record, the statements that were made, I support the position of 1990 because I think it is a practical, workable, attainable date, and, for that reason, I would oppose the amendment proposed by the distinguished Senator from Pennsylvania.

I would be glad to yield back my time. I do not know whether the Senator from Pennsylvania will or will not yield back his time.

Mr. HEINZ. Mr. President, I am almost prepared to yield back the remainder of my time.

I listened very carefully to what the Senator from Colorado said and what my distinguished colleague, the Senator from Oklahoma, said. I will just take a moment of the Senate's time to attempt to reassure my colleagues that there was nothing unjust or unfair intended in this amendment.

What is unjust and unfair to everybody in the United States is a national energy policy that does not do the job, that does not conserve energy and does not produce more energy. Indeed, I think the administration itself would admit that where natural gas is concerned its energy plan does not contemplate any increase in supplies. In fact, just about everyone agrees that the contrary is going to happen, that supplies are going to get shorter and shorter.

I have to disagree with the contention that by conserving natural gas in a particular electric utility regardless of where that utility is located—and not all of them are located in Oklahoma, by any means—a shortage of energy is going to be created. I am mindful that the committee was concerned about whether the required conversions could be met by 1985 or by 1990. But I am also mindful that the original bill introduced on March 10 by Senators JACKSON, FORD, HUDDLESTON, HUMPHREY, and RANDOLPH provided for a conversion date not of 1990, not of 1985, but of January 1979; 2 very short years from now.

So I respectfully observe that what we are talking about here is certainly a compromise between the original bill introduced in the committee and what the committee has decided on. Nothwithstanding that, Mr. President, I want to assure my colleague from Oklahoma—and if I am wrong in this I hope he will correct me—that were a powerplant required by 1985 under my amendment to convert from natural gas; first of all, it would not be forced to convert to a particular fuel. It would have freedom of choice, and it would have the freedom to convert to another very plentiful fuel throughout the United States, petroleum, oil. And from what I understand, based on studies that I have received, it is not a difficult, expensive, or time-consuming process to achieve a gas to oil conversion. One study that I have with me indicates that most gas-fired boilers can be readily converted to oil at reasonable cost. It is true that changes must be made to fuel-burning equipment and controls and that some modification of internal boiler pressure parts may be required, and some oil storage facilities and handling equipment and perhaps cleaning equipment such as soot removers and additional heat transfer service may have to be installed in some cases, but those are relatively modest in terms of cost and in terms of engineering requirements. Further, there is little or no derating required in terms of the unit's steam generating capacity.

That, it seems to me, is a very moderate, modest requirement to impose over what amounts to an 8-year period. I hope that we recognize that if we fail to take this action we really will see the combustion of some 4 trillion cubic feet of natural gas which simply will not be created in any way, shape, or form ever again and that is a lot of natural gas, as I indicated at the outset.

It is for that reason, Mr. President, that I hope my colleagues will be understanding of my amendment and will support it.

I am prepared to yield back the remainder of my time, if there is no further interest in it.

Mr. BARTLETT. Mr. President, will the Senator yield me what time I require?

Mr. HASKELL. How much time is remaining on our side?

The PRESIDING OFFICER. The Chair will advise the Senator from Colorado has 18 minutes remaining.

Mr. HASKELL. Eighteen?

The PRESIDING OFFICER. Eighteen, the Senator from Colorado. And the Senator from Pennsylvania, I may say, has 14 minutes remaining.

Mr. HASKELL. I yield 5 minutes to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator is recognized for 5 minutes.

Mr. BARTLETT. Mr. President, I say to the Senator from Pennsylvania, my good friend, as to the point he made about the deadline for conversion from gas being roughly 2 years, or by January 1, 1979, in the original bill. The original bill was subjected to very lengthy and thorough hearings, and it was clearly brought out in those hearings that it would be impossible to make any appreciable conversion by that time for several reasons. One, the cost, of course, would be greatly amplified because there would be double conversion required: First a conversion to oil and then an ultimate conversion to coal. So this would create a bigger burden. But also it was brought out that it was impossible to achieve it in anywhere near 1½ or 2 years. It would be more in the neighborhood of 8 to 10 or 12 years, roughly the same as conversion to coal.

The conversion to oil is not as easy as the Senator implies. He mentioned that oil is plentiful. It is not plentiful, of course. In the first 6 months of this year this country imported 47 percent of its oil consumption. That level is increasing. So, any conversion to oil means a larger increase in imports of that costly fuel from other countries and specifically from the Middle East.

My good friend from Pennsylvania said he did not want to be unfair to another State. I am sure that that is his intention. It was brought out clearly in the testimony before the committee on the original bill that the utilities in our State, and this was true of the other producing States, would require the full length of time to 1990 and then would probably not quite be completely converted. This is testimony that I believe is correct and not exaggerated at all to favor their own position because we had testimony from manufacturers of equipment as well who testified that there would not be the equipment available in time to make the conversions earlier even if there were financing and the ability of the utility companies to do it.

So if the Senator will assume that our utility companies cannot make the conversion, and I can assure him that they cannot by 1985, and the utility companies were required to divorce themselves of gas at that time to the extent of the amount that they were requiring, obviously they would have to shut down virtually all of their present capacity and in the process would not be able to produce electricity to take care of their customers in Oklahoma. So it would be im-

pacting very unjustly and unfairly on people in another part of the country.

It would, to the extent it freed additional gas, provide relief to the citizens of Pennsylvania and other people in the Northeast. But it would play havoc with those in the Southwest, and certainly in our State.

So I do not think that the Senator from Pennsylvania wants to do what his proposal would actually do, because it would mean that for 5 years there would not be sufficient electricity in the producing States, which have been providing the bulk of the energy for this Nation for many decades.

I feel that this amendment is grossly unfair. I assure the Senator from Pennsylvania, and I think the Senator from Colorado would back me up, that the hearings were very lengthy, very intense, and very serious, and that if the testimony had been such as to support the provisions of the original bill——

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. BARTLETT. The provisions of the bill would have been left intact.

Mr. HASKELL. I yield the Senator 1 additional minute.

The PRESIDING OFFICER. One additional minute is yielded by the Senator from Colorado.

Mr. BARTLETT. But it was because of the testimony being most convincing that the bill was changed drastically to its present form, and of course in my estimation has been greatly improved.

I thank the distinguished Senator from Colorado.

Mr. HASKELL. I thank the Senator from Oklahoma. As I mentioned earlier, it is not merely a matter of judgment based upon the record. We felt that 1990 was the practical and proper date, and for that reason, obviously, the bill as originally introduced was amended.

I am prepared to yield back the remainder of my time, and I do yield it back.

Mr. HEINZ. I thank my distinguished colleagues for the very well-informed debate. I state to the Senator from Colorado that I think his suggestion is true, and I am prepared to yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time has been yielded back.

Mr. HEINZ. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HEINZ. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HEINZ. Mr. President, after consulting with the Senator from Colorado and the Senator from Oklahoma, I ask unanimous consent that the yeas and nays be ordered on the amendment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the yeas and nays are ordered.

Is all remaining time yielded back?

Mr. HEINZ. Yes.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Pennsylvania. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Missouri (Mr. EAGLETON), the Senator from Ohio (Mr. GLENN), the Senator from Alaska (Mr. GRAVEL), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Washington (Mr. MAGNUSON), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Ohio (Mr. GLENN), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Washington (Mr. MAGNUSON) would each vote "nay."

Mr. BAKER. I announce that the Senator from Rhode Island (Mr. CHAFEE), the Senator from Nebraska (Mr. CURTIS), the Senator from Arizona (Mr. GOLDWATER), the Senator from Oregon (Mr. HATFIELD), the Senator from California (Mr. HAYAKAWA), the Senator from Oregon (Mr. PACKWOOD), the Senator from Alaska (Mr. STEVENS), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) and the Senator from Alaska (Mr. STEVENS) would each vote "nay."

The result was announced—yeas 12, nays 71, as follows:

[Rollcall Vote No. 348 Leg.]

YEAS—12

Brooke	Heinz	Proxmire
Bumpers	Mathias	Ribicoff
Church	Nelson	Riegle
Hart	Percy	Schweiker

NAYS—71

Allen	Ford	Metzenbaum
Anderson	Garn	Morgan
Baker	Griffin	Muskie
Bartlett	Hansen	Nunn
Bayh	Haskell	Pearson
Bellmon	Hatch	Pell
Bentsen	Hathaway	Randolph
Biden	Helms	Roth
Burdick	Hollings	Sarbanes
Byrd, Harry F., Jr.	Huddleston	Sasser
	Inouye	Schmitt
Byrd, Robert C.	Jackson	Scott
Cannon	Javits	Sparkman
Case	Johnston	Stafford
Chiles	Kennedy	Stennis
Clark	Laxalt	Stevenson
Cranston	Leahy	Stone
Culver	Long	Talmadge
Danforth	Lugar	Thurmond

Dole	McClure	Wallop
Domenici	McGovern	Weicker
Durkin	McIntyre	Williams
Eastland	Melcher	Zorinsky

NOT VOTING—17

Abourezk	Gravel	Metcalf
Chafee	Hatfield	Moynihan
Curtis	Hayakawa	Packwood
Eagleton	Humphrey	Stevens
Glenn	Magnuson	Young
Goldwater	McClellan	

So the amendment (No. 636) was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. BUMPERS. Mr. President, I ask unanimous consent that Ark Monroe of my staff be granted the privilege of the floor during debate on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HASKELL. I move to reconsider the vote by which the amendment was rejected.

Mr. MATSUNAGA. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open at this point to further amendment.

UP AMENDMENT NO. 760

Mr. BARTLETT. Mr. President, I offer two unprinted amendments I would like to have considered at the same time.

The PRESIDING OFFICER. Is there objection? The Chair hears none. Without objection, the amendments will be considered en bloc.

The amendments will be stated.

The legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT) proposes unprinted amendment No. 760.

On p. 114, strike lines 20 through 24, and insert in lieu thereof:

"(2) Provides by 1990 for the reduction of the use of such intrastate natural gas to less than 20 per centum of (A) the quantities used in calendar year 1976 by those power plants in the company's system which began operation on or before January 1, 1976, and (B) one half the quantities used as the primary energy source during the first twenty-four months of operation of power plants which began operation after January 1, 1976 but before the effective date of this section;"

On page 116, after line 23, add the following new section:

"(f) After January 1, 1995, any power plant covered by a plan approved pursuant to this section and using natural gas as its primary energy source shall be eligible for an exemption pursuant to sections 207(e) or 208(a) of this Act."

Mr. BARTLETT. Mr. President, the first amendment is of a technical nature. It strengthens the language of section 214 of the bill to include in the base level calculation of natural gas consumption the amount required by new plants coming onstream after January 1, 1976. It is totally consistent with the purposes of section 214 of the bill.

The second amendment would simply allow individual plants to qualify for the exemptions provided in the bill for peak load and standby operation upon termination of a system compliance plan, or after 1995, at their option.

As I said, it is my understanding that these amendments are acceptable to the manager of the bill.

The PRESIDING OFFICER. If the Senator will suspend just for a moment, I ask again if we can have order in the Chamber so that the Senator from Oklahoma can be heard.

The Senator from Oklahoma.

Mr. BARTLETT. Mr. President, I reserve the balance of my time.

Mr. HASKELL. Mr. President, the Senator from Oklahoma has a second amendment; is that not correct?

Mr. BARTLETT. Yes. I introduced two amendments at the same time.

Mr. HASKELL. I know both of them are acceptable, but have we officially acted on both of them?

The PRESIDING OFFICER. The Chair advises that we have not acted on either. The titles have been read, the Senator from Oklahoma described the essence of the amendments, and that is how it stands.

Mr. HASKELL. I say to the Senator from Oklahoma that the first amendment is acceptable and, as I understand it, it is acceptable to the Senator from Wyoming. We can yield back our time on that and then adopt it and go to the second.

The PRESIDING OFFICER. I might say that we previously agreed to consider the two amendments en bloc. So I assume the Senator from Oklahoma is about to proceed with the second.

Mr. BARTLETT. Let me elaborate, if I may, on the first amendment.

Western Farmers Electric Cooperative is a generation and transmission cooperative located at Anadarko, Okla. It is owned by and provides wholesale power to the rural electric cooperatives which serve the southern and western three-quarters of Oklahoma. Despite the large area served, in 1976 Western Farmers accounted for less than 5 percent of the thermal power generated in Oklahoma.

The total generating capacity of Western Farmers is now 678,400 kW. Of that, 435,000 kW—63 percent—has been in service for 2 years or less. All of this generating plant currently relies on intrastate natural gas as its primary energy source.

Western Farmers is now planning the construction of 400,000 kW of coal-fired generation and it is committed to purchase 400,000 kW of nuclear capacity. This is necessary in addition to its present plant to meet its needs by 1985. Because of technical limitations, site limitations, and the threatened impairment of service reliability it is impossible for Western Farmers to convert any of the existing units to the use of coal.

What S. 977, particularly section 214, means to Western Farmers in its present form is that by 1990 its use of natural gas must be reduced to 20 percent of the amount it used in 1976—a use period before 300,000 kW of its capacity went into service.

What this amendment would do is simply incorporate the average annual gas consumption for the first 2 years of operation of any plants coming onstream after the beginning of 1976, as a part of the base consumption level against which the 20-percent limitation is applied.

Let me restate that.

The bill presently prohibits the use of natural gas for electrical generation beyond the year 1990. Utility systems dependent on intrastate natural gas may submit a system compliance plan, and if approved, continue to burn some gas beyond 1990 in amounts not to exceed 20 percent of their systemwide 1976 consumption level.

Western Farmers Electric Cooperative, and perhaps others as well, had a gas-fired plant come on stream this year. This new plant, while small by anyone's standards, nevertheless constitutes 45 percent of Western Farmers' generating capacity. It is only fair that such plants be taken into account in calculating the base level of gas consumption for the purpose of the system compliance option which was adopted as an amendment and is a part of the bill in its present form. This amendment that I am offering will do just that.

Mr. HASKELL. Mr. President, both amendments by the distinguished Senator from Oklahoma, on this side of the aisle, are in conformance with the general overall scheme of the bill. For that reason, they are acceptable.

Mr. HANSEN. Mr. President, the statement made by the distinguished floor manager of the bill reflects the thinking of the minority side. I agree that they seem reasonable and I yield back the remainder of my time.

Mr. HASKELL. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. CULVER). All time having been yielded back, the question is on agreeing to the amendments of the Senator from Oklahoma.

The amendments were agreed to.

AMENDMENT NO. 637

Mr. HEINZ. Mr. President, I call up amendment No. 637 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Pennsylvania (Mr. HEINZ) for himself and Mr. Young, proposes an amendment numbered 637:

On page 86, after line 22 insert the following new subsection:

"(c) Except as provided for in sections 206, 207, 208, and 209 of this title, effective January 1, 1982, no existing electric powerplant, or existing major fuel-burning installation, with the capability to utilize coal or other fuel as its primary energy source shall utilize natural gas or petroleum as its primary energy source.".

Mr. HEINZ. Mr. President, this second amendment that I offer would restore a prohibition on the use of scarce oil and natural gas by major plants which now have the capability to burn coal.

This provision would apply to utility and industrial installations and become effective January 1, 1982. It is not in my judgment an unnecessarily stringent measure, but a reasonable approach to conserving additional supplies of these fuels.

I am particularly concerned that the current language of the bill does not make a clear and strong commitment to the development of abundant domestic coal resources. This, frankly, surprises me in view of our long-standing and unwavering support of national policies to achieve energy independence. In my view, title II, the provisions for operation of existing plants, provides only a weak prohibition on the use of natural gas and the substitution of oil in those plants. In fact, the administration has estimated that utilities will actually be increasing their use of oil from 1.3 million barrels per day to 2.2 in 1985: A 70-percent increase when our alleged objective has long been to reduce oil consumption and dependence on foreign imports. So it seems to me, clearly we must accede to short-term conversions to oil where necessary to conserve natural gas since many boilers canot be converted to coal or other fuels without major investments in new boilers and other equipment. But while we shift temporarily from gas to oil in these facilities, we should take fullest advantage of opportunities to convert to coal use those plants that are capable of being converted without significant added cost.

The Federal Energy Administration has identified a total of 350 generating and 2,000 industrial plants that currently have the capability to burn coal. The current bill would leave the responsibility for ordering these facilities to convert with the existing regulatory program mandated in the Energy Supply and Environmental Coordination Act of 1974. The FEA, which administers the ESECA program, estimates that only 20 percent of these coal-capable plants will actually receive orders to make conversions by 1985. The major obstacle to more comprehensive program coverage is the substantial burden of proof which must be overcome by the FEA in issuing conversion orders. By restoring to the bill a prohibition on oil and gas use in these plants, the burden of proof would be shifted to the utilities and industries to demonstrate that conversion is not feasible. In these cases, the Administrator of the program could grant, as appropriate, a temporary exception or permanent exemption. The net effect of the amendment in additional oil equivalent savings, above and beyond the savings anticipated in the ESECA program, could amount to well over 300,000 barrels per day by 1985.

I fully recognize that the conversions required by this prohibition would not be without some additional cost in the short run to the industries affected and their customers. But I do believe, equally, that we can ameliorate this because it is appropriate that the Government can and should share in part of the costs of capital formation to stimulate the investments as required by compliance with the bill. Title II already provides various forms of financial assistance, including direct grants, loans, and loan guarantees, to ease the capital burden.

In addition, I am proposing legislation which would allow investments in pollution control and coal conversion equipment to be expensed in the first year of the investment. I am not proposing to add that to this bill. It would be nongermane. But it is a legislative priority that I hope we can take up. In my judgment, such a provision could further expedite compliance with the Clean Air and pending Coal Utilization Acts. Rapid amortization of essentially nonproductive plant improvements would involve the Government integrally in the achievement of these national environmental and energy objectives.

But even more important, a bill so amended would create a more certain economic environment for coal and its related industries. The conversion to

coal in existing coal-capable plants affected by this amendment could increase production 40 to 50 million tons per year by 1985. By putting more pressure on utilities and industries to find and develop new sources of coal, upgrade necessary transportation facilities, and purchase the best available pollution control technology, the bill would stimulate growth in domestic energy markets needed to accommodate the national objective of energy independence. Finally, this shift in energy production would bring renewed economic vitality to depressed mining areas in Appalachia and the Midwest and accelerate new developments in the West.

Mr. President, I reserve the remainder of my time.

Mr. BUMPERS. Mr. President, this amendment would prohibit existing powerplants and existing major fuel-burning installations with the capability of using coal from using natural gas or petroleum after January 1, 1982.

This provision was considered by the committee, and it was not adopted in the final reported bill for two reasons.

First, under existing law, the Federal Government has the authority to order such units to convert to coal now. The burden of proof under present law would be on the Administrator to prove that such reconversion is practicable. This amendment would reverse that burden of proof while many orders, under existing law, are still outstanding.

Second, the January 1, 1982, deadline in the amendment was found by the committee as creating an unreasonable regulatory burden on FEA and the affected industry, associated with requests for temporary exemptions and permanent exemptions with respect to prohibition.

For all these reasons, Mr. President, the committee opposes this amendment.

I reserve the remainder of my time.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. BUMPERS. I am happy to yield to the Senator from Oklahoma.

Mr. BARTLETT. Would the Senator sum up his remarks this way, or would he feel that this would be a fair way to sum them up: This amendment is not needed because the matter is being dealt with administratively.

Mr. BUMPERS. The Senator is correct.

In other words, the Administrator of FEA has the authority to do this now, and he can do it if he finds that it is practicable for that particular company or utility to convert. But the burden of proof is on him. The amendment of the Senator from Pennsylvania would create a rather arbitrary burden on the user to convert, whether it is practicable or not.

Mr. BARTLETT. I thank the distinguished Senator from Arkansas.

Mr. BUMPERS. Mr. President, I am prepared to yield back the remainder of my time if the Senator from Pennsylvania is.

Mr. HEINZ. Mr. President, I am prepared to yield back the remainder of my time, after one final comment.

I simply wish to draw the attention of my colleagues to page 83 of the bill, section 201, the definition of the term "capable of consuming coal or other fuel."

So that there is no misunderstanding, I think it is important to put on the record the fact that the powerplants that would be required to convert under this amendment are carefully described by the language of pages 83 and 84. Specifically, what is meant by a powerplant or industrial plant capable of consuming coal or other fuel is that that plant was designed and constructed to use coal or another fuel in lieu of natural gas or petroleum.

That language also goes on to point out that even if a plant were designed and constructed to use coal or another fuel instead of natural gas or oil, it would not be included in my definition and the definition of the bill if either of the following were the case: One, if "substantial modifications" to any boiler or nonboiler unit in order to utilize coal or other fuel instead of gas or petroleum were necessary, it would not be included. Second, if, alternatively, the energy user would suffer a substantial downgrading of rated capacity of such unit in order to utilize coal or other fuel instead of gas or petroleum, it, too, would not fit the definition.

I put that on the record not because there is any argument with any of my colleagues here on that point. I think they all have been more than fair. But I did want to get on the record the fact that I think this is a reasonable and modest amendment, even though disagreements about it have been expressed quite fairly by my colleagues.

I am now prepared to yield back the remainder of my time.

Mr. BUMPERS. Mr. President, I shall take 60 seconds to respond to the Senator.

First of all, my personal feelings are very closely akin to those of the Senator from Pennsylvania. I think I was one of the nine brave souls who just voted for his amendment.

Mr. HEINZ. The Senator from Arkansas was one of 12 brave souls.

Mr. BUMPERS. But I was also voting for the same position I took in committee.

I wish the Senator's amendment on conversion from natural gas had set a deadline of 1987 rather than 1985. That would have given everybody 10 years to convert.

I think there is no higher purpose that this body could serve than to mandate the quickest possible conversion of all boiler use of natural gas as quickly as possible.

I agree with the thrust of the amendment. But the FEA says there are now 2,350 existing utility and industrial facilities that are coal-capable as defined in the bill.

Of these FEA estimated that approximately 500 could economically, technically, and environmentally convert to coal. But if this amendment passed, either of two situations would exist. FEA would have to issue 1,850 exemptions to all of those which were not going to convert or allow severe economic dislocations to occur on the affected companies or the ratepayers.

I intend to vote against the Senator's amendment although I personally agree with the thrust of the amendment. FEA would do a better job of using the authority they now have in mandating the conversion of a lot of these companies that could convert.

But one thing could occur. If FEA suddenly mandated 500 companies in this country to convert to coal, it could put a lot of utilities virtually out of business because it is a massive capital-intensive requirement to convert to coal. I also doubt that the equipment could be manufactured and installed in the time limit the Senator's amendment provides.

Mr. STONE. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. HEINZ. May I just respond briefly to the Senator and then I would be happy to yield to the Senator from Florida on my time.

Mr. STONE. This is merely for a unanimous-consent request.

Mr. HEINZ. I would be happy to yield.

Mr. STONE. I ask unanimous consent that Bill Pursley of my staff be granted the privileges of the floor during the votes on and consideration of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. I make a similar request for Aubrey Sarvis of my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HEINZ. Mr. President, let me say to my very good friend I do appreciate his act of courage on the last vote and his support for the concept behind what I am doing here on this, and I do appreciate the Senator's responsibility to the committee.

I might also add I respect his integrity on the last vote in voting consistently with the way he did in committee. But it would be my hope and, indeed, it is my understanding, that it would not be for these powerplants or other plants a costly exercise to convert away from oil and gas specifically because these are plants that have been designed and constructed to burn coal. So I would hope, and it would be my intention to see, that the bill is sufficiently well-drafted so that that problem is mitigated and, indeed, eliminated.

I do agree that we are talking about a lot of plants and we are talking about a lot of orders. I would certainly agree, too, and wish that FEA would be willing to take the bull by the horns and act much more aggressively and effectively.

But what concerns me, I suppose, is that we all want—and I am no exception—an easy answer to the energy question, and we keep looking, understandably, for the top 100 powerplants, so that if we convert them to coal or away from natural gas that it is going to solve 50, 70, 80 percent of our energy problem.

When we improve the energy conservation in a building we first take the easy step of turning off every other light, as we have done in some of the halls of the Senate, and we achieve thereby a 50-percent saving in the consumption of electricity.

But what we are dealing with here, it seems to me, is a law of some diminishing returns, and if we are going to get the energy conservation that President Carter wants we are going to have to understand that the solutions are no longer

easy, and we are going to have to look at the next 500 or 1,000 or 2,000 energy consumers in order to achieve the conservation we all would like to achieve, and that is why I feel this amendment is necessary.

I do candidly acknowledge that, yes, this is an additional burden on FEA. It happens to be a responsibility that I think they should be fulfilling right now, but they are not, and they say they cannot and they will not. We should all understand, however, that we are talking about a substantial amount of energy conservation, 300,000 barrels a day oil equivalent. That is a substantial amount. The Alaska pipeline will only bring us—in spite of the fact it has taken 4½ years to build and complete, and the field even longer to drill up—1 million barrels a day. Here we have one-third of what that monumental effort to build the Alaska pipeline is going to bring us.

Therefore, I suggest to all my colleagues that this is indeed something we should not overlook. We should not say that because there is some work involved here for the utilities and for FEA that we should, as a result, turn a blind eye to it.

Mr. President, I am prepared to yield back the remainder of my time if there are no other requests.

Mr. LONG. Mr. President, will the Senator yield me a moment?

Mr. HASKELL. I yield to the Senator from Louisiana.

ORDER PLACING H.R. 5146 ON THE CALENDAR

Mr. LONG. Mr. President, during this afternoon there was a meeting held both on the motion of the majority leader, the Senator from West Virginia (Mr. ROBERT C. BYRD) and the leadership on the other side represented by Mr. BAKER, the Senator from Tennessee, and we discussed the parliamentary situation and the problems that may be involved in getting out this bill that is before us, as well as other parts of the energy proposal that came over in one package, but which will be passed in separate bills in the conference, and it was decided that it might serve a purpose to take a House bill that could be passed without amendment and simply add the Senate language in this bill, together with the language in the House bill to it in such a fashion that the whole thing would be in conference between the two Houses. That technique has been used by the Committee on Finance from time to time in order to get into conference both the House and the Senate version of something, and in order that that approach might be available to the Senate if the Senate chose to do business in that fashion.

So I would suggest that the Committee on Finance be discharged from considering a noncontroversial bill which we would recommend be passed without amendment. It is H.R. 5146, relating to duty-free entry of competition bobsleds and luges. None of these is manufactured in the United States. I have with me the committee report, and I ask unanimous consent that an excerpt from it be printed in the RECORD at this point, and I am speaking of the report of the Committee on Ways and Means.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS, JUSTIFICATION, COMPARISON WITH PRESENT LAW, AND EFFECT ON REVENUE

Analysis

Section 1 of H.R. 5146 amends subpart D of part 5 of schedule 7 of the Tariff Schedules of the United States by striking out item 734.97 and inserting new items number 734.98 and 734.99 which provide for the duty-free entry of competition bobsleds and luges.

Section 2 applies the duty-free entry to articles entered, or withdrawn from warehouse, for consumption on or after the date of enactment of this Act.

Justification

Legislation to remove the duty on sleds is one of the recommendations of the recently concluded study of amateur sports by the President's Commission on Olympic Sports. The Commission agrees that a major impediment to participation in these sports is the high cost of equipment. There are no American bobsled or luge manufacturers and this legislation would not adversely affect any United States industry.

A favorable report was received from the Department of Commerce. Reports with no objections were received from the Department of the Treasury and Labor while the Department of State and the Office of the Special Representative for Trade Negotiations deferred to the other agencies.

Public hearings were held by the Subcommittee on Trade of the Committee on Ways and Means on April 26, 27, and 28, 1977 on duty-free entry and duty suspension bills. During these hearings favorable testimony was received on H.R. 5146. No objections to this legislation have been received by the Committee from any source.

A technical amendment was made to the proposed Tariff Schedules of the United States (TSUS) items 734.97 and 734.98 in order that the indentation of the article description follow the form used in the TSUS.

Your committee believes H.R. 5146, as amended, to be meritorious and unanimously urges its approval.

EFFECT OF THE BILL ON THE REVENUES AND VOTE OF THE COMMITTEE IN REPORTING THE BILL

In compliance with clause 7 of rule XIII of the Rules of the House of Representatives, the following statements are made relative to the effect on the revenues of this bill. The committee estimates that enactment of this bill would result in a loss of customs revenue of a negligible amount.

In compliance with clause 2(l)(2)(B) of rule XI of the Rules of the House of Representatives, the following statement is made relative to the vote by the committee on the motion to report the bill. This bill, as amended, was unanimously ordered reported by the committee.

OTHER MATTERS REQUIRED TO BE DISCUSSED UNDER HOUSE RULES

In compliance with clauses 2(l)(3) and 2(l)(4) of rule XI of the Rules of the House of Representatives, the following statements are made.

With regard to subdivision (A) of clause 3 relating to oversight findings, your committee advises that in its review of the special circumstances with respect to the bobsleds and luges involved, it concluded it would be desirable to enact legislation to remove the duties on imports of bobsleds and luges, by reason of the considerations outlined above in the general statement.

With regard to subdivision (B) of clause 3 and after consultation with the Director of the Congressional Budget Office, the committee states that the changes made by this bill involve no new budgetary authority, or new or increased tax expenditures.

In compliance with subdivision (C) of clause 3, the committee advises that the Director of the Congressional Budget Office has examined the committee's revenue estimate and agrees with the methodology used and in the resulting dollar estimate.

With respect to subdivision (D) of clause 3, no oversight findings or recommendations have been submitted to the committee by the Committee on Government Operations concerning this subject matter.

In compliance with clause 2(l)(4) of rule XI, the committee states that the temporary suspension of duties under this bill would not have an inflationary impact on prices and costs in the operation of the general economy.

CHANGES IN EXISTING LAW MADE BY THE BILL, AS REPORTED

In compliance with clause 3 of rule XIII of the Rules of the House of Representatives, changes in existing law made by the bill, as reported, are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italic, existing law in which no change is proposed is shown in roman):

TARIFF SCHEDULES OF THE UNITED STATES

* * * * *

SCHEDULE 7.—SPECIFIED PRODUCTS; MISCELLANEOUS AND NONENUMERATED PRODUCTS

* * * * *

Item	Articles	Rates of duty 1	2
	PART 5.—ARMS AND AMMUNITION; FISHING TACKLE; WHEEL GOODS; SPORTING GOODS, GAMES AND TOYS		
*	* * *	*	*
	Subpart D.—Games and Sporting Goods		
*	* * *	*	*
[A 734.97	Other	95% ad val.	45% ad val.]
734.98	Bobsleds and luges of a kind used in international competition.	Free	Free.
734.99	Other	9% ad val.	45% ad val.
*	* * *	*	*

Mr. LONG. Mr. President, it has been recommended in the Committee on Finance that this particular proposal be added to another tariff bill so that this number could be cleared just for expediting the flow of legislation. That being the case, Mr. President, I ask unanimous consent that the Committee on Finance be discharged from consideration of H.R. 5146 and that it be referred to the calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HASKELL. Mr. President, I would be glad to yield back the remainder of my time in just one moment.

I would point out on this amendment by the Senator from Pennsylvania, the difference between the position of the committee and that of the Senator from Pennsylvania is again a matter of judgment. There are a great many orders pending under existing law. Testimony has been submitted and is under consideration that reversing the burden of

proof, as the Senator would do, would cause administrative difficulties.

The committee discussed this problem and considered the proposition of the Senator from Pennsylvania, but decided as it did. Again it is a matter of judgment. I intend to vote, of course, with the committee against the Senator from Pennsylvania.

I yield back the remainder of my time.

Mr. HEINZ. Mr. President, I yield back the remainder of my time and ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time having been yielded back, the question now occurs on agreeing to the amendment of the Senator from Pennsylvania. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Missouri (Mr. EAGLETON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Washington (Mr. MAGNUSON), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), the Senator from New York (Mr. MOYNIHAN), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Washington (Mr. MAGNUSON) and the Senator from Minnesota (Mr. HUMPHREY) would each vote "nay."

Mr. BAKER. I announce that the Senator from Rhode Island (Mr. CHAFEE), the Senator from Nebraska (Mr. CURTIS), the Senator from Arizona (Mr. GOLDWATER), the Senators from Oregon (Mr. HATFIELD and Mr. PACKWOOD), the Senator from Alaska (Mr. STEVENS), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) and the Senator from Alaska (Mr. STEVENS) would each vote "nay."

The result was announced—yeas 14, nays 71, as follows:

[Rollcall Vote No. 349 Leg.]

YEAS—14

Bellmon	Javits	Proxmire
Brooke	Mathias	Ribicoff
Hart	McIntyre	Riegle
Heinz	Pell	Schweiker
Huddleston	Percy	

NAYS—71

Allen	Culver	Hollings
Anderson	Danforth	Inouye
Baker	DeConcini	Jackson
Bartlett	Dole	Johnston
Bayh	Domenici	Kennedy
Bentsen	Durkin	Laxalt
Biden	Eastland	Leahy
Bumpers	Ford	Long
Burdick	Garn	Lugar
Byrd, Harry F., Jr.	Glenn	Matsunaga
	Gravel	McClure
Byrd, Robert C.	Griffin	McGovern
Cannon	Hansen	Melcher
Case	Haskell	Metzenbaum
Chiles	Hatch	Morgan
Church	Hathaway	Muskie

Schmitt	Talmadge	Zorinsky

NOT VOTING—15

Abourezk	Hatfield	Moynihan
Chafee	Humphrey	Packwood
Curtis	Magnuson	Sparkman
Eagleton	McClellan	Stevens
Goldwater	Metcalf	Young

So Mr. HEINZ' amendment was rejected.

Mr. HASKELL. Mr. President, I move to reconsider the vote.

The PRESIDING OFFICER. The Senate is not in order. The Senator will suspend until order is restored.

Mr. WALLOP. Mr. President, will the Senator yield for a unanimous consent request?

The PRESIDING OFFICER. The Senate is not in order. Senators will kindly suspend their conversations or retire to the cloakrooms.

The Senator from Colorado may proceed.

Mr. HASKELL. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. BENTSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. WALLOP. Mr. President, I ask unanimous consent that Kathryne Bruner of Senator HAYAKAWA's staff may have the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAYH. I ask unanimous consent that Steve Bell be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I make the same request in behalf of Gary Klein.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senate will be in order.

Mr. RIBICOFF. Mr. President——

The PRESIDING OFFICER. The Senate is not in order, and the business of the Senate will not continue until the Senate is in order.

The Senator from Connecticut may proceed.

Mr. RIBICOFF. Mr. President, I make the same request for Stuart Brahs.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HASKELL. I make the same request, Mr. President, for Deming Cowles, of Senator GRAVEL's staff.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time?

UP AMENDMENT NO. 761

Mr. HEINZ. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Pennsylvania (Mr. HEINZ) proposes an unprinted amendment No. 761.

Mr. HEINZ. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 69, line 13, strike "and" and insert in lieu thereof "or".

On page 69, between lines 13 and 14, insert the following:

"(v) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; and".

On page 70, between lines 23 and 24, insert the following:

"(3) The Administrator shall renew any exception under subsection (a) of this section for additional periods of up to five years if the circumstances justifying the initial exception are likely to persist.".

Beginning on page 73, line 2, strike out all through line 7 on page 76.

On page 76, line 8, strike "(d)" and insert in lieu thereof "Sec. 160 (a)".

On page 76, line 20, strike all through line 3 on page 77.

On page 77, line 4, strike "(f)"and insert in lieu thereof "(b)".

Mr. HEINZ. Mr. President, this amendment deals with the title I provisions for permanent exemption of new utility and industrial plants from the requirement to be constructed with the capability to burn coal or some fuel other than oil or natural gas. The amendment deletes the provisions for permanent exemptions and substitutes instead an expanded and long-termed temporary exemption. The expanded temporary exemption will provide needed flexibility and the capability to adjust requirements to changing conditions. By deleting the provisions for general permanent exemption of new plants, we can significantly broaden the initiative for long-term oil and gas conservation and increased coal utilization.

Under the present bill, the Administrator is authorized to grant a permanent exemption from the requirement to build a coal-burning plant. To qualify, the applicant company must demonstrate that the use of coal will not be feasible for the majority of the life of the plant due to various economic, environmental, and other limitations. While it may seem reasonable to exempt plants where compliance would create serious hardships, these broad loopholes will have the effect of committing us to another generation of oil- and gas-dependent combustion facilities. I do not believe that that should be our intention in this legislation.

The grounds for a permanent exemption include the inability to secure a reliable supply of coal, inadequate coal transportation facilities, a significant fuel cost differential, and the impossibility of burning coal in compliance with environmental standards. The difficulty with these provisions is that the conditions which may qualify a plant for a permanent exemption in the planning stages today are not likely to be sustained over the life of the plant. For utilities and major fuel-burning installations, this can extend as long as 30 to 45 years. Why should we allow these plants to be built without even the capability to use coal when conditions will change over time?

The effect of my amendment would be

to require new plants to build with the capability to use other fuels. The temporary exceptions now in the bill would still be available to relieve the plant operator of temporary obstacles to coal combustion. As an alternative, the operator could select a different and more economical location for his plant that would insure compliance with the act and allow coal combustion without the temporary exception. This might involve location in a coal-producing area, adjacent to adequate rail facilities, or beyond an environmental nonattainment area. The operator might also participate in the production of new coal supplies, the upgrading of necessary transportation routes, or the development of more efficient and reliable pollution control technologies in order to protect this new plant in compliance with these provisions.

The primary impact of this amendment will be on industrial facilities. The utilities have already trended toward the construction of new coal and nuclear steam generators instead of oil and gas fired plants. Only 10 to 15 percent of newly ordered industrial plants have been designed for coal combustion. The remainder will operate on oil predominantly and do not have the capability to burn coal. By requiring these plants to have coal capability and to burn coal at the earliest feasible time, this amendment could increase oil and gas savings significantly by 1985—150,000 to 200,000 barrels per day oil; 0.2 to 0.3 trillion cubic feet gas and enhance coal production—19 to 28 million tons per year.

To the extent that this amendment forces a radical reconsideration of industrial location, this bill could impose a considerable short-term burden on those constructing new plants. But this is the type of systemwide adaptation that is needed if this Nation is to achieve a meaningful shift from an economy fired by scarce fuels to one dependent upon reliable and abundant domestic fuels.

I have discussed this amendment with the Senator from Colorado (Mr. HASKELL). This was a subject, as I understand it, that the committee explicitly looked at but did not hold hearings on. The committee, I further understand, feels that there may be an opportunity to do more work on the existing legislation.

Further, the committee would be quite willing, at a further time when they take up any additional amendments to these statutes, to look at this idea. I believe it is fair to say there are many, including myself, who have been looking for a way to recognize, in this act and in similar legislation, a way to take into account the fact that what creates an exemption today or for the next 5 years, what circumstances make such an exemption necessary today, or even 5 years from now—may not apply 10 years from now. The intent of the amendment I have offered would be to find a way around that very problem.

It is not my intention, since the committee has not held hearings on this provision as they did on the other two amendments, to press for a vote on this amendment. Indeed, with the luck I had on the last two amendments, I believe I would be ill-advised to press for a vote on any amendment today. That is really a testament to the effective leadership of the Senator from Colorado and the Senator from Oklahoma, whose word today clearly is law. I would be happy to yield.

Mr. HASKELL. I will advise the Senator from Pennsylvania that he cannot lose them all. That is my viewpoint.

Mr. President, seriously, I think the Senator from Pennsylvania has an excellent thought. The issue basically is this: If there is a new plant, the plant has to do its financing. Of course, I would object to the 5-year temporary exception of the Senator from Pennsylvania, because the facility could not do its financing. On the other hand, the committee bill says a permanent exemption. It seems to me that a permanent exemption probably is not warranted. There might be somewhere in between where it would be possible to do the financing of a new plant but we would not give them a "forever" exemption in the bill.

The Senator from Pennsylvania is quite right, that we do expect to consider other aspects of this subject when we get more information, more factual information. I will assure the Senator from Pennsylvania that when that takes place, we will consider this problem.

Mr. HEINZ. I thank the Senator from Colorado for his comments. If some approach similar to the sequestrial temporary exemptions could be worked out, I calculate we could substantially increase coal production, because of the increased demand, by some 19 to 28 million tons per year. That means we could save some 150,000 to 200,000 barrels of oil per day, or oil equivalents. In addition, we could save some 200 to 300 billion cubic feet of natural gas per year. Clearly, those are savings worth trying to achieve in view of our dedication to trying to achieve energy conservation. I do thank the Senator from Colorado for his thoughtful remarks and observations on the amendment.

I am prepared to withdraw the amendment and yield back the remainder of my time.

Mr. BARTLETT. Will the Senator yield?

Mr. HEINZ. I am happy to yield.

Mr. BARTLETT. I would point out to my good friend from Pennsylvania that I could not agree with him more, that it is impossible for a legislative body or any body to project into the future events which are going to take place. It is impossible to know what is going to happen 5 or 10 years from now.

Just as the 10-year or 12-year projection could be unfair to those wanting more rapid conversion, it could be just as unfair to those who have to bring it about if that 12-year period is not sufficient. This is one of the great concerns I have with this kind of legislation. Right now, the trend in the energy industry is toward gas conversion, to nuclear energy or coal. This is taking place. There have not been any new major gas-fired plants started in many years. Some plants have been completed recently, but it took them several years to be constructed.

The economics of the energy industry today are such that conversions are taking place for a very good reason: because the cost of coal or the cost of nuclear energy is cheaper than that of natural gas in the States which are producing the natural gas.

I feel the Senator has a good point, but I believe the error is as apt to be in one direction as it is in the other. For this reason, I believe it makes no sense to have bills written with shorter periods of time in them because there can be a lot of unfairness result from them.

Doing it the way the Senator suggests would be favoring one side over the other in this matter, and I think both sides might suffer.

Mr. HEINZ. I am conscious that neither the committee nor I have gone into this particular approach, nor have any of the experts. I do not feel it would be appropriate to put my colleagues in an unjustifiable position to take a position on something where we do not have an effective hearing record and where other people have not had the chance to think the problem through. I agree with the comments of my good friend.

Unless there is someone else who wishes time, I am prepared to yield back the remainder of my time and withdraw the amendment.

Mr. HASKELL. Mr. President, I thank the Senator from Pennsylvania for his thoughtful presentation, and I would hope he would appear before the committee when the subject comes up again.

The PRESIDING OFFICER. The amendment is withdrawn. Who yields time?

UP AMENDMENT NO. 762

Mr. ROBERT C. BYRD. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes unprinted amendment No. 762.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 139, insert the following: SEC. 314. Section 27 of the Interstate Commerce Act is amended by striking "and" at the end of section 24(4)(d), striking the period at the end of section 27(4)(e) and inserting in lieu thereof a semicolon and the word "and", and by inserting after such section the following:

"(f) shall present the views of communities and users and providers of rail services in proceedings of Federal agencies whenever the Director determines that it is in the public interest that transportation policy be implemented in a manner consistent with national energy policy."

Mr. ROBERT C. BYRD. Mr. President, although S. 977 would strengthen substantially the Nation's coal conversion approach to oil and gas conservation, conversion is limited by a number of

factors, including the adequacy of transportation services.

Under the bill as reported, major fuel-burning facilities, both new and existing, are exempted temporarily or permanently upon a showing that transportation of alternative fuels is not adequate. Most of those installations which will be required to convert will shift to coal, and most coal is transported by rail. Given the close link between rail transportation and the effectiveness of the coal conversion policy in the National Energy Act, it seems imperative that Federal rail transportation policy be implemented in harmony with national energy policy.

The amendment I propose would direct the Office of Rail Public Counsel to exercise its authority in rail matters when a decision by a Federal transportation agency is inconsistent with the national energy policy. The jurisdiction of the office places it in a unique position. Surveying implementation of national rail policy on a direct and continuing basis, the office is well situated to identify and represent the public interest in cases where rail policy may deter realization of national energy goals.

There are currently three major agencies with rulemaking authority in rail matters, the Interstate Commerce Commission, the Federal Railroad Administration, and the Department of Transportation. Each administers the laws over which it has jurisdiction in accordance with the purposes of each respective law. In this situation, where a multitude of administrators pursue varying objectives, conflicts between transportation decisions and energy policy are likely to arise.

The jurisdiction of the Office of Rail Public Counsel cuts across every layer of this Federal rail bureaucracy. Although it is affiliated with the ICC, the office is legally independent of the Commission. The objectivity of the Rail Public Counsel is further assured because the primary responsibility of the office is to represent the public, particularly in rail regulatory proceedings where the public's views might not be represented. In Federal proceedings, the outcome of which might have meant or did mean the loss of jobs and rail services, the record of the prototype of the Office of Rail Public Counsel is exemplary.

The Office of Rail Public Counsel would not be the ultimate decisionmaker. The amendment only makes mandatory the exercise of the office's authority to represent the views of communities as well as users and providers of rail services where the director determines it is in the public interest that transportation policy be implemented in accordance with national energy policy. The purpose of the mandate is to reaffirm the importance of implementing transportation policy in a manner consistent with national energy policy.

This amendment has been discussed with the managers of the bill, Mr. President. I hope they will accept the amendment.

Mr. HASKELL. Mr. President, this amendment is very satisfactory to the majority. I relinquish the remainder of my time.

Mr. HANSEN. Mr. President, I know of no objections on this side of the aisle to the amendment. I yield back my time.

Mr. ROBERT C. BYRD. Mr. President, I thank both of the managers of the bill.

I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MATSUNAGA). All time having expired, the question is on agreeing to the amendment of the Senator from West Virginia.

The amendment was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Are there further amendments?

Mr. HASKELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. HASKELL. To be equally divided on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 757

Mr. JAVITS. Mr. President, I call up my amendment No. 757 and ask that it be considered.

The PRESIDING OFFICER The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New York (Mr. JAVITS) proposes amendment No. 757.

Mr. JAVITS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 108, line 16, insert the following after the word "devices": "and any auxiliary equipment and facilities which the Administrator determines is necessary to burn coal".

On page 108, line 20, delete "$5,000,000,000" and insert in lieu thereof "$10,000,000,000".

On page 109. lines 7, 12, 14, and 19, after the word "devices" insert the following: "or any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal".

On page 109, line 21, after the word "control" insert the following: "or auxiliary equipment and facilities".

Mr. JAVITS. Mr. President, these amendments are simply designed. I have submitted one; I shall submit a parallel one, assuming that this one is taken to conference.

These amendments are designed to expand the potential uses of the loan guarantee section of the bill. The bill currently provides for a loan program, section 211, as well as a loan guarantee program, section 212. Each authorizes the Administrator to provide assistance only for the specific purpose of financing the purchase and installation of air pollution control devices.

There is provided an available fund of $1 billion for the loan section, and $5 billion for the loan guarantee program. The amendments would add to this single allowable purpose, "any other auxiliary equipment which the Administrator determines is necessary to burn coal". In addition, the amendment would double the allowable authorizations.

As reported, I believe the loan and loan guarantee sections of the bill are not adequate incentives to conversion. Although these provisions will, to some degree, facilitate utility and industrial borrowing in order to finance conversions from oil or gas to coal, the limitation on the financing assistance to "air pollution control devices" will seriously hamper a potential converter's use of the assistance.

Air pollution control equipment may be a substantial portion of the cost of coal conversion. But it is not the only major capital cost. Nor is it more difficult to borrow capital for the addition of air pollution control equipment than for any other portion of the cost of coal conversion. There is little justification for limiting this important program of Federal assistance to the purchase of such pollution control equipment. If we really wish to provide adequate incentives, to utility and industrial energy users to pursue early retirement of existing gas- and oil-fired boilers, it seems to me desirable that we provide these businesses with the means to make the conversions without financial sacrifice. If we do not, there simply will not be the inducement for these major energy users to convert to coal.

The reported bill does not require the conversion of existing facilities; it merely prohibits the burning of natural gas in electric utility powerplants by 1990. The bill does not mandate that electric utilities cease burning oil by any date certain, nor does it require that industrial users—major fuel burning installations—cease using oil or gas by any date. In other words, the bill as framed is essentially, insofar as existing facilities are concerned, a voluntary conversion program. It is one that requires adequate incentives to industry if it is to be of real use. To implement a loan or loan guarantee program that is limited in its terms to a part of the capital costs of conversion is to deny the very incentives necessary to make the program function effectively.

There are additional reasons for expanding the loan and loan guarantee provisions of the bill, one of which is especially significant from the perspective of the Northeast but important to the Nation as well. The bill does not, as I have said, require the conversion of gas and oil plants to coal. But it does prohibit the burning of natural gas in an electric powerplants after 1990. One possible effect of this combination is that electric

powerplants will convert, but they will convert from gas to oil. I can think of no more unintended and damaging effect upon our national program than such conversions.

These are the reasons, Mr. President, why I believe, and I hope very much the committee will agree with me, that we should expand the loan guarantee provisions of the bill.

From the perspective of the Northeast, which is my particular area of the country, Mr. President, I believe that this will make the bill very much more effective and very much more attractive.

Although we must limit, indeed prohibit, the burning of natural gas under utility boilers, it would be counterproductive to our national energy policy if those conversions were simply to oil. The prime objective of the entire national energy plan is to limit our imports of petroleum. And yet, Mr. President, there is nothing in this bill that would prevent conversion to imported oil. It is therefore imperative that we provide incentives for utilities to burn coal, and not oil, once the natural gas prohibition goes into effect. One such incentive is one I described, an expansion of both the nature and amount available for loans and loan guarantees, where necessary, to facilitate that conversion to coal.

Mr. President, we must bear in mind that these are loans and loan guarantees, not subsidies, and that in these particular cases which we are discussing we are dealing on the whole with perfectly proper and solvent debtors and that, therefore, it is best to serve truly the full basis and reason why we are enacting this legislation.

So long as we are doing it, let us do it amply enough to have the necessary result.

The need for such assistance to industrial users other than utilities is even more compelling. Many of these businesses are hard pressed for capital in today's market, and when capital can be obtained on reasonable terms, it will be used for other, less nationally necessary, uses. Moreover, these are the businesses that must provide the largest part of the conversion program, since utilities are unlikely to convert existing plants in lieu of building new plant capacity.

It is not possible to obtain precise estimates of the cost of conversion to coal, since these costs will vary from plant to plant. But it is clear that the cost of the environmental control equipment is not nearly the total capital cost for such conversion. Many other related costs will be necessary.

Estimates from the President's Office of Energy Policy and Planning indicate that, for a small 25 MW boiler unit using coal—the size that would be needed by a moderate size industrial user—of a total cost of approximately $9.9 million, the cost of the environmental system would be about $1.9 million. The largest single cost would be the new boiler, and it is unlikely that any industrial user would convert voluntarily unless it already has a boiler capable of burning coal. But there are many other capital costs incurred in such a conversion, which would amount to expenditures probably equal to the cost of the environmental equipment. The rule of thumb for capital costs is one-third for boiler, one-third for environmental equipment, and one-third for other auxiliary equipment.

For that reason, the amendment would double the authorizations available from $1 billion to $2 billion on loans, and from $5 billion to $10 billion on loan guarantees.

Examples of the equipment that would be necessary, aside form the environmental equipment and the direct boiler construction costs, are: costs related to the boiler such as site preparation; fuel handling and storage equipment; ash handling and disposal system; and powerhouse equipment. Typical forms of coal handling equipment might be a bucket elevator type, with a hopper unloading-dumping system. There could be a need for additional access roads, or a rail spur to the track hopper. There will have to be storage facilities, including the preparation of a coal yard, a reclaim system and drainage controls. These are just examples of the kind of equipment that may be necessarily incurred by a utility or an industrial user before it can convert to coal. Under the amendment, the Administrator would determine which equipment is necessary.

The administration estimates that costs associated with a new boiler capable of burning coal, both direct and indirect, are approximately $3.75 million for a 25 MW unit. For that same plant, fuel handling equipment would cost about $0.55 million; ash handling $0.4 million; and powerhouse equipment about $90,000. These substantial costs should be included in the loan and loan guarantee program initiated in the bill. Without such inclusion, it will be difficult for capital-pressed businesses to make these conversions.

Finally, it is likely that the businesses most in need of this Federal loan and loan guarantee assistance will be the smaller industrial users, not the corporate giants which have relatively easy access to the capital markets. Yet these smaller users will probably not even need the expensive environmental equipment, such as a custom-made scrubber, that the loan and loan guarantee provision as written is designed to aid them in obtaining. Thus, for those most in need of assistance, the assistance available may not even be needed.

For these reasons, Mr. President, we feel the amendment needs to be expanded in respect of these guarantees.

I hope that this may find favor with the committee as, in my judgment, it goes directly along the lines of the purpose of the bill.

Mr. HASKELL. Mr. President, I concur with the Senator from New York. I think this is a useful addition to the bill and, for my part, I am prepared to accept it.

Mr. HANSEN. Mr. President, I know of no one on the minority side who opposes the amendment of the distinguished Senator from New York. I support the amendment.

Mr. President, I yield back the remainder of my time.

Mr. HASKELL. I yield back the remander of my time.

Mr. JAVITS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from New York.

The amendment was agreed to.

Mr. JAVITS. Mr. President. I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 758

Mr. JAVITS. Mr. President, I send a parallel amendment numbered 758 to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New York (Mr. JAVITS) proposes an amendment numbered 758.

Mr. JAVITS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 105, line 5, insert the following after the word "installation": "and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal".

On page 105, line 6, delete "$1,000,000,000" and insert in lieu thereof "$2,000,000,000".

On page 106, line 4, insert the following after the word "devices": "and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal".

On page 106, line 9, insert the following after the word "devices": "and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal".

On page 106, line 10, delete subparagraph (2) and insert in lieu thereof the following: "(2) the applicant is unable to obtain sufficient funds on reasonable terms and conditions from any other source,".

On page 106, line 14, insert the following after the word "devices": "and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal".

On page 108, line 4, delete "$200,000,000" and insert in lieu thereof "$400,000,000".

Mr. JAVITS. Mr. President, this one deals with loan guarantees in a parallel amendment to which I referred.

Mr. President, I am ready to yield back my time.

Mr. HASKELL. Mr. President, I favor this amendment and yield back my time.

Mr. HANSEN. Mr. President, I support the amendment and yield back the time on this side.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from New York.

The amendment was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HASKELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I ask unanimous consent that my staff members, Hargrave McElroy and Robert Lyon, be granted privilege of the floor during debate on S. 977 and the vote.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. HANSEN. Equally.

The PRESIDING OFFICER. Without objection, it is so ordered. Time will be charged equally.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ALLEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLEN. Mr. President, I ask unanimous consent that I may proceed for 5 minutes, as in morning business, with the time not to be charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

IN THE MATTER OF BERT LANCE

Mr. ALLEN. Mr. President, when Hon. Bert Lance was named as Director of the Office of Management and Budget by President Carter, it was generally felt that he was an excellent choice to head this important work.

His performance in office has been outstanding. If he had done nothing other than encourage President Carter to withdraw his $50 tax refund proposal, his record in office would be highly creditable.

Furthermore, Mr. Lance is the architect of the administration's goal of balancing the Federal budget by 1981 and is the administration's figure who most inspires the confidence of the business community.

Despite the laxity of his personal business affairs, I regard him as a man of honor and integrity.

I admire President Carter for not caving in to demands that he fire Mr. Lance, and I support Mr. Lance's determination to stay on and to seek to rebut charges against him in a public hearing. There is too much of an air of "hush, hush, Bert's gotta go" to suit me.

I urge Mr. Lance to lay all his cards on the table at the hearing and let decisions be made on the basis of facts and not rumors.

In the meantime, I hope that the President and Mr. Lance will stand firm until a hearing develops all the pertinent facts. The success of the entire Carter administration can well hinge on the eventual outcome of the Lance matter. I think it may well determine the direction in which the administration goes, whether it shall adopt a spend and tax and elect policy or shall continue with a sound fiscal policy.

It is anomalous that a man who has been depicted as a wheeler-dealer in his personal affairs stands officially for sound governmental policies; whereas, many who are clamoring for his scalp are backers of big spending programs.

It is no accident, then, that backers of big spending programs, in many cases, are the very ones who are seeking to have Mr. Lance discharged from his position.

I think of Rudyard Kipling, who, in his poem "If," in describing a real man, wrote:

> If you can keep your head when all about you are losing theirs and blaming it on you.

In many cases, that is the situation here.

Mr. President, I am going to reserve judgment on this matter, which means much to the Nation, much to Mr. Lance, to the President, and to all of us. I hope that others in Government and others in the Nation also will reserve their opinion and their judgment in this very critical matter.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. THURMOND. Mr. President, I should like to be associated with the remarks of the distinguished and able Senator from Alabama.

I do not have the facts about Mr. Lance or any of his dealings. I have heard talk both ways. I understand that Mr. Lance stands for a balanced budget and that he has been a strong man in the Carter administration in trying to help bring this about. I was impressed by his position on the $50 refund to which the distinguished Senator referred. So he must have a lot of good in him.

If information develops later that would tarnish his reputation or his record of service in this administration, that can be considered at that time. But I think it would be well for the public and the Members of Congress to reserve judgment until all the facts are on the table. After all, any man is due this consideration, especially one who is in the Cabinet of the President of the United States.

It is my hope that we can reserve judgment until we learn the true facts in this case. I have been impressed with the work Mr. Lance has done in the administration. It is my hope that the matter can be cleared up with fairness and justice to all.

Mr. ALLEN. I thank the distinguished Senator for his comments.

Mr. President, I yield the floor.

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

UP AMENDMENT NO. 763

Mr. DOMENICI. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk read as follows:

> The Senator from New Mexico (Mr. DOMENICI) proposes unprinted amendment No. 763.

Mr. DOMENICI. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> Page 124, line 10, insert after the word "coal", the words "or uranium".
>
> Page 124, strike all after the word "determines" through the word "area" on line 14, and insert the following: "That employment in the coal- or uranium-mining industries, and in coal- or uranium-related industries in an area has increased by 8 percent or more over the 1976 level of employment in coal or uranium mining and coal- or uranium-related industries in the area".
>
> Page 125, line 4, insert after the word "coal", the words "or uranium".
>
> Page 127, line 23, insert after the word "coal-", "or uranium-".
>
> Page 127, line 24, insert after the word "coal", the words "or uranium".
>
> Page 128, line 3, insert after the word "coal", the words "or uranium".

Mr. DOMENICI. Mr. President, although this amendment is rather lengthy, it is lengthy only because in that section of the bill where we speak of impact aid for land acquisition for residential development the bill as offered uses the word "coal" as the new energy source that causes this impact. I have substituted or added, I should say, wherever that word appears "or uranium," so that all I am doing is saying in a couple of States where there is a mix of growth caused by—impact type growth caused by—new coal mining or uranium, which is certainly going to take the place to some extent of natural gas which we are trying to emphasize here in terms of getting off natural gas and onto another energy source, I have just made it so that if a community has this 8-percent employment growth, as amended by Senator RANDOLPH today to make that trigger, that it can be from either coal employment growth or uranium growth.

I would say, Mr. President, that the distinguished Senator from West Virginia (Mr. RANDOLPH), who has been one of the strong proponents of this and who caused the 8-percent employment trigger to be put into the bill, has been consulted with and he agrees this would be a good idea.

I also say, Mr. President, that the Subcommittee on Economic Development of the Committee on Environment and Public Works held field hearings in my State, held hearings here in Washington on the impact on small communities in terms of their ability to cope with this new growth. We had such hearings, as the good Senator from West Virginia (Mr. RANDOLPH) indicated here today, in my State, and it is quite obvious anything we can do to help them accommodate to new growth would be helpful.

In my State and, I think, in perhaps Colorado, and certainly I would yield to the floor manager shortly, if we should broaden it where it is either coal or uranium we would be doing a service to the main thrust of this bill in emphasizing just a little more the partner-

ship we have been talking about between our States and the National Government in terms of energy development, resource development, within those States.

Having said that, I want to thank the senior Senator from West Virginia who, this morning, amended this same section to make a very new objective determinator of when there was impact growth that would trigger assistance under this bill, and I thank him for the support for that approach and for his support for including uranium as I intend in this amendment.

Mr. HASKELL. Mr. President, the distinguished Senator from New Mexico mentioned this amendment to me a moment ago. My first inclination was to accept it. However, Mr. President, I have told several Senators already that there would be no further floor action today on this particular bill and, presumably, they and possibly members of their staff have left the floor. For that reason, I would hope the Senator would not press the amendment at this particular time.

Mr. DOMENICI. I would be delighted to agree to that. Before I agree to that and agree to some approach for either getting acceptance of it or a vote. I want to say that the floor manager of this bill, the senior Senator from Colorado, has been a leader in an effort to try to find some reasonable way to help, in particular, small communities, those in his State, in mine and in much of the Rocky Mountain West, and certainly in Appalachia, that are suffering the growth problems that they cannot cope with.

The basic part of this bill is his to which I have been referring at this point, and I commend him for it.

I have no objection to waiting until tomorrow and seeing if others want to look at the amendment. I do understand the Senator from Colorado as to this point would have no serious objection to it, is that correct?

Mr. HASKELL. Yes.

First, I want to thank the Senator for his very kind remarks. My inclination, as I said to the Senator from New Mexico, is that this is an excellent idea, and my inclination would be to now accept it. But in view of my statement to other Senators I just do not feel I can at this time.

Mr. ROBERT C. BYRD. Mr. President, would both Senators listen to this suggestion so that the time taken at this point will not have been wasted. Could we get consent that if any Senator wishes to vitiate action on this amendment he may have that privilege of doing so tomorrow, and that the Senator would have the privilege in that event of reoffering his amendment?

Mr. DOMENICI. Could we ask then, I ask the distinguished majority leader, that any Senator who would want to do that would do it at what point in time? I did not quite understand what the Senator had in mind with respect to the time they could do this.

Mr. ROBERT C. BYRD. I did not put a time limit on it, but we could do that if the Senator wishes. If any Senator wishes to abrogate the action of the Senate in adopting the amendment of the Senator from New Mexico that—I am trying to avoid a motion to reconsider—it would simply be up to that Senator to stand up and ask the Chair that the action on this amendment be vitiated. If that be the case, the Senator from New Mexico would, under this request, have the authority and the privilege to offer his amendment anew.

Mr. DOMENICI. Could I just ask one further question for the Senator's consideration? I would think that the leader is going to establish a time when we are going to once again take up this bill, and it would appear to me that anyone who wants to exercise his right we are going to agree to here ought to do so before the next amendment is offered or before the next act occurs on this bill or, say, within a time after the leader has agreed that we are going to start again.

I do not think we ought to leave it open all day tomorrow. Could the Senator have a suggestion on how we might solve that problem?

Mr. ROBERT C. BYRD. Yes. Inasmuch as this is the last amendment to be acted on tonight, if it is agreeable with the distinguished minority leader and other Senators here, we could provide that any such vitiation of this action would occur at the beginning of action on this measure tomorrow when it is resumed and prior to the calling up of any other amendment.

Mr. HASKELL. Mr. President, I would like to say both to the distinguished majority leader and to the Senator from New Mexico that this right to vitiate includes the right of people now on the floor. I cannot imagine myself doing it, but there may be something I have not comprehended.

Mr. DOMENICI. Absolutely, I understand that.

Mr. BAKER. Mr. President, if the Senator will yield to me, I think it is a good suggestion and a good utilization of the time we spent on it, so I certainly hope the parties will agree.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

Has my request been made clear, I ask the Chair and the Parliamentarian? If so, I ask unanimous consent that it be so ordered.

The PRESIDING OFFICER. The question has been put clearly, it appears. So, without objection, it is so ordered. The amendment is agreed to.

Mr. HANSEN and Mr. DOMENICI addressed the Chair.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. HANSEN. Mr. President, in order that I may clearly understand what we have done, I gather that the amendment offered by the Senator from New Mexico now has been approved and agreed to.

Mr. HASKELL. Subject to what the majority leader said.

Mr. HANSEN. Subject to the possibility of an objection being raised tomorrow.

Mr. ROBERT C. BYRD. Yes.

Mr. DOMENICI. Mr. President, I wonder if I might now move to reconsider and complete that action so that if no one moves to vitiate it we will have firmly tied it down as an amendment.

I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. With the understanding that the order just entered still holds notwithstanding the tabling of the motion to reconsider.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ADDITIONAL STATEMENTS SUBMITTED

Mr. JACKSON. Mr. President, the measure before us will foster the conservation of increasingly scarce domestic natural gas and imported petroleum, through greater utilization of our most plentiful domestic energy resource—coal. Such legislation is essential if we are to reverse the present trend toward increased use of imported oil and in the future achieve greater energy self-sufficiency.

Our challenge will be to negotiate an orderly transition from our present primary reliance on natural gas and petroleum to a future reliance on domestic coal supplies and, eventually, renewable energy sources, such as geothermal and solar energy. This could take well into the 21st century. Therefore, it is important that the Congress provide direction and the necessary certainty to our national energy policies.

S. 977 will upgrade the present coal conversion program of the Federal Energy Administration. We are all familiar with the shortcomings of that program. But precisely because the Energy Supply and Environmental Coordination Act has been unsuccessful in stimulating greater coal usage than already planned, the program must be strengthened.

The goals of coal conversion are conservation of natural gas for higher priority uses than steam or electric generation and the assurance of natural gas and petroleum supplies to meet the process and feedstock needs of our manufacturing industries—we are all familiar with the painful economic and unemployment impacts resulting from last winter's natural gas shortages—by placing phased restrictions on natural gas uses between now and 1990, we can assure its conservation by 1995.

Reconversion of existing boiler facilities back to coal must be a priority. The 2 to 8 years required to affect reconversion under the present program must be accelerated.

Boiler uses of natural gas must be minimized. With our country facing further natural gas curtailments, conservation of this resource for feedstock and process uses may necessitate short-term conversions from natural gas to oil.

Excessive environmental restrictions on potential coal users must not be permitted to frustrate essential national energy policies, such as coal conversion. We must insure that coal will be used in compliance with applicable environmental standards, but an equitable balance between energy and environmental policies also must be assured. Environmental overkill must be avoided.

However, greater coal utilization must be consistent with Federal and State environmental requirements, or our total national energy program will be jeopardized.

S. 977 is the product of a legislative program begun in 1973 by the Senate's national fuels and energy policy study. The measure reflects hearings begun this March by the Subcommittee on Energy Production and Supply, which continued through June. Considerable attention also was given to the proposals set forth in the National Energy Act which was proposed on April 20, 1977, as well as S. 977.

The senior Senator from Colorado (Mr. HASKELL), chairman of the subcommittee, is to be commended for the dispatch with which he has brought this comprehensive measure to the floor. The legislation represents a truly bipartisan effort, being reported by a committee vote of 15 to 1. This cooperative effort has been possible because of the statesmanship of our ranking minority member, the Senator from Wyoming (Mr. HANSEN).

The committee recommends that the Senate approve this legislation.

Mr. HUDDLESTON. Mr. President, for the purpose of clarification, I would like to address a question to the floor manager of the bill. Under section 207, paragraph (e), which provides for temporary exceptions, would this language cover a plant which ordinarily uses coal, but in an emergency, such as an air pollution alert or an unanticipated equipment outage, would need to use natural gas for a short time?

Mr. HASKELL. The purpose of this section is to permit the use of natural gas or petroleum for only emergency purposes, when the normal sources of supply are not available. It would be our intent that the section would also cover the situation that is described. If the owner of the plant you described applied to the administrator, and outlined that the plant would meet the criteria of the section, then I would expect the administrator to grant an exception.

Mr. PERCY. Mr. President, I add my support to the Coal Utilization Act of 1977. We have at most another decade or so during which oil will be available at prices comparable to today's—if indeed it is available at any price. This legislation is a necessary and important step toward securing safe future energy supplies for American industry.

Coal is our most plentiful but least used domestic fossil fuel. For the next few years coal is the only fuel to which we can convert rapidly. Coal is a vital fuel for the transition period between today's oil age and tomorrow's age of solar and other renewable resources.

Analyses of the coal industry show its use is demand-constrained. That is, coal companies could eventually supply far greater amounts of coal. But the demand for coal from industry has just not expanded. In the last two decades several primary uses of coal—to power railroad locomotives, to heat homes and to make acetylene for the chemical industry—have all but vanished. This bill will cure the lack of demand by stimulating other uses of coal: To generate electricity and to fuel large industrial boilers and furnaces.

Mr. President, as you know, my State of Illinois is one of the Nation's leading coal producers. On December 10 of this year I will host a conference on coal at Southern Illinois University-Carbondale. I hope that by then the Congress will have established a Federal coal policy that settles uncertainties once and for all. The Congress has settled the strip mine question this summer. I hope we can expedite consideration of the coal use questions before us today.

Opponents of this bill raise several objections. I wish to deal with them one by one.

First, some claim that industry already is planning to use coal, as evidenced by inquiries to boiler manufacturers. But Congressional Research Service and Combustion Engineering, a boiler manufacturer, say orders are not being placed. Firms ask about coal, but they still buy oil or gas.

Second, opponents point to the oil and gas taxes in the tax portion of the administration's energy package, and claim these price incentives will be sufficient stimulus. But again, CRS says these taxes will not be adequate. CRS notes the breakeven point in a choice between coal or oil is now around 300 million Btu per hour in size. This bill will provide stimulus for firms which own individual installations down to 100 million Btu per hour in size.

Third, some point out cases where hardships will be forced upon individual firms as a result of conversion orders. But this bill prescribes exemptions for all cases in which conversion to coal should take second priority to other considerations. They include size, air quality, and economics.

The bill also provides numerous carrots to accompany its stick. It includes loans, loan guarantees, and outright grants to firms unable to finance conversion. It allows for use of innovative technologies, such as cogeneration of process steam and electricity, or fluidized-bed combustion. Standby burners and boilers, plants slated for early retirement, and electric utility peaking plants are exempted. I feel we should worry more about tightening up those exemptions than about creating new ones.

Fourth, electric companies in gas-producing areas are today heavily dependent upon gas for electric generation. They and their customers would be particularly affected by the utility provisions of this bill. But there is a so-called "systems compliance option" which would allow special compliance schedules for these companies.

Finally, some argue it is unfair to place the burden of proof upon industry when industry applies for exemptions. These persons overlook the fact that FEA's coal conversion program, in which FEA has the burden of proof, has to date produced no significant results. Reduction of oil imports is so vital to our economic health and national security that we cannot allow that situation to continue. I therefore urge my colleagues to join me in support of S. 977 today.

Mr. BENTSEN. Mr. President, on April 20, when President Carter outlined his blueprint for a national energy plan, it was apparent that energy conservation and increased utilization of coal were the twin pillars of this program. The importance of both these concepts is indisputable. The plan lacks a very important additional element that of increased production incentives. I nevertheless praised the President for facing up to the energy issue with a major energy program. I do not agree with some aspects of the President's program, but I commend him for offering it and I shall work to improve it.

Today, the Senate begins its consideration of the President's plan, with its review of the Coal Utilization Act of 1977. I am pleased to see that we have established realistic, obtainable legislative goals. I think we are moving in the right direction.

Mr. President, coal is the 19th century workhorse that was put out to pasture by what appeared, at that time, to be limitless supplies of oil and natural gas reserves in this country. As we have come to realize that our oil and gas resources are finite, as we have come to depend increasingly on imported sources of energy, we have turned again to coal which our Nation does possess in abundance.

The problem, of course, is that our 20th century energy requirements differ quantitatively and qualitatively from our 19th standards. Today, readily available energy is not enough: We demand energy that is easy to transport, easy to utilize, easy on the environment, and easy on the pocketbook. Unfortunately, the resource we possess in abundance, coal, meets some of these standards.

The conversion to coal is neither an easy nor an ideal solution to our energy problems. Rather, it is a pragmatic solution, forced on us by necessity. If we are to rely increasingly on coal, we must be prepared to sacrifice.

Our task is to minimize the price extracted from the American public; to insure our environment is protected to the maximum possible extent, and to insure that the consumer is protected, wherever possible, from the increased costs and inflation that can result from this massive shift to alternative energy sources.

Mr. President, this process is underway in Texas and I believe we can extrapolate from the Texas experience to provide some useful insights on national policy.

Texas has begun an orderly transition from natural gas to alternative fuels. Natural gas has always been readily available in Texas because we pay a fair market price for the product while the interstate market is regulated by the Federal Power Commission. But we have realized that while natural gas is plentiful in the State, this premium fuel should be conserved in order to meet the essential needs of the Nation as a whole.

The working document governing this shift away from gas to alternative energy sources in Texas is Railroad Commission docket 600 which requires a 25 percent reduction in electric utility use of natural gas by 1985.

The Public Utility Commission is supporting the Railroad Commission in this undertaking by refusing to certify any new natural gas generating facilities.

The Commission is, however, certifying new coal, lignite, and nuclear facilities to allow the phasing out of natural gas generating capacity. These State programs, which combined with con-

servation efforts of the utilities themselves, provide the strongest possible coal utilization program for Texas. It is an excellent example of the public and private sectors of our economy working in concert—rather than at loggerheads as is so frequently the case—to achieve an important national objective.

The systems compliance option of the 1977 coal conservation bill will permit this program to proceed. It will enable an electric utility company utilizing intrastate natural gas to comply with the requirements of the Coal Utilization Act by limiting its 1990 use of natural gas to 20 percent of 1976 consumption.

This is not going to be an easy objective to achieve. We are talking about a 25-percent decrease in the 1977–1985 period. To reduce natural gas use by an additional 55 percent in the ensuing 5 years will be difficult and costly, but I believe it can be done if we can build on the momentum and learn from the experience of the initial 8-year period. If we can keep the public and private sectors of our economy working in tandem rather than at cross purposes.

I mentioned earlier that we will have to sacrifice in order to convert to alternative sources of energy. I am anxiously awaiting the results of the EPA study, requested by Senator HASKELL, that will analyze the regional environmental impact of massive plant switchovers. But in terms of economic cost to the consumer, I would point out that the customers of the Houston Lighting & Power Co., who have seen their utility bills go up by 60 percent in the past 5 years, will have to contend with a further 160 percent rate increase in electric service costs just to meet the 1985 conversion replacement program dictated by regional needs and State regulations.

This pattern of escalating utility costs is being repeated across the State. The residents of Austin, Tex., recently had the dubious distinction of paying the highest price in the Nation for a kilowatt hour of electricity. And this trend is found throughout the State. For instance, San Antonio is presently paying at least 50 percent more for their electricity than the consumers in Chicago or Washington. The people are paying for conversion, and they will continue to pay for conversion; the job cannot be done easily or painlessly. However, in the absence of a systems compliance option, the people of Texas and the Southwest would encounter a precipitous, discriminatory, unfair, and unrealistic increase in their utility costs.

Mr. President, the systems compliance option recognizes that there are certain historical, geographical, and supply factors at work in our energy consumption patterns. It provides the means to reconcile these factors with the requirements of a comprehensive national energy policy. It will allow an electric utility company using intrastate natural gas to fulfill the requirements of the Coal Utilization Act by limiting its 1990 use of natural gas to one-fifth of 1976 consumption, which remaining gas utilization limited to peakload operations. To insure orderly compliance, the utility will be carefully monitored to insure that it is following its natural gas phaseout schedule.

Mr. President, this is a sensible, workable approach to a difficult problem. It demonstrates at the outset that we can draft a comprehensive energy policy that is both tough and fair.

FURTHER ROUTINE MORNING BUSINESS

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of August 5, 1977, the following messages from the President were received and referred during the adjournment of the Senate:

THE WELFARE SYSTEM—PM 105

The following message from the President of the United States was received on August 6, 1977, and referred jointly to the Committee on Finance, the Committee on Human Resources, and the Committee on Agriculture, Nutrition, and Forestry, pursuant to the order of August 5, 1977:

To the Congress of the United States:

As I pledged during my campaign for the Presidency I am asking the Congress to abolish our existing welfare system, and replace it with a job-oriented program for those able to work a simplified, uniform, equitable cash assistance program for those in need who are unable to work by virtue of disability, age or family circumstance. The Program for Better Jobs and Income I am proposing will transform the manner in which the Federal government deals with the income needs of the poor, and begin to break the welfare cycle.

The program I propose will provide:

—Job opportunities for those who need work.

—A Work Benefit for those who work but whose incomes are inadequate to support their families.

—Income Support for those able to work part-time or who are unable to work due to age, physical disability or the need to care for children six years of age or younger.

This new program will accomplish the following:

—Dramatically reduce reliance on welfare payments by doubling the number of single-parent family heads who support their families primarily through earnings from work.

—Ensure that work will always be more profitable than welfare, and that a private or non-subsidized public job will always be more profitable than a special federally-funded public service job.

—Combine effective work requirements and strong work incentives with improved private sector placement services, and create up to 1.4 million public service jobs. Forty-two percent of those jobs may be taken by current AFDC recipients. Those who can work will work, and every family with a full-time worker will have an income susbtantially above the poverty line.

—Provide increased benefits and more sensitive treatment to those most in need.

—Reduce complexity by consolidating the current AFDC, Supplemental Security Income (SSI), and Food Stamp programs, all of which have differing eligibilty requirements, into a single cash assistance program, providing for the first time a uniform minimum Federal payment for the poor.

—Provide strong incentives to keep families together rather than tear them apart, by offering the dignity of useful work to family heads and by ending rules which prohibit assistance when the father of a family remains within the household.

—Reduce fraud and error and accelerate efforts to assure that deserting fathers meet their obligations to their families.

—Give significant financial relief to hard-pressed State and local governments.

THE NEED FOR REFORM

In May, after almost four months of study, I said that the welfare system was worse than I expected. I stand by that conclusion. Each program has a high purpose and serves many needy people; but taken as a whole the system is neither rational nor fair. The welfare system is anti-work, anti-family, inequitable in its treatment of the poor and wasteful of taxpayers' dollars. The defects of the current system are clear:

—It treats people with similar needs in different fashion with separate eligibility requirements for each program.

—It creates exaggerated differences in benefits based on state of residence. Current combined state and Federal AFDC benefits for a family of four with no income vary from $720 per year in Mississippi to $5,954 in Hawaii.

—It provides incentives for family breakup. In most cases two-parent families are not eligible for cash assistance and, therefore, a working father often can increase his family's income by leaving home. In Michigan a two-parent family with the father working at the minimum wage has a total income, including tax credits and food stamps, of $5,922. But if the father leaves, the family will be eligible for benefits totalling $7,076.

—It discourages work. In one Midwestern state, for example, a father who leaves part-time employment paying $2,400 for a full-time job paying $4,800 reduces his family's income by $1,250.

—Efforts to find jobs for current recipients have floundered.

—The complexity of current programs leads to waste, fraud, red tape, and errors. HEW has recently discovered even government workers unlawfully receiving benefits, and numbers of people receive benefits in more than one jurisdiction at the same time.

The solutions to these problems are not easy—and no solution can be perfect; but it is time to begin. The welfare

system is too hopeless to be cured by minor modifications. We must make a complete and clean break with the past.

People in poverty want to work, and most of them do. This program is intended to give them the opportunity for self-support by providing jobs for those who need them, and by increasing the rewards from working for those who earn low wages.

PROGRAM SUMMARY

The Program for Better Jobs and Income has the following major elements:

—Strengthened services through the employment and training system for placement in the private sector jobs.

—Creation of up to 1.4 million public service and training positions for principal earners in families with children, at or slightly above the minimum wage through state and local government and non-profit sponsors.

—An expansion of the Earned Income Tax Credit to provide an income supplement of up to a maximum of well over $600 for a family of four through the tax system, by a 10 percent credit for earnings up to $4,000, a 5 percent credit for earnings from $4,000 to the entry point of the positive tax system, and a declining 10 percent credit thereafter until phase-out. A major share of the benefit will accrue to hard-pressed workers with modest incomes struggling successfully to avoid welfare.

—Strong work requirements applying to single persons, childless couples and family heads, with work requirements of a more flexible nature for single-parent family heads with children aged 7 to 14. Single-parent family heads with pre-school aged children are not required to work.

—A Work Benefit for two-parent families, single-parent families with older children, singles and childless couples. The Federal benefit for a family of four would be a maximum of $2,300 and, after $3,800 of earnings, would be reduced fifty cents for each dollar of earnings.

—Income Support for single-parent families with younger children and aged, blind or disabled persons. The Federal benefit would be a base of $4,200 for a family of four and would be reduced fifty cents for each dollar of earnings.

—New eligibility requirements for cash assistance which insure that benefits go to those most in need.

—Fiscal relief to States and localities of $2 billion in the first year, growing in subsequent years.

—Simple rules for State supplements to the basic program, in which the Federal government will bear a share of the cost.

COSTS

In my May 2, 1977 statement I established as a goal that the new reformed system involve no higher initial cost than the present system. It was my belief that fundamental reform was possible within the confines of current expenditures if the system were made more rational and efficient. That belief has been borne out in our planning. Thereafter, Secretary Califano outlined a tentative no cost plan which embodied the major reform we have been seeking:

—Consolidation of programs.

—Incentives to work.

—Provision of jobs.

—Establishment of a national minimum payment.

—Streamlined administration.

—Incentives to keep families together.

—Some fiscal relief for State and local governments.

Subsequently, we have consulted with State and local officials and others who are knowledgeable in this area. As a result of those consultations we have gone beyond the no cost plan to one with modest additional cost in order to provide more jobs, particularly for current AFDC family heads, additional work incentives, broader coverage for needy families and greater fiscal relief for States and localities.

The Programs For Better Jobs and Income will replace $26.3 billion in current programs which provide income assistance to low-income people. In addition, the program will produce savings in other programs amounting to $1.6 billion. The total amount available from replaced programs and savings is $27.9 billion.

Current Federal expenditures and savings (1978 dollars)

Expenditures	*Billions*
AFDC	$6.4
SSI	5.7
Food stamps	5.0
Earned income tax credit	1.3
Stimulus portion of CETA public jobs	5.5
WIN program	0.4
Extended unemployment insurance benefits (27–39 weeks)	0.7
Rebates of per capita share of wellhead tax revenues to low-income people if passed by Congress [1]	1.3
Subtotal	26.3
Savings	
Decreased unemployment insurance expenditures	0.4
HEW program to reduce fraud and abuse	0.4
Decreases in required housing subsidies due to increased income [2]	0.5
Increases in social security contributions [3]	0.3
Subtotal	1.6
Total	27.9

[1] The National Energy plan calls for rebate of the wellhead tax revenues to taxpayers through the income tax system and to "the poor who do not pay taxes" in effect through income maintenance programs.

[2] This does not decrease housing programs nor reduce the amount of cash assistance paid to residents of subsidized housing. It is merely an estimate of the savings to the Department of Housing and Urban Development's housing subsidy programs on account of higher incomes going to tenants under the new program.

[3] This does *not* increase anyone's Social Security Tax, nor does it take any money out of the Social Security Trust Funds. It merely recognizes that the millions of people taken off of dependence on welfare and given a job will become contributors to the Social Security System.

The new Program for Better Jobs and Income will have a total cost of $30.7 billion. The additional cost of the program above existing costs is $2.8 billion in spending. In addition, $3.3 billion of tax relief is given to working low and moderate income taxpayers through an expanded income tax credit.

Cost of new program

	Billions
Work benefit and income support	$20.4
Earned income tax credit [4]	1.5
Employment and training	8.8
Total	30.7

[4] This is the cost of the portion of the expanded EITC which will be received by those who do not pay income taxes. Income taxpayers with families will receive benefits totalling $3.3 billion.

The additional cost above current expenditures has been used to make important improvements in our original plan:

—Increased fiscal relief has been provided for states and localities, particularly for those which have borne the greatest financial burdens.

—Incentives which strengthen family ties have been improved by adopting a broader definition of eligible applicants to permit more generous payment than in the earlier plan to older persons and young mothers with children who live in extended families.

—Work incentives for low wage workers have been increased by expanding the Earned Income Tax Credit for those in private and non-subsidized public work to cover and supplement approximately twice the income covered by the existing EITC.

—A deduction for child care will permit and encourage single parents to take work which will lift them out of poverty.

—Up to 300,000 additional part-time jobs have been added for single parent families with school age children (if adequate day care is available, such parents will be expected to accept full-time jobs).

With these improvements the Program for Better Jobs and Income will help turn low income Americans away from welfare dependence with a system that is fair, and fundamentally based on work for those who can and should work.

PROGRAM DETAIL

EMPLOYMENT SERVICES AND JOB SEARCH

A central element of this proposal is a new effort to match low-income persons with available work in the private and public sector. It will be the responsibility of State and local officials to assure an unbroken sequence of employment and training services, including job search, training, and placement. Prime sponsors under the Comprehensive Employment and Training Act, state employment service agencies, and community-based organizations will play major roles in this effort.

JOBS FOR FAMILIES

A major component of the program is a national effort to secure jobs for the principal wage earners in low income families with children. The majority of

poor families—including many who are on welfare for brief periods of time—depend upon earnings from work for most of their income. People want to support themselves and we should help them do so. I propose that the Federal Government assist workers from low income families to find regular employment in the private and public sectors. When such employment cannot be found I propose to provide up to 1.4 million public service jobs (including part-time jobs and training) paying at the minimum wage, or slightly above where States supplement the basic Federal program.

This program represents a commitment by my Administration to ensure that families will have both the skills and the opportunity for self-support.

This new Public Service Employment Program is carefully designed to avoid disruptive effects to the regular economy:

—Applicants will be required to engage in an intensive 5-week search for regular employment before becoming eligible for a public service job. Those working in public service employment will be required to engage in a period of intensive job search every 12 months.

—In order to encourage participants to seek employment in the regular economy, the basic wage rate will be kept at, or where states supplement, slightly above, the minimum wage.

—Every effort will be made to emphasize job activities which lead to the acquisition of useful skills by participants, to help them obtain employment in the regular economy. Training activities will be a regular component of most job placements.

The development of this job program is clearly a substantial undertaking requiring close cooperation of all levels of government. I am confident it will succeed. Thousands of unmet needs for public goods and services exist in our country. Through an imaginative program of job creation we can insure that the goals of human development and community development are approached simultaneously. Public service jobs will be created in areas such as public safety, recreational facilities and programs, facilities for the handicapped, environmental monitoring, child care, waste treatment and recycling, clean-up, pest and insect control, home services for the elderly and ill, weatherization of homes and buildings and other energy-saving activities, teachers' aides and other paraprofessionals in schools, school facilities improvements, and cultural arts activities.

EARNED INCOME TAX CREDIT

The current Earned Income Tax Credit (EITC) is an excellent mechanism to provide tax relief to the working poor. I propose to expand this concept to provide benefits to more families and provide relief to low and modest income working people hard hit by payroll tax increases, improve work incentives, and integrate the Program for Better Jobs and Income with the income tax system. The expanded EITC, which will apply to private and non-subsidized public employment, will have the following features:

—A 10 percent credit on earnings up to $4,000 per year as under current law.

—A 5 percent credit on earnings between $4,000 and approximately $9,000 for a family of four (the point at which the family will become liable for Federal income taxes).

—A phase-out of the credit beyond roughly $9,000 of earnings at ten percent. The credit will provide benefits to a family of four up to $15,600 of income.

—The credit will be paid by the Treasury Department and the maximum credit for a family of four would be well over $600.

WORK BENEFIT AND INCOME SUPPORT

I propose to scrap and completely overhaul the current public assistance programs, combining them into a simplified, uniform, integrated system of cash assistance. AFDC, SSI and Food Stamps will be abolished. In their place will be a new program providing: (1) a Work Benefit for two-parent families, single people, childless couples and single parents with no child under 14, all of whom are expected to work full-time and required to accept available work; and (2) Income Support for those who are aged, blind, or disabled, and for single parents of children under age 14. Single parents with children aged 7 to 14 will be required to accept part-time work which does not interfere with caring for the children, and will be expected to accept full-time work where appropriate day care is available. These two levels of assistance are coordinated parts of a unified system which maintains incentives to work and simplifies administration.

—For those qualifying for income support the basic benefit for a family of four with no other income will be $4,200 in 1978 dollars. Benefits will be reduced fifty cents for each dollar of earnings, phasing out completely at $8,400 of earnings. Added benefits would accrue to those in regular private or public employment through the Earned Income Tax Credit.

—An aged, blind, or disabled individual would receive a Federal benefit of $2,500 and a couple would receive $3,750—more than they are now receiving. That is higher than the projected SSI benefit for either group—about $100 higher for a couple and $120 higher for a single person.

—For those persons required to work who receive a Work Benefit, the basic benefit for a family of four with no other income will be $2,300. To encourage continued work, benefits will not be reduced at all for the first $3,800 of earnings and will thereafter be reduced by fifty cents for each dollar earned up to $8,400. Again, the Earned Income Tax Credit will provide added benefits to persons in regular private or public employment.

—We are committed to assure that inflation will not erode the value of the benefits, and that real benefits will be increased over time as Federal resources grow. To preserve flexibility in the initial transition period, however, we do not at this time propose automatic indexing of benefits or automatic increases in their real value. (The figures contained in this message expressed in 1978 dollars will be adjusted to retain their real purchasing power at the time of implementation).

—Single parent family heads will be able to deduct up to 20 percent of earned income, up to an amount of $150 per month to pay for child care expenses required for the parent to go to work.

—No limits are placed on the right of states to supplement these basic benefits. However, only if states adopt supplements which complement the structure and incentives of the Federal program will the Federal government share in the cost.

Eligibility rules for the Work Benefit and Income Support will be tightened to insure that the assistance goes to those who are most in need.

—To reduce error and direct assistance to those most in need, benefits will be calculated based on a retrospective accounting period, rather than on the prospective accounting period used in existing programs. The income of the applicant over the previous six-month period will determine the amount of benefits.

—The value of assets will be reviewed to insure that those with substantial bank accounts or other resources do not receive benefits. The value of certain assets will be imputed as income to the family in determining the amount of benefits.

—Eligibility has been tightened in cases where related individuals share the same household, while preserving the ability of the aged, disabled and young mothers to file for benefits separately.

STATE ROLE AND FISCAL RELIEF FOR STATES AND LOCAL COMMUNITIES

Public assistance has been a shared Federal and State responsibility for forty years. The program I propose will significantly increase Federal participation but maintain an important role for the states.

—Every State will be assured that it will save at least ten percent of its current welfare expenses in the first year of the program, with substantially increased fiscal relief thereafter.

—Every State is required to pay ten percent of the basic Federal income benefits provided to its residents except where it will exceed 90 percent of its prior welfare expenditures.

—Every State is free to supplement the basic benefits, and is eligible for Federal matching payments for supplements structured to complement and maintain the incentives of the Federal program. The Federal government will pay 75 percent of the first $500 supplement and 25 percent of any additional supplement up to the

poverty line. These State supplements will be required to follow Federal eligibility criteria to help achieve nation-wide uniformity.

—Where States supplement the income support they must also proportionally supplement the work benefit and the public service wage.

—There will be a 3-year period during which states will be required to maintain a share of their current effort in order to ease the transition of those now receiving benefits. These resources must be directed to payment of the State's 10 percent share of the basic benefit, to supplements complementary to the basic program, and to grandfathering of existing SSI and partially grandfathering AFDC beneficiaries. The Federal government will guarantee a State that its total cost for these expenditures will not exceed 90 percent of current welfare costs. States can retain any amounts under the 90 percent requirement not actually needed for the mandated expenditures. In the second year of the program states will be *required* to maintain only 60 percent of current expenditures, in the third year, only 30 percent. In the fourth year, they will only be required to spend enough to meet their 10 percent share of the basic benefit.

—States will have the option to assist in the administration of the program. They will be able to operate the crucial intake function serving applicants, making possible effective coordination with social service programs. The Federal government will operate the data processing system, calculate benefits, and issue payments.

—The Federal government will provide a $600 million block grant to the states to provide for emergency needs. These grants will assist the states in responding to sudden and drastic changes in family circumstances.

—The Federal government will provide 30% above the basic wage for fringe benefits and administrative costs of the jobs program, and will reimburse the states for costs of administration of the work benefit and income support program.

In the first year of this program, states and localities would receive $2 billion in fiscal relief, while at the same time ensuring that no current SSI beneficiary receives a reduced benefit and that over 90 percent of current AFDC beneficiaries receive similar protection.

In subsequent years as current recipients leave the rolls and as the maintenance of State effort requirement declines from 90 percent to zero within 3 years, the opportunities for increased fiscal relief will grow.

Under our program for fiscal relief, states will be required to pass through their fiscal relief to municipal and county governments in full proportion to their contributions. Thus, for example, in New York State, where New York City pays 33% of the State's share, New York City would receive 33% of the State's fiscal relief or $174 million.

REDUCTION OF FRAUD AND ABUSE

The few providers and recipients guilty of fraud and abuse in our welfare programs not only rob the taxpayers but cheat the vast majority of honest recipients. One of the most significant benefits of consolidation of existing cash assistance programs is the opportunity to apply sophisticated management techniques to improve their operation. The use of a central computer facility will permit more efficient processing of claims, reduce the incidence of error in calculating benefits, and facilitate the detection of fraud. No longer will people easily claim benefits in more than one jurisdiction.

We will strongly enforce current programs directed at assisting local officials in obtaining child support payments from run-away parents, as determined by judicial proceedings.

We will ensure that the Department of Health, Education, and Welfare will vigorously root out abuses and fraud in our social programs.

We will work for passage of current legislation designed to crack down on fraud and abuse in our medicaid and medicare program. The administration of these programs will be a major challenge for Federal and State officials. It provides a valuable opportunity to demonstrate that government can be made to work, particularly in its operation of programs which serve those in our society most in need.

IMPLEMENTATION

Because of the complexity of integrating the different welfare systems of the 50 States and the District of Columbia into a more unified national system, we estimate that this program will be effective in Fiscal Year 1981. Moreover, we recognize that the National Health Insurance plan which will be submitted next year must contain fundamental reform and rationalization of the medicaid program, carefully coordinated with the structure of this proposal. However, we are anxious to achieve the swiftest implementation possible and will work with the Congress and State and local governments to accelerate this timetable if at all possible.

Given the present complex system, welfare reform inevitably involves difficult choices. Simplicity and uniformity and improved benefits for the great majority inevitably require reduction of special benefits for some who receive favored treatment now. Providing the dignity of a job to those who at present are denied work opportunities will require all the creativity and ingenuity that private business and government at all levels can bring to bear. But the effort will be worthwhile both for the individual and for the country. The Program for Better Jobs and Income stresses the fundamental American commitment to work, strengthens the family, respects the less advantaged in our society, and makes a far more efficient and effective use of our hard-earned tax dollars.

I hope the Congress will move expeditiously and pass this program early next year.

JIMMY CARTER.

THE WHITE HOUSE, *August 6, 1977.*

RAILROAD SAFETY ACT—PM 106

The following message from the President of the United States was received on August 12, 1977, and referred to the Committee on Commerce, Science, and Transportation:

To the Congress of the United States:

I transmit herewith the Sixth Annual Report on administration of the Railroad Safety Act of 1970 (84 Stat. 971, 45 U.S.C. 421 et seq.) as required by that Act. This report has been prepared in accordance with Section 211 of the Act, and covers the period January 1, 1976, through December 31, 1976.

This Report was prepared based upon activities of the Department of Transportation and the Federal Railroad Administration prior to my term of office.

JIMMY CARTER.

THE WHITE HOUSE, *August 12, 1977.*

NATIONAL FOUNDATION ON THE ARTS AND HUMANITIES ACT—PM 107

The following message from the President of the United States was received on August 12, 1977, and referred to the Committee on Human Resources:

To the Congress of the United States:

In accordance with the provisions of the National Foundation on the Arts and Humanities Act of 1965, as amended, I transmit herewith the eleventh annual report of the National Endowment for the Humanities for fiscal year 1976. This Report covers events prior to the beginning of my Administration.

JIMMY CARTER.

THE WHITE HOUSE, *August 12, 1977.*

SPACE AND AERONAUTICS—PM 108

The following message from the President of the United States was received on August 15, 1977, and referred to the Committee on Commerce, Science, and Transportation:

To the Congress of the United States:

I transmit herewith this report on the Nation's progress in space and aeronautics during 1976. This report is provided in accordance with Section 206 of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2476). The activities described in it occurred before I became President.

In the interest of efficiency and clarity, the report next year will be simplified and shortened.

JIMMY CARTER.

THE WHITE HOUSE, *August 15, 1977.*

NATIONAL SCIENCE FOUNDATION—PM 109

The following message from the President of the United States was received on

August 15, 1977, and referred to the Committee on Commerce, Science, and Transportation (subsequently the referral was changed to the Committee on Human Resources):

To the Congress of the United States:

I am pleased to submit to the Congress the Twenty-Sixth Annual Report of the National Science Foundation, covering fiscal year 1976. This Report covers events prior to the beginning of my Administration.

The growth of scientific knowledge and its use in the service of mankind is an important concern of our times. The strength of our Nation depends in large part on the ideas and technologies that have emerged from our pursuit of questions at the frontiers of science. We must continue to invest in the development of fundamental knowledge to help meet the challenges and opportunities of the future. My 1978 Budget, now before the Congress, reflects the high order of importance this Administration gives to basic scientific research.

We are aware that the technological advances which result from scientific inquiry represent a mixed blessing, often creating strains upon the environment, our natural resources, and our ability to wisely manage progress. The remedy is not to retreat from new knowledge but to progress further in our understanding of the processes that underlie our universe, drawing upon the inventiveness of our people and keeping alive the political freedom that guarantees our scientists the right of free and open intellectual inquiry.

This annual Report of the National Science Foundation expresses in concrete terms the achievements of scientists and engineers supported by the Foundation's programs during the past fiscal year.

JIMMY CARTER.

THE WHITE HOUSE, *August 15, 1977.*

DEFERRAL AND REVISION OF PREVIOUS DEFERRAL—PM 110

The following message from the President of the United States was received on August 16, 1977, and referred jointly to the Committees on Appropriations, the Budget, Energy and Natural Resources, and Finance, pursuant to the order of January 30, 1975:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report one new deferral of budget authority amounting to $11.3 million for the Energy Research and Development Administration's Intense Neutron Source Facility. In addition, I am reporting a revision to a previously transmitted deferral for the antirecession financial assistance fund in the Office of the Secretary of the Treasury.

The details of each deferral are contained in the attached reports.

THE WHITE HOUSE, *August 16, 1977.*

HAZARDOUS MATERIALS CONTROL—PM 111

The following message from the President of the United States was received on August 18, 1977, and referred to the Committee on Commerce, Science, and Transportation:

To the Congress of the United States:

I transmit herewith the Seventh Annual Report on Hazardous Materials Control, as required by the Hazardous Materials Transportation Act, Title I of Public Law 93–633. This report has been prepared in accordance with Section 109 of the Act and covers calendar year 1976, prior to the time I became President.

JIMMY CARTER.

THE WHITE HOUSE, *August 18, 1977.*

NEGOTIATIONS ON THE CYPRUS PROBLEM—PM 112

The following message from the President of the United States was received on August 25, 1977, and referred to the Committee on Foreign Relations:

To the Congress of the United States:

As required by Public Law 94–104, this report describes our efforts over the past sixty days to bring about a negotiated settlement of the Cyprus problem.

My last report, submitted to the Congress on June 22, noted that talks between the two Cypriot communities during the preceding sixty days had accomplished little. Regrettably, there has been no substantial change in the general situation.

The efforts of U.N. Secretary General Kurt Waldheim's Special Representative to Cyprus, Ambassador Perez de Cuellar, to persuade the two communities to hold a new round of talks in Nicosia in July and early August have proven unsuccessful.

Despite the failure of these efforts, however, the Administration has persisted in its efforts to bring the parties together in an effort to promote a settlement. In meetings in Washington with Ambassador de Cuellar and with House of Representatives President Kyprianou (now Acting President of Cyprus), Administration officials continually reiterated our view that the intercommunal forum should serve as the basis for substantive talks, and that they should be resumed as quickly as circumstances warranted. Moreover, we took the position that no time should be lost in pursuing a settlement once a new Turkish Government was formally installed.

The death of President Makarios on August 3 was an unfortunate development. The precise implications of his death for the future of the intercommunal negotiations are, as of this writing, difficult to assess.

Nonetheless, we see no reason to change course. As Clark Clifford stressed in his press conference in Nicosia on August 9, this Administration is as dedicated today to helping find a solution to the problems of Cyprus as it was last January, when he was appointed as my Special Representative. We are prepared at any time to offer guidance and counsel to assist in the negotiating process, should the parties to the dispute so desire. It is my strong hope that constructive talks will be resumed and that the two Cypriot communities will again focus, with renewed energy, on the goal of achieving a just and lasting settlement which will enable everyone on the island to live in peace, harmony, and freedom.

JIMMY CARTER.

THE WHITE HOUSE, *August 25, 1977.*

MESSAGE FROM THE HOUSE DURING ADJOURNMENT

Under authority of the order of August 5, 1977, a message from the House of Representatives was received on August 6, 1977, during the adjournment of the Senate, announcing that:

The Speaker has appointed as members of the U.S. group of the North Atlantic Assembly the following members on the part of the House: Mr. PHILLIP BURTON, chairman, Mr. HAMILTON, vice chairman, Mr. RODINO, Mr. BROOKS, Mr. ANNUNZIO, Mr. ROSE, Mr. IRELAND, Ms. OAKAR, Mr. BOB WILSON, Mr. BROOMFIELD, Mr. FINDLEY, and Mr. EDWARDS of Alabama.

The Speaker has appointed Mr. PREYER as a member of the National Historical Publications and Records Commission.

ENROLLED BILLS SIGNED

The Speaker has signed the following enrolled bills:

H.R. 2563. An act for the relief of Velzora Carr.

H.R. 6161. An act to amend the Clean Air Act, and for other purposes.

H.R. 7589. An act making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

S. 1153. An act to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes.

S. 1935. An act to amend Public Law 95–18, providing for emergency drought relief measures.

The enrolled bills were signed on August 6, 1977, by the Acting President pro tempore (Mr. METCALF).

REPORTS OF COMMITTEES DURING ADJOURNMENT

Under authority of the order of August 5, 1977, the following reports of committees were submitted during the adjournment of the Senate:

On August 18, 1977:

By Mr. McINTYRE, from the Committee on Banking, Housing, and Urban Affairs:

Without amendment:

S. 2055. An original to provide improved consumer deposit services, to promote competitive balance among financial institutions, and to enhance the effectiveness of the Federal Reserve System (Rept. No. 95–407).

Without amendment:

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

S. 2056. An original bill to amend the Council on Wage and Price Stability Act (Rept. No. 95–408).

By Mr. JOHNSTON, from the Committee on Energy and Natural Resources:

Without amendment:

S. 2057. An original bill to establish a comprehensive National Energy Conservation Policy (Rept. No. 95–409).

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

With an amendment:

S. 1724. A bill to establish a Neighborhood Reinvestment Corporation (Rept. No. 95–410).

By Mr. STENNIS, from the Committee on Armed Services:

With an amendment:

S. 274. A bill to amend chapter 49 of title 10, United States Code, to prohibit union organization in the armed forces, and for other purposes (Rept. No. 95–411).

On August 29, 1977:

By Mr. CRANSTON, from the Committee on Veterans' Affairs:

With an amendment:

H.R. 1862. An act to amend title 38, United States Code, to increase the rates of disability compensation for disabled veterans; to increase the rates of dependency and indemnity compensation for their survivors; and for other purposes (Rept. No. 95–412).

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGE REFERRED

The PRESIDING OFFICER laid before the Senate a message from the President of the United States submitting the nomination of Frank J. Devine, of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to El Salvador, which was referred to the Committee on Foreign Relations.

APPROVAL OF BILLS

A message from the President of the United States announced that he has approved and signed the following bills:

August 15, 1977:

S. 1235, An Act to authorize appropriations for the Peace Corps for fiscal year 1978.

S. 1377, An Act to amend the statute of limitations provisions in section 2415 of title 28, United States Code, relating to claims by the United States on behalf of Indians.

S. 1765, An Act for the relief of the Federal Life and Casualty Company of Battle Creek, Michigan.

S. 2001. An Act authorizing additional appropriations for prosecution of projects in certain comprehensive river basin plans for flood control, water conservation, recreation, hydroelectric power and other purposes.

August 17, 1977:

S. 1935, An Act to amend Public Law 95–18, providing for emergency drought relief measures.

MESSAGES FROM THE HOUSE

At 12:13 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that the House has passed the following bill in which it requests the concurrence of the Senate:

H.R. 8444. An act to establish a comprehensive national energy policy.

At 4:11 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House has agreed to the concurrent resolution (H. Con. Res. 342) to correct technical errors in the enrollment of the bill (S. 1153), in which it requests the concurrence of the Senate.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC–1810. A letter from the Assistant Secretary for Economic Business Affairs of the Department of State transmitting, pursuant to law, a report summarizing the trade controls of COCOM countries, current to February 1, 1977.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Executive Communication 1810, concerning trade controls of COCOM countries be jointly referred to the Committee on Foreign Relations and the Committee on Armed Services.

The PRESIDING OFFICER. Without objection, it is so ordered.

EC–1811. A letter from the Comptroller General of the United States transmitting, pursuant to law, GAO comments on the President's 14th and 15th Special Messages for fiscal year 1977 (with accompanying papers); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Armed Services, Foreign Relations, and Environment and Public Works, and ordered to be printed.

EC–1812. A letter from the Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a cumulative report on rescissions and deferrals for August, 1977 (with an accompanying report); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Agriculture, Nutrition, and Forestry, Armed Services, Commerce, Science, and Transportation, Energy and Natural Resources, Environment and Public Works, Finance, Foreign Relations, Governmental Affairs, Human Resources, the Judiciary, Banking, Housing, and Urban Affairs, and the Select Committee on Small Business, and ordered to be printed.

EC–1813. A letter from the Deputy Secretary of Agriculture transmitting a draft of proposed legislation to authorize civil penalties for violations of various laws for preventing the introduction and dissemination of livestock and poultry diseases, plant diseases, and plant pests (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC–1814. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, a report of the value of property, supplies, and commodities provided by the Berling Magistrate, and under the German Offset Agreement, for the quarter April 1, 1977; to the Committee on Appropriations.

EC–1815. A letter from the Secretary of Agriculture transmitting, pursuant to law, a report on a violation concerning overobligation of an administratively subdivided apportionment by an officer of the Soil Conservation Service, Department of Agriculture (with accompanying papers); to the Committee on Appropriations.

EC–1816. A letter from the Assistant Secretary of the Air Force, Research, Development and Logistics, transmitting, pursuant to law, a report on experimental, developmental and research contracts of $50,000 or more, by company, for the period January 1, 1977 through June 30, 1977 (with an accompanying report); to the Committee on Armed Services.

EC–1817. A letter from the Acting Secretary of the Army transmitting, pursuant to law, notice of transportation of chemical agents and munitions located at Tooele Army Depot (North Area), Utah and Dugway Proving Ground, Utah to Tooele Army Depot (South Area), Utah; to the Committee on Armed Services.

EC–1818. A letter from the Director of the Defense Mapping Agency transmitting, pursuant to law, a decision to consolidate the Defense Mapping Agency's Hydrographic Center and the Topographic Center; to the Committee on Armed Services.

EC–1819. A letter from the Commissioner of the Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, orders entered in 1,249 cases in which the authority contained in section 213(d)(3) of the Immigration and Nationality Act was exercised in behalf of such aliens (with accompanying papers); to the Committee on the Judiciary.

EC–1820. A letter from the Chairman of the Securities and Exchange Commission transmitting, for the information of the Senate, a staff report on transactions in securities of the City of New York, New York, (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

EC–1821. A letter from the Secretary of Transportation transmitting a draft of proposed legislation to amend the Railroad Revitalization and Regulatory Reform Act of 1976 (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC–1822. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report entitled "Other Storage Reserves" (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1823. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the third annual report on the activities of the FEA during the 1976–1977 period (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–1824. A letter from the Deputy Assistant Secretary of the Interior transmitting a draft of proposed legislation to amend the Great Lakes Fishery Act of 1956 (with accompanying papers); to the Committee on Environment and Public Works.

EC–1825. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, a report of building project survey for the consolidation of the Nuclear Regulatory Commission (with an accompanying report); to the Committee on Environment and Public Works.

EC–1826. A letter from the Special Representative for Trade Negotiations transmitting, pursuant to law, a report on reviews and hearings conducted under subsection 301(d)(2), title III, chapter I of the Trade Act of 1974, concerning relief from unfair trade practices for the six month period ending June 30, 1977 (with accompanying papers); to the Committee on Finance.

EC–1827. A letter from the Chairman of the United States Advisory Commission on International Educational and Cultural Affairs transmitting, pursuant to law, the thirteenth annual report to Congress summarizing the Commission's activities during the period May 1, 1976 through July 1, 1977 (with an accompanying report); to the Committee on Foreign Relations.

EC–1828. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Examination of the Government National Mortgage Association's Financial Statements for the 15-Month Period ended September 30, 1976" (FOD–77–11) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1829. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Shipbuilders Claims—Problems and Solutions" (PSAD–77–135) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1830. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Civil Defense: Are Federal, State, and Local Governments Prepared for Nuclear Attack?" (LCD–76–464) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1831. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Convincing the Public to Buy the More Fuel-Efficient Cars: An Urgent National Need" (CED–77–107) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1832. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Improvements in Charges and Settlements of International Mail Accounts" (ID–77–38) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1833. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Progress in Improving Program and Budget Information for Congressional Use" (PAD–77–73) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1834. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Supplement to Comptroller General's Report to the Congress, 'The Food Stamp Program—Overissued Benefits Not Recovered and Fraud Not Punished'" (CED–77–112) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1835. A letter from the Executive Secretary to the Department of Health, Education, and Welfare transmitting, pursuant to law, a copy of a document concerning final regulations for the Indochinese Refugee Children Assistance Act of 1976 which has been transmitted to the Federal Register for scheduled publication (with accompanying papers); to the Committee on Human Resources.

EC–1836. A letter from the Executive Secretary to the Department of Health, Education, and Welfare transmitting, pursuant to law, a copy of a document concerning final regulations for assistance to States for education of handicapped children which has been transmitting to the Federal Register for scheduled publication (with accompanying papers); to the Committee on Human Resources.

EC–1837. A letter from the Secretary of Transportation transmitting a draft of proposed legislation to amend Public Law 84–445 to authorize and request the President to proclaim annually the seven day period beginning June 1 as "National Safe Boating Week" (with accompanying papers); to the Committee on the Judiciary.

EC–1838. A letter from the Commissioner of the Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, 757 reports covering the period August 1 through August 15, 1977 concerning visa petitions which the Service has approved according the beneficiaries of such petitions third- and sixth-preference classication (with accompanving papers); to the Committee on the Judiciary.

EC–1839. A letter from the Commissioner of the Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, 1,007 reports covering the period July 1 through July 29, 1977 concerning visa petitions which the Service has approved according the beneficiaries of such petitions third- and sixth-preference classification (with accompanving papers); to the Committee on the Judiciary.

EXECUTIVE MESSAGES RECEIVED DURING ADJOURNMENT REFERRED

Under authority of the order of August 5, 1977, messages from the President of the United States submitting sundry nominations were received on August 15, 16, 22, 25, 26, 29, 31, and September 2, 1977, and referred to the appropriate committees.

(The nominations submitted during the adjournment are printed at the end of today's Senate proceedings.)

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs:

With an amendment:

S. 695. A bill to amend the Defense Production Act of 1950, as amended (Rept. No. 95–413).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Robert E. Raiche, of New Hampshire, to be U.S. marshall for the district of New Hampshire.

Hugh Salter, of North Carolina, to be U.S. marshall for the eastern district of North Carolina.

Juan G. Blas, of Guam, to be U.S. marshal for the district of Guam.

Donald D. Forsht, of Florida, to be U.S. marshal for the southern district of Florida.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

BILL PLACED ON THE CALENDAR

The bill (H.R. 5146) to amend the Tariff Schedules of the United States to provide for the duty-free entry of competition bobsleds and luges was ordered placed on the calendar.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on August 6, 1977, he presented to the President of the United States the enrolled bill (S. 1935) to amend Public Law 95–18 providing for emergency drought relief measures.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

On August 18, 1977:

By Mr. McINTYRE, from the Committee on Banking, Housing and Urban Affairs:

S. 2055. An original bill to provide improved consumer deposit services, to promote competitive balance among financial institutions, and to enhance the effectiveness of the Federal Reserve System. Placed on the Calendar.

By Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs:

S. 2056. An original bill to amend the Council on Wage and Price Stability Act. Placed on the Calendar.

By Mr. JOHNSTON, from the Committee on Energy and Natural Resources:

S. 2057. An original bill to establish a comprehensive National Energy Conservation Policy. Placed on the Calendar.

Today:

By Mr. CHURCH:

S. 2058. A bill to amend the Age Discrimination in Employment Act of 1967 to improve enforcement procedures under that Act, and for other purposes; to the Committee on Human Resources.

By Mr. WEICKER:

S. 2059. A bill to establish a comprehensive energy stamp program which will provide assistance to certain low-income and fixed-income households to help meet residential energy costs incurred by such households; to the Committee on Human Resouces.

By Mr. ZORINSKY:

S. 2060. A bill for the relief of Mario Di Dio; and

S. 2061. A bill for the relief of Dr. Dela Cruz; to the Committee on the Judiciary.

By Mr. BURDICK:

S. 2062. A bill designating the park established pursuant to the Act of April 25, 1947 (61 Stat. 52) as the "Theodore Roosevelt National Park"; to the Committee on Energy and Natural Resources.

By Mr. JAVITS:

S. 2063. A bill for the relief of Charles M. Metott; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

S. 2064. A bill to authorize Federal financial assistance if a site in the United States is selected for the 1984 Olympic summer games; to the Committee on Commerce, Science, and Transportation.

By Mr. RIEGLE:

S. 2065. A bill to amend the Consumer Credit Protection Act to provide consumer rights and remedies in electronic fund transfer systems; to the Committee on Banking, Housing and Urban Affairs.

By Mr. MATHIAS (for himself, Mr. BROOKE, Mr. HEINZ, and Mr. JACKSON):

S. 2066. A bill to amend the National Trails System Act; to the Committee on Energy and Natural Resources.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CHURCH:

S. 2058. A bill to amend the Age Discrimination in Employment Act of 1967 to improve enforcement procedures under that Act, and for other purposes; to the Committee on Human Resources.

Mr. CHURCH. Mr. President, I introduce for appropriate reference a bill to extend the notice of intent to sue requirement for employees and job applicants to 60 days before the 2-year statute of limitations for most cases under the Age Discrimination in Employment Act.

After receiving notice of an individual's intent to sue, the Department of Labor would still be able to engage in conciliation efforts—as it can now under existing law—to work out a settlement or agreement between the parties.

The Age Discrimination in Employment Act was enacted 10 years ago to protect workers 40 to 64 from discrimination in employment because of age concerning hiring, firing, and other conditions of employment.

The act requires an older person to give notice to the Secretary of Labor, and, where appropriate, a State agency, before filing a lawsuit.

This notice must be given within 180 days after the alleged violation.

Quite often, this requirement has proved to be a trap for the unwary or the unsophisticated.

The Department of Labor estimates that the courts have dismissed nearly two-thirds of all private age-discrimination suits, without a hearing on the merits, because an individual failed to comply with the act's procedural requirements.

One of the most troublesome is the 180-day notice of intent to sue provision.

The Congress passed the antiage discrimination law to:

First. Promote employment of older persons based on their ability, rather than age;

Second. Prohibit arbitrary age discrimination in employment; and

Third. Help employers and workers find ways to resolve problems related to the impact of age concerning employment.

These purposes, it seems to me, are not well served if disputes are decided on procedural technicalities, instead of substantive issues. The policy of the act, I strongly believe, should be to encourage decisions on the merits of the claims.

This can be achieved without compromising the rights or interests of employers, labor unions, or employment agencies. Most tort claims acts have a 2-year statute of limitations or longer period for bringing a suit. In many instances, plaintiffs notify the defendants of a law suit after 180 days. This has been achieved without prejudicing the interests of the defendants.

A plaintiff may need more than 180 days in order to:

Obtain an informed opinion from an attorney about the likelihood for success if a lawsuit is filed;

Obtain essential information to initiate a cause of action;

Make a good-faith effort to conciliate the dispute or work out a compromise; and

Become aware that age was a factor in an adverse employment decision.

For these reasons, I urge prompt and favorable action on my proposal.

Mr. President, I ask unanimous consent that the text of this bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2058

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7(d) of the Age Discrimination in Employment Act of 1967 is amended to read as follows:

"(d) No civil action may be commenced by any individual under this section until the individual has given the Secretary not less than sixty days notice of an intent to file such action. Upon receiving a notice of intent to sue, the Secretary shall promptly notify all persons named therein as prospective defendants in the action and shall promptly seek to eliminate any alleged unlawful practice by informal methods of conciliation, conference, and persuasion."

SEC. 2. The amendment made by the first section of this Act shall take effect with respect to civil actions brought after the date of enactment of this Act.

By Mr. WEICKER:

S. 2059. A bill to establish a comprehensive energy stamp program which will provide assistance to certain low-income and fixed-income households to help meet residential energy costs incurred by such households; to the Committee on Human Resources.

Mr. WEICKER. Mr. President, I am today introducing the Energy Stamp Act of 1977, legislation which is designed to provide assistance to low-income and fixed-income households in helping them meet residential energy costs.

During the last few years, all Americans have been hard hit by the ever-increasing costs of utility bills. The impact of the 1973 Arab oil embargo and subsequent OPEC price boosts have been felt in the pockets of the U.S. consumer, particularly the poor and the elderly. Mr. President, we must recognize the fact that there are a significant number of poor people in this country who have been severely affected by such runaway energy costs. Based upon figures compiled by the 1970 U.S. census, 11 percent of all families nationwide live in poverty and 23 percent of all inner-city families are poor. Added to this is the startling fact that 57 percent of elderly unrelated individuals live in poverty. What's more, according to a 1973 report by the Senate Select Committee on Nutrition and Human Needs, rent or mortgage payments take up 50 percent or more of the income of our Nation's poor.

The Federal Government has been slow to respond to the needs of the elderly and the poor in coping with inflationary fuel costs. On February 25, 1974, Senator JAVITS introduced S. 3051, a bill which would have provided $100 million to the Office of Economic Opportunity for the funding of special energy-crisis-related programs. The bill died in committee. Since that time, the Senate has not significantly addressed itself to this problem. I, therefore, introduce my bill to demonstrate to the American poor and elderly that the Congress does indeed have a great deal of concern for their welfare. With the implementation of an energy stamp program, which is designed to complement weatherization plans, these citizens will not be forced to freeze in their homes, as was the case with many during the winter of 1976.

Mr. President, it is my belief that energy stamps will help alleviate the substantial economic hardships which are borne by our Nation's poor and elderly citizens in meeting their fuel costs. The time to act is now.

Mr. President, I ask unanimous consent that a section by section analysis and a copy of the Energy Stamp Act of 1977 be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 2059

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; FINDINGS; PURPOSES

That (a) this Act may be cited as the "Energy Stamp Act of 1977".

(b) The Congress finds and declares that because of the rise in the cost of heating fuels and because low-income and fixed-income households must devote a major portion of their income for the purchase of utility services, many of these households are experiencing substantial economic hardships which may seriously affect their health and well-being. It is the purpose of this Act to help alleviate this burden by providing assistance to these households in the form of energy stamps.

DEFINITIONS

SEC. 2. As used in this Act:

(1) The term "heating fuel" means electricity, oil, gas, coal, or any other fuel if used by a household as the primary source of heat for a dwelling.

(2) The term "Director" means the Director of the Community Services Administration.

(3) The term "local agency" means the community action agencies, and State Economic Opportunity Offices which are established pursuant to the Economic Opportunity Act of 1964.

(4) The term "household" means—

(A) any group of related individuals who are living as one economic unit and for whom heating fuel is customarily purchased in common, directly, or indirectly by undesignated payments in the form of rent; or

(B) any individual living alone who purchases heating fuel, directly, or by undesignated payments in the form of rent.

(5) The terms "coupon" and "stamp" mean any coupon, stamp, or certificate issued pursuant to the provisions of this Act.

(6) The term "retail heating fuel outlet" means any establishment, including a recognized department thereof, which sells heating fuel for consumption by households.

(7) The term "wholesale heating fuel outlet" means any establishment, including a recognized department thereof, which sells heating fuel to retail heating fuel outlets for resale for consumption by households.

(8) The term "State" means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and the Virgin Islands.

(9) The term "bank" means any member or nonmember bank of the Federal Reserve System.

(10) The term "landlord" means any person who rents a dwelling which is the principal residence of the tenant and who normally includes the cost of heating fuel in the rental charge to the tenant.

ESTABLISHMENT OF PROGRAM

SEC. 3. (a) If the local agency plan described in section 7 is approved by the Director, the Director shall establish and maintain an energy stamp program, under which households deemed eligible pursuant to section 4 will be provided with assistance to defray heating fuel costs. The method in which this assistance is provided shall be through energy stamps.

(b)(1) Any eligible household may receive heating fuel coupon assistance—

(A) if such household purchases heating fuels; or

(B) if such household makes undesignated payments for heating fuel in the form of rent, and the landlord to whom such rent is due consents to the making of such payments in coupons.

(2)(A) Coupons received by any eligible household described in paragraph (1)(A) shall be used to purchase heating fuel only from a retail heating fuel outlet participating in the energy stamp program.

(B) Coupons received by any eligible household described in paragraph (1)(B) shall be used only for payment of the appropriate portion of such household's rent related to heating fuel costs.

ELIGIBILITY REQUIREMENTS

SEC. 4. (a) The Director shall establish uniform national standards of eligibility for

participation by households in the energy stamp program. Participation in the program shall be limited to households whose income and other financial resources are determined by the Director to be substantial limiting factors in permitting such households to purchase heating fuel or to make undesignated payments for such fuel.

(b) As a minimum, the standards of eligibility shall provide that any household is eligible if such household—

(1) is eligible for benefits under title IV or XVI of the Social Security Act; or

(2) is eligible for benefits under the Food Stamp Act of 1964.

(c) In lieu of, or in addition to, the criteria described in subsection (a) or (b), the Director shall consider any criteria submitted by a local agency to the Director for determining the eligibility of households in the area serviced by such local agency.

ENERGY STAMPS

SEC. 5. (a) Energy stamps shall be printed in $5 denominations and shall be issued by a local agency only to households which have been duly certified as eligible to participate in the energy stamp program.

(b) Each coupon shall—

(1) bear the name of the local agency from where it was issued;

(2) stipulate that its monetary value is $5; and

(3) include any words or illustrations that are required to explain its purpose and use.

(c) The Director shall establish standards for determining the number of energy stamps to be issued to an eligible household.

(d) In establishing standards under subsection (c), the Director shall consider—

(1) any criteria submitted by a local agency that is deemed to be important for the evaluation of energy stamp assistance in the area serviced by such local agency;

(2) the income of households within the area serviced by such local agency;

(3) the number of individuals in such households;

(4) the temperature and other climate conditions in the area in which such households reside;

(5) the type of heating fuel used by such households; and

(6) the extent to which such households have participated in weatherization programs.

(e) Prior to receiving the energy stamps, each participating household must pay to the local agency 33⅓ percent of the total value of the coupons to be received by such household.

(f) The value of the energy stamp assistance provided to an eligible household under this Act shall not be considered to be income or resources for any purpose under any Federal or State law, including any law relating to taxation, welfare, or public assistance programs.

REDEMPTION OF COUPONS

SEC. 6. (a) Coupons accepted by any retail heating fuel outlet or any person described in section 3(b)(1)(B) shall be redeemed through wholesale heating fuel outlets or banks, with the cooperation of the Treasury Department.

(b) Coupons issued and used in accordance with the provisions of this Act shall be redeemable at face value by the Director through the facilities of the Treasury of the United States.

ADMINISTRATION AND FINANCING OF PROGRAM

SEC. 7. (a) Each local agency desiring to participate in the energy stamp program shall submit to the Director for approval a plan of operation specifying the manner in which and the effective dates of participation during which such program shall be conducted within the area serviced by such local agency. In addition, the local agency may provide information regarding weatherization programs which have been or are now being conducted in the area.

(b) The Director shall approve any local agency plan of operation which satisfies the provisions of subsection (a) and which provides—

(1) that the local agency shall undertake the certification of applicant households in accordance with the eligibility requirements established by the Director under section 4;

(2) safeguards which restrict the use or disclosure of information obtained from applicant households to persons directly connected with the administration or enforcement of the provisions or regulations of this Act;

(3) that the local agency shall undertake extensive outreach action to inform eligible households and heating fuel outlets as to the availability, rules, regulations, and benefits of the energy stamp program;

(4) for the granting of a fair hearing and a prompt determination thereof to any household aggrieved by the actions of a local agency under any provision of its plan of operation as it affects the participation of such household in the energy stamp program;

(5) that the local agency keep a strict and accurate accounting of all transactions made pursuant to this Act;

(6) a requirement that landlords submit certification that any increase in rent charged to a household is not based solely upon actual or anticipated receipt by that household of energy stamps; and

(7) that the local agency shall coordinate the energy stamp program with weatherization projects.

(c) If the Director determines that in the administration of the program there is substantial failure by a local agency to comply with provisions of this Act or with the plan of operation submitted by such agency, he or she shall inform such local agency of the failure and shall allow the local agency a reasonable period of time for the correction of the failure. Upon the expiration of such period, the Director shall order that there be no further distribution of energy stamp assistance in the area serviced by such agency until such time as satisfactory corrective action has been taken.

(d) The Director shall reimburse a local agency for the costs it incurs in administering the energy stamp program. Such reimbursement would be made upon terms and conditions prescribed by rule of the Director. In addition, the United States—

(1) shall finance the printing of energy stamps and the issuing of such coupons to local agencies; and

(2) shall be obliged for payment of the face value of energy stamps to persons redeeming such coupons in accordance with the provisions of this Act.

PENALTIES AND ENFORCEMENT

SEC. 8. (a) Whoever knowingly uses, transfers, acquires, alters, or possesses energy stamps in any manner not authorized by this Act—

(1) shall, if the total value of such coupons is $100 or more, be fined not more than $10,000 or imprisoned for not more than five years, or both; or

(2) shall, if the total value of such coupons is less than $100, be fined not more than $5,000 or imprisoned for not more than one year, or both.

(b) If a local agency administering the energy stamp program finds (in accordance with the process described in section 7(b)(6) of this Act) that a landlord has increased rent to a household based solely upon actual or anticipated receipt by that household of energy stamps, then the landlord may be fined an amount not more than twelve times the amount of the household's rent increase.

REGULATIONS

SEC. 9. The Director shall issue such regulations as he or she deems necessary or appropriate for carrying out the provisions of this Act.

AUTHORIZATION FOR APPROPRIATIONS

SEC. 10. For the purpose of carrying out the provisions of this Act, there are authorized to be appropriated, for the fiscal year ending September 30, 1978, the sum of $100,000,000, for the fiscal year ending September 30, 1979, the sum of $100,000,000, for the fiscal year ending September 30, 1980, the sum of $100,000,000 and for each fiscal year thereafter, such sum as may be necessary.

SECTION-BY-SECTION SUMMARY OF ENERGY STAMP BILL BY SENATOR LOWELL WEICKER, JR.

Section 1 notes that the "energy stamp act of 1977" will help alleviate the burden borne by poor and elderly citizens in meeting their fuel costs.

Section 2 defines terms used in the act. The director of the community services administration, local community action agencies, and state economic opportunity offices will all be involved in the coupon program.

Section 3 states that both homeowners and apartment dwellers are eligible for energy stamp assistance.

Section 4 states eligibility requirements. Any household may receive energy coupons if it is eligible for benefits under title IV or XVI of the social security act or if it is eligible for benefits under the good stamp act of 1964. In addition to, or in lieu of, these criteria, local agencies may suggest eligibility guidelines.

Section 5 states that energy stamps should be printed in $5 denominations and shall include explanatory words or illustrations as to their usage. In establishing standards for determining the number of coupons to be issued to eligible households, the director shall consider household income, area climate conditions, the extent to which such households have participated in weatherization programs, and other noted factors. Each participating household must pay to the local agency 33⅓% of the total value of the stamps it will receive.

Section 6 provides for the redemption of coupons by retail fuel outlets, landlords, and the director.

Section 7 states that each local agency desiring to participate in the energy stamp program must submit to the director a plan of operation as to how it will carry out the assistance measures. Local agencies shall be held responsible for dutifully certifying applicant households, for undertaking extensive outreach publicity action, and for keeping a strict and accurate accounting of all transactions made pursuant to this act. The Federal Government shall reimburse local agencies for the cost of administering the program and shall also finance the printing and issuing of the energy stamps.

Section 8 outlines the penalties for unlawful actions with regard to the energy stamp program.

Section 9 states that the director shall issue necessary and appropriate regulations for carrying out the provisions of this act.

Section 10 authorizes $100 million to be appropriated for each of the next three fiscal years. For subsequent years, such sums as may be necessary for the energy stamp program are to be appropriated.

By Mr. MATSUNAGA:

S. 2064. A bill to authorize Federal financial assistance if a site in the United States is selected for the 1984 Olympic summer games; to the Committee on Commerce, Science, and Transportation.

UNITED STATES SHOULD ASSIST OLYMPICS HOST CITY

Mr. MATSUNAGA. Mr. President, I am introducing today a bill which would authorize the Secretary of Commerce to provide Federal assistance to any U.S. city selected to be the site of the 1984 summer Olympics.

To date, a site for the summer Olympic games has not been selected. However, the U.S. Olympics Committee has recently issued its guidelines and request for presentations from cities interested in hosting the Olympics. A preliminary review of the guidelines indicates that no U.S. city will be able to host the Olympics without substantial Federal assistance. Enactment of my bill would assure such aid in the event that a U.S. site is selected, and would encourage U.S. cities to compete for selection.

Mr. President, it would be a sorry state of affairs indeed if the United States were unable to offer the hospitality, for which our Nation is well known, to outstanding amateur athletes from all over the world. Amateur athletics have contributed to the health and fitness of Americans since our Nation was founded more than 200 years ago. Moreover, amateur athletic competition promotes the development of character, self-discipline, and good sportsmanship. Amateur athletics are enjoyed by a vast spectrum of the American public, regardless of economic circumstances or racial and ethnic background. As a former amateur boxer, judoist, and football player, I can personally attest to the benefits of amateur sports.

In addition to the character-building benefits of amateur sports competition, the city selected to host the summer Olympics will reap substantial economic benefits. Indeed, our entire country will benefit from the influx of tourists from other parts of the world. During the recent Bicentennial celebration, we learned that the judicious promotion of tourism can increase job opportunities and lower our balance-of-payments deficit. I am confident that the same thing would occur in 1984 if a U.S. city is selected to be the site of the summer Olympics. Other nations—most notably Canada and Japan—have recognized this and have provided national subsidies for local jurisdictions which host international competitions.

My bill provides that the Secretary of Commerce, under the provisions of the Public Works and Economic Development Act of 1965, could provide grants of up to $150 million to the Olympics host city for planning, design, and construction of facilities for the games. An additional $1 million would be authorized for administration of the new law.

The bill provides that the host city could also apply for and receive other forms of Federal aid—such as transportation and housing grants, through other Federal departments and agencies.

The Federal Government would be able to recoup the cost of the program under the provisions of my bill. Any revenues generated by the Olympic games in excess of actual costs would revert to the Federal Treasury—up to the amount appropriated under the provisions of my bill.

Finally, the bill provides for the maintenance of adequate records and reports so that the Federal Government and the local and State governments involved can have an accurate accounting of all funds.

Mr. President, I expect that this bill will receive broad support at the State and local levels and I believe it merits the support of my colleagues. Already, some cities have expressed reluctance to bid for the Olympics, because of the overwhelming cost. The prompt enactment of my bill would assure the participation of more cities in the site selection process. I urge, therefore, that early action be taken on the measure.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2064

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Olympic Summer Games Authorization Act of 1977".

FINDINGS

SEC. 2. (a) The Congress finds and declares that—

(1) it is desirable for Americans of present and future generations to be assured adequate recreational resources and facilities;

(2) the selection of a site in the United States for the 1984 Olympic summer games would further an awareness and appreciation of recreational activities;

(3) amateur athletics and amateur athletic competition have contributed to the health and well-being of the Nation and, if a site in the United States is selected for the 1984 Olympic summer games, the United States will have a unique opportunity to encourage participation in such activities by furnishing limited financial assistance to assure the availability of adequate facilities, resources, and support for the Olympic summer games;

(4) if a site in the United States is selected for the 1984 Olympic summer games, the Congress pledges its cooperation and support in the successful fulfillment of the Olympic summer games; and

(5) the Federal financial assistance authorized by this Act should not be considered as establishing a precedent for any future Federal financial assistance for international athletic competitions.

(b) The following provisions of this Act shall take effect only if a site in the United States is selected for the 1984 Olympic summer games.

DEFINITIONS

SEC. 3. For purposes of this Act—

(1) the term "Olympic summer games" means the 1984 international Olympic summer games;

(2) the term "Secretary" means the Secretary of Commerce; and

(3) the term "summer games facility" means existing or proposed summer sports and supporting facilities which are necessary to carry out the Olympic summer games.

FINANCIAL ASSISTANCE

SEC. 4. (a) GRANTS.—The Secretary shall provide financial assistance in the form of grants to State, local, or other governmental agencies for purposes of assisting in the planning, design, and construction or improvement of summer games facilities, and for purposes of land acquisition and legal and fiscal fees in connection with the Olympic summer games. Subject to the provisions of subsection (b) of this section, such grants shall be provided in such sums, at such times, and under such conditions as the Secretary considers necessary and appropriate.

(b) CONDITIONS.—The amount of any grant for a summer games facility under subsection (a) of this section shall be based initially on the estimated cost of such facility. If the actual cost of any summer games facility is less than such estimated cost, the difference may be applied to meet the excess cost of any other summer games facility. If the actual cost of any summer games facility exceeds such estimated cost, plus any amounts applied to the excess cost under the preceding sentence, the Secretary shall not provide any grant for more than 50 percent of the remaining excess cost of such facility.

(c) REVERSION.—All revenues generated by the Olympic summer games in excess of actual costs shall revert to the Treasury of the United States in an amount not to exceed the total amount of funds appropriated under the authority of section 7 of this Act.

(d) ASSISTANCE UNDER THE PUBLIC WORKS AND ECONOMIC DEVELOPMENT ACT OF 1965.—The Secretary may provide financial assistance for projects related to the Olympic summer games under the authority contained in title I of the Public Works and Economic Development Act of 1965 (42 U.S.C. 3131–3136). Any such assistance (1) shall not be subject to the requirements for a non-Federal matching share set forth in section 101(c) of such title, and (2) shall be excluded from the limitation on the amount available to any one State set forth in section 103 of such title.

(e) OTHER ASSISTANCE.—Nothing contained in this Act shall be construed to preclude financial assistance by the United States for planning, designing, and constructing, or improving facilities for the Olympic summer games and related projects under any other law.

REPORTS

SEC. 5. (a) INTERIM REPORTS.—The Secretary shall submit interim reports to the Congress and to the President on the progress of the planning, design, and construction or improvement of summer games facilities under this Act. Each such report shall summarize and evaluate the progress made in preparing for the Olympic summer games, and include any recommendations for any further Federal involvement which the Secretary considers necessary or appropriate.

(b) FINAL REPORT.—The Secretary shall, within 3 months after the conclusion of the Olympic summer games, submit a final report to the Congress and to the President containing a summary of all actions taken under this Act.

RECORDS AND AUDIT

SEC. 6. (a) RECORDS.—Each recipient of Federal financial assistance under this Act, whether directly or indirectly, shall keep such records as the Secretary shall prescribe, including—

(1) records which fully disclose (A) the amount and the disposition by such recipient of the proceeds of such assistance, (B) the total cost of the summer games facility or related project for which such assistance is given or used, (C) the amount of that portion of the cost of such facility or project supplies by other sources, and (D) an identification of such other sources; and

(2) such other records as will facilitate an effective financial audit.

(b) AUDIT.—Until the expiration of 3 years after the completion of the summer games facility or related project referred to in

subsection (a) of this section, the Secretary and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access, for purposes of audit and examination, to any books, documents, papers, and records of each recipient of Federal financial assistance under this Act which the Secretary or the Comptroller General considers relevant to such Federal financial assistance.

AUTHORIZATION OF APPROPRIATIONS

SEC. 7. (a) GENERAL.—There is authorized to be appropriated to the Secretary the sum of $150,000,000 for purposes of providing grants under section 4(a) of this Act for the Olympic summer games.

(b) ADMINISTRATION.—There is authorized to be appropriated to the Secretary the sum of $1,000,000 for the administration of this Act.

(c) AVAILABILITY.—Sums appropriated under this section are authorized to remain available until expended.

By Mr. RIEGLE:

S. 2065. A bill to amend the Consumer Credit Protection Act to provide consumer rights and remedies in electronic fund transfer systems; to the Committee on Banking, Housing, and Urban Affairs.

ELECTRONIC FUND TRANSFER CONSUMER PROTECTION ACT

Mr. RIEGLE. Mr. President, I am today introducing legislation to amend the Consumer Credit Protection Act to provide for consumer rights and remedies in electronic fund transfers.

Electronic fund transfer systems represent the application of recent electronic technology to consumer banking transactions. The most visible example of this new phenomenon is the automated teller machine. By inserting a specially coded card and a secret identification number, a consumer can perform several common banking transactions, like withdrawing or depositing cash or transferring funds from one account to another. Another recent EFT system is known as pay-by-phone. Under this system, a consumer, after identifying himself by a personal code, may order payments to third parties over the phone. In most cases the consumer never speaks to a bank employee, but to a computer instead. In some instances, the consumer's commands are relayed to the computer by depressing buttons on a touch-tone phone.

But these systems are merely precursors of more sophisticated payment systems. In the near future we will see widespread implementation of point-of-sale systems in which a consumer will utilize a computer terminal located in a store to instruct his bank to transfer funds from his account to the merchant's. The transfer will be instantaneous—a debit to the consumer's account, a credit to the merchant's.

While all of these systems have great potential to benefit consumers, the evidence indicates that consumers have not enthusiastically embraced them. There are several reasons for this. First, consumers are wary of entrusting important personal financial matters to computers which, no matter how sophisticated, too often break down or go awry. In addition, there is the very real fear that these systems, with data from millions of transfers located in computer memories, create the potential for massive invasions of privacy. By accessing these memories, a person could assemble a complete record of every financial transaction completed by a consumer. Consumers also fear that they will lose control over the timing and amount of payments from their accounts to third persons. And finally, consumers quite justifiably worry about the prospect of massive computer theft. A consumer could awake one morning and find that his or her entire savings has disappeared by virtue of a surreptitious computer manipulation.

These apprehensions flourish primarily because no law currently governs consumer rights in EFT transactions. Existing Federal consumer laws, like truth in lending and the Fair Credit Billing Act, apply to credit transactions, not to cash transfers. Thus, because of EFT's new technology, these systems are operating outside the law. The consumer has no protection from unauthorized transfers, as he does for unauthorized credit card uses, even though the consequences—immediate loss of cash—are far more severe in the EFT context. No law exists which requires banks to promptly investigate and correct EFT computer errors. And many other protections which apply to credit cards—like disclosure of important account terms and receipt of periodic statements—also are inapplicable to electronic fund transfers.

The National Commission on Electronic Fund Transfers, established by Congress in 1974, has recognized that the lack of consumer protection legislation in this area is a serious problem and has called on Congress to act.

The legislation I am introducing today establishes a comprehensive framework of consumer rights, remedies, and responsibilities in EFT systems. It will limit a consumer's liability for unauthorized electronic fund transfers and protect the consumer's right to privacy by placing strict limitations on who may receive account activity data.

The nightmare of never-ending computer errors is also addressed by requiring a financial institution to investigate and correct account errors promptly. In addition, a consumer must receive full disclosure of all terms governing an EFT account, as well as receipts for all transfers and periodic account statements.

This legislation also takes into account the unique character of EFT. Because consumers will not have canceled checks as evidence of payment, the bill provides that EFT receipts constitute proof of payment. And, as in check payment, the consumer is given the right to reverse a transfer within 3 business days—an important protection for consumers who receive shoddy goods or inadequate service.

Finally, because EFT transactions are instantaneous cash transfers, this legislation requires that financial institutions which offer these services be held to a strict fiduciary duty to establish secure, accurate, and confidential systems. Except in the case of a technical malfunction, a financial institution will be strictly liable for improper or erroneous transfers from a consumer's account.

While the legislation I am introducing today is comprehensive in scope, it is not overly complex. In fact, every effort has been made to avoid unnecessary restrictions. Wherever possible, general principles are enunciated rather than specific requirements, thereby permitting financial institutions to modify services easily or offer new EFT systems as technology evolves.

As we begin to debate the rights of consumers, financial institutions, and retailers in EFT systems, we must keep in mind that EFT has been aggressively marketed as a great benefit to consumers. For this to become reality, the legal framework governing EFT must regard the needs of the consumer as the primary consideration. EFT systems must be designed to meet these needs, with the convenience of banks and retailers a secondary consideration. This was the key recommendation of the National Commission on EFT:

> The Commission believes that the consumer has the primary interest in all regulatory, legislative, and policy decisions affecting EFT and that such decisions must take into account, first, the needs of the consumer and, second, the needs of other participating parties . . .

The Consumer Affairs Subcommittee, of which I am chairman, will conduct hearings on this legislation October 3, 4, and 5.

Mr. President, I ask unanimous consent that the text of the bill together with a section-by-section analysis be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 2065

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Consumer Credit Protection Act (15 U.S.C. 1601 et seq.) is amended by adding at the end thereof the following new title:

"TITLE VIII—ELECTRONIC FUND TRANSFERS

"§ 801. Short title

"This title may be cited as the 'Electronic Fund Transfer Consumer Protection Act'.

"§ 802. Findings and purpose

"(a) The Congress finds that the use of electronic systems to transfer funds provides the potential for substantial benefits to consumers. However, due to the unique characteristics of such systems, existing consumer protection legislation is inapplicable, leaving the interests of consumers unprotected and the rights and liabilities of consumers, financial institutions, and intermediaries in electronic fund transfers undefined.

"(b) It is the purpose of this title to provide a basic framework establishing the rights, liabilities, and responsibilities of all participants in electronic fund transfer systems. The primary objective of this title, however, is the protection of individual consumer rights.

"§ 803. Definitions

"As used in this title—

"(1) the term 'accepted card or other means of access to a consumer's account for the purpose of initiating electronic fund

transfers when the person to whom such card or other means was issued has requested and received or has signed or has used, or authorized another to use, such card or other means for the purpose of obtaining money, property, or services;

"(2) the term 'account' means an account established or a deposit made for personal, family, or household purposes;

"(3) the term 'Board' means the Board of Governors of the Federal Reserve System;

"(4) the term 'consumer' means a natural person;

"(5) the term 'electronic fund transfer' means, any transfer of funds the effectuation of which is dependent in whole or substantial part on electronic means, and such term includes, but is not limited to, point-of-sale transfers, automated teller machine transactions, direct deposit of funds, transfers initiated by telephone, transfers between a consumer's accounts, and other banking transactions performed in whole or substantial part electronically through remote terminals;

"(6) the term 'financial institution' means a State or national bank, a State or Federal savings and loan association, a mutual savings bank, a State or Federal credit union, or any other person who, directly or indirectly, holds an account belonging to a consumer;

"(7) the term 'preauthorized electronic fund transfer' means an electronic fund transfer authorized more than twelve hours prior to the scheduled occurrence of such transfer;

"(8) the term 'State' means any State, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing;

"(9) the term 'unauthorized electronic fund transfer' means an electronic fund transfer from a consumer's account initiated by a person other than the consumer without actual authority to initiate such transfer and from which the consumer receives no benefit.

"§ 804. Regulations

"(a) The Board shall prescribe regulations to carry out the purposes of this title. In prescribing such regulations, the Board shall take into account, and allow for, the continuing evolution of the technology utilized in electronic fund transfers.

"(b) Regulations prescribed hereunder may contain such classifications, differentiations, or other provisions, and may provide for such adjustments and exceptions for any class of transactions, as in the judgment of the Board are necessary or proper to effectuate the purposes of this title, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

"§ 805. Terms and conditions of transfers

"(a) A financial institution shall clearly disclose in writing to the consumer all terms and conditions governing electronic fund transfers involving the consumer's account prior to the first time access to such account by means of an electrnic fund transfer is permitted, and at semiannual intervals thereafter as long as the account is active and such transfers may be permitted. Such disclosures shall include, to the extent applicable—

"(1) the consumer's liability for unauthorized electronic fund transfers;

"(2) the telephone number and address of the person or department to be notified in the event the consumer believes that an unauthorized electronic fund transfer has been or may be effected;

"(3) the type and nature of electronic fund transfers which the consumer may initiate, including any limitations on the frequency or dollar amount of such transfers;

"(4) any charges for account maintenance or for electronic fund transfers;

"(5) the fact that a preauthorized electronic fund transfer is revokable by the consumer at any time up to the business day preceding the scheduled day of transfer;

"(6) the consumer's right to reverse an electronic fund transfer and the procedure to initiate a reversal;

"(7) the consumer's right to receive documentation of each electronic fund transfer under section 806;

"(8) a summary of the error resolution provisions of section 809 and the consumer's rights thereunder;

"(9) the financial institution's liability to the consumer under section 811; and

"(10) the financial institution's fiduciary duty to protect the consumer's right to privacy and assure the integrity, accuracy, and security of the consumer's account under section 816.

"(b) A financial institution shall notify a consumer in writing at least sixty days prior to the effective date of any change in any term or condition of the consumer's account required to be disclosed under subsection (a).

"(c) For any account of a consumer made accessible to electronic fund transfers involving such account prior to the effective date of this title, the information required to be disclosed to the consumer under subsection (a) shall be disclosed not later than—

"(1) in the first periodic statement required by section 806(b) after the effective date of this title; or

"(2) thirty days after the effective date of this title.

"§ 806. Documentation of transfers

"(a) A financial institution shall provide a consumer with written documentation of each electronic fund transfer affecting the account of such consumer. The documentation shall be provided at the time of the transfer whenever feasible, but in any event not later than five days after the transfer. The documentation shall clearly set forth—

"(1) the amount, date, and nature of the transfer;

"(2) the identity of the consumer's account with the financial institution from which or to which funds are transferred;

"(3) the identity of any third party to whom or from whom funds are transferred;

"(4) a brief description of any goods or services which are the subject of the transfer; and

"(5) a transfer identification number which provides an audit trail.

"(b) A financial institution shall provide each consumer with a periodic statement of each account of such consumer that may be accessed by means of an electronic fund transfer. Such statement shall be provided at least monthly for each monthly or shorter cycle in which an electronic fund transfer affecting the account has occurred, or every three months, whichever is more frequent. The statement, which may include information regarding transactions other than electronic fund transfers, shall clearly set forth—

"(1) with regard to each electronic fund transfer during the period, the information required to be disclosed under subsection (a);

"(2) the amount of any fees or charges assessed by the financial institution during the period for electronic fund transfers or for account maintenance; and

"(3) the balance remaining in the consumer's account at the close of the period.

"(c) In the case of a consumer's account which may be accessed only by electronic fund transfers which regularly credit such account, a financial institution may, in lieu of complying with the requirements of subsections (a) and (b), provide prompt notice to the consumer, in accordance with regulations of the Board, when such a transfer is not completed on the day or in the amount regularly scheduled. Such means of notice shall be clearly disclosed to the consumer under section 805.

"(d) In any action involving a consumer and a third person, any documentation or statement required by this section to be given to the consumer which indicates that an electronic fund transfer was made to the third person shall be admissible by the consumer as evidence of such transfer and shall be presumptive proof that such transfer was made. Thereafter, the burden of proof is upon the third person to show that the electronic fund transfer was not made.

"§ 807. Preauthorized transfers

"A preauthorized electronic fund transfer from a consumer's account may be so authorized by the consumer only in writing, a copy of which must be provided to the consumer at the time of his signing. Such authorization may be revoked by the consumer at any time up to the business day preceding the scheduled date of such transfer. No authorization under this section may remain in effect without explicit written renewal for more than one hundred and eighty days.

"§ 808. Reversal of transfers

"(a) A financial institution shall reverse an electronic fund transfer initiated by a consumer to a third party and recredit the consumer's account for the amount of the transfer upon oral or written direction by the consumer made within three business days after the transfer.

"(b) A consumer's right to reverse an electronic fund transfer under subsection (a) may be exercised regardless of whether the consumer's reason for initiating a reversal constitutes an account error under section 809.

"§ 809. Error resolution

"(a) If a consumer notifies a financial institution orally or in writing that an error affecting the consumer's account with the financial institution has occurred, the financial institution shall investigate the alleged error and report the results of such investigation to the consumer within three business days where the consumer has notified the financial institution of the alleged error within forty-five days of the occurrence of such error, or within ten business days where the consumer has notified the financial institution more than forty-five days after the occurrence of such error.

"(b) If the financial institution maintains after such investigation that such error did not occur, it shall provide to the consumer reproductions of all documentation which the financial institution utilized to conclude that such error did not occur within three business days after its report to the consumer under subsection (a).

"(c) If the financial institution determines that an error did occur, it shall promptly, but in no event more than twenty-four hours after such determination, correct the error, subject to section 810, including the crediting of interest where applicable.

"(d) If in any action under section 818, the court finds that a financial institution knowingly and willfully notified the consumer under subsection (b) that the consumer's account was not in error when such conclusion could not reasonably be drawn from the preponderance of the evidence available to the financial institution at the time of its investigation, the consumer shall be entitled to treble damages under section 818(a)(1) in such action.

"(e) For the purpose of this section, an error consists of—

"(1) an unauthorized electronic fund transfer or other transfer from the con-

sumer's account not initiated by the consumer;

"(2) an incorrect electronic fund transfer from or to the consumer's account;

"(3) the omission from a periodic statement of an electronic fund transfer affecting the consumer's account which should have been included;

"(4) a computational error by the financial institution;

"(5) the failure to reverse an electronic fund transfer when properly instructed to do so; or

"(6) any other error described in regulations of the Board.

§ 810. Consumer liability for unauthorized transfers

"(a) A consumer shall not be liable for any unauthorized electronic fund transfer involving the account of such consumer unless the card or other means of access utilized for such transfer was an accepted card or means of access. In no event, however, shall a consumer's liability for an unauthorized transfer exceed the lesser of—

"(1) $25; or

"(2) the amount of money or value of property or services obtained in such unauthorized electronic fund transfer prior to the time the financial institution is notified of, or otherwise becomes aware of, circumtances which lead to the reasonable belief that an unauthorized electronic fund transfer involving the consumer's account has been or may be effected. Notice under this paragraph is sufficient when the consumer takes such steps as may be reasonably required in the ordinary course of business to provide the financial institution with the pertinent information whether or not any particular officer, employee, or agent of the financial institution does in fact receive such information.

"(b) In any action which involves a consumer's liability for an unauthorized electronic fund transfer, the burden of proof is upon the financial institution to show that the electronic fund transfer was authorized or, if the electronic fund transfer was unauthorized, then the burden of proof is upon the financial institution to establish that the disclosures required to be made to the consumer under section 805 regarding the consumer's liability for an unauthorized electronic fund transfer were in fact made in accordance with such section.

"(c) In the event of an unauthorized electronic fund transfer which involves both an extension of credit as defined in section 103(e) of this Act and a transfer of funds from a consumer's account, the consumer's liability for such unauthorized electronic fund transfer shall be determined solely in accordance with this section.

"(d) Except as provided in this section, a consumer incurs no liability from an unauthorized electronic fund transfer.

"§ 811. Liability of financial institutions

"(a) Subject to subsection (b), a financial institution shall be solely liable, and shall hold a consumer harmless, for any damages suffered by a consumer arising out of—

"(1) the failure of the financial institution to make an electronic fund transfer in the correct amount or manner when properly instructed to do so by the consumer, except where the consumer's account has insufficient funds;

"(2) an electronic fund transfer from the consumer's account, other than an unauthorized electronic fund transfer, not initiated by the consumer;

"(3) the failure of the financial institution to reverse an electronic fund transfer when instructed to do so by the consumer in accordance with section 808; and

"(4) an unauthorized electronic fund transfer, subject to section 810.

"(b) A financial institution shall not be liable for damages under subsection (a) (1) or (2) if the financial institution shows by a preponderance of the evidence that its action or failure to act resulted from a technical malfunction which was—

"(1) caused by an act of God or other circumstance substantially beyond the control of the financial institution; or

"(2) made known to the consumer at the time he attempted to initiate an electronic fund transfer or, in the case of a preauthorized transfer, at the time such transfer should have occurred.

"§ 812. Issuance of cards or other means of access

"No person may issue to a consumer any card or other means of access to such consumer's account for the purpose of initiating an electronic fund transfer other than—

"(1) in response to a request or application therefor; or

"(2) as a renewal of, or in substitution for, an accepted card or other means of access, whether issued by the initial issuer or a successor.

"§ 813. Suspension of obligations

"In the event a technical malfunction prevents the effectuation of an electronic fund transfer initiated by a consumer to another person, and such other person has agreed to accept payment by such means, the consumer's obligation to the other person shall be suspended until the malfunction is corrected and the electronic fund transfer may be completed.

"§ 814. Compulsory use of electronic fund transfers

"No person may—

"(1) require as a condition of employment, receipt of Government benefits, or the extension of credit the use of or participation in any electronic fund transfer by a consumer. Any direct deposit of payroll shall, in the absence of a voluntary written authorization by an employee, create a presumptive violation of this section. This paragraph does not apply to the use of or participation in electronic fund transfers by an employee when such transfers are initiated by a consumer other than such employee; or

"(2) condition the receipt of payment by a consumer through an electronic fund transfer on such consumer's participation in any other electronic fund transfer.

"§ 815. Exemption of wages from attachment

In any account in which a consumer deposits his wages by means of an electronic fund transfer, there shall be exempt from any levy, attachment, garnishment, or other process the sum of $1,500 for each such consumer.

"§ 816. Fiduciary duty of financial institutions

"A financial institution shall be deemed to have a fiduciary duty to each consumer for whom it effects electronic funds transfers to ensure the security, integrity, accuracy, and confidentiality of each account of the consumer accessible by means of such transfers. This duty includes—

"(1) notifying the consumer as soon as possible of any action against the consumer's account;

"(2) designing all mechanisms, means, and systems employed in effectuating electronic fund transfers to prevent unauthorized electronic fund transfers and to detect and correct such transfers;

"(3) preventing information regarding any electronic fund transfer from being disclosed to any person other than—

"(A) the consumer making the transaction;

"(B) any other person who is a party to the transfer or is necessary to effectuate the transfer, but only to the extent that the information disclosed is necessary to effectuate the transfer;

"(C) those persons authorized by law to have access to the records of the financial institution or of the parties to the transaction; and

"(D) any other person specifically authorized in writing by the consumer to receive such information; and

"(4) meeting any other duty of a fiduciary nature recognized or imposed by State law.

"§ 817. Waiver of rights

"No writing or other agreement between a consumer and a financial institution or between a consumer and a provider of goods or services at retail may contain any provision which constitutes a waiver of any right conferred or cause of action created by this title. Nothing in this section prohibits, however, any writing or other agreement which grants to a consumer a more extensive right or greater protection than contained in this title.

"§ 818. Civil liability

"(a) Except as otherwise provided by this section, any person who fails to comply with any provision of this title with respect to any consumer is liable to such consumer in an amount equal to the sum of—

"(1) any actual damage sustained by such consumer as a result of such failure;

"(2) (A) in the case of an individual action, under this subparagraph, an amount not less than $100 nor greater than $1,000; or

"(B) in the case of a class action, such amount as the court may allow, except that (i) as to each member of the class no minimum recovery shall be applicable, and (ii) the total recovery under this subparagraph in such action shall not be more than the lesser of $500,000 or 1 per centum of the net worth of the defendant; and

"(3) in the case of any successful action to enforce the foregoing liability, the costs of the action, together with a reasonable attorney's fee as determined by the court.

"(b) In determining the amount of award in any class action under subsection (a) (2) (B), the court shall consider, among other relevant factors, the amount of any actual damages awarded, the frequency and persistence of failures of compliance by the defendant, the resources of the defendant, the number of persons adversely affected, and the extent to which the defendant's failure of compliance was intentional.

"(c) Except as provided in section 811, a person may not be held liable in any action brought under this section for a violation of this title if the person shows by a preponderance of evidence that the violation was not intentional and resulted from a bona fide error notwithstanding the maintenance of procedures reasonably adapted to avoid any such error.

"(d) No provision of this section or section 819 imposing any liability shall apply to any act done or omitted in good faith in conformity with any interpretation thereof by the Board, notwithstanding that after such act or omission has occurred, such interpretation is amended, rescinded, or determined by judicial or other authority to be invalid for any reason.

"(e) Without regard to the amount in controversy, any action under this section may be brought in any United States district court, or in any other court of competent jurisdiction, within one year from the date of the occurrence of the violation.

"§ 819. Criminal liability

"Whoever knowingly and willfully—

"(1) gives false or inaccurate information or fails to provide information which he is required to disclose by this title; or

"(2) otherwise fails to comply with any provision of this title;

shall be fined not more than $5,000 or imprisoned not more than one year, or both.

"§ 820. Administrative enforcement

"(a) Compliance with the requirements imposed under this title shall be enforced under—

"(1) section 8 of the Federal Deposit Insurance Act, in the case of—

"(A) national banks, by the Comptroller of the Currency;

"(B) member banks of the Federal Reserve System (other than national banks), by the Board;

"(C) banks insured by the Federal Deposit Insurance Corporation (other than members of the Federal Reserve System), by the Board of Directors of the Federal Deposit Insurance Corporation;

"(2) section 5(d) of the Home Owners' Loan Act of 1933, section 407 of the National Housing Act, and sections 6(i) and 17 of the Federal Home Loan Bank Act, by the Federal Home Loan Bank Board (acting directly or through the Federal Savings and Loan Insurance Corporation), in the case of any institution subject to any of those provisions; and

"(3) the Federal Credit Union Act, by the Administrator of the National Credit Union Administration with respect to any Federal credit union.

"(b) For the purpose of the exercise by any agency referred to in subsection (a) of its powers under any Act referred to in that subsection, a violation of any requirement imposed under this title shall be deemed to be a violation of a requirement imposed under that Act. In addition to its powers under any provision of law specifically referred to in subsection (a), each of the agencies referred to in that subsection may exercise, for the purpose of enforcing compliance with any requirement imposed under this title, any other authority conferred on it by law.

"(c) Except to the extent that enforcement of the requirements imposed under this title is specifically committed to some other Government agency under subsection (a), the Federal Trade Commission shall enforce such requirements. For purpose of the exercise by the Commission of its functions and powers under the Federal Trade Commission Act, a violation of this title shall be deemed an unfair or deceptive act or practice in violation of that Act. All of the functions and powers of the Commission under the Federal Trade Commission Act are available to the Commission to enforce compliance by any person with this title, irrespective of whether that person is engaged in commerce or meets any other jurisdictional tests in the Federal Trade Commission Act, including the power to enforce the provisions of this title in the same manner as if the violation had been a violation of a Federal Trade Commission trade regulation rule.

"§ 821. Reports to Congress

"(a) Not later than twelve months after the effective date of this title and at one-year intervals thereafter, the Board and the Attorney General shall, respectively, make reports to the Congress concerning the administration of their functions under this title, including such recommendations as the Board and the Attorney General, respectively, deem necessary or appropriate. In addition, each report of the Board shall include its assessment of the extent to which compliance with this title is being achieved, and a summary of the enforcement actions taken under section 820 of this title.

"(b) In the exercise of its functions under this title, the Board may obtain upon request the views of any other Federal agency which, in the judgment of the Board, exercises regulatory or supervisory functions with respect to any class of persons subject to this title.

"§ 822. Relation to State laws

"This title does not annul, alter, or affect, or exempt any person subject to the provisions of this title from complying with the laws of any State with respect to electronic fund transfers except to the extent that those laws are inconsistent with any provision of this title, and then only to the extent of the inconsistency. For purposes of this section, a State law is not inconsistent with this title if the protection such law affords any consumer is greater than the protection provided by this title.

"§ 823. Exemption for State regulation

"The Board shall by regulation exempt from the requirements of this title any class of electronic fund transfers within any State if the Board determines that under the law of that State that class of electronic fund transfers is subject to requirements substantially similar to those imposed by this title, and that there is adequate provision for enforcement.

"§ 824. Effective date

"This title takes effect upon the expiration of one year after the date of its enactment, except that section 810 takes effect upon the date of its enactment.".

SECTION-BY-SECTION ANALYSIS—EFT CONSUMER PROTECTION ACT

SEC. 801. *Short title*—The title may be called the "Electronic Fund Transfer Consumer Protection Act."

SEC. 802. *Findings and purpose*—The Congress finds that EFT provides the potential for substantial benefits to consumers, but under existing consumer protection laws the interests of consumers are unprotected.

The Purpose of the title is to establish a framework of rights, remedies, and responsibilities for all parties in EFT transactions.

SEC. 803. *Definitions*—The term "electronic fund transfer" means any transfer of funds dependent on electronic means. It includes automated teller machine transactions, point-of-sale transfers, pay-by-phone transactions, and direct deposit of funds.

The term "financial institution" is defined to mean traditional depository institutions as well as any other entity who holds a consumer's account. This would include mutual funds or brokerage houses who hold a consumer's account or line of credit and make it accessible by means of electronic fund transfers.

SEC. 804. *Regulations*—The Federal Reserve Board shall enact regulations to carry out the purposes of the title. These regulations shall take into account the evolving nature of EFT technology.

SEC. 805. *Terms and conditions of transfers*—Before a consumer's account may be accessed by means of an EFT, the financial institution holding the account must clearly disclose to the consumer all terms and conditions governing such transfers. The disclosures shall include: the consumer's liability for unauthorized electronic fund transfers; the person to notify if a debit card is lost or stolen; the type of transfers the consumer may make; any applicable charges; the fact that a preauthorized transfer is revoked by the consumer at any time up to the business day preceding the transfer; the consumer's right to reverse a transfer; a summary of the error resolution procedure; the financial institution's liability for improper transfers; the financial institution's duty to maintain a secure, accurate, and confidential system; and the consumer's right to receive EFT receipts and account statements.

These disclosures parallel those of the Truth in Lending Act, which applies to revolving credit accounts. If the financial institution is to change any of the above terms, the consumer must be given 60 days prior notice.

Sec. 806. Documentation of transfers—A consumer must receive a receipt for each transfer affecting the consumer's account. The receipt shall include: the amount, date and nature of the transfer; the consumer's account number; the third party involved; where applicable, the goods or services involved; and a transfer identification number. Whenever feasible, the receipt should be provided at the time of the transfer, but in no event more than 5 days after the transfer.

A financial institution must also provide a consumer with a periodic statement for each EFT account. In addition to the information above, the statement must disclose any charges or fees for the period and the consumer's closing balance.

These provisions assure that adequate records are given to the consumer. This is particularly necessary because traditional proofs of payment, like cancelled checks, will not exist in EFT transactions.

For any account which is accessed solely by transfers which regularly credit the account, the financial institution may, in lieu of providing separate receipts for each transfer, notify the consumer in the event the transfer does not occur at the time or in the amount scheduled. This will apply primarily to savings accounts which do not have a debit aspect but which receive regular EFT credits, such as Social Security benefits. This exception will eliminate the cost of individual mailings by the financial institution for each credit received, but will still assure proper notice to the consumer if such credits are not received as scheduled.

The receipt and statement required by this section are to constitute presumptive proof of an EFT payment to a third party. The EFT receipt will therefore resemble the cancelled check as proof of payment.

Sec. 807. Preauthorized transfers—A preauthorized transfer may be made only by written authorization from the consumer which shall be revokable at will at any time up to the business day preceding the scheduled transfer. An authorization must be renewed after 180 days.

Preauthorized payments are often arranged for recurring expenses like mortgage payments, utility bills, and insurance premiums. This section assures that automatic debits to a consumer's account be effected only on written authorization which the consumer may readily revoke.

Sec. 808. Reversal of transfers.—A consumer may reverse a transfer to a third party upon oral or written notice to the financial institution within 3 business days of the transfer.

This provision parallels traditional "stop payment" authority for check payments, an important protection for consumers who receive defective goods or services. The right to reverse transfer has repeatedly been cited by consumer groups as essential for consumer acceptance of EFT.

A consumer may reverse a transfer within the 3-day period even if his reason for doing so is an account error which could be pursued under the error resolution procedure of section 809.

This enhances the consumer's ability to correct errors affecting his account when they are readily apparent. This will result in quicker corrections than under the provisions of section 809.

Sec. 809. Error resolution—If a consumer notifies a financial institution of an EFT account error, the financial institution must promptly investigate the alleged error and report its findings to the consumer within 3 business days if the consumer's notice is within 45 days of the error, or within 10 business days when the consumer's notice is received more than 45 days after the error's occurrence. If the financial institution discovers an error, it must make the necessary correction within 24 hours. If the financial institution maintains that no error has occurred, it must provide the consumer with written documentation supporting its determination within 3 business days after its report.

This procedure is similar to that of the Fair Credit Billing Act, which applies to errors in revolving credit accounts. The time periods for bank action, however, have been substantially shortened in view of the more

severe effects on the consumer of an EFT error. With revolving charge accounts, an improper entry is not cause for alarm; the consumer can withhold payment while the bank investigates. In the EFT context, however, an improper entry represents cash already debited from a consumer's account. As a result, the consumer has been deprived of his money and may be unable to meet important expenses. These time periods protect the consumer from severe hardship computer data.

If a court finds that a financial institution willfully reported to a consumer that his account was correct when such a conclusion could not reasonably be drawn, the bank is liable for treble damages.

This provision recognizes the severe hardship which an erroneous EFT debit can cause. It will cause financial institutions to exercise great care when investigating allegations of EFT errors.

Sec. 810. Consumer liability for unauthorized transfers—In the event of an unauthorized electronic fund transfer, a consumer's liability is limited to the lesser of $25 or the amount of money obtained.

This provision parallels the Truth in Lending Act, which limits consumer liability for unauthorized use of a credit card to $50. The lower $25 limit is in recognition of the more severe consequences to the consumer of an immediate unauthorized transfer from his account. The limit is high enough, however, to deter negligent use of debit cards.

If an unauthorized transfer constitutes both a cash transfer and an extension of credit, the consumer's liability is to be determined under this section.

Some unauthorized electronic fund transfers will involve both a cash transfer and a credit (overdraft) extension. For the purpose of determining the consumer's liability such a transfer would be regarded as a cash transfer and subject to the $25 limitation.

Sec. 811. Liability of financial institutions—A financial institution is held strictly liable to a consumer for any improper or incorrect transfer, the failure to make a transfer when properly instructed, and for the failure to reverse a transfer. In the case of an improper or incorrect transfer, or the failure to make a transfer, the financial institution is excused from this liability if the error was caused by a technical malfunction beyond the financial institution's control or if the malfunction was made known to the consumer at the time he attempted to initiate a transfer.

This standard of strict liability is similar to a financial institution's liability under the Uniform Commercial Code for check transactions. In the case of an improper payment or wrongful dishonor of a check, a financial institution is strictly liable to its account holder. This section makes provision, however, for technical malfunctions beyond the institution's control.

As in check transactions, a strict liability standard is essential because of the severe consequences which could flow from a bank's wrongful failure to transfer funds. Such an error could render a mortgage in default, cause an insurance policy to lapse, or result in the transfer of a consumer's funds against his wishes.

Sec. 812. Issuance of cards or other means of access—A financial institution may issue EFT debit cards or account access codes only in response to an application or in renewal of an existing accepted card.

This provision parallels the Truth in Lending Act's prohibition on unsolicited credit cards. It assures that only those consumers who request debit cards will receive them. In addition to protecting consumers from unwanted cards, this section will eliminate losses resulting from the theft of unsolicited debit cards.

Sec. 813. Suspension of obligations—If a technical malfunction prevents the transfer of funds to a third party and the third person has agreed to accept payment by means of an electronic fund transfer, the consumer's obligation is suspended until the malfunction is corrected and the transfer can be completed.

This section will prevent hardships to consumer's (such as the lapsing of an insurance policy) stemming from technical malfunctions which prevent transfers when the payee has agreed to accept payment by an electronic fund transfer.

Sec. 814. Compulsory use of electronic fund transfers—This section prohibits conditioning employment, government benefits, or the extension of credit on a consumer's use of electronic fund transfers. It also prohibits a financial institution from refusing to accept a transfer for a consumer on the ground that the consumer does not participate in other EFT services.

This section maintains a consumer's freedom of choice. A consumer may not be forced to use EFT or purchase other services in order to transact EFT's.

Sec. 815. Exemption of wages from attachment—This section provides that for any account in which a consumer deposits his wages by means of an electronic fund transfer, $1,500 of such account is exempt from garnishment or other process.

Under current federal law, not more than 25% of a consumer's wages may be attached by a creditor. But the issue of when wages lose their protected status and become commingled with other funds of the consumer is a perplexing problem. The problem will become more acute, however, if direct deposit of payroll becomes widespread. There is a significant danger that Congress' intention to protect 75% of a worker's wages could be thwarted and all of a worker's wages be lost if the consumer's EFT account were attached.

Rather than impose complex formulae to determine when wages lose their protected status, this section provides a blanket exemption of $1,500 for each consumer depositing his wages by means of electronic fund transfers. This is the same approach adopted by several States, including California and Massachusetts.

Sec. 816. Fiduciary duty of financial institutions—This section imposes a fiduciary duty on financial institutions which effect electronic fund transfers to establish systems which are secure, accurate, and confidential. A financial institution is required to notify a consumer in the event of a legal action against the consumer's account. Information regarding electronic fund transfers can be disclosed only to the consumer, another party in the transfer, persons authorized by law to see the information, and any other person specifically authorized by the consumer.

These standards will require that a financial institution use utmost care in establishing an EFT system to be sure it is secure and accurate. The privacy of consumers will also be protected by requiring that account information be kept confidential. This is an extremely important consideration in view of the vast amounts of personal data which will be stored in computer memory banks.

Sec. 817. *Waiver of rights*—This section prohibits any agreement which would deprive a consumer of any right granted under this title. Agreements may, however, provide greater rights or protections to consumers.

Sec. 818. *Civil liability*—Subject to defenses discussed below, any person who violates this title is liable to a consumer for actual damages, additional damages of $100–$1,000, and reasonable attorney's fees and costs. A suit may be brought in federal or state court within one year of the alleged violation.

Two defenses are available to a defendant: Bona fide error notwithstanding the maintenance of procedures to avoid such an error; and good faith reliance on an interpretation of the Board.

These provisions parallel those of the Truth in Lending, Fair Credit Billing, and Consumer Leasing Acts.

Sec. 819. *Criminal liability*—Any person who knowingly and willfully gives false or inaccurate information, or fails to provide required information, or otherwise violates the Act, may be fined not more than $5,000 or imprisoned not more than one year, or both.

Sec. 820. *Administrative enforcement*—The Act is enforced by the bank regulatory agencies in the case of banks, and by the Federal Trade Commission in all other instances. The agencies may use all their powers and functions to enforce compliance.

This section parallels other federal consumer protection legislation.

Sec. 821. *Reports to Congress*—The Board and Attorney General are to report to the Congress annually on their enforcement activities under the Act.

Sec. 822. *Relation to State laws*—This title does not annul or void State EFT laws unless they are inconsistent. A State law is not considered inconsistent if it provides greater protection than this title.

Sec. 823. *Exemption for State regulation*—The Board may by regulation exempt a State from this title's coverage if the law of such State is substantially similar.

Sec. 824. *Effective date*—The Act takes effect one year after enactment, except for Section 810 (unauthorized electronic fund transfers) which takes effect on the date of enactment.

By Mr. MATHIAS (for himself, Mr. BROOKE, Mr. HEINZ, and Mr. JACKSON):

S. 2066. A bill to amend the National Trails System Act; to the Committee on Energy and Natural Resources.

PROTECTING THE APPALACHIAN TRAIL

Mr. MATHIAS. Mr. President, the Appalachian Trail is the country's most famous long distance hiking trail extending 2,000 miles through the Appalachian Mountain chain. Those mountains are among the oldest in the country and contain unique geologic features.

The hiker traveling the trail can follow the footpath through some of the most primitive and scenic areas of 14 States from Mt. Katahdin, Maine, to Springer Mountain, Ga.

The original concept for the trail was put forth in 1921 by the late Benton MacKaye, a pioneer of regional planning. Mr. MacKaye foresaw a trail linking wilderness areas along the Atlantic seaboard that would be easily accessible to the people living in nearby metropolitan areas. The trail was intended as a "back to nature" respite for the many urban dwellers who wanted to find mental peace and time to think, away from the hurried pace and noise of city life.

In that regard, the trail must be deemed an unqualified success. The large number of hikers on the trail every day of the year attest to that success. An estimated 4 million hikers use the trail each year.

At present, 40 percent of the Appalachian Trail is within national parks and forests; 10 percent is on State-owned land; 10 percent is on roads; and

40 percent crosses privately owned land in easements.

The problem is this: The press of the Atlantic seaboard megalopolis is threatening parts of the trail with development which would be incompatible with the greenbelt corridor the trail provides. Parts of the trail are fragmented and need to be reestablished where and when land is available. Several States in which the trail is located have not been able to provide the money to acquire and maintain the trail right-of-way. As a result, many property owners have unfairly suffered uncompensated loss. And the original National Trails System Act of 1968, which established the trail, was interpreted to limit the width of right-of-way acquisition to not more than 200 feet. This limitation has resulted in title problems, partial land takings, and excessive land speculation on property abutting the trail. It has also resulted in incompatible development within sight and earshot of the trail.

My bill attempts to redress some of these problems. First, it increases the present $5 million authorization level for trail right-of-way acquisition to $89 million. This figure is the best estimate the National Park Service has for projected mapping, surveying, title searches, acquisition, and payment in lieu of taxes for those portions of the trail most threatened by encroachment.

The bill would increase the amount of property that could be acquired through eminent domain from 25 acres in any one mile to 125 acres. This would permit the acquisition or acquired easement of a flexible and much wider trail right-of-way depending on the surrounding land uses.

Finally, my bill would reconstitute the Appalachian Trail Advisory Council to conform to requirements of the Federal Advisory Committee Act. It would also make administration of the advisory committee consistent with most other national parks advisory committees in the payment of travel and attendant expenses, term of appointment of members, and termination date. At present, the 14 State representatives of the Advisory Council are not reimbursed for expenses when they travel out of State to attend the council's meetings.

I believe these amendments to the National Trails System Act will insure the protection of the Appalachian Trail as a continuous footpath for present and future generations to enjoy. Areas now unprotected and threatened by development can be acquired. Once acquired, the costs of operation and maintenance are minimal. Trail construction and maintenance would be the responsibility, as it has been historically, of member trail clubs of the Appalachian Trail Conference. This is, perhaps, the most unique feature of the development and operation of the trail. The Appalachian Trail Conference is a federation of 63 trail clubs which voluntarily devote hours to clearing the trail, rebuilding it when necessary, and marking it. Without the work of those outdoor enthusiasts, the Appalachian Trail simply would not exist. They have worked over the years in a voluntary capacity to maintain the trail in cooperation with the States and Federal Government. And they have performed the yeoman's part of the job without cost to the Government.

In fact, the cost of maintaining the trail has been minimal. And, it is important to note here, that the Federal Government makes a payment in lieu of taxes to those State and local jurisdictions in which the property it owns is located.

Today there are only two designated national scenic trails—the Appalachian and the Pacific coast. Only the Appalachian Trail has a 50-year tradition of volunteer maintenance. But there is a renewed interest in scenic and historic trails, as evidenced by the President's environmental message in May of this year. In that message the President proposed establishing three new national scenic trails.

Last year, the Interior Department appointed a Project Manager for the Appalachian Trail for the first time in its 9-year history. His job is to oversee the trail's development and maintenance. The appointment of this manager indicates to me that the Interior Department is also taking a renewed interest in the trail.

The time for action to protect the trail is now, while there is still the opportunity to reroute parts of the trail, estimated at about 675 miles, to desirable locations without causing relocation of homes or businesses.

And I should emphasize that these amendments are not intended to take any land out of active farming or timbering. Both uses are compatible with the trail and help to enhance the trail experience.

Benton MacKaye foresaw the trends toward urban sprawl and increased leisure time. His proposal for an Appalachian Trail was meant to check the sprawl of east coast cities while simultaneously serving as a rest and relaxation source for those city dwellers at little cost. He recognized that cities function as organic communities only when they are in a harmonious relationship with their surrounding region.

And MacKaye recognized the restorative powers of time spent in the wilderness of the mountains:

> Next there would be perspective. Life for two weeks on the mountain top would show up many things about life during the other fifty weeks down below. The latter could be viewed as a whole . . . away from the heat, and sweat, and irritations. There would be a chance to catch a breath, to study the dynamic forces of nature and the possibilities of shifting to them the burdens now carried on the backs of men. The reposeful study of these forces should provide a broad gauged enlightened approach to the problems of industry. Industry would come to be seen in its true perspective—as a means in life and not as an end in itself.

Continued preservation of the Appalachian Trail as a natural resource is the responsibility of that partnership of volunteers, State, and Federal Government. The simplicity of the concept, its low cost of operation, and the history of private trail club maintenance make the Appalachian Trail a cause worth fighting for.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2066

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) that part of paragraph (3) of subsection (a) of section 5 of the National Trails System Act which precedes the colon in the third sentence thereof is amended to read as follows:

"(3) The Secretary of Agriculture shall establish an advisory council for the Pacific Crest National Scenic Trail. The Secretary of Agriculture shall consult with such council from time to time with respect to matters relating to the trail, including the selection of rights-of-way, standards of the erection and maintenance of markers along the trail, and the administration of the trail. The members of such council, which shall not exceed thirty-five in number, shall serve without compensation or expense to the Federal Government for a term of five years and shall be appointed by the Secretary of Agriculture as follows:".

(b) Subparagraph (iii) of paragraph (3) of section 5 of such Act is amended by deleting the following: ": *Provided,* That the Appalachian Trail Conference shall be represented by a sufficient number of persons to represent the various sections of the country through which the Appalachian Trail passes".

(c) Subsection (a) of section 5 of such Act is amended by adding at the end thereof the following new paragraph:

"(4) There is hereby established an advisory council for the Appalachian National Scenic Trail which shall terminate one hundred and twenty months from date of the enactment of this paragraph. The Secretary of the Interior shall consult with such council from time to time with respect to matters relating to the trail, including the selection of rights-of-way, standards for the erection and maintenance of markers along the trail, and the administration of the trail. The members of the Advisory Council, which shall not exceed thirty-five in number, shall serve without compensation, shall serve for a term of two years, and shall be appointed by the Secretary of the Interior in the manner set forth in subparagraphs (i) through (iv) of paragraph (3) of this subsection.".

(d) Subsection (d) of section 7 of such Act is amended by adding at the end thereof the following: "Notwithstanding the foregoing provisions of this subsection, the provisions of subsection (g), or any other law, the heads of Federal agencies, in connection with the Appalachian National Scenic Trail, may acquire up to one hundred and twenty-five acres in any one mile without the consent of the owner thereof.".

(e) Section 10 of such Act is amended by deleting "$5,000,000" and inserting in lieu thereof "$89,000,000."

ADDITIONAL COSPONSORS

S. 961

At the request of Mr. CRANSTON, the Senator from Colorado (Mr. HART), the Senator from Colorado (Mr. HASKELL), and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 961, to promote the healthy development of children.

S. 1487

At the request of Mr. BELLMON, the Senator from Oklahoma (Mr. BARTLETT)

was added as a cosponsor of S. 1487, to eliminate racketeering in the sale of cigarettes.

S. 1692

At the request of Mr. MELCHER, the Senator from Nevada (Mr. LAXALT) was added as a cosponsor of S. 1692, to reform the Postal Service.

S. 1773

At the request of Mr. JAVITS, the Senator from Iowa (Mr. CLARK) was added as a cosponsor of S. 1773, the age discrimination amendments.

S. 1766

At the request of Mr. RIBICOFF, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1766, the Federal Computer Systems Protection Act.

S. 1819

At the request of Mr. DECONCINI, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1819, the Federal Criminal Diversion Act.

S. 1981

At the request of Mr. DOLE, the Senator from Montana (Mr. MELCHER) and the Senator from Alaska (Mr. GRAVEL) were added as cosponsors of S. 1981, to provide for automatic adjustment to individual retirement accounts.

SENATE RESOLUTION 238

At the request of Mr. CHURCH, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of Senate Resolution 238, calling for a World Assembly on Aging and a World Year on Aging.

SENATE RESOLUTION 242

At the request of Mr. HATCH, the Senator from Texas (Mr. TOWER) was added as a cosponsor of Senate Resolution 242, relating to certain policies of the IRS.

SENATE JOINT RESOLUTION 65

At the request of Mr. KENNEDY, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of Senate Joint Resolution 65, to provide representation in Congress of the District of Columbia.

SENATE RESOLUTION 257—ORIGINAL RESOLUTION REPORTED DURING THE ADJOURNMENT

Under authority of the order of August 5, 1977, Mr. JOHNSTON, from the Committee on Energy and Natural Resources, reported the following original resolution, which was referred to the Committee on the Budget:

S. RES. 257

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of . Such waiver is necessary because S. , containing parts A, B, and G, as amended, of title I of S. 1469, the National Energy Act, authorizes the Administration of the Federal Energy Administration to expend funds and to guarantee loans for certain energy conservation programs in fiscal year 1978.

The authorizations contained in S. , are consistent with the Energy and Natural Resources Committee's March 15, 1977, report to the Committee on the Budget. However, compliance with section 402(a) of the Congressional Budget Act of 1974 with respect to these authorizations was not possible because of—

(1) the extensive hearings and markups necessary for the full consideration of the President's national energy plan proposals submitted to the Congress on April 20, 1977, and

(2) the large number of other matters considered and reported by the Committee on Energy and Natural Resources during the past three months.

AMENDMENTS SUBMITTED FOR PRINTING

REDWOOD NATIONAL PARK—S. 1976

AMENDMENTS NOS. 827, 828, AND 829

(Ordered to be printed and referred to the Committee on Energy and Natural Resources:)

Mr. CRANSTON submitted three amendments intended to be proposed by him to the bill (S. 1976) to add certain lands to the Redwood National Park in the State of California, to strengthen the economic base of the affected region, and for other purposes.

CIVIL RIGHTS ACT AMENDMENTS—S. 995

AMENDMENTS NOS. 830, 831, AND 832

(Ordered to be printed and to lie on the table.)

Mr. HATCH (for himself and Mr. HELMS) submitted three amendments intended to be proposed by them jointly to the bill (S. 995) to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy.

NATIONAL ENERGY POLICY—S. 1469

AMENDMENT NO. 833

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. HART submitted an amendment intended to be proposed by him to the bill (S. 1469) to establish a comprehensive national energy policy.

SACCHARIN STUDY—S. 1750

AMENDMENT NO. 834

(Ordered to be printed and to lie on the table.)

Mr. CANNON (for himself, Mr. CRANSTON, Mr. DOMENICI, Mr. GOLDWATER, Mr. HAYAKAWA, Mr. STEVENS, Mr. STONE, Mr. THURMOND, Mr. TOWER, Mr. WALLOP, and Mr. ZORINSKY) submitted an amendment intended to be proposed by them jointly to the bill (S. 1750) to amend the Public Health Service Act and the Federal Food, Drug, and Cosmetic Act, as amended, to conduct studies concerning toxic and carcinogenic substances in foods, to conduct studies concerning saccharin, its impurities and toxicity and the health benefits, if any, resulting from the use of nonnutritive sweeteners including saccharin; to ban the Secretary of Health, Education, and Welfare from taking action with regard to saccharin for 18 months, and to add additional provisions to section 403 of the Federal Food, Drug, and Cosmetic Act, as amended, concerning misbranded foods.

ENERGY CONSERVATION—S. 977

AMENDMENT NO. 835

(Ordered to be printed and to lie on the table.)

Mr. DOMENICI submitted an amendment intended to be proposed by him to the bill (S. 977) to require the new and, to the extent practicable, existing electric powerplants and major fuel-burning installations, in categories to be determined, utilize other than natural gas or petroleum as their primary energy source in compliance with applicable environmental requirements, and for other purposes.

AMENDMENT NO. 836

(Ordered to be printed and to lie on the table.)

Mr. HANSEN (for himself, Mr. WALLOP, Mr. SCHMITT, Mr. GARN, Mr. HATCH, Mr. MCCLURE, Mr. LAXALT, Mr. DOMENICI, Mr. HAYAKAWA, Mr. BENTSEN, and Mr. HELMS) submitted an amendment intended to be proposed by them jointly to the bill (S. 977), supra.

AMENDMENT NO. 837

(Ordered to be printed and to lie on the table.)

Mr. ROTH submitted an amendment intended to be proposed by him to the bill (S. 977), supra.

AMENDMENT NO. 838

(Ordered to be printed and to lie on the table.)

PREVENTING FURTHER OIL COMPANY ACQUISITIONS OF COAL AND URANIUM RESOURCES

Mr. KENNEDY. Mr. President, tomorrow I will be calling up an amendment to prohibit major oil and gas producers from acquiring any further interests in coal and uranium assets. It is not a divestiture amendment, and would not affect the ability of any firms presently holding coal and uranium resources to move forward with development of those resources. Nor would it affect any corporate structure or relationship presently existing.

Moreover, where an exception to this ban would not lessen competition and would substantially promote increased production, the Secretary of Energy and the Secretary of the Interior can certify an exception or exemption from the prohibition.

So that my colleagues can have the opportunity to review this amendment in its entirety—which will be considered tomorrow—I ask unanimous consent that the amendment be printed in the RECORD at this point.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 838

On page 139, between lines 7 and 8, insert the following new section:

PROTECTION OF COMPETITION

SEC. 6. (a) The Energy Supply and Environmental Coordination Act of 1974, as amended by this Act, is further amended by adding at the end thereof the following new title:

"TITLE V—PROTECTION OF COMPETITION

"DEFINITIONS

"SEC. 501. As used in this title the term—

"(1) 'person' means an individual, corporation, partnership, joint venture, joint stock

company, trust, trustee in bankruptcy, receiver in reorganization, association, or any organized group, whether or not incorporated, but does not include any authority of the United States or of the several States;

"(2) 'control' means a direct or indirect legal or beneficial interest in, or direct or indirect legal power or influence over, another person or asset arising through direct, indirect, or interlocking ownership of capital stock, interlocking directorates or officers, or contractual relations which substantially impair the independent business behavior of another person;

"(3) 'affiliate' means a person controlled by, controlling, or under or subject to common control with respect to any other person;

"(4) 'Outer Continental Shelf' has the same meaning as provided for such term in section 2(a) of the Outer Continental Shelf Lands Act (67 Stat. 462);

"(5) 'major petroleum producer' means any person (including all affiliates of such person) who, during the calendar year 1976, or in any subsequent calendar year, produced within the United States (including the Outer Continental Shelf) a total of fifty five million barrels of crude oil and condensate and natural gas liquids, or whose interest in crude oil and condensate and natural gas liquid production within the United States totalled fifty-five million barrels, or who produced within the United States (including the Outer Continental Shelf) one hundred billion cubic feet of natural gas, or whose interest in natural gas production within the United States totalled one hundred billion cubic feet;

"(6) 'Commission' means the Federal Trade Commission;

"(7) 'coal asset' means natural deposits of coal in recoverable quantities;

"(8) 'uranium asset' means natural deposits of uranium in recoverable quantities; and

"(9) 'antitrust law' means the Sherman Act, the Clayton Act, or the Federal Trade Commission Act.

"UNLAWFUL ACQUISITIONS

"SEC. 502. Notwithstanding any other provision of law, it is unlawful for any major petroleum producer to acquire any interest in or control over any coal asset or uranium asset after the date of enactment of this Act.

"EXEMPTION AUTHORITY

"SEC. 503. Upon the recommendation of the Secretary of Energy and the Secretary of the Interior, the Commission may, after consultation with the Attorney General of the United States, exempt specific persons otherwise subject to the provisions of section 502 of this Act with respect to a specific acquisition of a coal asset or uranium asset if the Commission finds that such acquisition—

"(1) would significantly enhance energy resource production; and

"(2) would not create or maintain a situation inconsistent with the antitrust laws.

"REPORTS

"SEC. 504. Not later than thirty days after the date of enactment of this Act, each major petroleum producer who owns or controls any interest in any coal asset or uranium asset shall file with the Commission and the Attorney General of the United States a report listing and describing its interests in such assets. Each major petroleum producer shall also file a report with the Commission and the Attorney General of the United States listing and describing any coal asset or uranium asset hereafter acquired within 30 days of the date of acquisition thereof and any coal asset or uranium asset held or controlled, but not previously reported, within 30 days of the date such major petroleum producer learns of the existence of such coal or uranium asset. The Commission or the Attorney General of the United States may order such major petroleum producers to file additional reports and may order any other person to file reports as it deems necessary to carry out the purposes of this Act.

"SANCTIONS

"SEC. 505. (a) Any person, or any officer, director, or partner thereof, who violates any provision of this Act shall be subject to a civil penalty of not more than $100,000, in the case of an individual, or not more than $1,000,000, in the case of a corporation. Such penalties shall accrue to the United States.

"(b) Any person, or any officer, director, or partner thereof, who violates a lawful order of the Commission issued pursuant to this Act shall be subject to a civil penalty of not more than $5,000 for each such violation which shall accrue to the United States. Each separate violation of such an order shall be a separate offense, except that in the case of a violation through continuing failure or neglect to obey an order of the Commission, each day that such failure or neglect continues shall be deemed a separate offense.

"(c) The Commission may enter such order as may be appropriate and the Attorney General may obtain in the courts of the United States such equitable relief as may be appropriate, to accomplish the purposes of this Act.

"REPORT ON SOLAR ENERGY

'SEC. 506. Not later than one year after the date of enactment of this Act, the Commission shall report to the Congress the extent to which the control of solar energy technology by major petroleum producers may be retarding the production of solar energy and the extent to which such control may limit the competition of solar energy with petroleum and other more conventional energy sources.

"APPLICATION OF ANTITRUST LAWS

"SEC. 507. Nothing in this title shall be deemed to convey to any person immunity from civil or criminal liability, or to create any defenses to actions, under any antitrust law."

(b) Notwithstanding the provisions of section 7 of this Act the amendment made by this section shall become effective on the date of enactment of this Act.

Mr. KENNEDY. Mr. President, I also ask unanimous consent that a factsheet containing background on the amendment be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FACTSHEET—AMENDMENT TO PROTECT INTERFUEL COMPETITION

I. This is not a divestiture amendment;

Major oil and gas producers would not be required to give up coal or uranium properties they now hold.

But, major oil and gas producers would not be allowed to acquire additional interests.

Interfuel competition would be preserved and enhanced by ensuring that future entrants into the coal and uranium industry have no conflicting interests in oil and gas.

II. Why should we limit oil company entry into other fields?

Concentration has been growing within the crude oil producing industry itself: In 1955 the eight largest producers had 36 percent of domestic production; in 1975, it was more that 54 percent—the eight largest producers in 1975 had just about the same market share as the 20 largest of 1955.

Oil companies accounted for 25 percent of the country's uranium output in 1970—and for 49 percent by 1975. Today, according to an Exxon statement, oil companies hold 60 percent of the nation's privately-held uranium reserves.

In 1966 two major oil companies accounted for 11 percent of the nation's coal output; in 1976, eight oil companies produced more than 20 percent of the country's coal. But a number of other oil companies are holding coal properties for speculation of future coal prices or future development of coal liquefaction or gasification technology. As a result, roughly two dozen oil and gas companies own more than 40 percent of the nation's privately-held coal reserves.

In other words, a handful of major companies not only control domestic crude oil production, but they are rapidly expanding their control over the principal competitive energy resources.

III. How will this amendment help preserve competition?

Major oil and gas producers (the top 16 oil companies and 6 large gas producers) will no longer be able to acquire coal or uranium production companies.

Even more important is the disposal of unleased reserves. Today, well over 100 billion tons of economically-recoverable coal is found on properties which have not yet been leased. An unknown, but large, volume of potential uranium reserves is yet to be found and exploited. What this amendment will do is ensure that these reserves will go to producers who have no interests in oil and gas, and, indeed, have every reason to compete vigorously against the oil and gas companies to market their own fuels, and to petroleum producers too small to control oil and gas prices.

IV. Can this amendment hurt the oil and gas industry?

No. No present holder of coal or uranium interests will be required to divest them. Basically, we simply warn major oil and gas companies not to make such investments in the future.

Of the 16 major oil companies, at least 15 have coal interests. Most of these are substantial—

Exxon, for example, has announced a 1985 production target of 40 million tons/year. At this rate of production the company's present coal reserves would last more than 200 years;

Continental Oil—the country's second-largest coal producer—had 56 million tons' output last year. Should Continental raise its production rate to 100 million tons/year, its reserves would last for more than a century.

Sohio has much smaller reserves—less than a billion tons. At last year's production rate, Sohio will run out of coal in about 85 years.

Companies like Phillips, Mobil, Shell, Arco, and Sun Oil are all in the multi-billion ton coal reserve class, without ever having mined a single ton. The biggest risk they face in becoming major producers is that coal may become technologically obsolete before they could exhaust their reserves.

Much the same situation appears in uranium. Of the sixteen major oil companies, ten have reported holding uranium reserves. Others are engaged in exploration and may well hold reserves which have not been publicly reported.

In short, major oil and gas companies hold important positions in the coal and uranium industries, and are in a position to profit from their investments in these industries.

The amendment does not restrict any company's ability to exploit the investments which it has already made. It says only that major oil and gas producers cannot continue to acquire an ever-increasing share of these alternative fuel industries.

V. What about the smaller oil and gas companies?

The major oil and gas producers have clearly demonstrated their ability to control the petroleum industry to their own benefit.

There is not one of them which is not engaged in a web of joint ventures with its so-called competitors, a world-wide web which cannot help but be anticompetitive and which would never be tolerated in any other industry by the antitrust authorities.

This is the danger which we hope to avoid in competitive energy industries.

The smaller oil and gas producers are often large enough to finance coal and uranium production. At the same time they are small enough petroleum producers to lack any market power in that industry. Kerr-McGee, for example, is the largest uranium producer in the world. While it is an "oil company," its domestic production is less than 0.2 percent of the domestic industry's. Clearly, Kerr-McGee has no influence over oil prices which could create a conflict with its uranium interests.

If there is any merit to the major oil company argument that oil industry technological skills can be transferred to the search for alternative fuels, the smaller companies are fully equipped to accomplish this. Nearly all onshore exploration and development of oil resources in recent years has been carried out by companies other than the sixteen majors.

VI. What's wrong with the major oil companies owning all the coal and uranium resources they can get hold of?

Coal and uranium are naturally competitive with oil and gas in important markets. If coal and uranium markets are themselves competitive, they exert downward pressures on oil and gas prices. Obviously it makes no sense to permit those companies which have vested interests in high oil and gas prices—and the market power to achieve those prices—to also control the very substitutes which are competitive.

To date, the record of oil company development of their coal resources is remarkably unimpressive. Five oil companies had coal production in 1970 (Gulf, Continental, Sun, Sohio, and Exxon). Their coal production between 1970 and 1976 went down by 17 percent. Meanwhile, in response to rising coal prices, the rest of the industry expanded production by 17 percent. Exxon, which began producing coal during 1970, was the only one of the five to increase output.

In the long run there is another problem. The future market for coal may be in liquefaction or gasification, which would greatly widen the area of competition with conventional oil and gas. There is at least the temptation for a company with large oil and gas reserves to avoid risking any drop in the value of those reserves which would result from aggressive technological development of efficient, economic methods of utilizing coal.

Finally, the international commitments of the majors could tempt them, at least, to go slow on coal and uranium development. For example, the United States is now a major market for Saudi Arabian oil. The Aramco owners' existing and planned investments in Saudi Arabia come to billions of dollars. Would these investments be jeopardized if the Aramco owners developed their coal and uranium resources in a manner which threatened to eliminate the U.S. market for Saudi oil? Would the present favored position of the Aramco owners as virtually exclusive agents for the worldwide marketing of Saudi oil be threatened if they are pushing substitute fuels to a degree which threatens to reduce the market for Saudi oil? These are the types of conflict which inevitably arise when major international oil companies gain a position of influence over supplies of competitive fuels.

VII. Would this amendment reduce the availability of capital to the coal and uranium industries?

Of course not. Again, the major companies nearly all have large reserves of coal and uranium—reserves which will absorb huge sums of capital if they are diligently developed. The most obvious reason for such companies to acquire still more reserves is not to develop them, but to foreclose any potential competitor from developing them.

The failure of oil companies to develop their coal reserves in recent years is not surprising. While competitive coal prices were low, the rate of return on coal investments was less than what the oil companies were used to or would accept. Now that coal prices are much higher than they were—and the industry has become very profitable—the oil companies are starting to develop their reserves.

In other words, if coal production is not profitable enough to attract investment funds from the banking community, the oil companies won't put money in either. If the industry is profitable enough to persuade oil owners of coal reserves to spend money on development, the coal industry itself can attract non-oil company funds.

To summarize: coal and uranium should be profitable enough over the next decades to attract ample financing, even if there were no oil company involvement in these industries. But the amendment does not push anyone out of coal or uranium. The major companies, subject to the amendment, already have ample reserves which they are free to develop. Smaller oil and gas producers are still welcome to enter these other industries.

Mr. KENNEDY. Finally, Mr. President, I think that my colleagues will be interested in the conclusions and recommendations of the Tennessee Valley Authority, in a major report which was transmitted this morning to the President and the Congress. These conclusions and recommendations from the report's last chapter are brief, and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONCLUSIONS AND RECOMMENDATIONS

In this final chapter, we have again summarized our conclusions concerning the structure of the coal and uranium markets and have set out our recommendations for TVA actions to maintain and improve competition in those markets.

A. CONCLUSIONS

The major conclusions of this report may be summarized as follows.

1. *The steam coal markets*—

a. Bituminous and lignite coal form a distinct product market. Steam coal is traded in a national market and four important regional markets including the Midwest, Appalachia, Northern Great Plains, and Southwest.

b. The national steam coal market is concentrated and increasing in concentration. The market is dominated by a small group of energy companies.

c. Concentration in three of the four principal regional markets (Midwest, Northern Great Plains, and Southwest) is even higher than in the national market.

d. The Midwest coal market is an oligopoly, and all but one of its principal competitors are energy companies who have entered the market since the early 1960's. The concentration in the Midwest is of particular concern to TVA since that market supplies us with 70 percent of our coal receipts.

e. The Northern Great Plains and the Southwest coal markets are important to TVA as potential sources of low sulphur coal. Each of those fields is highly concentrated and tending toward increased concentration.

f. Two recent mergers may have substantial adverse effects on the western coal markets. Socal's acquisition of a substantial minority interest in AMAX Coal Company tied one of the Northern Great Plains' largest coal producers to the Nation's fourth largest energy company. General Electric's merger with Utah International will give GE control of the second largest coal producer in the Southwest.

g. At the same time the energy companies were acquiring the coal companies and concentration in the coal markets was increasing, the price of coal increased drastically. After TVA's average cost per ton of coal remained relatively constant from 1963 through 1969, it increased steadily from 1970 to 1974, and thereafter rose so sharply that by 1976, coal cost four times more than in 1969.

h. The changes in the competitive structure of the coal industry during the last 13 years and the major increase in the price of coal were instrumental in forcing TVA to nearly double average residential electric rates between 1970 and 1975.

2. *The uranium market*—

a. There is a distinct national uranium market.

b. Concentration in the uranium industry is high and has been high for at least the last 10 years. In addition, the uranium market is dominated by the same small group of energy companies which dominate the coal markets.

c. Skyrocketing like coal and petroleum prices, the price of uranium concentrate has tripled in the last three years.

3. *The coal and uranium market*—

a. Although coal and uranium are traded in distinct markets, the fuels are substitutes for power generation and together they form a third distinct market.

b. The markets for coal and uranium are dominated by the same group of energy companies, all of whom have entered the coal and uranium industries in the last 10 or 15 years.

c. The energy companies exercise sufficient control over the coal and uranium markets to be able to hamper interfuel price competition.

B. RECOMMENDATIONS

The major recommendations of this report may be summarized as follows:

1. *Solutions involving litigation*—

a. The coal and uranium markets are so concentrated that any further mergers of large coal companies, uranium companies, or energy companies, will noticeably increase concentration and the likelihood of uncompetitive pricing and practices. Therefore, we recommend that TVA establish procedures to constantly monitor the energy markets, and upon finding mergers, to make our opposition known to the appropriate officials at the FTC or the Department of Justice.

The procedures for monitoring the energy markets need not be particularly expensive or time consuming. One person (preferably a lawyer or economist) can easily stay current with the coal and uranium markets by following the financial pages of a major newspaper in addition to several coal and uranium trade publications.

In addition, we need to maintain our contacts at the FTC and Justice Department to have effective means of presenting our opposition to particular mergers or other anticompetitive conditions.

b. We recommend that we make our opposition to particular mergers known to the public. We think one of the things merging companies watch for, and the enforcement agencies react to, is adverse public opinion and potential opposition.

For example, the Mapco/Falcon merger in the fall of 1975 was dropped shortly after it became publicly known that TVA was actively assisting the FTC in its investigation. Perhaps that was a coincidence.

In any event, TVA is a giant in both the coal and the uranium markets. When a merger or other occurrence threatens to hurt us, we think we should complain, loudly.

c. If the FTC or the Department of Justice will not bring suit, if necessary, to prevent an energy company merger, we recommend that TVA be prepared to bring the suit itself.

It is not clear that TVA can bring a suit for divestiture. While the Fifth Circuit and others have held that divestiture is a remedy available to private litigants, such as TVA (*Dailey* v. *Quality School Plan, Inc.*, 380 F.2d 484 (5th Cir. 1967); *Carlson Cos.* v. *Sperry & Hutchinson Co.*, 507 F.2d 959 (8th Cir. 1974); *Gottesman* v. *General Motors Corp.*, 414 F.2d 956 (2d Cir. 1969)), other courts have held to the contrary (*Utah Gas Pipelines Corp.* v. *El Paso Natural Gas Co.*, 233 F. Supp. 955 (D. Utah 1964)). Therefore, if we want to prevent the merger altogether, we probably should seek an injunction blocking the consummation of the merger, rather than bringing suit after the merger is complete.

d. If we are going to spur the enforcement agencies to action, we think we should be prepared to back them up with whatever assistance (at whatever cost) we can reasonably provide. While we certainly know more about the energy markets in which we compete, the FTC and Justice Department are much better equipped, staffed, and funded to pursue antitrust litigation.

e. We recommend that TVA not challenge any completed energy company mergers at this time. No matter how compelling a suit might have been brought at the time of the merger, most of the mergers are now over five years old and there are substantial questions as to TVA's laches and the statute of limitations which would likely bar relief.

2. *Solutions involving legislation*—

a. We recommend that TVA actively support legislation to prevent energy company formation and growth from further acquisitions. Competition in both the coal market and the uranium market would be helped if those two markets had to compete with each other.

We think reasonable legislation would include the following provisions:

1. No large firm shall be allowed to acquire by merger or de novo any interests in more than one fuel of the three primary fuels—petroleum, coal, and uranium. That is, oil companies would not be allowed to purchase interests in either coal or uranium; but

ii. To avoid massive dislocation in the fuel markets, existing energy companies would not be required to divest themselves of their current multiple fuel interests, but they would be prohibited from further acquisitions.

b. Uncertainty about Government energy policies makes investment in energy ventures a rather risky business. Some of that risk can be eliminated by an energy company diversifying into multiple energy fields. A small company with a single fuel interest, on the other hand, cannot achieve that diversity and is subject to the full risk of changes in energy policy. Therefore, one way to improve energy market competition is for the Government to adopt a stable, rational long-range energy policy on which all energy firms can reply. TVA Board Chairman, Aubrey J. Wagner, called for such an energy policy in a speech to the Mississippi Public Power Association in October of 1976. ("Guidelines to Prevent Disaster," *TVPPA News* 2 (Oct. 1976)). We hardly need to recommend that TVA continue to push for such an energy policy.

NOTICES OF HEARINGS

FEDERAL CRIMINAL DIVERSION ACT

Mr. DECONCINI. Mr. President, I wish to announce that the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary will hold another open public hearing on S. 1819, the proposed Federal Criminal Diversion Act of 1977.

The hearing will be held on September 19, 1977, commencing at 9 a.m., in room 2228, Dirksen Senate Office Building.

Persons who wish to testify or submit a statement for inclusion in the record should communicate as soon as possible with Tim McPike of the subcommittee staff, 6306 Dirksen Senate Office Building, Washington, D.C. 20510; telephone 224–3605.

JUDICIAL TENURE ACT

Mr. DECONCINI. Mr. President, I wish to announce that an open public hearing will be held by the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary on September 14, 1977, on S. 1423, the proposed Judicial Tenure Act.

The hearing will be held in room 2228, Dirksen Senate Office Building, commencing at 9 a.m.

Persons who wish to testify or submit a statement for inclusion in the record should communicate, as soon as possible, with the subcommittee office, 6306 Dirksen Senate Office Building, Washington, D.C. 20510; telephone 224–3618.

HEARINGS ON THE IMPLEMENTATION OF THE JUVENILE JUSTICE AND DELINQUENCY PREVENTION ACT OF 1974

Mr. CULVER. Mr. President, on September 27 and 28 the Subcommittee to Investigate Juvenile Delinquency will hold hearings on the Implementation of the Juvenile Justice and Delinquency Prevention Act of 1974. The hearings will focus on the extent to which States have made progress toward the goal of removing juveniles who have engaged in noncriminal misbehavior from detention and correctional facilities in accordance with the mandate of the act.

The hearings will begin at 9:30 a.m. in room 4200 of the Dirksen Senate Office Building, Washington, D.C. Any questions regarding the hearings should be directed to Josephine Gittler, chief counsel for the subcommittee.

SUBCOMMITTEE ON PARKS AND RECREATION

Mr. JACKSON. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of a public hearing before the Parks and Recreation Subcommittee of the Senate Energy and Natural Resources Committee.

The hearing is scheduled for September 23, 1977, beginning at 9 a.m., in room 3110 of the Dirksen Senate Office Building. Testimony is invited regarding the following bills:

S. 1156—To authorize the establishment of the San Antonio Missions National Historical Park in the State of Texas, and for other purposes.

S. 1671—To designate the Absaroka-Beartooth Wilderness, Custer and Gallatin National Forests, in the State of Montana.

S. 1791—To authorize the establishment of the Chattahoochee River National Recreation Area in the State of Georgia, and for other purposes.

For further information regarding the hearings you may wish to contact Mr. Thomas Williams of the subcommittee staff on extension 47145. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Parks and Recreation Subcommittee, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

JUDICIAL NOMINATIONS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Thursday, September 15, 1977, at 10 a.m., in room 2228 Dirksen Senate Office Building, on the following nominations:

Procter R. Hug, Jr., of Nevada, to be U.S. circuit judge for the ninth circuit vice Ben Cushing Duniway, retired.

Alvin B. Rubin, of Louisiana, to be U.S. circuit judge for the fifth circuit vice John Minor Wisdom, retired.

Harry H. MacLaughlin, of Minnesota, to be U.S. district judge for the district of Minnesota vice Earl R. Larson, retired.

Any persons desiring to offer testimony in regard to these nominations, shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

FREEDOM OF INFORMATION ACT

Mr. ABOUREZK. Mr. President, I wish to announce that the Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee will hold hearings on the Freedom of Information Act. The hearings are scheduled for September 15 and 16 and October 6, 1977. The September 15 hearing will be in room S–126, the Capitol, the September 16 hearing will be in room 2228, Dirksen Senate Office Building, and the October 6 hearing will be in room 1202, Dirksen Senate Office Building, at 10 a.m. each day.

Any person wishing to appear and testify or to submit a statement should contact the subcommittee staff in room 162, Russell Senate Office Building, telephone 224–5617.

ADDITIONAL STATEMENTS

EIGHTEEN YEARS AFTER STATEHOOD, HAWAII IS STILL MORE THAN A PRETTY PLACE

Mr. MATSUNAGA. Mr. President, while the Senate was in its nonlegislative work period, the people of Hawaii celebrated its 18th anniversary of statehood. It was on August 23, 1959, that the bill granting statehood to Hawaii was signed into law by President Dwight D. Eisenhower.

The final enactment of the statehood bill was the culmination of more than 50 years of persistent appeal. The first petition calling for statehood was presented

to Congress by the people of Hawaii in 1903—only 3 years after Hawaii became a U.S. Territory. Beginning in 1919, every single territorial delegate to Congress offered resolutions providing for Hawaii's admission to the Union.

In 1959, I was a member of the Territorial legislature and I well remember the day in March when the statehood bill finally passed Congress. The U.S. Senate acted first, passing the bill on March 11. On March 12, we all gathered in the throne room of the Iolani Palace in Honolulu—the Territory's capital building at that time—to await word on the House action. Our Territorial delegate, John A. Burns, had promised to call us long distance as soon as the vote was taken. His announcement of the favorable vote was greeted with a deafening cheer, followed immediately by an almost mystical silence. It was as if all those present had joined in silent prayer, to thank God for the great blessing bestowed on the people of Hawaii, and to ask for His guidance in their new and heavier responsibilities.

After 18 years of statehood, Hawaii remains, in the words of Mark Twain:

The loveliest fleet of islands anchored in any ocean.

Unique because of its location in the mid-Pacific, Hawaii nevertheless shares the hopes, dreams, aspirations, and problems of its 49 sister States. It is "more than a pretty place," as the Hawaii Visitors Bureau said in a recent promotional campaign.

The island State was selected by President John F. Kennedy as the site of his first major civil rights address in June 1963 because, he said:

Hawaii is what the United States is striving to be.

With its multiethnic, multiracial, and multicultural population, Hawaii still is the embodiment of the American dream which our forefathers had in mind when they founded this Nation more than 200 years ago. Moreover, Hawaii was the first State to ratify the equal rights amendment to the U.S. Constitution, acting only a few hours after its passage by the U.S. Congress. Hawaii was among the first to give the right to vote to the 18-year-old.

In selecting Honolulu to be the site of the Center for Cultural and Technical Interchange Between East and West—the East-West Center—President Lyndon Baines Johnson recognized Hawaii's crucial importance as a bridge between Asia and the nations of the Western World. Every succeeding President, right up to President Jimmy Carter, has endorsed the concept that the United States should remain a "Pacific power" through the means of peaceful, cultural, scientific, and educational exchange. Every President has recognized the vital role of the East-West Center in connection with this effort. Every Congress has strongly supported its continuance since the center was created.

A pioneer in the fields of tropical agricultural research and tropical medicine, Hawaii will probably pave the way to solving the problems of world hunger and disease, particularly in the developing nations of the Third World.

The 50th State is also a leader in the search for innovative new sources of energy and, in recent years, has made tremendous progress in its efforts to harness solar, geothermal, ocean thermal, and wind power.

The clean air and clear atmosphere atop Mauna Kea, one of the world's tallest mountains, led scientists from France, Canada, and the University of Hawaii to select that spot for the world's second-largest telescope. The Mauna Kea Observatory will also play a major role in our future space explorations.

Hawaii's ideal geographic location, its favorable climate, and its progressive government have also attracted the attention of business leaders here at home and abroad. With the rapid advancement of communications technology, it is becoming a Pacific center of trade, commerce, finance, and research and development.

These changes have not occurred without some cost, of course. That the people of Hawaii have managed to retain their unique aloha spirit, their cultural diversity, their beautiful scenery, clean air, and fine beaches, is the real miracle of the island State and one which is appreciated by resident and visitor alike. Their many friends in Congress who worked long and hard to make the people of Hawaii full citizens of this great Nation can be truly proud of them.

THE HUMANITIES AND THE ARTS FOR URBAN SURVIVAL

Mr. MATHIAS. Mr. President, so much has been written about our cities in the past several years that it is hard to conceive that there is still something fresh to say. But Kent Mullikin, Jr., staff associate of the National Humanities Center in Research Triangle Park, N.C., gave a talk which seems to me to analyze the significance of our cities to our civilization with unusual clarity and freshness.

Speaking at a symposium sponsored by Far Rockaway High School in Far Rockaway, N.Y., in May, Mr. Mullikin deftly and cogently outlined the interrelationships of cities and civilization. He defined the humanities within the context of our cities and he measured our cities to the size of man. There is no doubletalk in Mr. Mullikin's lecture; it is direct, sensible and, to my mind, important. I commend his words to the attention of my colleagues and ask unanimous consent that the full text of his talk, entitled "The Humanities and the Arts for Urban Survival," be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE HUMANITIES AND THE ARTS FOR URBAN SURVIVAL

(By Kent Mullikin)

It is a privilege to take part in the Humanities Enrichment Program here at Far Rockaway. I do so gladly but humbly, realizing that the obvious success of this program is owing in part to the National Humanities Faculty Members who have been here before me, but is owing most of all to the energies and imagination of the Far Rockaway teachers and students, who have been here all along. I congratulate Max Schrier and his colleagues and I congratulate Vicki, Laura, Fern, Hank, and their fellow students in the Humanities and Arts Program.

To give you a sense of where I'm from I grew up in Annapolis, the capital of Maryland—a city in which everything was in walking distance. I have studied in Baltimore and Dublin, both of which are cities with strong personalities. I have taught in Beirut, Lebanon, a city now in ruins, and Washington, D.C.—which some people would also classify a disaster area (for different reasons). I'm still a young man (you might not think so, but I am) but even I have seen the city change. I also know the changes my father has seen. He was born in 1899. His first visit to Annapolis was in a horse-drawn buggy in 1908. One of his earliest memories is being taken outside one night in 1904 to see the glow in the sky from the great Baltimore fire, twenty-five miles away. I, too, have seen Baltimore in flames—not as the result of a careless accident as in 1904 but as a result of frustration, poverty, and rage—in 1968 after the murder of Martin Luther King. As I said, I have a sense of change.

Today I want to talk about the central role of the city in human civilization, to say something about the humanities, to look at some past and present attacks on the city, and to try to look toward the future.

Recently I was reading a best-selling book. It begins in a peaceful rural environment but ends in the city. It got me thinking about the ancient human pattern of movement from country to city. According to the Greek and Roman myths, man began as a solitary creature living in the forest. Eventually, great legendary leaders used the art of rhetoric to persuade their fellow men to co-operate in the building of cities.

The name of that best-selling book I mentioned is the Bible. It begins in the Garden of Eden and ends in the ideal city, the New Jerusalem. Unfortunately, human life takes place somewhere between these two perfect places—you might say in a temporal suburbia. Nevertheless, I want to stress that ancient pattern of movement to the city as one which is very deeply etched in the Judaic and Christian, Greek and Roman, in the European imagination—that is to say, in the mainstream of Western culture. The touchstones of our culture are cities: in the religious tradition in the holy cities of Zion, Rome (or to shift from our exclusive focus on the West, Byzantium, Mecca, Delhi); in the philosophical tradition, Athens; musical, artistic and in the literary traditions, Vienna, Florence, Paris, London, etc. All are integral parts of the human experience. Man is a city-builder. The city is a work of human art. Our word civilization is linked to the Latin word for city; our word politics is linked to the Greek word for city.

But let me interrupt this around-the-world-in-80-days grand tour of great cities and climb down from my beautiful balloon to take a closer look, to zoom in for a close-up. The gerat cities of the past were not all shining marble palaces and refined civilization. One about which I have read is eighteenth-century London. In the early 1700's, London had its full share of urban poverty, disease, vice, and squalor. It's worth remembering that Daniel Defoe not only wrote the famous book about Robinson Crusoe's life on a desert island; he also wrote an account of the year when the plague swept through the city; he wrote about Moll Flanders, a London prostitute; and he wrote about a character called Colonel Jack, who started out in life as a pickpocket. The high crime rate in London evidently was not affected by the fact that criminals—men, women, and even children—were hanged in public,

to the great entertainment of the London crowds, who went to executions with something of the same spirit that we go to picnics or carnivals.

Violence, crime, and let's not forget squalor, for London was a mess. Here is Jonathan Swift's description of a London street after a sudden shower of rain:

"Sweepings from butchers' stalls,
dung, guts, and blood,
"Drowned puppies, stinking sprats,
all drenched in mud,
"Dead cats and turnip-tops come
tumbling down the flood."

When you walked through those streets you risked having a basin or bucket of something emptied on your head from a second-story window—and in the days before indoor plumbing, you can guess what that something might be.

Such were the sights and smells of the *real* London of 200 years ago: not too sweet. And yet, Samuel Johnson, one of the greatest Londoners of that day and of that time, a man who came to the city poor and was well acquainted with its back-streets and misery before he succeeded, would not tolerate anyone's saying that life in the country was preferable. Johnson declared "When a man is tired of London, he is tired of life; for there is in London all that life can afford." It has been said [by Joseph Wood Krutch] that—

"London was to Johnson first and foremost not London's filth or suffering or degradation. For him London was above all the center of learning. . . . Cities were the characteristic product of man's effort to raise himself above the animal level, to create a world of thoughts and aims and institutions human rather than natural . . . [cities were] the greatest of man's achievements."

These resources of the city sustained Johnson, and they still sustain people today. You may have seen the article in the *Times* not long ago that presented the statistical evidence of a psychological survey which concluded that mental health was better in New York City than in the countryside. (Now I can assure all my friends in New York, "You only *think* it's driving you nuts." One of them replied, "You see, we're like cockroaches. We develop immunities to any poison.") Seriously, the point of the article in the *Times* was that the varied cultural riches of New York supplied things that people really need.

Samuel Johnson also argued that: "No wise man will go to live in the country. A great city is proper school for studying life" and repeated a favorite line by Alexander Pope: "The proper study of mankind is man." (Today, Pope might have to write "The proper study of person-kind is person.") However you take it, Pope's line brings me to the other aspect on my topic—I've been talking about the city and now I want to say something of the humanities.

In the first place I am not sure what the term "humanities" means. If you are unsure too, don't worry. The National Endowment for the Humanities, the Federal Agency charged directly with their support, states that "there are few concepts in our language as imprecisely defined as the humanities." Having made my excuses, I'll offer something like a definition. The humanities have as their special province certain large areas of human effort and imagination, including not only works of art and music, literature, philosophy, history, and theology but also more generalized creations such as social structures and codes of law. The humanities extend the boundaries of our sympathy and understanding as well as our knowledge by locating us in the contexts of human history and human diversity. The humanities have to do with the things that endure in human experience, both its possibilities and its limitations.

As the focal points of human civilization, the cities of the world have traditionally generated the stuff of the humanities. The question we face today is whether or not we are slowly losing a humanistic conception of the word "city." At the same time, there is concern about the state of the humanities. Not long ago a young humanist scholar was confronted with the proposition that the humanities are going to hell. He thought a minute and replied, "Why that's impossible; we've got all the good books." What do we say to those who claim the cities are going to hell?

There have always been critics of the city—from the prophet Jeremiah who wept over Jerusalem, to the patriot Thomas Jefferson who hoped for a rural and agricultural America. There have been those to whom the city was not Zion but Babylon, and there are plenty of folks today who'd say that New York is a whole lot closer to Sodom and Gomorrah than to the heavenly Jerusalem. In addition, we face a special case in the United States because of a strong tendency in our national background to associate the new world, America, with a new beginning, in fact with a new Garden of Eden. The seventeenth-century promoters of colonization never tired of comparing the virgin land with Eden, and to many immigrants the possibility of a new beginning was real and compelling. So, in a way, the migration to the new world reversed the pattern of garden to city in that it was a move from civilized (and corrupt) Europe to untouched (and pure) America. It's not surprising then that this country has always had a current of thought exalting the "natural" life away from the city. James Fenimore Cooper's unforgettable novels, The Pathfinder, The Deerslayer, The Last of the Mohicans portray a hero of solitary rugged independence in the wilderness; the descendants of these novels are cowboy movies, in which "city-slickers" are dishonest or stupid.

Probably the best-known enemy of city life in American literature is Henry David Thoreau, who went to live alone in the woods by Walden Pond to commune with nature and himself. Of course what is almost always overlooked is the fact that Thoreau carried with him to the woods a head full of learning acquired in the city of Boston, a crate full of books printed in the cities of Boston, New York, London, and elsewhere, and he spent his time writing a book to be published in Boston, New York, London, and elsewhere. But, nevertheless, there he lived, cut off from the city; and there he stayed, for two whole years, producing such wonderfully quotable lines as "The mass of men lead lives of quiet desperation." (Of course I am being a little unfair to Thoreau. He never insisted that we all live in the woods any more than I would insist that we all should live in the city. He repeatedly described his own life there as "an experiment." I believe that he was wise enough to know that he was overstating the case for isolation; he had his reasons, and he has his uses; so it's too bad that he is so often quoted as the gospel.) My real point about Thoreau is that the reason I can stand here and talk about him today is that there were people in urban centers who cared deeply for the interchange of ideas and who took the trouble to see that books were printed, that schools, colleges, and universities were founded or continued and who generally kept the traditions of the humanities going.

Today, however, it is seriously asked whether cities continue to serve this function as the nerve-centers of civilization. After all, the cities of the past were built, (in the words of a French writer) "to the measure of man; that is to say, to the measure of his footstep." People walked, met, talked, exchanged ideas. The automobile, modern communication, and formless urban sprawl have changed things a great deal—according to some, beyond the hope of recovery. One bleak science-fictional projection of the future I have read [Kenneth Boulding, "The Death of the City"] visualizes human society spread evenly over the face of the globe in self-sufficient households, recycling their water, communicating through personalized television powered by solar energy, while the sites of former cities are mere radioactive holes in the ground. Such is the imagination of a post-civilized world, and a post-human race.

Let me say that without being foolishly optimistic we should reject doomsday visions. I believe that our cities in the future must be different. If possible they should be restored to the measure of man. Given the energy crisis, we may see in our lifetime a new emphasis on the concentration urban center as a dwelling-place, a place for human communication.

In conclusion, let me try to express why I think the humanities have something vital to do with the survival of the city. I do not pretend to be an urban planner, a behavioral scientist, an expert on the future of the city. I believe that we will need the technical expertise of these and other specialists if we are to have habitable cities in the future. I also am committed to the belief that we need something else, something more basic, something to give purpose to all our specialized and technologically sophisticated efforts. We need the strength of understanding that proceeds from a grasp of the complexity of human life. I do not mean facile optimism—the too easy belief in progress. I mean something quite different. The humanities do not offer easy solutions—it has been said that the proper understanding of Shakespeare's great tragedies does not free us from evil, but it frees us from being deceived by it [Hazlitt]. I believe then that the fruit of humanistic learning is knowledge of ourselves, of our traditions, of our purposes, of our civilization, of our cities.

PRESIDENT CARTER'S STATEMENT ON NORTHERN IRELAND

Mr. KENNEDY. Mr. President, the statement by President Carter on August 30, 1977, on Northern Ireland is the most important and constructive initiative ever taken by an American President on the Irish issue. Coming at this time, it is a significant step toward peace that should be welcomed by all Irish-Americans and by all persons of good will on both sides in Northern Ireland.

While properly avoiding any specific U.S. involvement in the details of a settlement, the President has unequivocally endorsed a solution involving a form of government in Northern Ireland broadly acceptable to both the Protestant and Catholic communities. By endorsing this concept of partnership between the two communities, the President has given strong and much needed support to moderate political leaders on both sides in their continuing negotiations to achieve a peaceful settlement.

Even more important, the President has made a new and far reaching contribution to the cause of peace by suggesting the possibility of substantial U.S. aid for jobs and investment in Northern Ireland, once a settlement of the present conflict is achieved. My hope is that this bold and generous offer by President Carter will be a significant new catalyst for peace, and will encourage the parties, including the British and Irish govern-

ments, to make a greater effort to negotiate a settlement.

American assistance could take a variety of forms, including not only direct appropriations by Congress under the foreign aid program, but also loans, loan guarantees, and other incentives and subsidies for U.S. firms to invest in Northern Ireland and to provide desperately needed jobs for the people there.

My hope is that once a peaceful settlement is reached, the United States would undertake a Marshall-type program of assistance to heal the wounds of the present conflict and to benefit all the people of Northern Ireland, Protestants and Catholic alike. I believe there would be broad support in Congress for such a program of jobs and other assistance, linked to a peaceful settlement.

Finally, by strongly denouncing the violence on both sides and by calling for vigorous Federal law enforcement efforts against those who violate U.S. laws, the President has taken the strongest possible step to insure that American guns and dollars will not be used to support those engaged in violence.

President Carter deserves great credit for the initiative he has taken. I commend him for this valuable and hopeful step toward peace.

Mr. President, I ask unanimous consent that the text of President Carter's statement, the welcoming responses by the British and Irish Governments, and a series of recent newspaper editorials commending the President's initiative be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY PRESIDENT CARTER ON NORTHERN IRELAND, AUGUST 30, 1977

Throughout our history, Americans have rightly recalled the contributions men and women from many countries have made to the development of the United States. Among the greatest contributions have been those of the British and Irish people, Protestant and Catholic alike. We have close ties of friendship with both parts of Ireland, and with Great Britain.

It is natural that Americans are deeply concerned about the continuing conflict and violence in Northern Ireland. We know the overwhelming majority of the people there reject the bomb and the bullet. The United States wholeheartedly supports peaceful means for finding a just solution that involves both parts of the community of Northern Ireland and protects human rights and guarantees freedom from discrimination—a solution that the people in Northern Ireland, as well as the governments of Great Britain and Ireland can support. Violence cannot resolve Northern Ireland's problems; it only increases them, and solves nothing.

We hope that all those engaged in violence will renounce this course and commit themselves to peaceful pursuit of legitimate goals. The path of reconciliation, cooperation and peace is the only course that can end the human suffering and lead to a better future for all the people of Northern Ireland. I ask all Americans to refrain from supporting, with financial or other aid, organizations whose involvement, direct or indirect, in this violence delays the day when the people of Northern Ireland can live and work together in harmony, free from fear. Federal law enforcement agencies will continue to apprehend and prosecute any who violate U.S. laws in this regard.

U.S. Government policy on the Northern Ireland issue has long been one of impartiality, and that is how it will remain. We support the establishment of a form of government in Northern Ireland which will command widespread acceptance throughout both parts of the community. However, we have no intention of telling the parties how this might be achieved. The only permanent solution will come from the people who live there. There are no solutions that outsiders can impose.

At the same time, the people of Northern Ireland should know that they have our complete support in their quest for a peaceful and just society. It is a tribute to Northern Ireland's hardworking people that the area has continued to attract investment, despite the violence committed by a small minority. This is to be welcomed, since investment and other programs to create jobs will assist in ensuring a healthy economy and combating unemployment.

It is still true that a peaceful settlement would contribute immeasurably to stability in Northern Ireland and so enhance the prospects for increased investment. In the event of such a settlement, the U.S. Government would be prepared to join with others to see how additional job-creating investment could be encouraged, to the benefit of all the people of Northern Ireland.

I admire the many true friends of Northern Ireland in this country who speak out for peace. Emotions run high on this subject and the easiest course is not to stand up for conciliation. I place myself firmly on the side of those who seek peace and reject violence in Northern Ireland.

STATEMENT BY PRIME MINISTER CALLAGHAN OF GREAT BRITAIN, AUGUST 30, 1977

I welcome President Carter's statement. It shows a very real human concern for the people of Northern Ireland and an understanding of the reality of the situation, in saying that a permanent solution to the problem can come only from the people who live there.

I am glad to have his support for the establishment of a Government there which will command widespread acceptance throughout both parts of the community.

I welcome especially the President's rejection of violence and his support for peaceful means to find a solution. The overwhelming majority in Northern Ireland have also rejected violence. Violence will not achieve its purpose. It simply postpones the time when better days can return.

I welcome too the President's willingness to support continued investment which will provide jobs for the long-suffering people of the province. We will continue to work together with the United States and our other major trading partners to attract new investment, and Mr. Roy Mason, the Secretary of State for Northern Ireland, will visit the United States in October for this purpose.

STATEMENT ON BEHALF OF THE GOVERNMENT OF IRELAND, AUGUST 30, 1977

President Carter today made a statement on the situation in Northern Ireland in which he called for a just solution involving both sections of the community and supported by the Irish and British governments. The President understood that in the event of such a settlement the U.S. government will be prepared to join with others to see how additional job creating investments could be encouraged.

President Carter's statement is a constructive development in American relations with Ireland and Britain and reflects the traditional generosity of the American government and people and their interest in Ireland. The President has placed himself firmly on the side of very distinguished American leaders who in the President's words seek peace and reject violence.

It is particularly useful to emphasize that the problems of Northern Ireland have many dimensions, of which any effective and realistic solution must take account. President Carter rightly underlines the importance of finding a just solution by peaceful means, which protects human rights, in which both parts of the community in Northern Ireland as well as the Irish and British government will be involved.

The Irish Government also welcomes the renewed American commitment to continue vigorously to apprehend and prosecute those who violate U.S. law in the respect of supporting with financial or other aid organizations involved directly or indirectly in violence in Northern Ireland, irrespective of the political or religious sympathies of those involved.

President Carter's statement is a welcome indication of the interest of the United States government in Irish affairs. He has once again made clear the good will of the American people to a land to which many Americans have a special affection. He has offered to help. It is for the people of Ireland, North and South, together with the British and Irish Governments, to insure that his offer is transformed into political and economic progress.

[From the Baltimore Sun, Aug. 31, 1977]

CARTER ON ULSTER

President Carter's initiative on Northern Ireland, which his press secretary denied was coming, will seem mild to Americans. Yet it will have a constructive impact in Ulster, where in a vacuum of politics and hope, much is always read into very little.

What Mr. Carter had to offer was carefully balanced and beneficial within the confining limits of the possible. To interpret the codewords: His firm stand against violence was to disarm the suspicions of the Protestant majority, his call for establishment of a government "which will command widespread acceptance throughout both parts of the community," was something for the Catholics, modestly phrased; his vague offer of encouragement for investment in the wake of such a settlement was a tantalizing incentive for peace to people who should hardly require any.

The Carter gesture owes much to the political importance of concerned Irish-Americans, notably Speaker of the House Thomas P. O'Neill, Jr., and Senator Edward M. Kennedy, who are both doing what they can with humane understanding to alleviate the Irish trauma.

Of course this gesture cannot by itself still the violent organizations, convert the Protestant politicians to power-sharing or the Catholic ones to collaboration. Were there momentum in that direction, however, the Carter initiative would add to it.

It is up to the British government, which for two years has let Ulstermen stew in their own juice, to try again to prod a political settlement. The British secretary for Northern Ireland, Roy Mason, is coming to Washington in October to discuss ways to flesh out the Carter investment notion. There ought to be a British-sponsored political initiative in Northern Ireland before that visit to make it worthwhile.

[From the New York Times, Sept. 1, 1977]

FIFTH HORSEMAN FOR PEACE IN ULSTER

With heartening courage, four leading American Catholic politicians have dared in recent months to speak out against the violence in Northern Ireland. On the eve of St. Patrick's Day, Governor Carey, Senators Moynihan and Kennedy and Speaker O'Neill urged Irish-Americans to stop sending money and arms to the Irish Republican

Army. In April, from a platform in Dublin, Governor Carey went even further, denouncing one wing of the I.R.A. as nothing more than "the Irish killers" and the other wing as "the Irish Marxists." All four have been subjected to strident criticism from those who remain passionate about a long history of oppression and discrimination; to some American supporters of the I.R.A., they are "the four ignorant horsemen." But they are hardly ignorant, and now they have recruited a fifth to their side, a Baptist Sunday school teacher named Carter.

Why the President now chooses to venture into this bog of ancient hatreds is not clear. Perhaps the explanation has as much to do with his relations with Speaker O'Neill as with torment over Ulster. Nor is his new statement on Northern Ireland provocative. In it, Mr. Carter also urges that Americans not support violence in Ulster (and makes a reference to Federal laws against gun-running). He reaffirms American impartiality. He offers a vague pledge of American help, once a settlement is achieved, to try to alleviate Northern Ireland's crippling unemployment.

But it is not the specifics that make the President's statement noteworthy. It is the fact that he made such a statement at all. His expression of American support for peace may sound bland; but compare it with the silence of past Presidents. Perhaps the most important factor is that the statement comes from *this* President. Officials like Governor Carey can speak to Catholics. But if there is ever to be a settlement in Ulster, moderation must be preached to Protestants as well. And if there is any American voice that could encourage moderation among Northern Ireland's Protestants, it is that of Jimmy Carter.

The President's statement on Northern Ireland is a modest step; but to all who yearn for an end to the killing it is a welcome one.

[From the Boston Globe, Sept. 1, 1977]

BALM FOR BELFAST

While President Carter's statement on Northern Ireland was studiously neutral in the long-standing conflict between Protestants and Catholics there, it broke important new ground by linking U.S. assistance to a peaceful political settlement and by pledging stern treatment of Americans who break the law through illegal aid to one side or the other.

The measure of Carter's evenhandedness may be gauged by the prompt expressions of support from both London and Dublin government leaders. It is also an indicator of the depth of the problem facing all sides.

Violence in Northern Ireland has been singularly frustrating. Reprisals and counter-reprisals have gone on in an endless chain that has become their own justification for still further killing. Worse, much of the violence has been in the form of random bombings aimed at no one in particular. Streets, stores, restaurants have been the scene of mindless murder on both sides, food for fanatic retaliation.

There is more to the Carter package, of course. Most important, Carter pledged official encouragement of additional investment in Northern Ireland to improve economic conditions in the region of highest unemployment in the United Kingdom. This encouragement should be productive because American money already knows the way. The United States is the largest foreign investor in Northern Ireland, with holdings of about a quarter billion dollars.

Furthermore, the American step might serve as a model for the European Common Market, to which both Great Britain and Ireland belong. That organization has a real interest in halting the only open violence in its boundaries. If the remote American President can pledge aid, so should the Common Market. Everyone involved would gain.

[From The Christian Science Monitor, Sept. 1, 1977]

CARTER APPEAL FOR ULSTER PEACE

President Carter has steered a carefully impartial course in his statement on Northern Ireland, for plainly it would only exacerbate the situation if the U.S. leader were to appear to lean one way or another. Thus, he called for a peaceful settlement of Ulster's strife, he pledged continued prosecution of those Americans who support violence in violation of U.S. laws, and he said the U.S. would join with others to provide economic assistance in the form of "job-creating investments."

It was an unprecedented step—the first time an American chief executive had issued a formal statement on Northern Ireland's troubles. And Mr. Carter had to guard against any implication the United States was interfering in the internal affairs of another nation, Britain. But thus far, the response from London, Belfast, and Dublin has been cautiously favorable, with considerable praise and little criticism.

Four leading American politicians of Irish background—Senators Kennedy and Moynihan, New York Governor Carey, and House majority leader O'Neill—also supported the presidential action. Senator Kennedy termed it "the most important and constructive initiative ever taken by an American president on the Irish issue."

Welcome though the Carter verbal intervention was as an indication of American interest and concern, it does not of itself solve anything. The promise of economic aid from the United States and its associates is contingent on a negotiated settlement of the long-standing dispute between the Roman Catholics and Protestants of Northern Ireland. It offered a new and desirable incentive for peace, but it necessarily and rightly left the working out of a solution to those directly involved in the struggle.

This is as it should be. There is a point beyond which direct American involvement in the thorny Irish problem is not welcome and should not be offered. But Mr. Carter's concern for human rights made it appropriate for him to speak out on the subject and to indicate in no uncertain terms that no American involvement in violence would be tolerated.

It now will be up to the people of Northern Ireland, the British Government, and the Irish Government as well, to follow up the White House appeal with a fresh determination to achieve that elusive peaceful solution which will end the years of bloodshed in Ulster.

[From the Washington Post, Sept. 2, 1977]

THE PRICE OF PEACE IN IRELAND

It's exceedingly risky for an American President to get involved in the religious wars of Northern Ireland, but at least Mr. Carter seems to see the danger. His statement, issued on Tuesday after weeks of rumor and speculation, is a model of caution. The trouble is that not all of the people reading it are going to be as cautious as he is. He will have to guard against the inevitable attempts to draw him into a mediator's role and to make him weaken the one essential condition for his aid.

The justification for this initiative is that the guerrilla warfare in Northern Ireland is now in its eighth year, with no end in sight. A lot of Americans worry about it—particularly those whose families came here from Ireland. The administration can argue with some justice that there will always be a lot of American interest and involvement in Irish affairs, and Mr. Carter's statement is only an attempt to preempt the wrong kind with the right kind.

The wrong kind is, of course, the flow of contributions to buy arms for the Irish Republican Army. That flow has dropped sharply over the past year or two, as Americans have come to realize that the money goes to a terrorist organization whose victims have predominantly been not British soldiers, but Irish civilians, including small children. A strong appeal to cut off the money for the gunmen was launched last St. Patrick's Day by House Speaker Thomas O'Neill, Sens. Edward M. Kennedy and Daniel Patrick Moynihan, and Gov. Hugh Carey of New York. It was a statesmanlike gesture, but it was followed by a ripple of anxiety among other Irish-Americans that it addressed only the Catholic side of this covert war. The Protestants of Northern Ireland are, after all, the majority, and their irregular military organizations are at least as heavily armed, and as quick to violence, as the IRA.

In June the four politicians met with Secretary of State Cyrus Vance to ask what further might be done. The State Department talked at length with Britain, to which Northern Ireland belongs, and the Irish Republic, which it adjoins. The result was the President's statement promising aid—but only if there is peace.

Peace requires a political settlement between the Protestant majority and the Catholic minority, with the minority getting a genuine share of power. The Northern Irish are going to have to work that out among themselves, the President said. But if they can do it, the United States will "see how additional job-creating investment could be encouraged," a powerful inducement in a province where the unemployment rate is now double Britain's average.

Sen. Kennedy immediately added a suggestion that this aid could take on the dimensions of a small Marshall Plan with grants, loans "and other incentives and subsidies for U.S. firms to invest in Northern Ireland." The Senator may well be pushing the administration a bit further than it cares to go just yet. But, having gotten into this affair, Mr. Carter ought not to be excessively vague about the nature of the promise he is making. It is worth something to Americans to see peace in that battered province, and the United States is now putting up a cash prize for the peacemakers.

[From the Washington Star, Sept. 3, 1977]

A HELPING HAND FOR ULSTER

President Carter's call for peace and political moderation in Northern Ireland was cautious enough to avoid American embroilment in that long-insoluble mess. His offer of economic help, in the form of incentives for "job-creating investment," was unspecific. It was made conditional on a long-sought political settlement backed by both Protestant and Catholic communities in the troubled province. The expression of presidential interest in the Ulster affair thus cannot be expected to have an enormous effect on the prospect for reconciliation there.

For all that, the gesture, in consultation with the closely involved governments of Britain and Ireland, was worth making. The beleaguered forces of moderation among the Ulster factions need any encouragement they can get in a situation often dominated by extremism and violence. The British, ruling directly in the absence of a provincial parliament, can use moral support for whatever new power-sharing efforts they sponsor.

The President also put himself personally behind the commendable campaign of several leading Irish-American politicans—Senators Kennedy and Moynihan, Speaker O'Neill and Governor Carey—against fund-raising and gun-running by IRA supporters in the United States. (The same four were instrumental in bringing about the White House

"initiative.") And it should not be lost on Ulster Protestants that the new appeal for Protestant-Catholic reconciliation in the Six Counties comes from a prominent American Protestant.

The walls of bigotry that bar a humane settlement in Ulster will not fall, perhaps, to such a gentle nudge by President Carter. But if for a combination of reasons some new momentum toward peace should develop, the expression of friendly, impartial interest from the White House could prove to be of help.

PRM–10 AND THE KOREAN PULLOUT

Mr. HATCH. Mr. President, today we read again about Presidential Review Memorandum 10, more commonly known as PRM–10. Last month it was brought to the attention of the American public that the Carter administration was willing to concede one-third of West Germany to a Soviet invasion rather than seek increased defense spending. It now appears that the same memorandum indicates that the United States would have great difficulty protecting and holding Seoul, the capital of South Korea if attacked by North Korea.

As reported by Evans and Novak in Wednesday's edition of the Washington Post, the United States according to PRM–10 would, by withdrawal of all ground troops from South Korea, have the luxury of sitting back and deciding whether or not to honor its commitment to South Korea. In the last 6 weeks, two of our country's strongest allies have had good reason to question the strength of our commitment to the defense of their national borders in time of war.

In the realm of foreign policy, mutual trust among allies is a necessity, as is the assurance that each will honor the agreements and commitments that have been made to each other. History has shown that national security is a vital interest of all nations, an interest which motivates relationships among countries. The United States has long been the bastion of freedom in the world, offering that security to all nations seeking freedom. PRM–10 indicates we are now retreating from that position in the world.

In the past 10 years we have seen increased efforts by the Soviet Union to develop ties with Western bloc countries. The Republic of Korea stands alone in Southeast Asia, and without the support of the United States would not be able to deter an attack by North Korea and prevent its capital city from falling. Once the Communists become entrenched in Seoul, how much more difficult will it be to win back this territory in a war? Mr. President, I deplore even considering such an action. The treaties that this country has entered into demand our full commitment.

Apparently, the current administration feels that renegotiation of treaties is popular this season. Tonight the President will sign a new treaty with Panama, one that will have to come before this body for ratification. What will be next? Is the next step to renegotiate mutual defense treaties so that we will only be required to give support when we feel that we want to do so? Mr. President I ask unanimous consent that this morning's column by Mr. Evans and Mr. Novak be printed in the RECORD so that my colleagues in the Senate may properly evaluate the course the administration is taking.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

PRM–10 AND THE KOREAN PULLOUT

(By Rowland Evans and Robert Novak)

The same Carter administration document that contemplates losing one-third of West Germany to a Soviet attack contends that removing U.S. troops from South Korea gives Washington "flexibility" to determine whether or not to intervene against Communist invasion from the north.

PRM (Presidential Review Memorandum) 10, a top secret inter-agency study of U.S. force structures, also is gloomy about holding the South Korean capital of Seoul if North Koreans invaded today. Even with U.S. air and naval intervention and U.S. troops still stationed in South Korea, the study suggests Seoul could not be held.

All this contradicts President Carter's assurances that his decision to remove the 2nd U.S. infantry division does not undercut the U.S. commitment to South Korea. It also undermines current military doctrine based on the retention of Seoul as a necessity. Thus South Koreans face the same problem as the West Germans. Shall they believe public pronouncements of U.S. leaders or private documents of their staff experts?

The administration's claim that PRM–10 merely discusses options is simply untrue. Just as PRM–10 states that present allied forces could not hold one-third of Germany, its disturbing comments on Korea are based on conditions before and after the U.S. troop pullout, not on any option.

"Once the U.S. land forces are out of Korea," says PRM–10, "the U.S. has transformed its presence in Asia from a land-based posture to an off-shore posture. This . . . provides the U.S. flexibility to determine at the time whether it should or should not get involved in a local war."

The document goes on to reveal an unpublicized reason for removing the 2nd division: to give Washington the choice of whether or not to intervene. With the troops gone, says PRM–10, "the risk of automatic involvement (which was a major factor in removing land forces from Korea) is minimized. However, should the U.S. decide to intervene, military forces would be readily available."

Even with the 2nd division still on station and the U.S. supplying "initial air and naval support at D-Day," PRM–10 spins a grim scenario: "If the North Koreans were to achieve tactical surprise, it is possible that they could at least temporarily attain their most likely major objective—the capture of Seoul."

While predicting North Korea could not win "a substantial combat," it predicates this on major U.S. help. "With the U.S. contributions of land and carrier-based tactical air assets and materiel support, it would appear that the U.S. and ROK [Republic of Korea] would prevail against North Korea in the longer term, but with possible initial setbacks—including perhaps the fall of Seoul."

Without U.S. help, the situation is desperate, according to PRM–10: "The level of forces which could be brought to bear at the front on D Day would generally favor North Korea over the ROK in all categories. . . . The ROK has widely spread infantry forces with limited mobility and vulnerable stocks of war materiel."

The document implies a return to the old U.S. strategy of keeping allied troops away from the DMZ and instead falling back on Seoul. Now-retired Lt. Gen. James Hollingsworth changed that when he took command nearly four years ago, contending the North Koreans wanted to capture Seoul quickly and then start debilitating peace negotiations. So, allied strategy changed to a forward defense of Seoul.

Such a defense requires Korean confidence in U.S. readiness to supply indispensable air power. South Korea long has worried that its defense pact with Washington provides a less automatic U.S. response to invasion than does the NATO treaty. President Carter's July 25 letter sought to reassure President Park Chung Hee that the U.S. troop pullout does not mean "any change whatsoever in our commitment."

PRM–10 undercuts all of South Korea's expectations. While emphasizing that only U.S. air and naval intervention could stop an invasion, it now makes that intervention a matter of choice rather than automatic response.

After our column reported the PRM–10 assessment of a Soviet attack in Central Europe, a senior West German army officer secretly visited Washington to find the truth. Interviews with 30 people, the general said, left "not the shadow of a doubt in my mind" that the column was accurate despite White House denials. South Korea's generals may now begin in a similar process with hopes that the answer will be more reassuring than the findings of their German counterpart.

TRIBUTE TO SENATOR HUMPHREY

Mr. PELL. Mr. President, it gives me the greatest pleasure to bring to the attention of the Senate a singular honor bestowed on our friend and colleague, the senior Senator from Minnesota, HUBERT HUMPHREY. On August 4 he was presented with the Freedom Award of the International Rescue Committee.

As one who has long worked with the International Rescue Committee, I was particularly delighted to have the opportunity of participating in this ceremony.

Leonard H. Marks, the distinguished president of the IRC, presided. The award was presented by Leo Cherne who has served as chairman of the committee for the past 26 years. Leading Members of the Congress, White House officials, Cabinet members, foreign Ambassadors and many other prominent individuals were part of the audience which shared in this tribute to a great American, who has won the hearts of our Nation's people as few in our history.

Zbigniew Brzezinski, President Carter's Assistant for National Security Affairs, eloquently represented the President and read a special letter from him.

The citation on the Freedom Award plaque presented to Senator HUMPHREY reads: "For Distinguished and Courageous Service in the Cause of Freedom." There is no one more deserving of those words. Senator HUMPHREY's abiding courage is an inspiration to all of us; his service, which we so applaud, is not only to freedom but to all the best hopes our country cherishes.

Mr. President, I ask unanimous consent that the presentation ceremonies, as recorded in transcript, be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

PRESENTATION OF THE FREEDOM AWARD OF THE INTERNATIONAL RESCU' COMMITTEE TO SENATOR HUBERT H. HUMPHREY: THURSDAY, AUGUST 4, IN THE CAUCUS ROOM OF THE SENATE OFFICE BUILDING

LEONARD H. MARKS (President of IRC). Let me welcome all of you to this very significant occasion as the International Rescue Committee presents its Freedom Award to one of our great Americans and our good friend, Senator Hubert Humphrey. We have a time problem, as is customary in the closing days of the session, and there's going to be a roll call very shortly. So we're going to abbreviate our ceremony, depart from the regular order of procedure and call on Mr. Zbigniew Brzezinski, the President's Assistant for National Security Affairs, who has a letter which he would like to read to us today.

ZBIGNIEW BRZEZINSKI. Mr. Marks, and ladies and gentlemen. The President asked me to join you here today and to read a message which he has addressed to Hubert Humphrey. Before reading it, if I may just say a word on my own to Hubert: it's been my privilege to know him for a number of years. I worked with him in the 1968 campaign, more accurately, I worked for him. I am very pleased to see Henry Kissinger here, because I remember that on the day in which the outcome of that election was announced, he performed an act of friendship and chivalry by calling me from California to tell me he knows how I feel. He said how sorry he was that such an outstanding statesman had not become, on that day, the President of the United States.

I just want to say this. Hubert Humphrey to me epitomizes the real meaning of the word statesman. A statesman is a person who is not just dedicated to his state, but above all, to the society and the people that make it up. All of his life, he has worked for people of this country, and indeed, for the people of this world. And this is why he has earned the affection and the respect that all of us here today are demonstrating. I'm very, very proud that I am one of the legion of people who have been associated with him, in his toils and his successes, and I am doubly proud, that I have been asked to read this letter to him from the President:

THE WHITE HOUSE,
Washington, D.C., August 3, 1977.

Hon. HUBERT H. HUMPHREY,
U.S. Senate, Washington, D.C.

TO SENATOR HUMPHREY: I am happy to join with so many of your friends today in honoring you as you receive the Freedom Award of the International Rescue Committee. Your support for aid to refugees and other victims of oppression is one facet of a career that, from the beginning, has been dedicated to a broad conception of human rights.

Freedom, as you have always understood, is fundamental to the nourishment of the human spirit. It can never be a frozen state of affairs; to survive, it must be a vibrant, living reality that is the basis for the building of a better world and a more just, more humane society. In the words of your friend Reinhold Niebuhr, who was a founder of the International Rescue Committee and long its chairman, the efforts of a free government must comprehend both "the mystery of the individual's freedom and dignity" and "the social substance of human existence."

Few men in our history have embraced this view of freedom with more imagination and zest than you have and few have done more to make it a reality.

JIMMY CARTER.

Mr. MARKS. Thank you very much, Dr. Brzezinski. There are many who have served the International Rescue Committee valiantly over its 44 years of existence. Some of them are in the audience, and we have one on the dais. Senator Claiborne Pell of Rhode Island.

Senator PELL. Thank you, Leonard Marks and distinguished colleagues, including the majority leader (Senator Robert Byrd) and friends of Hubert Humphrey. If ever there was an individual who was the epitome of the happy warrior who combined the instincts of searching for the good, as Don Quixote did, with a hard practicality and the necessity of accepting on many occasions half a window instead of the whole, it is Hubert Horatio Humphrey. With his warm heart and his desire to help, he has always been in the forefront, helping those who suffer at home or abroad, black or white, rich or poor. In this regard, I remember 21 years ago, when we at the International Rescue Committee asked Hubert Humphrey if he would deliver the keynote speech for the Hungarian Freedom Fighters—and he did it. And he did a wonderful job, and raised a lot of money for us that evening. And through the years, we've been free to call on him—not only for the International Rescue Committee but for many of those of our fellow Americans and other citizens of the world. He is constantly aware of the needs of mitigating the suffering of fellow human beings in various regimes around the world. He has a world view—and it's a rare man who has this view as well as the consciousness of the individual's plight and problems. So I, for one, am very honored to be in this group.

Mr. MARKS. Thank you very much, Senator Pell. You've heard the reference that President Carter made to the founding of the International Rescue Committee by Dr. Reinhold Niebuhr, who occupied the position of IRC Chairman for many years. He was succeeded by Mr. Leo Cherne who for 26 years has been our Chairman and the inspiration for the activities of IRC. Mr. Cherne will make the presentation of the Freedom Award to Senator Humphrey on behalf of IRC. But before he does, let me just say that we agreed this Award as one of the most significant that we at IRC, a group of private individuals engaged in a humanitarian cause, can confer on any individual. It has been given to Winston Churchill, to Willy Brandt, to Bruno Kreisky, the Chancellor of Austria, to George Meany, to Senator Javits, to General Lucius Clay and others who have established their credentials in the case of human freedom and the field of humanitarianism. Today, we add a very proud name—and this is a very significant occasion for us—by honoring Senator Humphrey. And the presentation will be made by the Chairman of the International Rescue Committee, Mr. Leo Cherne.

LEO CHERNE. Mr. Marks, Senator Pell, Senator Humphrey, our honoree, distinguished members of the audience: there is simply no limit to Hubert Humphrey's efforts to enable others to nourish hope, health, peace and freedom. His very first days in this Capitol left an indelible mark on this century's most vital striving for freedom in our own country. Civil rights is the phrase which so poorly captures the clarity and stubbornness of his conviction: that so long as there were those who for reasons of color are denied the equal opportunity to shape their lives, their society, their future and their institutions, then all of us were living abbreviated, lives, in a partially free society, falsifving our past and limiting our own futures. That same vision—not only of the possibilities but of the urgencies—Hubert Humphrey addressed to the world, beyond these shores, seeing earlier than most, that where humanity starves then the larger purposes of which man is capable are beyond reach and vision. The role he has played in advancing the Food for Peace Program, the Foreign Assistance Program, the Peace Corps, were all rooted in his awareness that where children die of starvation, and their elders never shake the enervating presence of hunger, freedom is a fragile possibility, if it exists at all. His efforts to advance arms control and disarmament are anchors in his conviction that where aggression, fear and tyranny prevail, safety not liberty is the urgent preoccupation. But even as his heart is harnessed to his effort to bring humanitarian assistance where it is most needed abroad, his mind has always understood that the opportunity for freedom must be nourished and defended as well. Human rights is a phrase and a preference which has been given new momentum this year. But it must be said that this man has pursued that vision relentlessly, during all his nearly thirty years in Washington, and in virtually all that he has sought and everything he has fought for.

Let me say, having just returned from Zaire and Kenya, in an effort to extend the IRC's help to the refugees who have fled Angola and Uganda, that the food which is now keeping them alive, the medicine which will hopefully make the children who are desperately sick well again, owes much to the vision and the program Hubert Humphrey has fought for. Now whether a refugee fleeing terror is Ugandan or Cambodian, South African or Angolan, Chilean, Russian or one of the Vietnamese boat people, the vision before him is hope for freedom. But the immediate need is for food, safety and shelter, the needs on the very threshhold of life or death. But I've not caught the essence of this man and I will make an effort to do that. I think it is this. In a generation, if we are fortunate, there is a person who, whatever the specifics of his ideas, his actions reflect something larger. That person mirrors the best in all our purposes, the most compassionate in all our faiths, the brightness in all our hopes. He becomes more than the sum total of all his efforts. He is Hubert Humphrey.

It is with the deepest sense of our collective debt and pride that I am privileged to present Hubert Humphrey the International Rescue Committee's Freedom Award. The Committee was brought into existence one week after Hitler came to power in 1933. In the 44 years since then, we of the IRC have had no brighter moment than this, and not a more honored place in which to share it, than in this room.

Senator HUMPHREY. Leo, my very good friend, longtime friend, thank you very much for your splendid statement and remarks that come not only from a brilliant mind but also from a generous and warm heart. I've known Leo for many years. I've read many of writings, have shared in his counsel and I know at times, he's been disappointed in my performance. But tonight, he has forgiven me and may I say, there is no greater quality of character than to forgive an unrepenting sinner. So, you've done that. There are so many friends here and I've just heard the buzzer to return to the Senate floor telling those of us here who are members of the Senate to be mindful of our responsibilities. I don't know whether my esteemed and beloved friend, our able Majority Leader (Robert Byrd) timed it this way, knowing that Hubert has the propensity for extended remarks. Bob, stand up, please, our Leader.

One of the more delightful and happy things in my life was the privilege in recent months and years to become a close friend of Bob Byrd, and in these days, since January, we have worked together as never before and I salute him as one of the truly great leaders of the United States Senate for all of its history. And I think that the years ahead will show even greater accomplish-

ments. Now, this room is filled with dear and wonderful friends. Leonard Marks—you and I go back together so long that I shouldn't start talking about it. I just want you to know that you and Dorothy (Mrs. Marks) have been very close and dear to us. Henry, my friend, Henry Kissinger, truly a great public servant, a great man—Henry, stand up. I had the joy of working with him during the time he was Secretary of State, but more importantly, I have had the privilege of his personal friendship and that's a precious gift. Here is my Cabinet Officer here, Ray Marshall (Secretary of Labor). Ray, the Department of Labor is always close to my heart and you being here as a very distinguished representative of our administration, it warms my heart and I want to thank you very, very much. And my old buddy Orville Freeman. Orville and I started out this morning with a press conference which I had to run away from but it's all his fault. Because he was once Secretary of Agriculture and I've been in Conference Committee on Agricultural Legislation for three solid days.

And I've got to go back tonight—it's an incredible ordeal that we're going through. But Freeman knows it better than anybody else, and I didn't give him much sympathy this morning and I had to walk out on him. But Orville and Jane are going to share some of this evening with Muriel and myself. And I want to thank the Mayor of our city (Walter Washington) and his wife Bonita for coming here. Mayor Washington, you're always so nice to be with us. I see members of my staff here and former members of my staff. I see our Ambassador to the United Nations, Pat. (Senator Patrick Moynihan) What a beautiful Irish face! And I can see so many more around my dear sister, Frances, who is always present, and Annie. It means so much to me. They fill in for me so many times. I haven't been on the social circuit as much as I would like to be, so I assign Frances and she knows more Ambassadors than the Chief of Protocol. Now, I speak of the Rescue Committee because Muriel rescued me. That's the first rescue. Then she rescued me from the dust storms in the depression of South Dakota. If there were two events in my life that really changed my whole life, it was these two. Meeting Muriel and marrying her, and secondly, the University of Minnesota. Those two events changed my life and I hope for the good. The University tried to do something with my mind and Muriel has tried to do something with my character. Both of them had difficulty but both of them have been persistent.

Claiborne Pell—there he is. Claiborne Pell, Member of the Foreign Relations Committee, is one of the first people I knew at the International Rescue Committee. You and Angie Biddle Duke and Edgar Berman were a part of it at the time. What I especially like about Claiborne is that he lives every day of his life for humanity. He's Chairman of our Senate Subcommittee on Arms Control on which I serve. He's been the leader in the field of humanities and the arts. He's a man of tremendous intellect and compassion. And it's just a joy to have you here, with me tonight, and hear your remarks, Claiborne.

And, of course, I am very honored that the President of the United States saw fit to send such a beautiful letter and to have Dr. Brzezinski come here to present it and to read it. These are wonderful honors. This is what makes public life all worthwhile. This is it—when you're tired, fatigued, when you get to the point where you wonder if it's all worth it. Then there is a gathering like this. And all at once you know that it's not only worth it, it's what it's all about.

Jennings (Senator Jennings Randolph), it is always good to see you, bless your heart. Well, I've got to be careful because I've missed some of my colleagues and I wouldn't want a single one of them to think that I've forgotten them for a moment. The name of Dr. Reinhold Niebuhr was mentioned. I knew Reiny. I knew him well. We worked together. We worked together in A.D.A. in the beginning. One of the great theologians of our time, but more importantly, or as important, one of the great democrats, with a small "d." His writings were magnificent and his spirit is immortal. It lived on. I think that possibly one of the great gifts that has come to me is to be able to say, publicly, that I knew Dr. Reinhold Niebuhr. Just to share in that friendship. And then to know that this great Freedom Award of the International Rescue Committee, which I will cherish, will be in our home, not in my office, it will be in my home, to know that this Award has been presented to men of such quality and such greatness as Winston Churchill and Willy Brandt, who's been really a friend of mine for almost thirty years. And Chancellor Kreisky, whom I've had the privilege of knowing, and his Ambassador. And the great Labor Leader who is really a stalwart in the battle for freedom, George Meany. Let me tell you, he's something. And then, of course, Jacob Javits, my colleague, who is a brilliant man.

Now, I've got some marvelous things here that the "five minute rule" is not going to permit me to say. But I want to say this. That the International Rescue Committee came into being at a time when rescue was desperately needed. At a time, in human civilization, that's almost impossible for us to even comprehend. The ugliness, the inhumanity, the brutality of the period of Nazism and Fascism and the worst days of Stalinism. Yet the International Rescue Committee still has a vital role to fill because there are really more refugees today, I believe, than almost any other time. In different parts of the world, to be sure, but they're God's people. And the International Rescue Committee is there to help. We have maintained fidelity to the hope and pride of one of our greatest symbols of freedom and sanctuary here in America—in the being of this International Rescue Committee. I still am enough of a sentimental patriot to get a thrill out of seeing the Statue of Liberty and I always have tried to remember the words that Emma Lazarus had to say. I hope that we'll remember it now—because this is really what the IRC stands for: "Give me your tired, your poor, your huddled masses yearning to breathe free, the wretched refuse of your teeming shore. Send these, the homeless, tempest-tost to me, I lift my lamp beside the golden door!"

Now, at a time when so many people are cynical about this country, if it were possible that we could just open our gates totally, this country would be flooded with hundreds of millions of people who would come here. Because they know that what America stands for and what America means, above all, is freedom. It doesn't mean atom bombs, even though we have them. It doesn't mean the largest banks in the world, even though we have them. It doesn't mean gross national profit, even though we have that. It means one thing, above all, and that is freedom. And that's why I say that the International Rescue Committee is so relevant to our times and as people continue to come to our shores, as they continue to become assimilated in our society, I'm one of those that happens to believe that America's strength grows. I believe that we gain, all the time. Our foundation of liberty and human dignity and individual rights are strengthened as people come to us that we call refugees. Our life's work as a nation is renewed. Some of our most recent refugees are from Vietnam, and I'm happy to tell you that in the State of Minnesota, we have a very large number of them, and they've brought a whole new spirit to our state. They've added to the beauty of our state, to the cultural diversity and variety of our state and they've added to its productivity.

I want to thank IRC (I almost said I.R.S.—I wouldn't want to do that). I want to thank the International Rescue Committee. I want to thank all of you who are the pioneers. And I now must say that it is time for Hubert Humphrey to go vote, and I hope you'll forgive me. God bless you. Thank you very much.

Mr. MARKS. After Hubert Humphrey, anything else that might be said would be anticlimactic. I just want to thank all of you for coming, and I want to say that these arrangements would not have been possible if not for Jeanne MacDaniels of the IRC staff and Ray Nelson of the Senate staff. Thank you for putting this all together.

FITNESS TRAILS AND JOBS

Mr. MATHIAS. Mr. President, on May 26, 1977, we passed S. 1242, the Youth Employment and Training Act of 1977. The provisions of that bill were essentially those I called for on January 10, 1977, when I introduced Senate bill No. 1, the first bill introduced in this Congress.

I hope that this legislation will enable our young people to participate in a large-scale effort to improve and beautify America. By developing our urban and rural areas through rehabilitation and environmental projects, these young people will have meaningful jobs which will provide a legacy to those who will come after them.

I hope that some of the projects in this program will be fitness trails. I have long been a suporter of the bike trails systems in this country. We need to expand that system to include fitness trails in our national parks and in local and State areas.

Management Science for Health, a nonprofit institution in Cambridge, Mass., has developed this idea and is seeking to apply it around the country. I think they deserve the encouragement and support of the Congress. I ask unanimous consent that their statement on fitness trails be printed in the RECORD and trust that my colleagues will use this material to spread the good word about an important and useful program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FITNESS TRAILS: AN IDEA WHOSE TIME HAS ARRIVED

Many Americans who have been to Europe in the past ten years have become aware that in Scandinavia, Switzerland, and West Germany, the landscape is dotted with running and exercise trails. There trails offer an intelligent commitment of land to serious recreational and health purposes. They are fun to use, inexpensive, and immensely popular and it is encouraging to see such exercise paths now emerging on the American scene.

The prime reason for an exercise path is to encourage a sedentary, physically-unfit citizenry into a more active life. Since the trails emphasize the outdoors, are inexpensive and durable, and make running and exercising an enjoyable experience, the possibility of success is greater than with the usual indoor or brief "tone-up" approaches used by many in the exercise field. The trail concept is being promoted by health professionals, urban and regional planners, physical educators, and

recreation officials. It provides a new stimulus for physical activity and places it in the community, where it is accessible to neighborhoods; in a time of continuing energy shortages, Americans will be forced to look increasingly to their own neighborhoods for recreational outlets. To be able to walk, or bike, or ride on public transportation to such a place, as opposed to driving great distances to reach a recreation setting, would be highly advantageous to a majority of Americans.

Many professionals have recommended the establishment of these exercise paths across the United States. The President's Council on Physical Fitness and Sports, endorsing their use, urges every community to build one; Dr. Samuel Fox, past President of the American College of Cardiology, has endorsed their development here. The National Blue Shield organization has recently distributed a film, "You Can't Buy Health", which features the Life Course, one version of this idea. More than a hundred such courses now exist in the United States, some built by commercial companies, some established by schools and colleges using their own design, some in summer camps, and some developed by the nonprofit Life Course Resource Center of Cambridge, Massachusetts. However, one hundred trails in a country of over two hundred million is not exactly a neighborhood facilities program; Switzerland, with a population of about ten million, has over four hundred trails, and is building more. By this standard, we could well use eight to ten thousand here.

A logical question to ask is whether there is a way to hasten the establishment of a national system of fitness trails. In a population so unfit as ours, the potential benefits are enormous. One way to do this, and do it soon, is through the use of CETA and other jobs legislation-supported labor. Like the CCC of the 1930's, one way to provide jobs and useful conservation experience for young persons is to employ them in trail construction and fitness path building. Linked with a nationwide system of bicycle paths, this complex of fitness-oriented trails could make Americans once again among the healthiest, fittest people in the world. Local communities could thus take advantage of the presence of jobs programs in such a way as to bring this important fitness program to their citizens. We recommend the development of these programs, and urge that any jobs legislation be written in such a way as to encourage their rapid establishment.

CITIZENS AGAINST NOISE (CAN), CRUSADES AGAINST NOISE POLLUTION

Mr. MATSUNAGA. Mr. President, Citizens Against Noise—CAN—was organized in Hawaii nearly 7 years ago to inform citizens of the dangers of noise pollution. During the past 7 years, CAN, under the able direction of its board chairman, Joan Hayes, has demonstrated on many occasions the effectiveness of ordinary citizens in reducing noise and improving the quality of life in the Nation's cities. Its efforts have been so successful that it now has a sister organization in Los Angeles known as Citizens Against Noise Trespass—or CANT.

Among other things, CAN has sponsored educational programs in the public schools of Hawaii, waged campaigns against barking dogs, noisy vehicles and noisy industries, and, perhaps most importantly, has lobbied successfully for stronger, more effective noise control ordinances at the State and local levels. I am proud to be a member of CAN, an organization dedicated to the restoration of two of our most invaluable rights—peace and quiet.

With the thought that my colleagues in the Senate may find CAN's work of interest, I am submitting for inclusion in the CONGRESSIONAL RECORD CAN's latest information leaflet on the Economic and Social Costs of Noise. I hope that CAN's success will encourage other citizens to organize and do battle against crippling noise.

I ask unanimous consent that the material referred to above be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ECONOMIC AND SOCIAL COSTS OF NOISE
CITIZENS AGAINST NOISE, HONOLULU, HAWAII

Sixteen million Americans already suffer noise-induced hearing impairment; 140 million others are at risk. The Department of Health, Education and Welfare[1] says that "risk with regard to noise-induced hearing loss may be greater than any other hazard in the work environment."

The effect is cumulative. "Daily encounters with workplace noise may degrade hearing, mask reception of desired sounds, heighten emotions and psycho-allergic activity, disrupt concentration, or otherwise hinder job safety. The collective impact of these noise effects clearly poses a significant challenge to the employee's health productivity and well-being."[2]

Obviously, noise is just as damaging outside the workplace as in it.

Crisis in the Workplace, a 1976 Ford Foundation study, links noise to absenteeism, high labor turnover, and high error and accident rates, probably due to the loss of visual acuity which accompanies an excessively noisy environment.

The Ford Foundation report quotes a National Institute of Occupational Safety and Health study as finding that "the rate of seemingly non-occupationally related medical complaints is higher in plants with hazardous (e.g. noisy) working conditions, with the result that the costs of equipping and staffing the plant dispensary are higher than they would otherwise be."[3]

Despite research going back at least fifteen years and still being expanded on, the link between noise and such conditions as ulcers, high blood pressure, heart trouble, mental illness, cholesterol imbalance, miscarriage, fetal deformity . . . in short, all the stress-related ills, Crisis in the Workplace charges that "The issue of noise as a stressor and co-causative factor of disease is of little if any interest to the safety professional . . . each professional chooses not to deal with some aspect of the total problem, and words like 'noise' mean different things to different people."[4]

Both work-related and recreation-related noise exposure will cause a gradual, undetected-by-the-victim, "slow accident"—no less limiting in terms of future earning power or in enjoyment of life than a sudden loss of limb or sight in an industrial or recreational accident. Yet this is largely unnoticed by insurers, compensation boards, safety engineers, health education specialists, and even physicians.

HUBERT HUMPHREY

Mr. HATCH. Mr. President, everyone in this body, and indeed, probably everyone who reads a newspaper, knows that the senior Senator from Minnesota and I differ on many issues the Senate considers. As Senators from our respective States and political parties, this might be expected. But I would like to step out of my role as a legislative advocate for just a moment and share with you a poignant, personal experience I was privileged to have with HUBERT HUMPHREY.

Back in May, a 12-year-old constituent of mine stopped by my office. This youngster had been a patient at the National Institutes of Health being treated for terminal cancer. Before leaving Washington, his mother decided to tour the Nation's Capital and pay visits to Utah's congressional delegation. My staff escorted them down to the Joint Economic Committee where we were hearing testimony from Treasury Secretary Michael Blumenthal. I invited Bill to come with me up to the dais and listen for a few minutes to the proceedings, which at that point were the Secretary's responses to Vice Chairman HUMPHREY's questions.

After concluding his questioning of the witness, Senator HUMPHREY graciously joined my constituent and me in the anteroom and offered this young boy and his mother real, genuine encouragement for what they would face ahead. I was touched by his warm words. Here was a public figure who had served as Vice President of the United States, was a leader in the Senate; campaigned for the highest elected office in America, and had met with kings, queens, and heads of state from the world over, talking gently and unhurriedly with a 12-year-old boy from Utah who shared the same dread disease.

It has now been released that our colleague's disease has worsened, a fact which saddens me greatly. But I know that my friend HUBERT HUMPHREY will not allow himself to be defeated in spirit. He wrote it himself in a recent article for the August issue of Reader's Digest entitled, "You Can't Quit!" I ask unanimous consent that the text of this article be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH, Mr. President, Senator HUMPHREY's lifetime of accomplishments and service to his country will become history, but it is the character of HUBERT HUMPHREY that is now and will remain inspiring to each of us. I wish him a speedy return to participation in the Senate—I have my arguments all ready!

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"YOU CAN'T QUIT"

(The distinguished Senator from Minnesota tells how he has coped with cancer—and lives life to the fullest)

(By HUBERT H. HUMPHREY)

The worst moment in my life was when I discovered that I had cancer. I know what this dread disease can do to a person and what the chances for survival are. But if

you think of yourself as a statistic, then you're really in trouble. You have to believe that somehow you can win this fight. You have to gear yourself to the continuity of the struggle, knowing that there will be days when you won't feel too good.

My faith and hope get me from day to day. A favorite verse in the Bible is from St. Matthew: "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place, and it shall remove; and nothing shall be impossible unto you." Deep down, I believe in miracles. They have happened to a lot of people who were given up to die and then were restored to health.

But there are days when I get discouraged. I look at myself in the mirror and say, "Humphrey, you look like a sad sack." Because of the chemotherapy, I've lost a lot of hair, and got much thinner. My trousers don't fit; my shirt collar is the wrong size. When I start feeling sorry for myself, I tell myself: "The doctors told you this would happen. You can't do anything about it, so get on with living." Then I go and have my clothes altered.

The Will to Hang On. If you don't overcome self-pity, the game's all over. My father taught us there was no time for self-pity in life. You had work to do. On the plains of South Dakota, adversity was part of daily life. I remember the dust storms, the blizzards, the summer heat and droughts. Yet when the crops failed, you always thought, *There's another year coming. I'll prepare the soil and pray.* You were always future-oriented.

My family lost a lot, especially during the Depression. One of my saddest memories is of my mother crying and my dad with tears in his eyes because they had to sell our home to pay the bills. But in life it isn't what you've lost, it's what you've got left that counts. We had a lot left. We had ourselves, our family, our store. It was only a question of time before things would get better. The important thing was who would be the survivors. Who had the will to hang on for a better day.

I think the biggest mistake people make is giving up. Adversity is an experience, not a final act. Some people look upon any setback as the end. They're always looking for the benediction rather than the invocation. Most of us have enough problems so that almost any day we could fold up and say, "I've had it." But you can't quit. That isn't the way our country was built.

Life's always a struggle. If anything's easy, it's not likely to be worthwhile. I made up my mind very early that I would have to improve myself. I went back to the University of Minnesota after a six-year absence and, let me tell you, it wasn't easy. My wife, Muriel, had a job, earning something like $45 a month. She used to make sandwiches that we could sell to earn extra money. I was carrying a heavy academic load, but I worked six hours every night in a neighborhood drugstore. I never felt I couldn't make it.

One of my hardest battles was running for the Presidency in 1968. I had been given the chance I dreamed about, to be the standard-bearer of my party, but there were moments when we were so far behind that I got discouraged. Our party was broke. I remember saying to Muriel, "If we can't afford an airplane, we'll get in a car or a bus because, damn it, we're not going to give up, we're not going to quit."

To come as close as we finally did to winning the highest office in this land and then to lose it was hard. But in writing my concession speech, I told myself, "This has to be done right because it is the *opening* speech of your next campaign!" I was already looking ahead.

I've often thought of how we could have handled things differently. But I don't have any bitterness. Bitterness takes too much energy and accomplishes nothing. It doesn't hurt the other person. You think you're sending out the rays of bitterness like laser beams, but they stay inside of you—consuming *you*. As Lyndon Johnson often said, you can tell a fellow to go to hell, but it's hard to make him go.

SOURCES OF STRENGTH

The important thing in any setback is whether you can pick yourself up. That helps me with my illness. I keep thinking, "Well, tomorrow is another day." There may be people who'll say, "It's all right for you to talk about tomorrow being another day, but if you knew how much pain I suffer . . ." I do know. When I had to take X-ray treatments, I used to get up in the middle of the night with bladder spasms. One time I was in such agony that I honestly wanted to give it all up. But even in the deepest despair you have to look up—keep your eyes on the mountaintop. I believe, I know, that a positive outlook can influence your physical well-being, that it can help you fight something like cancer. If you have the will to live, it can help the process of recovery. Medical experience has supported this.

But I feel, also, that not all of my life is in my own hands. There is a power beyond man—Divine Providence, the will of God. It is a powerful source of strength if you can get in tune with it. Like anybody else's, my faith is sometimes rocked. When I'm feeling low, I draw strength from the prayer of St. Francis of Assisi. Part of it says, "Where there is doubt, let me sow faith; where there is despair, hope; where there is darkness, light; and where there is sadness, joy." I think it is the perfect prayer.

One of the greatest sources of strength throughout my illness has been my family, especially Muriel. We've been married more than 40 years, and she's put up with an awful lot from me. When I found out I had to have surgery, we decided to tell the children in a family gathering. Muriel fixed a brunch at our home in Waverly, Minnesota, and they all came. Then I called them to attention and told them: "You've just got to have faith with me that this is going to come out all right. Because if you doubt whether I'm going to make it, that's ten points off my chance."

I would be dishonest if I didn't say that there were some bad moments. At one point, when I was in the hospital, Muriel said, "Last night I was so angry that I cried. I keep asking, why you?" I told her I had felt that way, too. I don't know the answer. Looks like I always win the little elections and lose the big ones. But it *is* me, so why spend time trying to figure out why?

During those inevitable periods of depression and anger, another thing that kept me going was the great outpouring of love in telegrams, cards and letters from all over the world. I tell you they had a real healing effect on me. The greatest gift that has come to me is the affection of so many—far more important than people feeling sorry for me. In fact, feeling sorry for someone is simply to give him a little pain reliever. Love is a healing force.

When I was in the hospital, people marveled that I was up so quickly, visiting other patients. Can you imagine Hubert Humphrey strapped to a hospital bed? By the third day after surgery, I was walking around saying hello to people I knew were in worse shape than I was. I was doing it for them and for me.

Let me tell you something. What you give, you receive back a thousandfold. After World War II, this country was magnanimous and magnificent. We shared with all and the more we gave, the more we had. If you have a well and draw water from it, it fills. If you don't draw water, it gets stagnant. You have to learn to give yourself.

LIFE TO THE FULLEST

One reason I can keep going is that I enjoy living. I have a great inquisitiveness about the future. I see so many people younger than I who have no interest in tomorrow. But I want to live to the year 2000, to be around to see what's going to happen.

When you're older, you're bound to think about how many more days or years you have left. It certainly goes through my mind. Then I think, well, Humphrey, there's not much you can do about that, is there? Except live life to the fullest.

I must say it doesn't help when someone comes up and says, "Gee, you look bad." Back in January when the Senate opened for the new session, I had just had major surgery. Then I got the flu. I looked and felt pretty bad. But I came for the opening of the Senate because I was in the contest for Majority Leader.

Well, seems that day every camera in the United States was focused on me. The press kept running those picture, and they stressed how drawn and haggard I looked. I said to one reporter, "Don't bury me prematurely. I'm apt to get right out of the coffin."

Anyone who has experienced what I have knows damn well how bad he looks. I got so tired of hearing people talk about it that Muriel and I went to the Virgin Islands to rest and relax. When I got back, looking better, I thought, "Take my picture *now*."

It helps in life to have a sense of humor. If not, you start taking yourself too seriously and lose perspective. While in the Virgin Islands, I liked to tell my friends, "What a wonderful place this is! They've got Greta Garbo down here who doesn't talk to anybody and Hubert Humphrey who'll talk to everybody."

I hope I can demonstrate for others that you don't have to throw in the towel when you have something like cancer. Be grateful for every day of life. Be buoyant with it and do the best you can with what you have.

My goodness, there are people who live their lives with physical defects—doing marvelous things. Ray Charles is blind and he's one of our great musicians. Look at Max Cleland who is a dynamic director of the Veterans Administration. He came from Vietnam minus two legs and a right arm. Franklin Roosevelt was crippled by polio and needed steel braces to stand; but the pain never showed on his face as he conveyed to the nation his message of confidence and moving "forward with a strong and active faith."

A month after my surgery, I went back to work. There's nothing worse for a person with something like cancer to have nothing to do. If a person can't work, there are other things to do. It's important to be involved with people and activities.

My staff tells me I ought to cut down on my schedule. There are days when I wonder if I'm really making the best use of my time. But I enjoy being a Senator. When I'm in committee meetings, handling foreign affairs, economic and social problems, agriculture issues, I feel that I'm part of the life of this country. I feel vital.

The day after I withdrew from the Majority Leader race last January, my colleagues made me "Deputy President Pro Tempore of the Senate." It provided me with such things as extra salary and a special office. But far more important I would be included in the Senate leadership meetings at the White House. It showed that my colleagues recognized that I had given a lifetime of service to my party and that I still had more to give. They bestowed a great honor on me. They also gave me something more to live for.

I m sure many people think my odds against cancer are not very good. But it's a race I'm in, and I can't get off the pony. I've got to ride it and hope that I'm going to win. How long should a person live? I don't

know. What's more important is how you live and what you live for. As long as I have a breath of life I'm going to try to live actively and be a part of the daily life of my family and friends, my job, neighborhood, community and country. I'm not changing my life because I have had cancer. With the help of the good Lord, my wife and family, the love and affection of so many friends, the care of my doctors, and my own love of life, I expect to be around for quite a while.

PREVENTING POLLUTION PAYS

Mr. ANDERSON. Mr. President, Minnesotans take special pride in the leadership role both our private and corporate citizens have assumed in the fight to reduce pollution and conserve energy.

While I was Governor of Minnesota, I had the opportunity in 1973 to participate in 3M's 25th anniversary of its chemolite plant in Cottage Grove, Minn., and the dedication of its advanced incinerator that disposes of chemical and hazardous wastes without creating pollution problems.

Four years have passed since the anniversary celebration and incinerator dedication. Today, to an even greater extent, Americans recognize the urgency of pollution control and energy conservation. Today, 3M continues to symbolize environmental corporate responsibility, and once again has demonstrated its leadership role in finding environmentally acceptable solutions to pollution problems.

I refer to 3M's pollution prevention pays, or 3P program. This program, which I believe can serve as a model for other companies, is designed to reduce the necessity for cleaning up polluting wastes at the end of the manufacturing process, by using technology to keep pollutants from entering into the manufacturing process.

The philosophy behind this concept was expressed recently by Raymond H. Herzog, board chairman of 3M. He said,

> Systems for controlling pollution after it becomes a problem may not be the best or the most efficient solution in terms of materials and energy use. By preventing pollution from occurring in the first place—at the source—rather than at the end of the production process, we can improve the environment and conserve materials, and save energy at the same time. This is what the 3P Program is about.

I wish to share with my colleagues a description of the 3P program, taken from an article which appeared in the May 1977 issue of Pollution Engineering magazine. The article was written by Dr. Joseph T. Ling, vice president of environmental engineering and pollution control at 3M.

Dr. Ling is an internationally recognized authority in the field of industrial pollution control, and Minnesota is fortunate to have a scientist of his caliber working to preserve the quality of life in our State.

I ask unanimous consent to have printed in the RECORD an adaption of Dr. Ling's article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLLUTION PREVENTION PAYS: 3M RESOURCE CONSERVATION PROGRAM ATTACKS POLLUTION AT ITS SOURCES

(By Dr. Joseph T. Ling)

The little man on the cover of this issue symbolizes what 3M Company believes to be a necessary new approach to pollution abatement: *resource conservation technology*. As the name indicates, its purpose is to conserve resources and lower the cost of pollution abatement by working to eliminate the sources of pollution in processes and products before waste is created.

The concept is also referred to as nonwaste technology, which is literally unattainable. In practical terms, by either name, the goal is to apply knowledge, methods and means to provide the most rational use of natural resources and energy and to protect the environment. This approach avoids wastefulness which is "the irrational use of more than necessary resources to fulfill human needs and objectives." If this broad definition of waste is accepted, then "resource conservation becomes a positive image for the application of technology to fulfill human needs and aspirations without destructive impact on the environment." These definitions are from a seminar on "Principles and Creation of Nonwaste Technology and Production." The program was sponsored by the United Nations Commission for Europe and held in November 1976, in Paris. Representatives of some 30 nations attended, indicative of a considerable interest in conservation approaches to technology.

Our cover character also represents a unique and continuing program at 3M intended to accomplish this goal as far as practicable. It is called Pollution Prevention Pays (3P).

In the first 2 years of the program, 46 projects were submitted for recognition, 36 were reviewed, 19 were approved, 8 were held for additional information, 8 were rejected as not meeting 3P criteria, 7 were under initial review, and 3 were ready for presentation but delayed for patent protection or other proprietary requirements. The 19 approved projects, which have been presented with awards, have eliminated the equivalent of 73,000 tons of air pollutants, 500 million gal of polluted wastewater and 2800 tons of sludge annually. These 19 projects have produced a total estimated savings to 3M of $11 million in actual or deferred pollution costs and, in at least one instance, sale of a product which might have met user resistance in the future or have been forced off the market. (Projects are listed in Table 1: "Sales retained" refers to the previously mentioned product, mercury catalyst removed from electrical insulating resin.)

The 3P program was established in response to an inquiry from Raymond H. Herzog, 3M board chairman and chief executive officer, who became particularly aware of the cost of pollution control during the economic slowdown of 1974. Herzog asked the 3M Environmental Engineering and Pollution Control Department (EE&PC) the same question he had raised with other staff and line groups: "Isn't there anything else you can do to trim costs?" "Not if it means failure to comply with (Federal and state) regulations," EE&PC replied. It was explained, however, that certain cost savings could be achieved by promoting development of resource conservation technology, and Herzog gave the concept his enthusiastic blessing. This support was reflected throughout top management.

A program was developed for providing an orderly transition from conventional pollution removal technology to conservation oriented technology. The focus of the effort was to interest the company's technical employees in finding ways to prevent pollution through:

1. Product reformulation.
2. Process modification.
3. Equipment redesign, or
4. Recovery of waste materials for reuse.

The name "Pollution Prevention Pays" was selected for the program after considerable debate over whether the word "pays" should be associated with the concept of pollution prevention. Four valid payoffs were defined: better environment, conserved resources, improved technologies and reduced costs. Therefore, it was concluded, payoff not only should be equated with pollution prevention but was an essential motivating factor.

Four criteria were established for judging:

1. The project, through any means, must eliminate or reduce a pollutant that is a problem or that has the potential to become a 3M problem.

2. The project should exhibit, in addition to reduced pollution, environmental benefit through reduction in energy consumption, more efficient use of raw materials, or improvement in the use of other natural resources.

3. It should incorporate a technical accomplishment, innovative approach or unique design in meeting its objective.

4. The accomplishment must have some monetary benefit to 3M. This may be through reduced or deferred pollution control or deferred pollution control or manufacturing costs, increased sales of existing or new products, or other reduction in capital or expenses.

Plans then were made to introduce the concept throughout 3M, which has about 80,000 employees in 40 countries. Priorities were established and presentations prepared for each of several groups:

1. Corporate officers and managers of operating divisions, who set policy and provide an example. Support from this level of management is a necessary ingredient in the recipe for success of companywide programs.

2. Division engineering departments, which supervise the design and construction of all 3M manufacturing facilities.

3. 3M division laboratories in St. Paul, where a majority of product research and development occurs.

Table 1. The 19 Pollution Prevention Pays (3P) projects cited for awards by 3M Company. Included for each project are: estimated dollar savings to 3M; type of pollution eliminated; and the amount of pollution eliminated.

POLLUTION PREVENTION PAYS AWARD PROJECTS

Project	Estimated benefit	Pollution eliminated	Amount eliminated
Reactive coating	*$2,000,000	Hydrocarbon	25,000 tons/yr.
High-conversion polymer	*1,000,000	Odor	80 percent reduction.
100 percent solids coating	*3,000,000	Hydrocarbon	35,000 tons/yr.
Cr^{+6} elimination	*80,000	Chromium	2,000 lb/yr.
Cooling water recycle	*200,000	Water	1.5 mm gal/day.
Chemical process reformulation	*1,150,000	Dissolved solids, hydrocarbons.	450 tons/yr.
Incinerator improvement	†175,000	SO_2 and particulate	21 tons/yr.
Zinc salt reuse	†50,000	Zinc salts	20 tons/yr.
Polymerized coating	†100,000	Hydrocarbons	100 tons/yr.
Spray booth redesign	†125,000	Wet scrap	250 tons/yr.
Process modification	†35,000	Alcohol	350 tons/yr.
Product reuse	†500,000	Incinerated scrap	100 tons/yr.
Whitewater recycle	†56,000	Wastewater sludge	6 tons/day.
Degreaser solvent change	†24,000	Photo-reactive HC	360 lb/day.

Project	Estimated benefit	Pollution eliminated	Amount eliminated
Freon replacement	†100,000	Freon propellants	625,000 lb/yr.
Mixer reflux system	†8,000	Hydrocarbons	100,000 lb/yr.
High-solids coating	†250,000	Hydrocarbons	1.1 mm lb/yr.
Modified polymer coating	†800,000	Hydrocarbons	4.5 mm lb/yr.
Resin reformulation	‡330,000	Mercury	5,000 g/yr.

*Pollution control eliminated.
†Operating cost savings.
‡Sales retained.

4. Manufacturing personnel, both at headquarters and at plant locations.

Presentations to 3M management groups were first. Management was informed of objectives and organization of the 3P program. Next, presentations were made to the various division engineering departments which are housed conveniently in the same building as EE&PC. Reaching the engineers was a top priority, as they are responsible for designing and building all 3M research and manufacturing facilities. Then, meetings were held with laboratory groups in St. Paul and with manufacturing personnel at plant sites visited in conjunction with other environmental business.

We have also presented the 3P program to 14 3M International subsidiary companies. Of these, eight have formed their own programs, and two in Canada and Australia have designed their own recognition certificates. It is 3M policy to allow each subsidiary to establish, organize and implement its own 3P program. EE&PC gives them the guidelines under which the U.S. program is operating and assists as needed.

It is only a matter of time before the program is spread further throughout the company. Success breeds support, and the 3P concept is advancing as fast as possible within the limits of human, mechanical and fiscal resources. We are not impatient, because the program is continuous; it is not a one-time promotional effort designed to ring up immediate results and then to be forgotten.

Initial efforts have been successful largely because of cooperation from operating units, because the program is run by and for them and not forced on the unwilling by the unknowing and uncaring—as staff groups, unfortunately, sometimes are regarded by line organizations.

There is a four-part sequence to a 3P award:

1. The EE&PC representative to a division prepares nominations of likely candidates, which usually result from suggestions from the division.

2. The nomination is reviewed by the 3P Coordinating Committee, composed of representatives of 3M's Manufacturing Council, Technical Council, Engineering Council and the Environmental Engineering and Pollution Control Department.

3. If the project is approved by the Coordinating Committee, division management is contacted to determine whether recognition is appropriate and who should be selected for the award. Only persons who have made a direct, measurable contribution are eligible. Project managers are not eligible, unless they meet the criteria for personal, not supervisory, involvement. No members of EE&PC are eligible for citations, no matter how significant their contributions, because these efforts constitute their job.

4. Division management presents the awards. Frequently, the division general manager calls the recipients before the management operating committee to honor them. The award itself is a framed plaque signed by the chairman of the board, division general manager and the Vice President of the EE&PC. Other awards or incentives may be provided by individual divisions. The awards also help management to pinpoint who can solve problems creatively. Being recognized for this certainly does not hinder advancement.

The Coordinating Committee has been a significant factor in our efforts to build the 3P concept, which does require a certain faith in the program, particularly when things are working well already. Consider the manufacturing director who has solved a water pollution problem by black-box treatment at the end of the pipeline. Environmental Protection Agency and/or state standards for discharge are being met. Then somebody in the technical structure develops a plan to eliminate the source of the pollutant by drastically changing the process or product. The manufacturing director must decide between what is familiar and works and that which should work but is unproven. There is also the sales manager who is concerned about the wisdom of changing a product which has been performing well for customers.

Benefits or potential benefits must be evident and sufficiently important to the operating unit personnel, and there must be an atmosphere of corporate support and encouragement for participation. At 3M, this atmosphere is unclouded by doubts; the program was established with the firm support of top management.

Necessity, the cliche goes, is the mother of invention. This may be an overworked phrase, but that makes it no less true—particularly in reference to pollution abatement. 3M's attention was directed toward pollution control initially because of necessity. Now it is directed toward elimination of pollution sources for the same valid reason—it is necessary. The cost of relying entirely on pollution removal technology—the little black box at the end of the pipe—simply is becoming too great, considering the myriad other demands on our financial resources.

Removal technology consumes resources, and the rate of consumption and costs accelerate exponentially as removal percentages rise to the last few points. Removal also produces residue which, itself, is becoming an increasing disposal problem. Within management, the primary objective of pollution control is to achieve the most reduction in waste with the least use of human, material and financial resources. Pollution elimination technology apepars to be the best means of meeting this objective.

The problem is that resource conservation technology has not yet received much recognition by government or the general public. Emphasis has been on the traditional removal type of pollution control. This is indicated by the fact that legislation and regulations usually provide neither the time nor the flexibility a company needs to develop products and processes which eliminate or reduce pollution at the source; the rules are directed primarily toward achieving pollution removal. Some regulations limit the percentage of pollutants rather than the total amount. This restricts using techniques that reduce the amount of pollutants, and total volume of discharge, because they may increase the concentration.

3M's efforts in resource conservation technology are no panacea or substitute for pollution control; they represent an attempt to reduce the difficulty of abatement by eliminating as much pollution as possible before it occurs. Nobody is under the illusion that this concept can be adopted 100 percent; there always will be a certain amount of pollution removal technology required.

At times, certain product manufacturing situations cannot employ resource conservation technology, because none exists. In other instances, the cost/benefit ratio may indicate use of pollution removal technology. However, achieving some benefit to the environment and cost savings through resource conservation technology is better than no savings and no benefit. Our task is to reach as high a percentage of pollution elimination as possible.

Advocating different technological approaches in a controversial and tightly regulated field such as pollution abatement is analogous to surfing. To succeed in either, you have to ride the crest of a good wave. Too early, and there's no wave; too late, and you're swamped. The message of the little man on the cover is: "Surf's up!"

3M "Down Under" Is on Top in Pollution Prevention

3M Australia's Pollution Prevention Pays (3P) Program involves seven active programs, of which three are being considered for recognition. Recognition for the other four programs will be considered when they are in operation. 3M Australia is a leader among the 14 3M subsidiaries instituting the 3P program.

All three of 3M Australia's 3P awards were to the Abrasives Laboratory for making process changes. The award projects included:

1. Reduction of formaldehyde fumes by modifying a process for making coated abrasives. A $35,000 savings was achieved by eliminating the installation of ventilating equipment. A possible respiratory health hazard to employees during coating and converting operations was reduced, and cleaner air was achieved in and around the factory.

2. Replacement of solvent by a water-base system of applying zinc stearate to abrasive products. Savings of $45,000 were reported from reduced waste due to increased stability of coating rolls. Environmental benefit was cleaner air and less wet scrap.

3. Replacement of solvent by water in the production of pressure-sensitive paper-backed abrasives. Savings of $27,000 resulted from cheaper adhesives and reduced production waste. Cleaner air and less wet scrap were the environmental advantages.

3M Environmental Engineering Stresses Problem Management

Environmental Engineering and Pollution Control at 3M is organized by function rather than according to engineering disciplines. Its engineers are problem managers and not just technicians. There are four abatement functions at 3M, three within EE&PC and one that is part of 3M's Central (corporate) Engineering, but with a strong dotted-line relationship to EE&PC.

1. Environmental Laboratory develops information on the environmental impact of new and existing 3M products, and communicates product environmental information to outside organizations. It is the primary contact between EE&PC and division product development laboratories. It conducts analytical and field laboratory work and applied environmental research.

2. Environmental Process Technology is responsible for environmental assessment of 3M research and manufacturing processes. It is the contact with Division Engineering groups and reviews and approves pollution

facility projects. This department also conducts basic and applied research into pollution control technology and develops disposal methods for hazardous wastes.

3. Environmental Affairs is responsible for dealing with regulatory agencies and monitoring legislation and plant compliance. It obtains permits and variances, files compliance plans, environmental impact statements and related documents required by regulatory agencies or 3M, and handles noncompliance complaints and problems.

4. Pollution Control Facilities Engineering is responsible for hardware design of pollution control installations, including design engineering, scheduling and costs. Because it deals with facility design and construction, this department administratively is part of 3M's Central Engineering and functionally responsible to EE&PC.

Originally, EE&PC was structured vertically, with engineers specializing in air, water or noise pollution problems or waste control. The changeover to problem management came as the company's abatements grew increasingly sophisticated to cope with more stringent and complex regulations.

Coordination of pollution abatement activities and technical expertise to carry them out were centralized at 3M headquarters at St. Paul, because the company's manufacturing facilities tend to be small and diversified, and because this organization provides excellent channels of communications throughout the company. One telephone call from a plant with a pollution problem can set into motion all four abatement functions.

LONG ISLAND SOUND HERITAGE GAINS FURTHER SUPPORT

Mr. RIBICOFF. Mr. President, over the past month public support for my bill to establish the Long Island Sound Heritage in Connecticut and New York (S. 1968) has continued to grow. One newspaper after another has echoed my deep concern over the future of this precious natural resource and has endorsed the Heritage proposal.

Commenting editorially on the unique heritage of the Long Island Sound, the Waterbury Republican commented that—

Retention and preservation would seem to be most imperative for the generations that have inherited what nature carved out for us in pre-civilization years.

The Bristol Press very perceptively noted that—

The preservation and protection of Long Island Sound from the harmful effects of overdevelopment and urban pollution is a key ingredient in improving the quality of life for the people and wildlife of the areas which surround it.

In urging support for the Long Island Sound Heritage, the Willimantic Chronicle stated that—

It seems to us that the preservation move and setup of the Heritage is a most timely and worthy effort to insure that both Connecticut and New York will work to retain the Sound as a great mutual resource.

Mr. President, I ask unanimous consent that various newspaper editorials, as well as the endorsement of radio station WICC be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Chronicle, Willimantic, Conn., July 29, 1977]

WORTHWHILE AND TIMELY

Connecticut and New York officials, many local administrations, environmental and conservation groups in the two states are joining in an initiative by Senator Ribicoff to take congressional action to set up a "Long Island Sound Heritage"—an expanded system of parks, beaches and wildlife areas in this state and New York—to preserve a massive public domain within the Sound area.

Concern has been lodged that the long Island Sound littoral and adjacent lands face ultimate over-development; the Heritage preservation is intended to combine and extend public holdings in perpetuity, with cooperation of both states facing the Sound.

It seems to us that the preservation move and setup of the Heritage is a most timely and worthy effort to insure that both Connecticut and New York will work to retain the Sound as a great mutual resource. Administration would become a federal responsibility, perhaps with some recompense to the states for lands included in the new preservation system.

Reportedly, about 15 sites would be included in it initially, such as Bluff Point State Park in Groton; Ram, Dodges, and Andres Islands in the Mystic Island Group in Stonington; Rocky Neck State Park in East Lyme; Stony Creek Quarry and Faulkner's Island in Guilford; Lighthouse Point Park in New Haven; Silver Sands State Park in Milford; Pleasure Beach in Bridgeport; Long Island in Stratford; and the Great Meadow wetland complex.

Also, Sheffield Island and Chimon Island in Norwalk; Sherwood Island State Park in Westport; David's Island in New Rochelle; Fort Totten in Queens; Hen Island in Rye; Port Washington Sand Pits in Nassau County; Caumsett State Park in Nassau County; and, Roanoke Point in Suffolk County.

One hopes that the intention can be successfully worked out, and that the systematic protection of values along the Sound shore, for the general public, will follow.

[From the Bridgeport Post, Aug. 2, 1977]

LONG ISLAND SOUND HERITAGE

Once again Senator Abraham Ribicoff has stepped forward with a creative design to restore and preserve Long Island Sound. Yesterday, Senator Ribicoff officially introduced a bill calling for the establishment of the Long Island Sound Heritage. This would be a system of parks, beaches, and wildlife areas in Connecticut and New York. In his original plan, the senior Senator suggests inclusion of 15 sites in the two states.

To idealists it is a dream.

To pragmatists the Ribicoff proposal is something else again. Communities, whether they be located in Connecticut or New York, demand their autonomy. Regional cooperation can bring progress toward the solution of many problems, but many times officials and residents of one or two municipalities insist on holding tightly to their rights.

No one should know this better than Senator Ribicoff. Several years ago he proposed the Connecticut River Parkway. He maintained, and rightfully so, that nearly the entire length of the Connectitcut River should be a national park. People of vision saw the worth of his thinking, but petty bickering prevented the parkway from becoming reality. The most that came of it was the establishment by the General Assembly of a conservation zone.

As for the Long Island Sound Heritage program, it is an outgrowth of the study of Long Island Sound, which was initiated by Mr. Ribicoff. Nothing has been done to establish a commission consisting of Connecticut and New York people. Everyone, the governors, the legislatures, and the cities and towns are avoiding action, though no one disputes the worth of the blueprint the committee drew.

As for the Long Island Sound Heritage, Mr. Ribicoff believes in a close working arrangement involving the federal government, the governments of Connecticut and New York, and the municipalities.

He is absolutely correct in his contention that no additional time should be lost in cleaning Long Island Sound and guaranteeing that sites such as Pleasure Beach in Bridgeport, Silver Sands in Milford, the Great Meadows in Stratford and Sherwood Island State Park in Westport, among others, must be protected against an invasion by commercialism.

Senator Ribicoff, in shaping this program, has dramatically demonstrated his interest in one of the finest recreational areas in the country, which is being seriously threatened by private interests seeking to make money, the indifferent attitude of some cities and towns, and the failure of people to appreciate the beauty of nature.

If Long Island Sound Heritage can be put together, Senator Ribicoff will have made a contribution to the public good for many generations to come. May the other governmental officials who will be taking part in discussions and people, in general, realize that cooperation is essential.

[From the Danbury (Conn.) News-Times, Aug. 2, 1977]

LONG ISLAND SOUND HERITAGE PLAN

Senator Abraham Ribicoff yesterday introduced, as he promised he would over the weekend, a measure to create Long Island Sound Heritage, which would incorporate beaches, parks and wildlife areas in Connecticut and New York to enable more people to enjoy the pleasures of the sound.

The new measure carries out recommendations of the Long Island Sound Study, which the New England Rivers Basins Commission conducted in response to a federal act based on a bill which Senator Ribicoff had introduced in 1969.

When and if the new bill is finally approved by Congress and the President, close cooperation on the part of federal, state and local agencies and interested members of the general public will be required if the heritage program is to be developed to its full potential.

Several facilities on the Connecticut side of the sound, all of them somewhat convenient to those driving from the Danbury area, would be brought under the heritage plan if it is carried through in its present form.

Among them would be Sherwood Island State Park in Westport, the Sheffield and Chimon Islands in Norwalk, Pleasure Beach in Bridgeport and the Great Meadow wetland complex in Stratford, Silver Sands State Park and several other parks between New Haven and Groton.

As Senator Ribicoff pointed out to fellow senators Monday, the usefulness of Long Island Sound and its shoreline has been threatened by water pollution, shoreline erosion, the destruction of rich marshlands and the loss of open spaces.

Because of what might be described as urban blight, the southern shore along Connecticut and the northern shore along Long Island are not as useful and as valuable to the citizens as they should be.

The federal-state-local cooperation envisioned by the Ribicoff bill would do much to reverse the destructive trends which have been so evident for so long, to restore Long Island Sound to a high degree of usefulness for recreational and other people-oriented uses, and to preserve this rich natural resource for decades to come.

It is a measure whose time has come. The Senate should approve it and the House should do likewise. More people reside in close proximity to Long Island Sound than to any similar body of water on the Atlantic, Gulf or Pacific coasts. That is why its preservation is so important to all America.

[From the Middletown (Conn.) Press, Aug. 2, 1977]

THE LONG ISLAND SOUND PLAN

It is an ambitious plan—the Long Island Sound Heritage—but Senator Abraham Ribicoff has sparkplugged other conservation efforts in the past, and once again he may have touched a chord in proposing that an expanded system of parks, beaches, and wildlife be set up along the reaches of Long Island Sound.

It was back in June of 1969 that Ribicoff introduced legislation which authorized a comprehensive study of the sound and its shoreline. As the Senator reports: "In August 1971 the New England River Basins Commission initiated the Long Island Sound study. The goal of this study was to produce a plan of action which balanced the needs to protect, conserve, and wisely develop the Sound and its related shoreline as a major economic and life-enriching resource for the more than 12 million people who live near it. After almost four years of effort, the expenditure of $3 million, numerous hearings and on-site studies, the NERBC completed its work. The final report contained more than 600 recommendations for guiding shoreline development, reversing the trend in pollution and enhancing the Sound's economic, recreational, and esthetic potential. The proposals suggest action by the Federal, State and local governments."

"One of the key recommendations," the Senator said, "was the creation of the Long Island Sound Heritage—an expanded system of parks and beaches in Connecticut and New York. Fifteen different locations in Connecticut and New York were specifically nominated for acquisition and expansion."

The bill which Ribicoff has introduced seeks to carry out many of the recommendations of the study, and it directs the Secretary of the Interior to come up with a program that would delineate the uses, and the resulting legislation would provide 75 per cent of the cost for acquisition and development, which would be administered in partnership with the federal government.

While many of the details have to be filled in, in general, the Ribicoff bill has had extensive study in terms of its objectives, pinpoints 15 sites that should be preserved and in general could be attained, and further more creates a system to which other locations could be added.

The basic objectives hardly need underlining. The Sound provides too little in the way of recreation, and public beaches; it is unduly polluted; it needs far greater care and nurturing than it has been getting. It is in danger. While this one bill will not solve every problem, it focuses attention on the total problem.

In a day when Long Island Sound is under more and more pressure from more and more use by an expanding population, there must be counter-prevailing measures. Long Island Sound is a heritage, but at the present rate it will not stay that way for long. The signs of deterioration and decay are all about us.

[From Groton (Conn.) News, Aug. 2, 1977]

THE HERITAGE BILL—A VALUABLE TOOL

It was inevitable that Senator Abraham Ribicoff's Long Island Sound Heritage Bill would stimulate a new round of debate about the future of Bluff Point State Park. It is a debate that will have to be settled in the only manner possible—by accommodating both the needs of the people of the state who want access to the water sports potential of the point and of those who want to see maximum practical protection of a comparatively unspoiled area. It was the latter group that pushed through the state legislature a bill to establish a nature preserve on the point, virtually excluding those who foresaw a magnificent potential for recreational use.

Sen. Ribicoff's bill does not specifically address the fate of Bluff Point State Park. It calls for a combined state, federal and local effort to plan for the preservation of scenic, recreational, natural and cultural resources, initially at fifteen sites along Long Island Sound in New York and Connecticut. Bluff Point is one of those sites.

The basis for the planning would be the guidelines drawn up after a four year study by the New England River Basins Commission. The ideas put forth in that study are not final recommendations. They could not be, since the Commission called for both local and regional participation in a coordinated plan for the shoreline area. That presupposes the injection into planning of ideas that the Commission may have considered only incidentally or not at all.

Similarly, Ribicoff's bill calls for examination of each of the sites by local, state and federal officials to determine whether they should be included in the Long Island Sound Heritage system at all.

The focal point of the bill, however, is that it empowers the Secretary of the Interior to act on implementation of whatever plans are developed to, as Ribicoff said, "enable more people to enjoy the pleasures of the Sound." Presumably, even if the final word on Bluff Point were a recommendation for maximum preservation of natural features, there would be federal money available to make that come topass—including the most vital funds, those for administration and maintenance. A lack of that kind of money is, at present, crippling the entire system of state parks in Connecticut. Only by patchwork application of short term federal work programs has the state been able to fill in any part of that gap.

Thus, the Long Island Sound Heritage Bill will provide an exceptional tool to carry out the wishes, and provide for the needs of the populace with relation to shoreline areas.

There need be neither fear nor suspicion that any element of the program will be carried out without maximum public debate—which will be joined eagerly by the outspoken groups that forced the concept of the coastal reserve through the legislature.

Opposition to the bill, based on fears that it will override the wishes of the people, is ill founded. The bill is a tool that can be used well to carry out those wishes provided they are in the interests of most of the population of the state. This is not the time for new debate to begin.

[From New Britain (Conn.) Herald, Aug. 4, 1977]

A SOUND MODEL

Sen. Abraham Ribicoff's proposal to create an extended system of parks and beaches under federal protection along the Long Island Sound in Connecticut and New York is a model piece of environmental protection; the type of legislation which is in tune with times, with administration policy and with the drumbeat of environmentalists and vacationers.

But in even the best laid plans there may be a hitch. In this case the question of how Bluff Point State Park—which is included with 14 other sites in the Ribicoff package—will be affected should be resolved. Stanley J. Pac, state environmental commissioner, who generally applauds the Long Island Sound Heritage bill, has expressed reservations that the Heritage plan for a ferry from Bluff Point to neighboring Ram Island might lead to development of the naturally scenic park.

Such fears are well taken. Any change, well intentioned or not, which might threaten the natural state of the most scenic resources also threatens the thrust of the Heritage bill which is to preserve Bluff Point. The four year study of Sound beaches and parks, which was initiated by Senator Ribicoff and which he used to base his Heritage bill, recommended that a portion of Bluff Point become a public beach and another portion a nature area.

Hopefully, this hitch or question mark in the Heritage bill will be resolved to the satisfaction of the Connecticut Department of Environmental Protection so that the legislation may receive the unqualified support it, as a whole, deserves from this state.

Few would argue that the Connecticut and New York shorelines which Senator Ribicoff has noted as a "unique study in contradictions" between beauty and the effects of urban waste is worthy of this bill. The shore areas are a natural resource and asset which are of value beyond the borders of shore communities.

[From the Waterbury Republican, Aug. 23, 1977]

SOUND CONSERVATION

Creation of a Long Island Sound Heritage, as proposed by Sen. Ribicoff is long overdue in some form or another. The Sound has always been one of Connecticut's richest heritages—natural, of course. Retention and preservation would seem to be most imperative for the generations that have inherited what nature carved out for us in pre-civilization years.

It would almost seem as if there should be no cause for alarm over the future of the Sound, so valuable an asset is the 90-mile-long body of water separating Connecticut from New York's Long Island. But all our natural bodies of water—lakes, rivers, seacoasts, etc.—are taken so much for granted by most of us that we don't see the abuses that creep in until it's too late to curb or avert them.

With Sen. Ribicoff's premise that " . . . the area's scenic, recreational, natural and cultural resources are threatened by growth and development pressures . . ." no one can disagree. Whether or not such recognition is followed by such corrective measures as are proposed in the Long Island Sound Heritage is beside the point. What has to follow the seven-year study and recommendations is action to retain and maintain a Long Island Sound that will provide Connecticut and New York with a salt-water body, once described by Daniel Webster as the "American Mediterranean."

Urban sprawl and urban wastes are taking their toll along the Connecticut shoreline; will continue to do so until some sort of a barrier, like the Long Island Sound Heritage, is erected. Hopefully the Ribicoff legislation will fit into President Carter's views on environmental protection and preservation

---

[From the Westport News, Aug. 26, 1977]

IT SHORE MAKES SENSE

Two proposals to safeguard the state's threatened shoreline and diminished coastal resources are moving toward the legislative hopper—one in Hartford, the other in Washington, D.C.

One important program, which has received little public attention, is reaching the end of its planning stage for presentation to the General Assembly during its 1978 session. Right now, citizens in coastal towns like Westport have a chance to tell the Coastal Management Program (CAM) how they would like to see the fragile and valuable Connecticut shoreline used in the future.

The coastal homeowner, developer, sailor, fisherman, petroleum dealer, shipyard owner, presumably, the person who wants to fill a salt-marsh can all have their say as proposals are made for a more rational and coordinated system of coastal management and protection.

For those who missed the CAM workshops held in Fairfield County recently, "A Citizen's Handbook to Coastal Area Manage-

ment" is available from CAM, 71 Capitol Avenue, Hartford 06115. It contains a questionnaire on program recommendations and asks respondents what town they live in and why they are interested in the coastal area.

Not that there are simple answers to complicated questions.

Guidelines of the Federal Coastal Zone Management Act, which provides the planning funds, must be followed as a complex and multi-use coastline is studied. One requirement asks that the boundary of a coastal zone be determined as a condition of further federal funding. The coastal zone would then be subject to the special controls of the management program. The federal act also requires "genuine public participation in every phase of development" of a coastal management program and it provides quite a degree of flexibility in the kinds of programs which may be established.

Just understanding the language of CAM proposals and sorting out the government jurisdictions in charge may prove difficult for the average politician or citizen. Yet new evidence appears daily of the need to use our shoreline more wisely, particularly in this crowded part of Long Island Sound.

Let the CAM handbook state the problem: "The coastal municipalities, the state and the federal government have all become involved in coastal problems through activities such as planning and zoning, road construction, wetlands regulation, fish management, harbor development, and channel dredging. Too often, though, their efforts have been poorly coordinated. Many programs deal with only one of a large number of interrelated issues; others are concerned with a limited geographic area when problems cross town lines. Their sheer numbers are staggering; as many as 500 individual administrative and regulatory agencies in Connecticut coastal areas are presently making independent decisions which affect the coast.

The second proposal is that advanced by U.S. Sen. Abraham Ribicoff for a "Long Island Sound Heritage." The plan would incorporate 15 areas in Connecticut and New York state into a federally-supervised conservation-recreation complex. Basically, the proposal aims to provide funding to insure preservation of existing beach and shoreline refuge areas along the Sound. Another laudable goal that with proper coordination with state and local representatives should prove beneficial to citizen and ecology alike.

We hope both proposals pass swimmingly through their legislative inspections.

[From the Bristol (Conn.) Press, Aug. 2, 1977]

PRESERVING LONG ISLAND SOUND

Legislation introduced Monday by Senator Abraham A. Ribicoff to establish the Long Island Sound Heritage represents an important step in preserving what is left of Long Island Sound's unique but fragile ecosystem. The bill would create an expanded system of parks, beaches and wildlife areas at locations all around the Sound. Fifteen sites in Connecticut and New York State are proposed for inclusion in the system.

The legislative proposal comes as a result of recommendations from the Long Island Sound Study conducted by the New England River Basins Commission. The goal of the study, said Senator Ribicoff, was "to produce a plan of action which balanced the needs to protect, conserve and wisely develop the Sound and its related shoreline as a major economic and life-enriching resource for the more than 12 million people who live near it."

Upon introducing the bill Senator Ribicoff noted Long Island Sound represents a study in contrasts between beautiful expanses of undeveloped beach and marsh lands and blighted, decaying industrial harbors and waterfronts. Without coordinated planning the waters of the Sound are threatened by increasing pollution from urban and industrial use, and the remaining open spaces along its shores are threatened by over development.

Particularly important is the preservation of dwindling salt marsh and tidal wetland areas. The filling in of such areas for shoreline development, which has occurred at an alarming rate, has a direct impact on wildlife and shellfish populations. The salt marshes which ring Long Island Sound provide nesting areas for numerous species of birds.

Another problem the legislation addresses is that of public accessibility to the Sound. Most of the shoreline all around Long Island Sound is in private ownership. The existing shoreline parks are inadequate to handle the demand for recreational use. Long Island Sound represents the largest protected area of salt water available anywhere in the country, and it is situated in the midst of North America's greatest population center, noted the Senator.

The proposed legislation would create an instrument through which the Federal Government, the states of New York and Connecticut, and appropriate local agencies would work closely together. There would also be ample opportunity for such concerned groups as natural scientists, conservation, recreation and environmental organizations as well as individual citizens to have a role in the planning of the Heritage.

The Long Island Sound Heritage Bill has designated 15 sites in Connecticut and New York to be examined for inclusion in the Heritage. Among those located in Connecticut are Bluff Island Group in Stonington, Rocky Neck State Park in East Lyme, Stony Creek Quarry and Faulkner's Island in Guilford, Silver Sands State Park in Milford, Pleasure Beach in Bridgeport, Long Island and the Great Meadow wetland complex in Stratford, Sheffield Island and Chimon Island in Norwalk, and Sherwood Island State Park in Westport.

Fifty million dollars would be appropriated to provide up to 75 per cent assistance to the states and local communities in acquiring, developing and administering the sites. A series of on-site public hearings would be held to determine the type and scope of development or management the individual site would require.

The preservation and protection of Long Island Sound from the harmful effects of overdevelopment and urban pollution is a key ingredient in improving the quality of life for the people and wildlife of the areas which surround it. The Long Island Sound Heritage Bill which comes after a lengthy process of solid homework, represents a positive response to the need, and it deserves the thoughtful attention not only of the Congress but of all the individuals and agencies concerned about our natural resources.

[From WICC Radio 60]

LONG ISLAND SOUND HERITAGE

This is Vince Cremona, vice president and general manager, with a WICC editorial. Senator Abraham Ribicoff is introducing legislation in Washington which we think will go a long way to preserve one of our greatest natural resources, Long Island Sound. Under his legislation, called the Long Island Sound Heritage, an expanded system of parks, beaches and wildlife areas would be created and preserved for our use and that of future generations. Some of the areas included are, Light House Point Park in New Haven, Silver Sands State Park in Milford, Pleasure Beach in Bridgeport, Long Beach and the Great Meadows Marsh Land in Stratford, Sherwood Island State Park in Westport and Sheffield Island in Norwalk. The bill would authorize 50 million dollars to provide up to 75 percent assistance to the States and local communities to aid them in acquiring, administering and maintaining the sites. We agree with Senator Ribicoff when he says his legislation would protect the areas' resources from "growth and development pressures, as well as focus on the serious shortages of public conservation, recreation and open lands along the shores of the Sound." We hope local communities will go along with the plan to preserve this precious resource for future generations. We urge all interested citizens to listen for announcements of onsite hearings and to render in-person support for the Senator's worthwhile project.

Mr. RIBICOFF. Mr. President, I have also been gratified by the support my legislation has received from various officials in the Northeast. The very able chairman of the New England River Basins Commission, Frank Gregg, has written to advise me of his support of S. 1968. In addition, Lee Koppelman, executive director of the Nassau-Suffolk Regional Planning Board and one of the region's leading planners, has indicated that my bill "merits the support of every person interested in the Long Island Sound region." Both of these public servants have long been involved with programs to preserve and protect the Long Island Sound and I am especially gratified by their support. I ask unanimous consent that their letters also be printed in the RECORD.

There being no objection, the letters with attachment were ordered to be printed in the RECORD, as follows:

NEW ENGLAND RIVER
BASINS COMMISSION,
Boston, Mass., August 5, 1977.

Hon. ABRAHAM A. RIBICOFF,
U.S. Senator,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR RIBICOFF: Congratulations on your introduction of the Long Island Sound Heritage Bill. I know you and your staff have worked very hard to develop a vehicle that will preserve the extraordinary recreational and natural heritage of the Sound.

I look forward to working with you and with administration officials to make the concept a reality, and I hope that those who love the Sound appreciate the tenacity with which you have pursued its preservation and restoration.

Cordially yours,

FRANK GREGG,
Chairman.

NASSAU-SUFFOLK REGIONAL
PLANNING BOARD,
Hauppauge, L.I., N.Y., August 8, 1977.

Hon. ABRAHAM RIBICOFF,
U.S. Senator,
Committee on Governmental Affairs,
Washington, D.C.

DEAR SENATOR RIBICOFF: I have carefully read the draft of S. 1968 and feel that it merits the support of every person interested in the Long Island Sound region. I would appreciate being informed as to the date of the public hearing so that I may present some detailed views as they relate to Nassau and Suffolk counties.

I have enclosed a copy of my study of the Sound. In particular, Chapter 7, pages 157 through 161 discuss the heritage concept. Your leadership on this most important segment of the Sound study is most appreciated.

Very truly yours,

LEE E. KOPPELMAN,
Executive Director.

COASTAL ZONE MANAGEMENT: A PLANNED APPROACH

INTRODUCTION

The preceding chapters have shown an exciting potential for expanding and developing Long Island Sound marine activities. But much of this potential is being dissipated through outright waste and negligence. Preservation and wise management of wetlands areas are vital to commercial and sport fishing and shellfishing, recreation, and tourism, but thermal, bacteriologic, and chemical contamination continues to have adverse effects. The consequences of dredging, the significance of the wetlands, and the various kinds and degrees of contamination are just some of the things that must be thoroughly understood if a planned marine economy is to evolve from a series of unrelated, uncoordinated, unregulated, and generally exploitative ventures.

Urbanization on Long Island Sound, as in other suburban coastal zones of the country, is destroying land and water resources. Open spaces that once provided aesthetic enjoyment, wildlife protection, and recreational opportunities are being lost to the homes, schools, factories, highways, commercial centers, and other manifestations of an urban society. This has been the pattern on Long Island Sound in the past decades; it will surely continue if growth is left solely to the workings of the market. What is economically best for the community does not equal maximum economic efficiency in real estate terms. To act in the public interest, a third party, the government, must intervene between buyer and seller.

But how can government decide what is in the public interest better than the private citizen can? How can government provide for long-term development without ignoring immediate needs? Planning deals with these questions.

Planning is a process. It starts with knowledge already available, and then determines needs or desired goals, develops an answer or set of alternative answers, describes the consequences of each, and finally, offers a means of implementation for the selected solution. The aim of planning is balanced, orderly community growth. The planner attempts to structure governmental action to help meet this aim. His philosophy is that the "good life" can be achieved through proper ordering of land uses, community facilities, and transportation networks in an aesthetic setting.

In the first stage, or information period, the planner gathers all relevant data about existing conditions and past trends in the area, and he projects population growth to estimate future spatial and service needs. He also formulates general goals and objectives.

In the next phase, he draws up alternative proposals, each showing projected growth, development of policies and programs necessary for its implementation, and its own set of end objectives and consequences.

In the third stage, the planner chooses the alternative that reflects the overall objectives most closely. Physical and economic data are relatively easy to measure and, in *realpolitik* terms, easy to use in defining goals. The major obstacles to comprehensive planning, however, are the more abstract social and environmental components, which lack a methodological base and are not as widely accepted at the firing line.

Often, the planner has to act as a surrogate for the "people." How accurate the planners have been to date is perhaps epitomized in the brief plea, "Dear Lord, help us to help the people by making them want what we know they need."

Goal formulation is one of the weak links in the planning process; a selected goal is supposed to reflect the general consensus of the people, but it cannot help but be a value judgment. Even where an apparent consensus exists, there is always a discrepancy between general goals and more specific plans of attack. General goals can best be characterized as "motherhood" issues: there *should* be a program of park acquisition, there *should* be strict conservation of Long Island Sound, there *should* be an efficient transportation network, there *should* be full employment.

Just as data are converted into information, and information converted into plan alternatives, there is also a transformation of goals from the general to the specific. When one or more workable comprehensive plans evolve, and the consequences of each plan are fully enunciated, then the plan or plans are ready for implementation. It is at this stage that the issue of goals again becomes of paramount interest. As each alternative is developed and detailed, and the end objectives become less abstract. In place of "There should be an efficient transportation network," the planner may now say, "A six-lane, grade-eliminated highway is required to cut diagonally through the towns of X, Y, and Z."

We then pass very quickly from motherhood to oxgoring, and from the safety of technical seclusion to the political arena. This juncture usually marks the end of the planning process. Technical responsibilities end with the transmittal of the plan to the official decision-makers. The planner retires from the ring, so that elected representatives can assume the role of matador, since final decisions based on planning objectives are truly political.

There are two types of constraints on the implementation of planning objectives: inner-oriented and outer-oriented. Inner-oriented indicates planner-to-planner relationships; outer-oriented refers to planner-to-politician-to-public relationships. In the former category, implementing objectives has been limited by planning deficiencies. These include technical failings, such as the lack of operational theories and the uneven quality of information input—partially due to inadequate funding, but more often to a varied sophistication in data on urban and ecological systems. Other inner-oriented constraints are deficiencies in methodology and differing goals among planning agencies that share responsibilities for the same area.

Among the outer-oriented deficiencies is the short-sightedness of many planners, who do not view planning in socio-political-economic-ecological terms. There is a great need for communication between the planner and the politician. It is all too easy to rationalize the ineffectiveness of planning by blaming the politician for being unresponsive. Until the planner recognizes that all public agency programs must be politically acceptable as well as technically sound, it is doubtful that planning objectives will become political realities. Impaired communication between planner and politician is not the story of the good guys v. the bad guys but a generation gap. The planner often fails to realize that while his generation may be the next two to four decades, the generation of the elected official is his current term of office. While the planner talks of the year 2000, the politician wants to discuss and solve what are yesterday's problems—from the planner's point of view. And the politician's constituency is very real—particularly at the polling booths. Any proposals that cannot stand testing in the crucible of political heat are almost assured of defeat, decline, or impotence:

Finally, any act of management of the environment, any intervention in the relationship between man and his surrounding milieu . . . implies decisions of a political nature. . . . Environmental decisions are, hence, ineluctably political . . . and, thus, whoever wishes to pursue the achievement of a sound environment must be prepared to deal with the relevant political factors.

If the politician realizes that the planner is not attuned to the crisis issues of the day, he relies on input from other sources, especially in the field of social planning. The new concept of "advocacy planning"—in which planners stand outside the power structure—means that the politician hears from segments of the constituency that the institutionalized planning office has not dealt with. Therefore, the need for dialogue between planner and politician has become more important to the planner than to the politician.

Planning objectives can only become political realities when the planner does the following:

(1) Addresses the public and not just fellow planners.

(2) Considers the problems that face the politician.

(3) Educates the public.

(4) Establishes a working liaison with the array of decision-makers who effect any degree of control over planning.

Communication obstacles can be overcome. The prime impetus must come from the planner. But there are obstacles to implementation beyond the planner's reach. These arise out of governmental inertia resulting from structural and functional limitations. Control spread among multiple governmental units—a manifestation of home rule—is a major barrier to attaining regional planning objectives. Many problems and solutions apply to fiscal or legal jurisdictions broader than the municipalities involved. Little can be done unless the general public and their elected representatives are willing to support shared or regional controls by relinquishing some local powers. Of course, inertia can also be the result of unwillingness of elected officials to exercise leadership, or in some cases, just plain venality. Such deficiencies are rarely addressed, let alone rectified, in American domestic affairs except in response to a real or perceived crisis.

Fortunately for Long Island Sound, increasing public attention has been focused on potential threats like growing pollution, proposed bridges, fuel desulfurization plants. Strong constituencies have emerged in the last decade. In striving to prevent real crises, these groups have lobbied for and supported regional planning efforts. In fact, the relatively untrained but committed citizens have often shown more courage and vision than have the professional planners. Until recently, with few exceptions, the planning efforts undertaken in the Long Island Sound region have been based on general trend analyses with predetermined objectives. Such efforts result in highly constrained, almost deterministic views of the future. Considering growth a "given" reduces the planning process to a holding action at best, or a charade in most cases. Sops to citizen requests for reform and rationality in governmental decision-making no longer suffice. Increased citizen interest and action have given birth to increased sophistication—both in technical knowledge and in political astuteness.

The Nassau-Suffolk Regional Planning Board and the New England River Basins Commission (NERBC) have been working towards developing a comprehensive and multidisciplinary management plan. Their efforts have not yet produced a final acceptable plan, but two key factors have emerged: an understanding of 1) the process and methodologies used in planning, and 2) the administrative mechanisms necessary to implement the recommendations of a plan. The techniques used and standards derived from developing a management plan for Long Island Sound will un-

doubtedly serve as models for other areas with similar concerns.

THE LONG ISLAND SOUND STUDY

The Long Island Sound Study, begun in August 1971, was released for public scrutiny and comment at the end of 1974. NERBC staff then reedited the various drafts during the spring of 1975. The final report is an amalgam of ten broad interest areas that are meant to make up the plan for Long Island Sound. Each area—land use, water management, shoreline appearance and design, erosion and sedimentation, flood damage reduction, recreation, fish and wildlife, marine transportation, minerals, and power and the environment—is essentially a miniplan. (See Appendix F for an annotated bibliography of selected functional studies.) Intensive inventories were prepared, problems identified, short-term and long-term projections of need made, goals chosen, alternative solutions developed, and finally, a set of recommendations drawn up.

A 30-member Citizen Advisory Committee (CAC) was appointed by the chairman of the NERBC and the governors of New York and Connecticut. The CAC was specifically assigned the task of deciding the broad goals of the program. They also participated in the various technical work groups set up to carry out the individual functional studies. A similar 30-member Research/Planning Advisory Committee was appointed from the academic and scientific communities to provide the technical equivalent of the CAC.

The general goal of the study was "to produce a plan of action by the Spring of 1975 which balances the needs to protect, conserve and wisely develop the Sound and its related shorelands as a major economic and life-enriching resource for the 12 million people who live near it."

Unfortunately, the Long Island Sound Study did not achieve its stated goal. Yet even its failures are a contribution, in the sense that latent pitfalls were revealed in planning for a system as complex as the Sound and its surroundings. Current efforts to complete the planning process for the Sound region, discussed later in this chapter, were able to avoid the shortcomings and build on the strengths instead. For example, it is now obvious in retrospect that the CAC did not succeed in the important and elusive task of becoming the intermediary between the planners and the citizenry. If it had, much of the criticism of the plan could have been avoided. Perhaps the absence of broad support at the public hearings—which clearly demonstrated that the NERBC failed to capture the imagination of the person in the street—was due in part to the manner of selecting members of the CAC. An official appointment tends to taint the designee as being part of the government. The NERBC could have taken its cue from the War on Poverty legislation, requiring that citizens organize and select their own representatives.

One other general observation is in order. It appears that the NERBC promised much more than it could reasonably have been expected to produce, given the time and money constraints set by the federal government. Although some of the planners, economists, and environmental scientists and engineers recognized these limitations, it was never made clear to the public that the overall goals were too high. "Promise less but deliver more" is a motto that should be stressed in planning schools as vigorously as the classic saw, "Planning is a continuous process."

Despite the shortcomings of the Long Island Sound Study, several aspects of the plan are innovative and should be given serious consideration. These include the Long Island Sound Heritage proposal, the segment on shoreline appearance and design, and the proposals for administrative agencies to implement the management programs.

Long Island Sound Heritage

The aim of the work group on recreation was to enable more people to enjoy the pleasures of the Sound. But most of the shoreline and the access to it are either privately owned or controlled by municipalities that restrict use to its residents. The Long Island Sound Heritage proposal strongly urged that New York and Connecticut create an expanded system of public beaches and parks, and specifically nominated 16 sites for acquisition or expansion. The proposal also recommended removing restrictions on bus transportation to state parks, instituting a recreational ferry service to link the various parks, and opening beach fronts now inaccessible to vehicular traffic.

Shoreline appearance and design

Aided by a consultant landscape architect, the work group on shoreline appearance and design concentrated on scenic preservation, removal of debris, and public education programs on visual pollution. Despite some criticism that there was too much emphasis on this segment of the plan, the work group produced a valuable and professional assessment of the aesthetic problems and solutions to them. Their recommendations could lead to a new sense of public awareness, an appreciation not only of the many and varied beauties in the coastal zone but also of the importance of proper management.

The more valid criticisms of the Long Island Sound Study relate to its organization. Most of the almost $3 million invested in the program went to the 20 federal agencies that conducted the bulk of the work. The CAC's staff had virtually no quality control over the agencies. This fragmentation carried over to the final package, more an aggregation of pieces than a coherent plan. The Long Island Sound Task Force noted that the most significant issues of growth policies for the region were avoided:

Any plan for managing growth around the Sound which leaves the question of limiting growth up to the Federal government, which discusses transportation only as marine transport and recreational access, and energy only in terms of power generation, is clearly suffering from a failure of nerve. This report handles the easy questions in many cases very well; it does not tackle the really hard ones at all.

Once committed to the limited, subject-by-subject approach, the CAC planning staff also missed an opportunity to utilize ongoing or prior work of other agencies until the end of the project. In a sense the Long Island Sound Study was administered in a partial vacuum: a decade of planning and research experience on the Long Island side of the Sound was largely ignored—until public criticism prodded the CAC to cooperative action.

TAX EXPENDITURES IN THE ENERGY TAX BILL

Mr. KENNEDY. Mr. President, one of the major issues the Senate will deal with in the forthcoming energy legislation is the questionable use of tax expenditures. Yesterday, I submitted a statement to the Committee on Finance opposing a number of these tax expenditures and urging the committee and the Senate to delete them from the bill, on the ground that they are wasteful and inequitable methods of achieving our national energy goals.

Mr. President, all of us must give careful attention to these Federal subsidies. Each of them is no less of a Federal subsidy because it is being implemented through the tax laws, although frequently tax subsidies receive less scrutiny from Congress than direct subsidies. Large amounts are involved in the energy tax subsidies—taken together, the provisions will cost the Treasury a total of $8 billion over the life of the bill.

Mr. President, my statement to the Finance Committee summarizes a number of my objections to these tax subsidies, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR EDWARD M. KENNEDY ON TAX EXPENDITURES IN THE ENERGY TAX BILL, SEPTEMBER 6, 1977

The House-passed version of H.R. 8444, the National Energy Act, represents an important step in the efforts of President Carter and Congress to develop a rational and effective national energy policy. There is much in the bill to commend it and I support many of its provisions.

However, the House bill includes a number of provisions that are undesirable and should be rejected by the Senate. These provisions involve a series of new or expanded tax subsidies for individuals and businesses, including the following:

A. Individual Tax Subsidies:

1. Residential insulation tax credit.
2. Residential solar energy equipment tax credit.
3. Residential wind energy equipment tax credit.
4. Tax credit for electric automobiles.

B. Business Tax Subsidies:

1. Business energy tax credits.
2. Tax credit for waste recycling equipment.
3. Intangible drilling and development cost deduction and percentage depletion deduction for geothermal resources.

These tax expenditures will cost the Treasury a total of $8 billion by the end of 1984, or over $1 billion a year over the life of the bill. The enactment of such large tax subsidies is directly contrary to the tax simplification efforts that will constitute a major element of the tax reform legislation to be submitted shortly to Congress by the President. The proposed tax expenditures are also deficient as spending programs from the standpoint of need, efficiency, and fairness. Therefore, these tax expenditure provisions of the energy bill should be deleted by the Senate.

From the standpoint of tax reform and tax simplification, the new individual tax credits created by the House bill will have to be included on all individual tax return forms, including the short form 1040–A. This means new lines on the tax return form for every taxpayer in the country. Taxpayers will have to fill out supporting schedules for each of the new credits, and the IRS will have to issue detailed regulations to implement the credits. This new complexity is clearly contrary to the goals that Congress and the Administration are trying to achieve in the tax simplification effort.

For business taxpayers, the number of new tax credits and deductions—both personal and business—will be even larger. Still more complex forms and regulations will be the inevitable result.

It is unfortunate that the Administration and Congress are taking up consideration of the energy tax bill separately from tax reform. If the energy tax expenditures were being taken up in conjunction with the tax reform bill, it is likely that they would have all been rejected, on the ground that they would make the tax system more complex. The Senate, however, can resolve this procedural issue by eliminating all of the tax expenditures from the energy bill and de-

ferring consideration of them until we take up the tax reform bill next year. I commend this step to the Committee on Finance, and I hope that it will be followed by the Senate.

In addition, analysis of the tax subsidy provisions indicates that they are seriously deficient as Federal spending programs. Since they are tax expenditures, it is appropriate to ask the same questions that we would ask of direct spending programs:

1. Is there a need for the new or expanded federal subsidies?

2. Is the tax subsidy structured efficiently to avoid making windfall payments to individuals or businesses for doing what they would have done anyway?

3. Is the value of the benefits equal to the costs of the tax expenditure?

4. Are the benefits available to individuals or businesses who, for other reasons, do not have tax liability?

5. Are the benefits of the tax subsidies distributed fairly among individuals by income and among businesses by size?

6. What are the effects of the tax subsidies on inflation?

7. What are the effects of the tax subsidy on competition within an industry?

8. How are the benefits of the tax subsidy allocated among regions of the country?

9. How does the tax subsidy affect the allocation of capital resources—that is, if capital is to be attracted to energy-related investments, what other areas of investment may suffer a capital loss?

These are crucial questions which I hope the Administration and the Senate Finance Committee will address and answer for the Senate before we begin floor debate on the energy bill. Failure to answer these questions means that the Senate will be voting in the dark on the expenditure of federal funds that ultimately will total in the billions of dollars. The Senate simply cannot perform its responsibilities to the taxpayers in such a fashion.

The accompanying pages analyze these tax expenditures and address some of the questions that should be raised. My hope is that this analysis will encourage more extensive debate on these and similar tax expenditures in the energy bill. The tax expenditures in the energy bill raise important issues of tax simplification and efficiency and fairness in the expenditure of federal funds. In my view, these tax expenditures should be deleted from the energy bill, because they are sources of increased tax complexity, and because they constitute wasteful and inequitable uses of limited federal funds. It would be a travesty of responsible action on the energy crisis to allow the crisis to become the pretext for adding a large number of new tax loopholes to the already loophole-ridden Internal Revenue Code.

THE TAX CREDIT FOR RESIDENTIAL INSULATION*

At first glance, it may be asked why anyone should oppose a Federal tax credit for home insulation. But when carefully examined, this seemingly generous gesture toward homeowners actually raises many serious questions, and turns out to be a costly and wasteful method of achieving the desired goal of residential insulation.

The insulation tax credit in the House-passed National Energy Act, H.R. 8444, has five fatal defects that should lead Congress to reject it:

It is inefficient, because the credit will not encourage many people to insulate their homes who would not insulate them anyway;

It is inflationary, because the supply of insulation is limited, and increased demand will only push up the price;

It is inequitable, because well-to-do homeowners will receive far greater benefits than low-income homeowners;

It is complex, because the tax return and the IRS audit process will become even more confusing and more complicated than before; and

It is expensive, because the Treasury will lose $500 million a year as a result of the proposed tax credit, with no corresponding public benefit.

H.R. 8444 provides an individual income tax credit for "qualified" residential energy conservation expenditures. The credit is equal to 20 percent of the first $2,000 of such expenditures, with a maximum credit of $400. The credit applies to expenditures made between April 20, 1977 and the end of 1984. Items qualifying for the credit include: insulation, storm doors and windows, clock thermostats, caulking or weatherstripping, and various devices for making furnaces and water heaters more efficient. The credit is available only for insulation of an individual's principal residence, not for vacation homes or other residences.

The idea of an insulation tax credit was born out of the energy crisis and the concern for energy conservation. Conservation is important, but so are other goals, such as the efficient use of Treasury funds, the need to keep the federal deficit under control, and the avoidance of complexity in the tax laws. Tax equity and fiscal responsibility require that Congress ask whether the home insulation tax credit is an appropriate and effective means of encouraging energy conservation.

There are five major objections to the credit as it was approved by the House of Representatives in H.R. 8444:

1. The insulation credit is inefficient. The credit is premised on the belief that people will buy more insulation if the federal government make it cheaper by granting a tax credit of 20 percent to purchasers. The tax credit philosophy also presumes that high energy prices in the marketplace will not be a sufficient incentive to get people to insulate. In addition, there is an implicit assumption that the supply of insulation substantially exceeds the current demand. All of the assumptions are in error.

In 1975, 9.1 million, or 22%, of the occupied, single-family, detached houses added some form of insulation or weatherstripping. All of this insulation was installed in the absence of any tax incentive. The number of people insulating their homes has been rapidly increasing. The number of storm windows installed in 1975 was 11.1% higher than the number added in 1974.[1]

People are already stampeding to install insulation, and they are doing so because it makes economic sense. Price is the only incentive needed for action. The high price of energy in the market place has sent a clear signal to citizens about the importance of conservation. Two recent studies demonstrate the point:

—According to a study by the National Bureau of Standards, the owner of a small (1,200 square feet), single-story house with wall insulation and weatherstripping in Washington, D.C. could economically invest between $461 and $731 in storm windows and attic and floor insulation depending on the price of energy ($0.45 per BTU for cooling and between $0.15 and $0.45 for heating).[2]

—A Congressional Budget Office study estimates that the energy dollars saved by consumers will exceed insulation costs by a benefit-cost ratio of about 3:1. In other words, the fuel savings are three times the insulation costs.[3] With such substantial savings already coming from insulation, the sensible and obvious step for taxpayers to take is to insulate their homes.

Defenders of the tax credit argue, however, that some people are so slow to recognize this logic that they need a tax credit to awaken them to the importance of insulation. This is a "Rip Van Winkle" argument for the credit, and it is nonsense. If a taxpayer is smart enough to know about the tax credit, if he is smart enough to keep records so that he can benefit from the credit, if he is smart enough to fill out the tax form, then he will also be smart enough to know that his energy bill is going up and that he had better do something about it. It is difficult to believe that significant numbers of people likely to use the credit are unaware of the savings from insulation, when, as noted, so many people are already insulating their homes without the benefit of the credit.

One of the most complex issues in evaluating the insulation credit is estimating how many additional people will insulate their homes because of the credit who would not have insulated their homes otherwise. The Congressional Budget Office estimated that the President's proposed insulation credit[4] would increase the $6.3 billion that would be spent without the credit on insulation and related materials over the next 7 years by $2.9 billion. The study estimated that 7.8 million of the 23.8 million households expected to make insulation improvements over this period would be induced to do so by the proposed credit; 16 million of these households would make the improvements by 1985 in any event.[5]

The CBO estimate may be reliable, but it is not much more than an intelligent guess. My own guess would be much lower, because I would attribute future increases in insulation more to higher energy prices than to the tax credit.

In addition, in the case of fiberglass insulation, any increase in demand is immediately confronted with supply shortages. Three firms manufacture 85 percent of the fiberglass insulation: Owens-Corning, Johns Manville and Certain-Teed. According to a recent study by the Council on Wage and Price Stability, these firms are already working at peak capacity.[6] The Council states that prospects for increasing imports or switching to other forms of home insulation are not good. While there is less of a supply problem with storm windows, the demand is already high here as well.

It is therefore impossible to predict with any accuracy how many additional people will insulate their homes because of the tax credit. Since we cannot predict how much more insulation will be installed, we also cannot predict how much energy will be saved by the tax credit.

2. The insulation credit is inflationary. As pointed out in the preceding section, the Administration's Council on Wage and Price Stability has criticized the insulation tax credit because the three firms which make most of the insulation in this country are already working at capacity. As a result, the Council said, the credit would simply increase demand for the same supply, and thus force prices up. Much of the value of the credit to taxpayers would thus be eaten up in higher prices.

The Council concluded that "the chief beneficiaries of the tax credit this year would be the manufacturers of fiberglass insulation."[7] Although the Council felt that plant additions planned by the fiberglass industry might be able to accommodate the increased demand within 18 months, in the meantime, prices would be pushed higher. Once prices go up, it is difficult to believe that they will ever come back down, especially since demand has been growing steadily. The net result of the credit may simply be to encourage the dominant firms in the industry to raise their prices even more rapidly, in effect "capturing" the value of the credit from the average citizen.

3. The insulation credit is inequitable. Although tax credits are more equitable than deductions, many homeowners will not be able to spend the full $2,000 on insulation, even if they know they will get $400 back from the federal government; they will still be out of pocket $1,600. As a result, only

Footnotes at end of article.

those who can afford $1,600 of insulation expenses will get the full advantage of the credit.

In addition, low income homeowners will receive little or no benefits, since the credit is not refundable—i.e. it is not available to taxpayers unless they have tax liability.[8] Thus those who need the most help to insulate their homes will get the least aid—and wealthier families, who have less need for the aid, will get the full value of the credit.

Statistics show that the amount of insulation installed by upper income groups is far greater than the amount installed by lower income groups.[9] The tax credit will increase this discrepancy by subsidizing the rich excessively, while discriminating against those too poor to pay significant taxes. The poor will also suffer from the fact that the price of insulation will be forced up by any increased demand stimulated by the credit among the more affluent.

Finally, millions of persons who have already insulated their homes will receive no benefit from the credit. Yet their neighbors who procrastinated about insulating, will enjoy the benefit of the Treasury subsidy. Why should citizens who practiced sensible energy conservation at the right time get nothing, while those who delayed get the credit?

4. The insulation tax credit is complex. Many people mistakenly think that a tax credit is less complex than a direct expenditure program. But an insulation tax credit is not less complex. Either revenue agents or officials from another agency will be climbing stairs to determine whether a claimed Federal subsidy is being used for insulation or for a new attic playroom. Moreover, use of the tax expenditure route will actually increase the bureaucracy involved in the subsidy. The tax credit will require bureaucratic negotiations between the Internal Revenue Service and the departments of Treasury, Energy, and Housing and Urban Development. In a direct expenditure program, the Treasury and the IRS would have no part to play in the program, thus simplifying its administration.

Supporters of the insulation credit argue that there will be less red tape with a credit than with a direct expenditure. This is only true if there is less supervision under a tax credit than under a direct expenditure program. As has been pointed out: [10]

"Not only is the myth about 'less read tape' untrue, but the utilization of the tax system to implement socio-economic goals places on the Internal Revenue Service responsibility for implementing and enforcing regulations dealing with a highly technical area in which that agency has little or no expertise. It is simply illogical to assign to the Internal Revenue Service matters more properly suited to the Federal Energy Administration, the Department of Housing and Urban Development and the Energy Research and Development Administration. But IRS jurisdiction over these areas of administration is the inevitable result of an attempt to fuse social or economic programs onto the tax system.

"Similarly, the argument that tax credit programs are simpler and easier to administer than direct appropriations is likewise untrue. The relative simplicity or complexity of the program depends more on the particular characteristics of the goal to be achieved, and the means by which it is to be achieved, than on the form of the program (tax credit versus direct appropriations). In regard to the home insulation and residential solar energy equipment credits, the basic contours of the program would be the same if a direct subsidy were used instead of a tax credit program. The proposal could be as complex or as simple as deemed necessary to achieve the goal, whichever form were utilized. It thus appears that this alleged advantage of tax credits is not inherent in a tax expenditure program any more than in a direct expenditure approach."

Finally, the irony should be noted that at a time when simplification is a basic goal of tax reform, the insulation tax credit will make the system more confusing and complex. Many taxpayers will be unaware of the credit itself or of the requirements for qualifying for the credit. As a result, they will not keep the necessary records that the IRS will demand for substantiating the credit. It will cost the IRS millions of dollars to thoroughly audit this new item on the tax form. If the IRS chooses not to audit the item thoroughly, many more millions of dollars will be lost to taxpayers claiming the credit who do not deserve it—one more burden on the IRS in the increasingly serious problem it faces of "audit roulette."

5. The insulation credit is expensive. The credit is not cheap. It will cost the Treasury a total of $4.1 billion by 1985, or approximately $500 million a year over the life of the credit. This $4.1 billion will increase the federal deficit and impair the goals of balancing the budget, providing across-the-board tax relief, and meeting other urgent domestic needs. If Congress wishes to spend money on energy conservation, there are many less expensive and more effective ways of doing so than by enacting a wasteful and inefficient insulation tax credit.

In sum, the home insulation tax credit should be rejected by the Senate. Increased oil prices have already made clear to consumers that they should insulate their homes. Because they can save money on their fuel bill by insulation, the market mechanism already provides a strong incentive to insulate. Average home insulation costs can be recovered in a few years, through the resulting savings in heating and cooling costs. There is no need for government subsidies in the form of tax expenditures—and certainly not through a tax credit that is grossly inefficient, inequitable, inflationary, complex and expensive.

THE SOLAR AND WIND ENERGY TAX CREDITS FOR RESIDENCES

As in the case of insulation, advocates of tax reform do not oppose the sun and the wind. But the popularity of tax credit proposals for solar and wind energy equipment borders on a superstitious belief in the efficacy of the tax code for accomplishing the impossible.

THE SOLAR ENERGY TAX CREDIT

The proposed solar energy tax credit for residences is a mistake for several reasons:

The technological problems blocking solar energy development cannot be solved by tax credits for purchasers of home equipment.

Solar energy heating is currently much more expensive than alternative sources of energy.

Only well-off individuals are likely to benefit from the credit.

Tax returns and the IRS audit process will be further complicated by the credit.

The credit will cost over $100 million a year by 1983.

H.R. 8444 provides a tax credit equal to 30% of the first $1,500 of "qualified" solar energy expenditures and 20% of the next $8,500 in such expenditures. Thus, the maximum tax credit is $2,150 on the first $10,000 of expenditures. As in the case of insulation, the credit is available for expenditures between April 28, 1977 and the end of 1984.

There are five major objections to the credit:

1. The solar energy credit is ineffective. Solar energy today is not an economical source of energy in most parts of the United States. The technological problems involved in recovering solar energy at reasonable cost have not been solved. If the Federal Government is to become involved in the effort to develop solar energy, it should do so through direct appropriations that can be focused on the search for answers to these technological problems, which now block the recovery and use of solar energy.

Granting tax credits for the installation of home solar energy equipment is not an effective way to spur the needed research and development effort. Most of the benefit of the credit will be wasted on individuals who are fortunate enough to live in areas with a large number of sunny days each year, and who already find the use of solar energy to be practical. They will get a government tax subsidy for doing what they would already have done in any event. Meanwhile, the research and development programs that are needed to make solar energy practical in the rest of the United States are less likely to be undertaken, or may be undertaken with inadequate funds.

The best way to develop solar energy is to concentrate on the technical problems that actually block its use. The proposed tax credit is ineffective because it fails to do so.

2. The solar energy credit is inefficient. Use of solar energy is a worthy goal, but it should be pursued in an efficient manner. Before the invention of small electric motors and the incandescent lamp, it would have made little sense to grant government incentives to encourage people to put electricity in their homes. The comparable statement on solar energy is equally cogent today.

The Treasury Department has examined the cost effectiveness of various heating systems and has found solar energy to be the least efficient. See Table 1. Among other things, solar energy requires installation of an alternative heating system for use as a backup, when the sun does not shine.

For a homeowner in a 20% marginal tax bracket, the total costs over a 20-year period of heating an average home are shown by the Treasury study to be $12,907 for a solar system, $3,659 for an oil system, and $2,582 for a gas system. Thus, the solar system is from three and a half to five times as expensive as alternative systems. Since the benefits of each system are similar, the solar system is one-fifth as cost-effective as gas heat and less than one-third as cost-effective as oil heat.

TABLE 1. *Cost of heating an 1,850 square foot house over a 20-year period* [11]

Type of heating system	20 percent	50 percent
Solar	$12,907	$12,068
Electric furnace	5,440	5,363
Electric resistance	4,968	4,906
Oil	3,659	3,546
Gas	2,582	2,525

Percentages listed are homeowner's marginal tax rate.

Assuming a solar system with an electric baseboard backup system, a 20 percent marginal tax bracket homeowner would need a 69 percent credit to make solar heat competitive with oil, and a 77 percent credit to make it competitive with gas. If a credit were allowed only on the solar system (and not on the backup system as well), the corresponding figure jumps to 83 percent for a 20 percent bracket taxpayer considering gas heat as an alternative. The need for such absurdly high tax credits shows clearly the costly and inefficient character of a solar heating system. There is no justification for federal subsidies for such costly and inefficient systems.

3. The solar energy credit is inequitable. To take ful advantage of the proposed solar energy credit, a homeowner must spend $10,000 under the House-passed bill. It is true that a taxpayer with sufficient tax liability is eligible to receive $2,150 of this cost back from the government as a result of the tax credit.[12] But who except the upper income homeowner can generally afford to spend nearly $8,000 for solar equipment? The credit

Footnotes at end of article.

clearly becomes a subsidy for the well-off homeowner, who is likely to install the equipment even without the credit. The benefit of the credit will be confined to a relatively small group of homeowners in the upper income brackets. The credit is thus an "upside down" subsidy that favors higher income taxpayers and discriminates against lower income taxpayers.

4. The solar energy credit is complex. Taxpayers are having more difficulties every year filling out the tax return form, and the Internal Revenue Service is having greater difficulty auditing returns. Enactment of the solar energy credit will require more lines on the tax return, even if the credit is claimed by only a few individuals, causing confusion for most taxpayers. Tax returns need to be simplified, not made more complex.

All of the arguments given above against the insulation credit also apply to the solar energy tax credit. In particular, the "bureaucratic inefficiency" argument applies to both the insulation and the solar energy credits.[13]

5. The solar energy credit is expensive. The revenue loss from the solar and wind energy credits will amount to over $150 million a year by the end of 1984, and the total cost to the Treasury over the entire seven-year period is estimated at $720 million. Moreover, as the technical problems of solar energy are solved, more people will purchase solar energy equipment, and the cost to the Treasury of the tax credit will rise. Thus, although the credit fails to spur energy research now when we face difficult technological problems, it constitutes a fiscal time bomb set to go off in future years when those problems are solved and government help is no longer needed. Such "wedge" provisions are presenting increasingly serious problems for the Federal budget process, since they enter the budget with low costs in their early years, then mushroom in later years.

Technically, the House bill scheduled the credit to expire at the end of 1984. But any tax benefit creates a special interest constituency, which works to prevent the termination of the tax subsidy to which it has become addicted. There is no reason to think that a solar energy credit would be different. The industry will become dependent on the tax subsidy and argue that to take the credit away will cause withdrawal pains which will kill the patient.

For these reasons, the solar energy credit should be rejected. By failing to concentrate on the problems that demand a solution if the sun is to become a practical source of energy, the credit wastes government funds. It is inefficient, because it spurs a form of heating that is currently much more expensive than other forms. And it is inequitable, because it will benefit only homeowners who can afford the high cost of solar energy equipment.

If energy conservation and development measures are needed, they should be funded through direct appropriations. As the Manhattan Project and the Apollo Program demonstrate, projects funded through direct appropriations show results, and outlays are cut when the project has achieved its objective.

In contrast, programs funded through the tax system go on and on, and there is rarely any effective review of the results, or any end to the costs and the drain on the Treasury. The proposed credit for solar energy equipment should be rejected.

THE WIND ENERGY TAX CREDIT

Advocates of tax reform have sometimes been compared with Don Quixote, dreaming his impossible dream.[14] The House-passed bill promotes the image by giving them an actual windmill to tilt against. Long ago, persons learned to harness the wind through windmills, and they have been doing so ever since, whenever it was an economical source of energy. The windmill was invented and used for centuries without a tax credit subsidy, and it will continue to be used if the credit is not enacted.

Like the insulation and solar energy tax credits discussed above, the wind energy tax credit[15] is inefficient, inequitable, expensive, and complex. The defects that impair the other credits also apply to the wind energy credit.

The credit is a windfall for windmills. The tax benefits will go largely to those who would install windmills in any event. Only the very wealthy will have enough money to buy such equipment, and will have enough tax liability to benefit from the credit. The money spent on this credit could be much better used on serious programs. The wind energy credit is extravagant, and will create complicated regulations, forms and instructions which will only confuse taxpayers, and it should not be included in the energy legislation enacted by Congress.

ELECTRIC CAR CREDIT

The House-passed bill also contains a tax credit of $300 for the purchase of new electric motor cars. Currently, electric cars are being purchased as fast as they are built; consequently, there is no need for a credit to stimulate demand. In addition, electric cars are energy inefficient. Rather than burning energy directly, they must obtain electricity from a utility, which must first burn fuel (oil, gas, nuclear material, or coal), heat water, turn turbines, create electricity, and transport it by wire to the consumer. Each of these stages loses energy. The electricity must then be stored in the car batteries which by their nature also lose energy. A logical energy program would not give a tax credit to electric cars. It would put an excise tax on them like the one put on inefficient automobiles powered by gasoline.

BUSINESS ENERGY TAX CREDITS

Another measure in the House bill that unwisely expands the use of tax expenditures is the so-called "business energy tax credit"—an extra tax credit of 10% proposed for a wide variety of business investments which are thought to promote a rational energy policy. The revenue loss estimated from the credit is about $500 million a year.

The kinds of items eligible for the new credit are:

Investments to use fuels other than oil and gas;

Investments to expand cogenerative capacity;

Investments in business insulation;

Investments in equipment to use advanced technologies (solar, geothermal and wind) in connection with existing buildings or plants;

Investments in equipment to use energy more efficiently when installed in connection with existing industrial or commercial facilities; and

Investments in pollution control equipment required for shifting from oil or gas to a substitute material.

From an economic standpoint, there is some support for the idea of subsidizing equipment that reduces the use of oil and natural gas, because we are continuing a price policy which results in users paying less than the marginal cost for fuel. Using more oil means that we increase our imports; in effect, the import price is the marginal cost.

The main point at issue is whether it makes sense to carry out this subsidy policy through the tax law, by making it a new investment credit.

A major problem of the tax expenditure approach is that it adds considerably to the complexity of the tax law. Investments qualifying for the new credit must meet performance and quality standards prescribed in consultation with the Secretary of Energy. The tax accountants and the Internal Revenue Service auditors will have difficulty deciding if a regenerator or a recuperator meets an esoteric test stated in BTU's per hour. They will also have to determine whether the new equipment is used in connection with a process which was being carried on as of April 20, 1977. We already have tax lawyers and tax accountants. Now we will need tax engineers.

It is in areas like these that the error inherent in using the tax law to implement a Federal subsidy stands out most clearly. The basic policy that is being implemented is a remarkably complex one that involves highly sophisticated technology. The policy is being implemented through a structure, the tax system, in which the people involved, including the administrators, are not familiar in any detail with what is involved.

Moreover, one subsidy rate—a 10% tax credit—is being established for a variety of very different conservation investments. The credit applies to replacement equipment in a plant that has been burning fuel for years. The same credit applies to a firm that makes a highly innovative investment in solar energy to replace natural gas. In effect, in spite of wide differences and circumstances, the tax credit asks every business to wear a size 10 shoe.

In addition, there is no coordination between other subsidy efforts in the energy area and the new tax credit. In recent years, the Federal Government has been heavily engaged in subsidizing research and pilot operations in new energy technologies. The new tax credit applies at the flat 10% rate, whether the installation is of a type already being subsidized or a type which is now standard.

Again, the tax subsidy is applicable only to old buildings and existing processes. If subsidizing industrial energy conservation were a sensible step to take it would certainly be sensible to apply it for new buildings and new processes. The reason for the distinction is that, applied to new buildings, the provision would be too complicated. It would involve a highly specialized calculation to guess how the new plant would have been built, and then how this hypothetical design was moderated to introduce more energy efficiency.

Another aspect of the basic inefficiency that arises from the effort to implement a complex energy policy through the tax law is that it leaves little opportunity for government to learn from the process. If the Department of Energy were subsidizing the use of equipment to conserve oil and gas, particular efforts would be made to develop pilot projects for equipment that showed promise of further development. Evidence could be accumulated on the performance of various types of equipment, and this information could be fed into a long run program for energy research and development. But no such planning and follow-up is likely under a subsidy program administered by the IRS.

Finally, the tax approach to energy subsidies will introduce a new layer of eligibility conditions that have nothing to do with energy. The investment credit for energy related investments will only be available to a taxpayer who has sufficient income to utilize the full investment credit.

In 1971, over one-quarter of the corporations that had earned the regular investment credit did not have sufficient tax liability to use all of their investment credit. Out of 381,000 corporate tax returns with tentative investment credits, 103,000 finished the year with unused credits. At that time the investment credit rate was 7%. It has since been raised to 10%, and the new credit will be on top of the credits presently available.

Footnotes at end of article.

The House bill attempts to deal with this problem in some cases by allowing a "100% fill-up" against tax liability for the new credit.[16] But this device does not help many small firms, new firms, rapidly growing firms, firms hurt by the recession, and other firms which have no tax liability and which will therefore obtain no benefit at all from the credit. This situation clearly illustrates one of the basic defects of tax subsidies—such subsidies disqualify many potential recipients on the basis of their specialized tax circumstances, although such circumstances have nothing to do with any proper qualifications for the Federal subsidy. In fact, the hit-and-miss effect of the tax subsidy will put many firms at a competitive disadvantage—energy conservation equipment will cost them 100 cents on the dollar, whereas their competitors can use the credit to purchase the same equipment for 80 cents on the dollar, as a result of the 10% discount available through the investment credit in current law and the additional 10% credit proposed under the House bill.

If some additional governmental encouragement for installing energy conservation equipment will advance the country's energy program, the purpose is not served by structuring the incentive in a way that disqualifies a large proportion of firms from participating in the subsidy and puts them at a substantial disadvantage with their competitors.

In summary, the proposed business energy tax credit, like the other proposed tax expenditures, is a wasteful and complex approach to an important national problem. If we are serious about bringing order to the Federal budget process, we must analyze our subsidy policy with a critical eye and eliminate subsidies that are not designated to give us our money's worth. A new investment credit for a melange of so-called energy conservation investments is not an appropriate answer.

THE RECYCLING INVESTMENT CREDIT

The House bill revives a proposal that the Senate wisely rejected in the Tax Reform Act of 1976, an additional investment credit for waste recycling equipment.[17]

This proposal continues to show signs of life, because the tax law already provides large subsidies for the production of new materials through provisions such as the percentage depletion deduction, the current "intangible" deduction for oil and gas well drilling and mine development expenses, and the allowance of capital gains treatment for some of the gain from growing and cutting timber.

These tax benefits for producing new materials will to some extent stimulate their production, which means an increased supply and a lower price.

Recycling used iron, aluminum, paper, or other materials are expensive processes which will only be undertaken to the extent they successfully compete with new production. While the tax law is responsible for artificially reducing the price of new materials, it is simultaneously creating a competitive handicap for recycling.

In this situation, a recycling credit purports to restore a competitive balance. Although the diagnosis may be valid the remedy is an improper cure. The technique of balancing loopholes by spreading them to more producers can only further undermine the tax system. Moreover, the concept of recycling is extremely vague and broad, since it covers in principle any by-product recovery process.

One of the most harmful aspects of our present tax law is the pervasive across-the-board inducement for business to use up scarce materials.

If two products are in competition, and one is made from a valuable resource while the other is made from a cheap, almost valueless resource, our tax law, through percentage depletion, reduces the tax on the valuable resource-using process. In effect, the tax code penalizes processes that conserve valuable resources by using substitutes.

The fact that the percentage depletion subsidy applies to producing natural resources but not to recycling scrap is only one aspect of this basically unsound anti-conservation penalty. In effect, because percentage depletion applies only to the value added in extracting minerals, it penalizes the value added in manufacturing. It favors the income of owners of natural resources and penalizes income generated by manufacturing.

The recycling credit partially offsets a small part of this pattern of tax subsidies, but it does not deal with the basic problem. As a practical matter, the thrust of the recycling credit is to bring another group of lobbyists on board the depletion bandwagon. A new tax benefit would exist, available to those whose closest competitors enjoy the percentage depletion subsidy. Still another set of opponents to repeal of percentage depletion would be created.

The average citizen should be concerned over a bill that blithely creates new tax loopholes, when the public is indignant about the loopholes that already exist. An important source of President Carter's commitment to tax reform is his opposition to existing tax loopholes. To use existing loopholes to justify new loopholes is simply to compound the serious problem that already exists.

The House bill is also extremely vague in its recycling provisions. It devotes four lines to the definition of recycling equipment as "any equipment which is used exclusively in the recycling of solid waste or to sort and prepare solid waste for recycling."

Any manufacturing or mining process which has a primary product will have some refuse which, unless it were "recycled" to become a by-product, would be solid waste. In such cases, many businesses already have highly profitable operations to create by-products from what otherwise would have been waste.

How would the new credit for reprocessing "waste" apply in practical cases?

If a firm has been producing the by-product for years and replaces its by-product machinery, does it obtain a credit?

If a firm stops its by-product production for a month and has solid waste and then goes back to recycling the "waste," does it obtain a credit?

If a firm undertakes a new manufacturing process and tells the revenue agent it will throw away its waste unless it is allowed a tax credit for equipment to recycle the waste into a by-product, as its competitors are doing, does it obtain a credit?

The basic problem underlying these examples is that there is already a large number of business activities which are appropriately described as "recycling waste." Most of these are profitable by-product lines of business, and there is no case to justify a tax subsidy for processing that is going to take place anyway.

In addition, there are situations where, under present conditions, recycling waste is not efficient. This inefficiency may be artificial, such as in cases where a firm is not charged the full cost for disposal of solid waste, or where recycled materials compete against materials whose price has been pushed down by percentage depletion.

The most sensible government strategy with respect to recycling is to provide encouragement for recycling efforts that are efficient. It does not make sense to spend—in real resources plus tax expenditures—$10 to recover $2 of material. It also does not make sense to subsidize recycling that will take place in any event.

One way to eliminate artificial inefficiencies is to charge the full cost for business waste disposal. Another way is to eliminate the tax subsidies for percentage depletion and deductible development costs which push down the price of virgin materials. If we do go the subsidy route for recycling, the vagueness of the concept makes it indefensible to place this subsidy in the tax laws, where it will be up to revenue agents to decide what recycling is to be subsidized. The only efficient way to handle a subsidy is to assign it to an agency with expertise in the waste disposal area. Such an agency would at least be able to make informed judgments about what types of recycling should be subsidized. This direct subsidy approach would also make it possible to subsidize new technology in the area and develop cost breakthroughs that could reduce the national problem of waste disposal.

TAX INCENTIVES FOR GEOTHERMAL ENERGY PRODUCERS

The tax provisions of H.R. 8444 also expand some longstanding tax loopholes on the pretext of "encouraging" producers of energy from geothermal steam.

Specifically, the House-passed bill extends to this relatively new energy source the advantage now given oil and gas producers to deduct currently most of their capital costs—the so-called deduction for intangible drilling expenses. In addition the House bill extends percentage depletion, at a 10% rate, to geothermal steam, though on a restrictive basis, since the total amount of depletion may not exceed the cost basis of the property. The estimated revenue loss from the provisions is $192 million through the end of 1984.

Three points should be made about the new deductions proposed for geothermal energy:

Because the new tax benefit is in the form of a deduction, its benefits will go primarily to very rich investors.

The form of the new tax benefit makes it very unlikely that it will lead to any increase in available geothermal energy resources.

While taking significant steps toward market incentives for currently important energy resources—oil, natural gas, and coal—the bill takes no action to eliminate the unnecessary and unwise tax incentives now provided for these resources; instead it uses these existing loopholes as models for new loopholes for geothermal energy.

1. *The geothermal tax benefit primarily helps rich investors.* The technique that the House bill adopts to encourage geothermal energy development is an enhanced tax deduction. As a deduction, it becomes more valuable as the tax rate increases on the income against which the deduction is taken. As a result, the new deduction primarily benefits rich investors in the upper income brackets.

In recent years, Congress has made increasing use of the tax credit device, as opposed to a tax deduction, when it is desired to provide special tax incentives for various activities. In the 1960's the investment credit was enacted to promote business investment in equipment and machinery. In other provisions of H.R. 8444, tax credits are used to encourage home insulation and solar energy. The major advantage of the credit approach is that it provides an essentially uniform benefit for taxpayers in each bracket.

However, the technique that the House bill adopts for geothermal wells is a form of highly accelerated depreciation deduction for capital costs. The thrust of the bill is brought out by comparing an investment in a geothermal well with a 20 year life to investment in a machine with a 20 year life:

Using the double declining balance method of depreciation, the annual depreci-

Footnotes at end of article.

ation deductions on the machine are worth 54% of the value of the same deductions taken entirely in the first year.[18] By providing a 100% deduction in the first year for the costs of geothermal wells, the House bill allows, in effect, an extra deduction of 46% of the cost of such wells.

Put another way, under the 48% corporate tax rate, the accelerated deduction for geothermal wells in the House bill is equivalent to a tax credit of 22%.[19] For a taxpayer in the 70% bracket, the equivalent tax credit is 32%. For a taxpayer in the 20% bracket, the equivalent credit is only 9%.

The House bill will have the effect of expanding into a new area the sort of investment tax shelter abuses that have come to be associated with oil and gas well-drilling expenses. These shelters are a special preserve for wealthy investors. Ironically, the bill applies the minimum tax to this new tax preference. The minimum tax is a modest 15% tax on income from tax loopholes. This House action itself shows that the provision on geothermal wells would simply open up a new tax loophole, which will be subject to all of the tax shelter manipulations of the present intangible drilling deduction for oil and gas. But coverage under the minimum tax does not cure the basic defect of a new tax preference for wealthy investors. It is only a 15% slap on the wrist for such investors whose income from tax loopholes is so large that it triggers the minimum tax.

2. The geothermal tax benefit is an inefficient subsidy. The new allowance for deducting intangible drilling expenses on geothermal wells will make very little contribution to finding new sources of geothermal energy. This result is clear from the experience with intangible drilling expenses for oil and gas.

Oil and gas industry representatives constantly stress the risk involved in exploratory drilling for new deposits. Numerous scientific techniques are used to indicate the existence of underground rock structures that may contain oil and gas, but only drilling will prove the existence of such resources. It is commonly said that only 1 in 10 "wildcat" wells discovers oil, and that only 1 in 30 such wells finds oil in commercially profitable amounts.

Under normal tax principles the full cost of a dry well is deductible in the year it occurs as a normal business loss. So far as exploratory drilling for oil and gas is concerned, therefore, almost all of the drilling expenses would be deducted in the first year in any event. Thus, the allowance of a current deduction for all intangible drilling expenses does very little to improve the tax treatment of wildcat drilling.

With respect to oil and gas, the intangible drilling expense loophole is primarily a subsidy for development wells. Three out of four development wells are successful. Except for the unjustified deduction provided by present tax rules, costs of these wells would have to be deducted gradually over the life of the wells. In fact, under proper accounting theory, even the cost of unsuccessful development wells should be spread over the life of the particular field in which they were drilled, since the one-in-four development wells that are dry represent one of the normal costs of exploiting the entire oil or gas field.

The tax subsidy for development wells is especially bizarre, because if left to themselves oil and gas producers would ordinarily drill too many development wells. Under the usual patchwork of land claims, there is an economic incentive for each land owner to drill more wells and draw out his oil and gas, before neighboring landowners do the same thing. As a result of this "market" incentive for excessive drilling, States have developed conservative laws to limit the amount of development drilling, such as by requirements of minimum spacing between wells. In effect, States are trying to limit activities for which Congress is providing a special subsidy.

At this time we know little about the technology of geothermal deposits. We can say confidently, however, that drilling to find new deposits will involve far more risks than drilling to exploit a discovered field. It follows that the proposed new deduction for intangible drilling will do little to improve the tax treatment of exploratory drilling, while providing a tax bonanza for producing wells in fields already discovered.

If Congress desires to provide a serious incentive for geothermal energy, it should design a direct subsidy to pay bonuses for exploratory drilling. It certainly should not create a tax windfall for rich investors to conduct more development drilling.

Further, since the deduction technique makes the new tax benefit attractive to rich investors, the House bill is placing this new geothermal shelter into competition with other tax shelter devices in areas like oil and gas, real estate and farming as well as with capital gains, tax exempt interest, etc. This piling up of attractive investments for a limited class of rich investors is a further indication that the bill will have little effect on developing a new energy source that could be important to the nation.

3. A percentage depletion deduction for geothermal energy is unjustified. The House bill extends the percentage depletion allowance to geothermal energy sources in an unusual way. Geothermal energy is to receive a 10% depletion allowance, but the amount of depletion taken by a taxpayer under this provision is not permitted to exceed the cost basis of the property.

This "basis" rule represents a modest step to curb the well-known abuses of percentage depletion. The mischief in the customary percentage depletion allowance is that a producer of minerals can write off, as intangible development expenses, most of the capital costs, and then use the depletion allowance to subtract from his income a continuing annual percentage of gross receipts which is not limited to the remaining unrecovered cost.

For example, the cost of developing an oil field might be $1 million, of which $800,000 could be deducted currently, through the intangible drilling deduction. The percentage depletion deductions could well amount to $2,000,000 or more over the life of the deposit. The total capital costs allowed to be deducted would be three times the actual amount of the capital costs. The example is not unrealistic. Past Treasury studies have suggested that in the aggregate, such deduction exceeded capital costs by about 3 to 1.

If the House-passed provision for percentage depletion for geothermal energy is applied to this example, the percentage depletion deduction would be limited to the amount of the unrecovered capital cost of $200,000. The total deductions would be limited to $1 million, the amount of the capital costs. The defect in the new proposed percentage depletion deduction is that it allows an additional acceleration of the capital cost deduction, which is the same type of loophole involved in the proposed intangible drilling deduction discussed above.

EXISTING ENERGY TAX LOOPHOLES

The House bill is designed to deal in a major way with the entire energy area. It can be seriously faulted, therefore, for failing to deal with the major existing tax loopholes involving energy.

From a long range standpoint, a significant part of the bill is that the price of new oil and gas will be allowed to rise ultimately to market levels. Higher market prices constitute a strong economic incentive both for energy production and for energy conservation. At a time when the nation is moving down the road of higher price incentives, we should be taking the related step eliminating the intangible drilling deduction and the percentage depletion allowance for oil and gas and other minerals.

The hard part of the energy bill is the burden of higher energy prices that is being imposed on American citizens. These citizens are being asked to accept higher prices which will simultaneously enrich some producers and stimulate new production. At a minimum the average citizen should demand in return that Congress eliminate existing and proposed tax loopholes that enrich some producers without stimulating new production.

FOOTNOTES

* The discussions of the residential insulation tax credit and the solar energy tax credit are revised and updated from the analyses in *Federal Tax Reform for 1976*, a compendium of papers prepared by Stanley S. Surrey, Paul McDaniel, and Joseph A. Pechman at the request of myself and other Senators for use in the Senate debate on the Tax Reform Act of 1976.

[1] "Energy Program 7, Energy Tax Proposals Relating to Residential Conservation," pamphlet prepared for the Committee on Ways and Means by the Staff of the Joint Committee on Taxation, June 3, 1977, p. 9. Henceforth this pamphlet will be referred to as "Energy Program 7."

[2] "Energy Program 7," p. 4; S. R. Peterson, "Retrofitting Existing Housing for Energy Conservation: An Economic Analysis" (National Bureau of Standards, Department of Commerce, 1974), pp. 28–40.

[3] "Energy Program 7," pp. 16–17 and "President Carter's Energy Proposals: A Perspective," by the Congressional Budget Office, May 31, 1977.

[4] In his Message to Congress on April 20, 1977, President Carter proposed a two-tiered tax credit equal to 25% of the first $800 of expenses for residential insulation and 15% of the next $1,400 of expenses, for a total credit of $410. The House-passed bill dropped the two-tiered concept.

[7] *Id.*

[8] As a result of the Tax Reduction and Simplification Act of 1977, a family consisting of a married couple with two children does not incur a tax liability of $400 until its adjusted gross income reaches about $10,000. If the credit were refundable, a family with tax liability of, say, $100 could receive a Treasury refund of $300 if it qualified for the full $400 credit; under the House-passed bill, the family would get only $100 of benefit from the credit. Families with no tax liability (those with adjusted gross income of about $7,000 or less) will get no benefit at all from the credit.

[9] "Energy Program 7," pp. 10–11.

[10] Steven D. Moore, "A Critique of Insulation and Solar Energy Tax Credit Proposals," *Tax Notes*, April 18, 1977, pp. 15–20.

[11] "Solar Heating," Office of Tax Analysis, U.S. Department of Treasury, April 8, 1976. Figures are based on the present value of installation and operating costs, assuming that the investor's after-tax rate of return is 10%, and that 80% of the cost is financed by an 8% loan, the interest on which is deductible.

[12] A married couple with two children does not incur a tax liability of $2,150 until its adjusted gross income reaches about $20,000. Since the credit is not refundable, low income taxpayers will not receive any benefits from the credit, and many middle income taxpayers will not receive the full benefit of the credit. See footnote 8.

[13] See footnote 10 and the accompanying text.

[14] George F. Break and Joseph Pechman, *Tax Reform: The Impossible Dream* (Washington, D.C., The Brookings Institution, 1975).

[15] The amount of the tax credit in H.R. 8444 for residential wind energy equipment is the same as for solar energy equipment—30% of the first $1,500 spent and 20% of the next $8,500, for a maximum credit of $2,150.

[16] The maximum offset allowed for the 10% investment tax credit under present law is $25,000 plus 50% of tax liability over $25,000. The House bill allows the new credit to offset 100% of tax liability in certain cases.

[17] The bill provides a 10% investment tax credit, in addition to the 10% credit already available under existing law, for the purchase of equipment to recycle solid waste and to sort and prepare such waste of recycling. The cost of the credit is estimated at approximately $30 million a year.

[18] Speeding up the taking of a deduction is equivalent to increasing its amount, and postponing a deduction reduces its amount. The calculation assumes a discount rate of 10%, since a normal equity investment rate of return is 20% before tax and 10% after tax. The present value of the accumulated future-year deductions for depreciation of the machine under the double declining balance method of depreciation is worth only 54% of the cost of the machine.

[19] Calculated as (100% — 54%) × 48% = 22%.

MINNESOTA OPINION POLLING

Mr. ANDERSON. Mr. President, in July I sent out a comprehensive questionnaire to over 300,000 people in Minnesota. The results of the questionnaire have now been tabulated and I would like to share the results with my colleagues.

Mr. President, I ask unanimous consent that the results of the questionnaire be printed in the RECORD.

There being no objection, the questionnaire results were ordered to be printed in the RECORD, as follows:

QUESTIONNAIRE RESULTS

ARMED SERVICES

1. Are you in favor of returning to a military draft? Yes, 46 percent, no, 54 percent.

2. Do you think the U.S. should buy the B–1 bomber? Yes, 20 percent, no, 80 percent.

3. Should military retirees, so called "double-dippers," be permitted to receive both a military retirement pension and a full check from a government job? Yes, 17 percent; no, 83 percent.

4. Are you in favor of removing all U.S. forces from Korea? Yes, 42 percent; no, 56 percent.

5. In regards to the Strategic Arms Limitation talks (SALT II), do you feel we should push for a substantial reduction in nuclear weapons? Yes, 78 percent; no, 22 percent.

6. Also in regards to the SALT talks, should the U.S. reject Soviet demands to limit development of the Cruise missile? Yes, 67 percent; no, 33 percent.

7. Should the U.S. limit sale of large quantities of conventional weapons to Third World developing nations? Yes, 86 percent; no, 14 percent.

BUDGET ISSUES

1. Do you think that the United States should have national health insurance? Yes, 60 percent; no, 40 percent.

2. Unemployment is one of the most urgent problems that this Congress must address. Here are some of the major proposals which have been suggested for putting Americans back to work. Please indicate whether you support or oppose the proposals.

a. A large personal and business income tax reduction. Yes, 56 percent; no 44 percent.

b. Action by the government to ease credit for mortgages and loans so that interest will come down. Yes, 77 percent; no 23 percent.

c. One million or more government financed public service jobs. Yes, 41 percent; no, 59 percent.

d. Increased price supports for farmers to improve farm purchasing power. Yes, 55 percent; no, 45 percent.

e. Special work programs and comprehensive job counseling and placement services for young people during periods of high unemployment. Yes, 77 percent; no, 23 percent.

f. Regulating imports of foreign manufactured goods that are competing with American goods. Yes, 68 percent; no, 32 percent.

3. Do you support a proposal to make college tuition costs tax deductible? Yes, 65 percent; no, 35 percent.

4. President Carter has proposed that the nation's hospitals hold their average annual increase in charges to 9 percent. Do you approve or disapprove of this proposal? Yes, 87 percent; no, 13 percent.

ENVIRONMENT AND PUBLIC WORKS ISSUES

1. The following proposals are being considered as a means of protecting and enhancing our natural resources. Please check to indicate whether you favor or oppose the proposal becoming national policy.

a. A national law providing for deposits on beverage containers. Favor, 76 percent; oppose, 24 percent.

b. A moratorium on new construction of nuclear power plants. Favor, 45 percent; oppose, 55 percent.

c. Tougher controls on water and air pollution from industries. Favor, 79 percent; oppose, 21 percent.

d. A national ban on fluorocarbons and propellants in aercsol products. Favor, 87 percent; oppose, 13 percent

e. Regulation of the phosphorous content in detergents. Favor, 88 percent; oppose, 60 percent.

f. Federal regulations for state land use planning. Favor, 40 percent; oppose 60 percent.

2. Which of the following statements most closely approximates your feelings about the best future of the Boundary Waters Canoe Area? (Check only one)

a. The entire BWCA should be designated a wilderness area and no lumbering or use of motorized vehicles permitted. 36 percent.

b. The BWCA should be split into two jurisdictions, one of which would be wilderness and the other a multi-use recreational area which permits motorized vehicles, timber cutting and other usages. 15 percent.

c. The BWCA should remain a designated wilderness area with several specific areas set aside for controlled harvesting of nonvirgin timber and with several designated motorized uses. 48 percent.

GENERAL ISSUES

1. Do you think that the Hatch Act should be amended to allow employees of the federal government to participate in political activities that are now permitted Minnesota state employees? Yes, 46 percent; no, 54 percent.

2. Would you support legislation that limits the amount of personal funds that a candidate may contribute to his/her own political campaign? Yes, 65 percent; no, 35 percent.

3. Most experts feel that the Social Security Trust Fund has been depleted to the point that future social security payments are endangered. In order to replenish this fund, would you prefer to:

A. Increase social security taxes; 28 percent.

B. Transfer funds from general revenues; 72 percent.

TRADITIONAL AMERICAN PRINCIPLES REQUIRE RATIFICATION OF THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, from the very beginnings of our history, the people of this Nation have been dedicated to preserving the basic rights of man. I need hardly remind this body of the first lines of the Declaration of Independence which declare that "all Men are created equal, that they are endowed by their Creator with certain inalienable Rights, that among these are Life, Liberty, and the Pursuit of Happiness."

I would like to point out, however, that these words apply not only to Americans. The noble principles of the Declaration apply to all peoples. As President Abraham Lincoln stated more than 100 years ago, the Declaration of Independence gave liberty "not alone to the people of this country, but the hope for all the world for all future time." Our adherence to the ideals of liberty and equality, as well as to all human rights, is in other words a powerful signal to the world. All nations listen to what we say. We have a responsibility, therefore, to proclaim, on every appropriate occasion, our dedication to the high principles in which we believe.

Thus I believe we must ratify the International Convention on the Prevention and Punishment of the Crime of Genocide. It is time that we declare to all the world, loudly and clearly, that we condemn this terrible crime. It has been 28 long years since the General Assembly of the United Nations unanimously adopted the convention. During these years, more than 80 nations have endorsed its principles. The one nation that all the world might have expected to have been the first to act, however, has never acted at all. In fact, this body, whose role it is to vote on all treaties, has not even considered it.

It is time that we face up to our responsibility. I dare say that the authors of the Declaration would expect no less.

SUPPORT FOR THE AIR BAG STANDARD

Mr. RIBICOFF. Mr. President, every day of the year throughout this Nation men, women, and children are killed or permanently maimed in automobile accidents. These tragedies are such commonplace occurrences of our daily life that they are hardly noted except by the families of the victims. Only on holidays such as this last Labor Day weekend, where 469 people were killed in automobile accidents do the cumulative numbers reach a level where they receive much public comment.

The stark facts, however, are that automobile accidents are the fifth leading cause of death in this country and the No. 1 killer of our young people. Fortunately, the Congress can now take a major step to drastically reduce this carnage by supporting the recent safety standard proposed by the Department of Transportation on June 30 of this year. This safety standard would require that automatic crash protection de-

vices—most likely air bags or passive belts—be phased into the front seating positions of all new automobiles during model years 1982 through 1984.

It is very gratifying to note that over 95 percent of all insurance companies support this standard. Insurance representatives have estimated that full utilization of these devices would lead to potential insurance savings of as much as $2.5 billion a year. The Department of Transportation also estimates that once these devices are fully deployed they will save 9,000 lives and prevent over 100,000 injuries annually. Opponents of this safety standard have argued that the Federal Government should not mandate these safety requirements. The New York Times in a perceptive editorial entitled "Don't Deflate the Air Bag," on July 24 responded to this argument as follows:

Some opponents of passive restraints argue that drivers ought to be allowed to risk their necks without interference from a paternalistic government. But it is hard to see how, in principle, passive restraints differ from safety devices already mandated by the government such as shatterproof glass, energy absorbing steering columns, padded dashboards, strengthened bumpers and seatbelts. In any event, those who purchase an automobile are seldom the only persons at risk. Teenage drivers, young children and others who have had no voice in choosing safety options may find their lives in danger. Nor are drivers who get hurt needlessly harming only themselves. Their fellow citizens pick up the tab for police officers, ambulances, hospital care, insurance payments and government benefits.

It has been suggested by certain other citizens that mandatory seatbelt laws could more effectively and inexpensively resolve these safety problems. Such an approach resting necessarily on the active enforcement by the police is clearly more intrusive Government action than the placing of air bags in automobiles. A recent Gallup poll demonstrated that the public by a 4-to-1 margin opposed mandatory seatbelt laws, while this same poll showed public support for mandatory air bag requirements.

Mr. President, under the provisions of the National Traffic and Motor Vehicle Safety Act of 1966, the Congress is provided an opportunity to review the Department of Transportation's passive restraint standard for a period of 60 calendar days, excluding recesses of more than 3 days. I urge my colleagues to join me in strong support of this standard, it is unlikely that any other single action that we may take during this Congress could save as many American lives or prevent so much unnecessary tragedy.

PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the RECORD at this point the 10 notifications I have just received.

There being no objection, the 10 notifications were ordered to be printed in the RECORD, as follows:

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE). OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-78, concerning the Department of the Navy's proposed Letter of Offer to Australia for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $14.5 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF Director, Defense Security Assistance Agency, and Deputy Assistant Secretary (ISA), Security Assistance.

TRANSMITTAL NO. 77-78

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—

(i) Prospective Purchaser: Australia.

(ii) Total Estimated Value:
Major Defense Equipment [1]—$14.5 million.
Other—0.0 million.
Total—$14.5 million.

(iii) Description of Articles or Services Offered: Twelve (12) MK48 mod 3 torpedoes, six (6) exercise heads, two (2) dummy torpedoes, initial spare parts and two years support.

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE), OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-79, concerning the Department of the Army's proposed Letter of Offer to The Netherlands for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $37.0 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

[1] As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

TRANSMITTAL NO. 77-79(a)

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—

(i) Prospective Purchaser: Netherlands.

(ii) Total Estimated Value:
Major Defense Equipment [1]—$37.0 million.
Other—$0.0 million.
Total—$37.0 million.

(iii) Description of Articles or Services Offered: Two-thousand three-hundred (2,300) Dragon missiles, three-hundred fifty (350) trackers and support equipment.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 25, 1977.

TRANSMITTAL NO. 77-79(b)

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—

(i) Prospective Purchaser: Netherlands.

(ii) Total Estimated Value:
Major Defense Equipment [1]—$37.0 million.
Other—$0.0 million.
Total—$37.0 million.

(iii) Description of Articles or Services Offered: Two-thousand five-hundred and seventy (2,570) Dragon missiles, three-hundred and thirty-five (335) trackers and support equipment.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 25, 1977.

TRANSMITTAL NO. 77-79(c)

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—

(i) Prospective Purchaser: Netherlands.

(ii) Total Estimated Value:
Major Defense Equipment [1]—$37.0 million.
Other—$0.0 million.
Total—$37.0 million.

(iii) Description of Articles or Services Offered: Two-thousand eight-hundred and forty (2,840) Dragon missiles, three-hundred and twenty (320) trackers and support equipment.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE), OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-64, concerning the Department of the Army's proposed Letter of Offer to Iran, not major defense equipment as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $167.0 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

TRANSMITTAL NO. 77-64

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—

(i) Prospective Purchaser: Iran.
(ii) Total Estimated Value:
Major Defense Equipment [1]—$0.0 million.
Other—$167.0 million.
Total—$167.0 million.
(iii) Description of Articles or Services Offered: Contractor continuation of establishment and operation of helicopter training center for pilots (1,550) and mechanics (4,500) to accomplish flight and technical training for Iranian personnel and to train Iranian personnel to operate the training center. Program extends through August 1981.
(iv) Military Department: Army.
(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.
(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE), OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-67, concerning the Department of the Army's proposed Letter of Offer to Iran, not major defense equipment as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $183.7 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

TRANSMITTAL No. 77-67

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—
(i) Prospective Purchaser: Iran.
(ii) Total Estimated Value:
Major Defense Equipment [1]—$0.0 million.
Other—$183.7 million.
Total—$183.7 million.
(iii) Description of Articles or Services Offered: Provide contractor on-the-job training (OJT) over a two-year period to support the deployed Iranian I-HAWK air defense system in two phases. The initial phase (an LOA of $2.7 million) will provide for the recruitment and training of 73 contractor personnel. The second phase (LOA value of $181 million) will provide for training in Iran.
(iv) Military Department: Army.
(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.
(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE) OASD/ISA,

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-76, concerning the Department of the Navy's proposed Letter of Offer to Australia for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $179.9 million and support costs of $3.6 million for a total estimated cost of $183.5 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

TRANSMITTAL No. 77-76

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—
(i) Prospective Purchaser: Australia.
(ii) Total Estimated Value:
Major Defense Equipment [1] $179.9 million.
Other—$3.6 million.
Total—$183.5 million.
(iii) Description of Articles or Services Offered: One (1) guided missile frigate (FFG-7).
(iv) Military Department: Navy.
(v) Sales Commission. Fee, etc. Paid, Offered or Agreed to be Paid: None.
(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE), OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-77, concerning the Department of the Navy's proposed Letter of Offer to Germany for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $25 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretray (ISA), Security Assistance.

TRANSMITTAL No. 77-77

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—
(i) Prospective Purchaser: Federal Republic of Germany.
(ii) Total Estimated Value:
Major Defense Equipment [1]—$25.0 million.
Other—$0.0 million.
Total—$25.0 million.
(iii) Description of Articles or Services Offered: Modernization of three (3) guided missile destroyers. This modernization includes improvement of search radars, SQS-23G sonar, missile fire control system, electronic warfare capability and improved command and control systems.
(iv) Military Department: Navy.
(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.
(vi) Date Report Delivered to Congress: August 25, 1977.

DEFENSE SECURITY ASSISTANCE AGENCY AND DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE) OASD/ISA,
Washington, D.C., August 25, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Seante, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-66, concerning the Department of the Army's proposed Letter of Offer to Iran not major defense equipment as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $250 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

TRANSMITTAL No. 77-66

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act—
(i) Prospective Purchaser: Iran.
(ii) Total Estimated Value:
Major Defense Equipment [1] $0.0 million.
Other—$250.0 million.
Total—$250.0 million.
(iii) Description of Articles or Services Offered: Contractor continuation of the establishment and operation of four (4) helicopter area support centers and to train Iranian personnel to operate these centers through 1981.
(iv) Military Department: Army.
(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.
(vi) Date Report Delivered to Congress: August 25, 1977.

CONSTITUTIONALITY OF DISCLOSURE REQUIREMENTS INVOLVING LOBBYING ORGANIZATIONS

Mr. KENNEDY. Mr. President, one of the current issues in S. 1785, the lobbying reform legislation that Senator CLARK, Senator STAFFORD, and I introduced earlier this year, concerns the constitutionality of the provisions in the bill which require public disclosure of major contributions to lobbying organizations and of grassroots lobbying activities.

During the recess, I asked the American Law Division of the Library of Congress to analyze these constitutional issues. Last week, I received the Library's report, which I believe provides strong support for the constitutionality of disclosure requirements in these two important areas of lobbying reform. As the report states in the case of disclosure of contributors:

Thus, a strong argument, based on the Supreme Court precedents discussed, may be made for the constitutionality of required disclosures of the major contributors to organizations which qualify as "lobbying organizations."

Mr. President, I believe that the Library of Congress report will be of interest to all of us concerned with this important aspect of lobbying reform. I ask unanimous consent that the report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CONSTITUTIONALITY OF CERTAIN REQUIRED DISCLOSURES UNDER PROPOSED LOBBYING ACT REFORMS

This report discusses the constitutionality of requiring the reporting and disclosure of the names of the major contributors to a "lobbying organization," and discusses the constitutional issues involved in requiring reporting and disclosure of so called "grass roots" lobbying activities, that is, activities aimed at the general public which are intended to encourage the public to contact members of the legislature to influence such members on various issues.

DISCLOSURE OF CONTRIBUTORS TO LOBBYING ORGANIZATIONS

Requiring the disclosure of contributors to organizations which petition the Congress and which engage in advocacy or debate concerning political, social or economic issues, raises questions as to possible infringements upon guaranteed First Amendment rights such as the freedoms of speech, expression, association, and petition. Although provisions which merely require certain disclosures regarding advocacy activities do not directly prohibit or limit the exercise of those enumerated rights, the Supreme Court of the United States has recognized the "deterrent effects on the exercise of First Amendment rights . . ." which may arise "as an unintended but inevitable result of the government's conduct in requiring disclosure" (*Buckley* v. *Valeo*, 424 U.S. 1, 65 [1976]).

In the case of *NAACP* v. *Alabama*, 357 U.S. 449 (1958), the Supreme Court overturned a state court contempt citation against the NAACP for that organization's failure to disclose its local membership list. Recognizing that "(e)ffective advocacy of both public and private points of view, particularly controversial ones, is undeniably enhanced by group association" and that, based upon the First Amendment rights of freedom of speech, petition and assembly, the Constitution guarantees the "freedom to engage in association for the advancement of beliefs and ideas," the Court noted the chilling effect that certain state actions, such as requiring the disclosure of membership lists, may have upon the exercise of those rights:

"Of course, it is immaterial whether the beliefs sought to be advanced by association pertain to political, economic, religious or cultural matters; any State action which may have the effect of curtailing the freedom to associate is subject to the closest scrutiny.

"The fact that [the State] . . . has taken no direct action, (citations omitted), to restrict the right of petitioner's members to associate freely, does not end the inquiry into the effect of the production order. (citations omitted). *In the domain of these indispensable liberties, whether of speech, press, or association, the decisions of this Court recognize that abridgment of such rights, even though unintended, may inevitably follow from varied forms of governmental action,*" (357 U.S. at 460–461) (Emphasis added).

Similarly, the Supreme Court in the case of *Gibson* v. *Florida Legislative Investigation Committee*, 372 U.S. 539 [1963], examined a State's investigatory authority and its authority to compel the disclosure of membership lists from issue oriented or advocacy organizations such as the NAACP. Citing its decision in *NAACP* v. *Alabama*, supra, the Court explained:

"It is hardly a novel perception that compelled disclosure of affiliation with groups engaged in advocacy may constitute [an] . . . effective . . . restraint on freedom of association. . . . This Court has recognized the vital relationship between freedom to associate and privacy in one's association. . . . Inviolability of privacy in group association may in many circumstances be indispensable to preservation of freedom of association, particularly where a group espouses dissident beliefs." (372 U.S. at 544, citing 357 U.S. at 46).

In the recent Supreme Court case of *Buckley* v. *Valeo*, supra, the Court in examining campaign disclosure laws stated:

". . . [W]e have repeatedly found that compelled disclosure, in itself, can seriously infringe on privacy of association and belief guaranteed by the First Amendment." (424 U.S. at 64).

Additionally, the Court in the *Buckley* case noted that this right of privacy in association which extends to individuals who become members of organizations, extends as well to individuals who contribute funds to organizations:

"The right to join together 'for the advancement of beliefs and ideas,' [*NAACP* v. *Alabama*, supra, at 460], is diluted if it does not include the right to pool money through contributions, for funds are often essential if 'advocacy' is to be truly or optimally 'effective.'" (424 U.S. at 66).

Thus, the Supreme Court has recognized a potentially serious threat to First Amendment rights in statutes which require the disclosure of member/contributors to advocacy or issue oriented organizations which engage in public debate and persuasion concerning issues of public interest. Although such a potential threat to First Amendment rights may exist as a result of mandatory disclosures, the Supreme Court has upheld the constitutionality of disclosure requirements concerning contributors to political parties, committees and candidates in the case of *Buckley* v. *Valeo*, supra, and concerning the disclosures required by the Federal Regulation of Lobbying Act of 1946 in the case of *United States* v. *Harriss*, 347 U.S. 612

(1954). In these two cases, the Supreme Court employed a "balancing" test, finding that there may be sufficiently important governmental interests in the required disclosures which will outweigh the possibility of infringement of the rights claimed.

The Court in the *Buckley* case, noting that disclosure requirements generally "appear to be the least restrictive means of curbing the evils" of unwarranted influence and corruption concerning basic governmental processes (Supra, at 68), noted the principle that certain governmental interests will outweigh the possible chilling effect of disclosure statutes on First Amendment rights:

"The strict test established by *Alabama* [*NAACP* v. *Alabama*, 357 U.S. 449 (1958)] is necessary because compelled disclosure has the potential for substantially infringing the exercise of First Amendment rights. But we have acknowledged that there are governmental interests sufficiently important to outweigh the possibility of infringement, particularly when the 'free functioning of our national institutions' is involved; *Communist Party* v. *Subversive Activities Control Bd.*," 367 U.S. 1, 97 (1961). (424 U.S. at 66).

The interest of the government in requiring disclosures relating to activities concerning "lobbying," as defined by the Court, was found to be sufficient to outweigh possible infringements on, or chilling of, associational or other First Amendment rights in the case of *United States* v. *Harriss*, supra. In the *Harriss* case, the Supreme Court, construing narrowly the provisions of the Federal Regulation of Lobbying Act (2 U.S.C. § 261 et seq.) upheld the constitutionality of that Act. As to the governmental interest involved in requiring the reports and disclosures from those who engage in "lobbying," as that term was defined by the Court, the Court stated:

"Present-day legislative complexities are such that individual members of Congress cannot be expected to explore the myriad pressures to which they are regularly subjected. Yet full realization of the American ideal of government by elected representatives depends to no small extent on their ability to properly evaluate such pressures. Otherwise the voice of the people may all too easily be drowned out by the voice of special interest groups seeking favored treatment while masquerading as proponents of the public weal. This is the evil which the Lobbying Act was designed to help prevent.

"Toward that end, Congress has not sought to prohibit these pressures. It has merely provided for a modicum of information from those who for hire attempt to influence legislation or who collect or spend funds for that purpose. It wants only to know who is being hired, who is putting up the money, and how much. It acted in the same spirit and for a similar purpose in passing the Federal Corrupt Practices Act—to maintain the integrity of a basic governmental process. See *Burroughs and Cannon* v. *United States*, 290 U.S. 534, 545.

"Under these circumstances, we believe that Congress, *at least within the bounds of the Act as we have construed it*, is not constitutionally forbidden to require the disclosure of lobbying activities. To do so would be to deny Congress in large measure the power to self-protection. And here Congress has used that power in a manner restricted to its appropriate end. We conclude that [the registration and reporting sections of the Act], as applied to persons defined in § 307 [those covered by the Act], do not offend the First Amendment." (347 U.S. at 611–612). (Emphasis added.)

The recognized governmental interest in requiring the reporting and disclosure by groups, individuals and organizations engaged in "lobbying" in the *Harriss* case was to preserve the integrity of the lawmaking process by eliminating secrecy in, and exposing and identifying pressures and influences upon the legislative process. Thus, this recognized governmental purpose has been, and apparently would be, considered a "compelling" interest in regulating what has traditionally and narrowly been defined as "lobbying." As noted, in narrowly interpreting the provisions of the Act, the Supreme Court found that the lobbying statute "sought the disclosure of . . . *direct pressures* [upon Congress] exerted by the lobbyists themselves or through their hirelings or through an artificially stimulated letter campaign" (347 U.S. at 620, emphasis added), implying that the statute would not entail "a broader application to organizations seeking only to propagandize the general public" (347 U.S. at 621). Interpreting the term "lobbying," the Court in the *Harriss* case stated the following:

"As in *United States* v. *Rumely*, 345 U.S. 41, 47, which involved the interpretation of similar language, we believe this language should be construed to refer only to 'lobbying in its commonly accepted sense'—*to direct communication with Members of Congress* on pending or proposed federal legislation. The legislative history of the Act makes clear that, at the very least, Congress sought disclosure of such direct pressures, exerted by the lobbyists themselves or through their hirelings or through an artificially stimulated letter campaign." (347 U.S. at 620) (Emphasis added).

Thus, a strong argument, based on the Supreme Court precedents discussed, may be made for the constitutionality of required disclosures of the major contributors to organizations which qualify as "lobbying organizations" because they substantially engage in what might be called traditional "lobbying," that is, direct communications with Members of Congress either through lobbyists themselves or through artificially stimulated letter campaigns. In requiring such disclosure Congress would arguably be advancing the recognized governmental interest of disclosing and identifying the "direct pressures" that are exerted upon Members of Congress (see: *Harriss* and *Rumely*, supra). The precedents discussed, however, provide less support for requiring the disclosure of contributors to organizations which merely engage in general advocacy and public debate, and do not engage in direct communications with Members of Congress. The issues concerning disclosures by such groups are discussed in the following section relating to "grass roots" lobbying organizations.

In should be noted that although the Supreme Court in the *Buckley* case did suggest that disclosure provisions generally "appear to be the least restrictive means of curbing the evils" of unwarranted influence and corruption concerning governmental processes (*Buckley*, supra at 68), the Court did note that the "balance" may be tipped in favor of non-disclosure of contributors of a group where such group may show that disclosure would result in harrassment or threats of reprisal to contributors such that First Amendment rights of association and expression would seriously be infringed by the disclosures. The Court stated:

"There could well be a case, similar to those before the Court in *Alabama* and *Bates*, where the threat to the exercise of First Amendment rights is so serious and the state interest furthered by disclosure so insubstantial that the Act's requirements cannot be constitutionally applied. But no appellant in this case has tendered record evidence of the sort proffered in *Alabama*." (424 U.S. at 71)

As to the evidence which may be necessary to be shown by a minor political party to exclude such a group from the disclosure requirements of the campaign Act, the Court in *Buckley* stated:

"The evidence offered need show only a reasonable probability that the compelled disclosure of a party's contributors' names will subject them to threats, harassment or reprisals from either government officials or private parties. The proof may include, for example, specific evidence of past or present harassment of members due to their associational ties, or of harassment directed against the organization itself. A pattern of threats or specific manifestations of public hostility may be sufficient." (424 U.S. at 74)

DISCLOSURE OF GRASS ROOTS LOBBYING ACTIVITIES

Although a compelling or subordinating governmental interest may be shown in enacting a disclosure statute, such disclosure provisions may not be so broad as to "invade the area of protected freedoms" (*NAACP* v. *Alabama*, supra at 307). This standard has required that the information is to be disclosed under a statute bear "a reasonable relationship to the achievement of the governmental purpose asserted as [the statute's] justification" (*Bates* v. *Little Rock*, 361 U.S. 516, 525 [1960]), that is, there must "be a 'relevant correlation' or 'substantial relation' between the governmental interest and the information required to be disclosed" (*Buckley*, supra at 59).

In the context of lobbying disclosure provisions, as in the case of the campaign disclosure provisions, this overbreadth doctrine may arguably necessitate that the activities which are subject to disclosure requirements be narrowly defined to exclude required dis closures relating to activities of individuals or groups that "do no more than discuss issues of public interest" (*Buckley* v. *Valeo*, 519 F. 2d 817, 872 [D.C. Cir. 1975], Appeals Court decision overturning former 2 U.S.C. Sec. 437a, not appealed to Supreme Court) or activities by "groups engaged purely in issue discussion" (*Buckley* v. *Valeo*, 424 U.S. 1, 79). Thus, constitutional questions may arise as to provisions of a lobbying bill being susceptible to an overly broad sweep requiring the disclosure by issue oriented or advocacy groups which do no more than publicly discuss or advocate stands on public issues. Such disclosure may arguably be too remote and not have a "substantial connection" to the governmental interest in lobbying regulation recognized in the *Harriss* case, that is, the revelation of "direct pressures" upon Congress in order to "maintain the integrity of a basic governmental process" (*Harriss*, supra at 625).

In the case of *United States* v. *Rumely*, supra, the Supreme Court, in upholding a resolution authorizing a House committee to investigate into "lobbying activities" which the Court narrowly defined, stated the following:

"Surely it cannot be denied that giving the scope to the resolution for which the Government contends, that is, deriving from it the power to inquire into all efforts of private individuals to influence public opinion through books and periodicals, however remote the radiations of influence which they may exert upon the ultimate legislative process, raises doubts of constitutionality in view of the prohibition of the First Amendment." (345 U.S. at 46)

It should be noted that the decision of the lower court in *Buckley* v. *Valeo*, 519 F. 2d 817 (D.C. Cir. 1975), overturning the specific provision of the Campaign Act previously codified at 2 U.S.C. §437a, which required reporting and disclosure from certain issue groups, was *not* appealed to the Supreme Court. Thus, the Appeals Court decision finding former §437a an overbroad intrusion into protected First Amendment rights was not directly affected by the recent Supreme Court *Buckley* decision. Briefly, the Court of Appeals found that the wording of the statute which required disclosure from groups expending funds "for the purpose of influ-

encing the outcome of an election" or publishing material "designed to influence individuals to cast their votes for or against" particular candidates, was so broad that the statute may encompass "groups that do no more than discuss issues of public interest on a wholly non-partisan basis" (519 F. 2d at 872). The Court of Appeals found that since such groups have at best a remote effect upon the purity of elections, and since the statute could not be narrowly constructed to exclude such groups, the regulation in question did not bear a sufficient connection to the stated governmental interest which would overcome the intrusion into associational rights that a required disclosure of member/contributors may have upon such an organization's membership. The Court of Appeals cited to the Supreme Court decision in *Rumley* in distinguishing between those persons having a direct and intimate relation to the political process and those who merely attempt to advance discussion of public issues or influence the general public:

"The Supreme Court has indicated quite plainly that groups seeking only to advance discussion of public issues or to influence public opinion cannot be equated to groups whose relation to political processes is direct and intimate. In *United States* v. *Rumely*, 345 U.S. 41 (1953), the Court upheld a resolution authorizing a House committee to inquire into lobbying activities after construing it narrowly to apply only to representations made directly to Congress, and not to indirect efforts to influence legislation by changing the climate of public opinion." (519 F. 2d at 873)

As noted, the Supreme Court upheld provisions of the Campaign Act in the *Buckley* case which required disclosures, including the identity of contributors, from those who it may be said have a "direct and intimate" relation to the political process, that is, candidates, political parties and political committees. The Court also, however, upheld the reporting requirements now codified at 2 U.S.C. §434(e) which require reporting and certain disclosures from persons *other* than candidates, political committees and political parties, who make independent political contributions or expenditures aggregating over $100 in a calendar year. The Court noted as to the disclosure provisions concerning such persons, however, that:

"Unlike the other disclosure provision, this section does not seek the contribution list of any association. Instead, it requires direct disclosure of what an individual or group contributes or spends."

Thus, it appears that the Supreme Court in the *Buckley* case made the distinction between those directly and intimately involved in the political process such as candidates, committees and parties, and those only indirectly involved such as other persons making independent political expenditures. In the case of those making independent political expenditures, contributors need not be disclosed. However, even though this distinction was made, some disclosure was required of those indirectly involved in the political process, and therefore the Court looked to determine if that provision suffered from overbreadth, that is, the Court looked to determine if there were a substantial connection between the disclosures required of those "indirectly" involved in the political process and the asserted governmental interest.

In upholding those provisions of section 434(e) requiring disclosure from persons and groups making independent political contributions or expenditures of over $100 against the overbreadth challenge, the Court narrowly construed the terms political "contribution" and "expenditure" to insure that the provision would not be "interpreted to reach groups engaged purely in issue discussion" (*Buckley*, at 79) so that the "relation of the information sought to the purposes of the Act" would not be "too remote" (Supra at 79–80).

Narrowing the term "expenditure" to include "only funds used for communications that expressly advocate the election or defeat of a clearly identified candidate" (424 U.S. at 80), the Court concluded that this provision, as narrowed, "does not reach all partisan discussion for it only requires disclosure of those expenditures that expressly advocate a particular election result" (424 U.S. at 80). Thus, distinguishing the present provisions from those regulations overturned in *Talley* v. *California*, 362 U.S. 60 (1960) and *Thomas* v. *Collins*, 323 U.S. 516 (1945), the Court concluded:

"Here, as we have seen, the disclosure requirement is narrowly limited to those situations where the information sought has a substantial connection with the governmental interests sought to be advanced. . . . The burden imposed by § 434(e) is no prior restraint, but a reasonable and minimally restrictive method of furthering First Amendment values by opening the basic processes of our federal election system to public view." (424 U.S. at 81–82).

Two observations concerning disclosure of grass roots lobbying activities may arguably be drawn from analogies with the *Buckley* campaign disclosure cases and from the previous disclosure cases discussed. Initially, it does *not* appear that strong arguments could be drawn from *Buckley* or the previous disclosure cases to support a provision which requires the revelation of member/contributors of organizations which do not engage in "lobbying in its commonly accepted sense," that is, organizations which are not "directly or intimately" involved in the political process by making direct communications to, or exerting direct pressures upon, Members of Congress, but rather merely engage in discussion and public persuasion concerning issues of public importance and interest. Secondly, although such disclosures of member/contributors may arguably not be supported from those organizations merely engaged in public persuasion, some disclosures relating to grass roots lobbying activities may arguably be supported under an analogy with the Supreme Court *Buckley* case. As noted, the Court in *Buckley* upheld disclosures of amounts spent on independent expenditures by persons who are not candidates, political committees, or political parties as long as the disclosure of such expenditures do not reach expenditures for all partisan discussion but reach only those which are for communications which expressly advocate the election or defeat of a clearly identified candidate. The Court found that the revelation of such expenditures, thus narrowly defined, would be "substantially relevant" to the governmental goal of purity in Federal elections. Similar to this reasoning, arguments could possibly be made to support the disclosure of "grass root" lobbying expenditures which are narrowly construed so as not to reach activities concerning all issue discussion, public persuasions, or general advocacy, but to reach only expenditures for communications which expressly urge, request, or advocate that one communicate with a Member of Congress to support or oppose a specifically identified issue or piece of legislation. Just as the Court in the *Buckley* decision found that, as narrowed, certain expenditures by those "indirectly" involved in the governmental process were sufficiently related to the governmental goal of purity in elections, it would be argued that the revelation of the amount of funds expended by a group on such narrowly defined "indirect" or "grass roots" lobbying campaigns is relevant to the governmental interest of revealing and analyzing direct pressures upon Members of Congress to preserve the integrity of the legislative process.

It may be noted that the Supreme Court of the State of Washington upheld lobbying disclosure provisions of State law concerning required disclosures of "grass roots" lobbying. The Court narrowly construed the Act so that an organization engaged in such a "lobbying" campaign need not disclose its member/contributor list. The Court found, however, that some disclosures regarding "grass roots" lobbying campaigns, such as amounts expended, were necessary to fill possible loopholes in lobbying regulation, and provided an interpretation of the statute which would even require the revelation of certain contributors who specifically contributed to a specific lobbying campaign of the organization. The particular section in question in the case of *Young Americans for Freedom, Inc.* v. *Gorton*, 522 P.2d 189 (1974), is R.C.W. § 41.17.200, entitled "Grass roots lobbying campaigns" and concerns, as characterized by the Washington Supreme Court, "indirect" lobbying, that is, a program addressed to the public, a substantial portion of which is intended, designed or calculated primarily to influence legislation. . . ." The sponsor of such a "program," if such person has expended over the threshold amounts designated, must register and report certain items including "[t]he names and addresses of all persons contributing to the campaign, and the amount contributed by each contributor" (R.C.W. § 42.17.200(2)(c)).

The plaintiff organization, which engages in public campaigns designed to urge people to contact their representatives in order to influence the passage or defeat of legislation, argues that this section would require the disclosure of its membership list and thus violate the membership's First Amendment rights of association. If the statute actually did require such a disclosure, the Supreme Court of Washington would have agreed with the plaintiff organization:

"We can agree with the contention of YAF that a required disclosure of its membership would be an impermissible and unconstitutional intrusion upon its members' associational freedoms and the right to privacy. *N.A.A.C.P.* v. *Alabama*, 357 U.S. 449, 78 S. Ct. 1163, 2 L. Ed. 2d 1488 (1958)." (522 P. 2d at 191)

To avoid this constitutional infirmity, however, the Supreme Court of Washington narrowly construed the section in question to apply only to funds expended by the organization concerning a *specific* campaign directed at a *specific* piece of pending or proposed legislation, and to require the disclosure only of those persons who had either contributed directly to that *specific* campaign or who had "earmarked" funds for that specific campaign. Such an interpretation would eliminate the necessity for disclosure of an organization's general membership list when that organization engages in indirect, grass roots lobbying. As stated by the Washington court:

"If a member or non-member contributes to a past, present or future YAF campaign which has as its objective the passage or failure of *specific* legislation, then the reporting of the contribution and its donor is required. If, however, the YAF does not receive funds earmarked for a *specific* campaign, but expends reportable amounts from its general funds, then there is no need to divulge the names and addresses of the membership. In this instance, the members have only contributed dues to the organization, but not to a *specific* campaign." (522 P.2d at 191)

Under this interpretation, the Supreme Court upheld the provision in question:

"To strike down this portion of the initiative would leave a loophole for indirect lobbying without allowing or providing the public with information and knowledge

re the sponsorship of the lobbying and its financial magnitude . . . "Thus, it seems abundantly clear, and we are convinced, that the right of the public to be informed is paramount to any inconvenience that reporting under section 20 [RCW § 42.17.200] may cause respondent." (522 P. 2d at 192)

JACK MASKELL,
Legislative Attorney, American Law Division, August 30, 1977.

STATEMENT ON THE 100TH BIRTHDAY OF THE LUSSIER BROTHERS

Mr. PELL. Mr. President, it gives me great pleasure indeed to bring to the attention of my distinguished colleagues an historic and happy event that occurred in Rhode Island during the month of August. The oldest living male twins in North America, Samuel and Emmanuel Lussier, celebrated their 100th birthday.

Born August 11, 1877, in St. Ann of Stuckley, Canada, the Lussier brothers have been officially certified by the Guinness World Book of Records as the oldest living male twins in North America.

Having lived and worked in Rhode Island and Massachusetts for most of their lives, the Lussiers were feted by hundreds of friends, family, and well-wishers on the occasion of their 100th birthday in Mendon, R.I.

Among their many honors and accomplishments, Samuel and Emmanuel Lussier are the only surviving founders of Rhode Island's Manville Fire Department, established in 1898. In addition to their part-time volunteer service, they spent 47 years of 60 hour weeks working in northern Rhode Island textile mills as hand-twisters—jobs they began at 12 years of age. And also to their credit, a distinction I find particularly commendable, is the fact that they have voted Democratic in every national election beginning with William Jennings Bryan's bid for the Presidency in 1900.

It gives me great pleasure to join with so many others, including Pope Paul VI, President Carter, and Rhode Island's Governor Garrahy, in paying respect to these two remarkable men who have attained such a distinguished landmark in their lives.

MINNESOTA'S WATER RESOURCES

Mr. ANDERSON. Mr. President, Minnesotans have historically considered themselves living in a state blessed with water resources. Recently the Minneapolis Star, in a series researched and written by Jane Sims Podesta, published a comprehensive and most informative series of articles entitled "Is land of lakes really water rich?" This series details the experiences of individuals and businesses around our State the past year as shortages of surface and groundwater for agricultural, municipal and industrial uses, as a result of reduced rainfall, have caused problems for local government, farmers, businesses, and homeowners.

Mr. President, the Star series make abundantly clear how absolutely dependent our society is on the availability of clean water. I ask unanimous consent that the articles in the series, "Is land of lakes really water rich?" be printed in the RECORD so that my colleagues may benefit from the research by Ms. Podesta.

There being no objection, the series of articles was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star, July 25, 1977]

ILLNESS, LOSS FLOW FROM STATE'S ACID WATER

(By Jane Sims Podesta)

CANBY, MINN.—Lawrence Traen sometimes wonders if he is drinking poison.

He's watched calves suffer from severe diarrhea and die of dehydration and neighbor children become chronically ill after drinking something we all take for granted—water.

In the hay-covered barnyard at Traen's Canby farm is a grim reminder of his troubles. Eight sickly dairy cows with pus-covered lumps on their throats and heads remain locked up after drinking iron-flecked water from a nearby pond.

"A steel fence post in that pond was disintegrated by the water. It's almost like acid," said Traen, 57, his lean face wrinkling at the thought. "We are living on something you might say is poisonous. But it's the only thing we've had for 17 years.

"Finally, I put the calves on rain water after the vet told me the water was extremely high in sulfate. It would cost me $6,000 to clean this water up so it's fit to drink, and I just don't have that kind of money."

Tales of water troubles may seem unbelievable this year, after a wet spring and an early summer. But in this water-rich land of lakes, there are thousands of people who routinely truck home tankfuls of water every day because their dry wells have still not recovered from the drought.

Throughout Minnesota there are scattered pockets of land—particularly in the southwest—where mineralized water is so potent that it corrodes water pipes and kills weaned animals.

Most Minnesotans are accustomed to quality water on demand. They use the supply as though it were limitless—about 1.5 to 2 trillion gallons last year alone, enough to cover the entire state with at least an inch of water.

"People in the cities never expect shortages or problems because they have never known shortages like rural people have," Traen's wife, Rose Adelle, 53, said, after pouring a glass of sour-smelling rusty water. "We are closer to nature here. You have to carry water by pails to appreciate every drop."

Like their neighbors, the Traen's underground water contains such heavy concentrations of iron and sulfate that area doctors advise that infants and unweaned animals be fed cistern water instead. The well water smells bad in this southwest Minnesota farming community, but most residents can't afford expensive water treatment and refuse to move from their homesteads.

"After a while, you sort of learn to live with this water," Traen said. "The vet's treating my cows now and says they'll get better if I keep them on cistern water. But then I have to worry about my supply running low when it doesn't rain."

The prospect of Minnesota's water supply running low is a subject that was rarely taken seriously in Minnesota until last year. That's what long-time weather observers such as state climatologist Earl Kuehnast say. "We worried about water at the peak of the drought, but I wonder if we are going to forget about it after we get wet again."

Already, many have forgotten. City lawns are emerald green and farmers are posing for family album pictures in front of headhigh corn. But water experts know that this portrait may not last forever.

"Right now the Minnesota Department of Natural Resources (DNR)—the agency more directly concerned with managing the state's water resources than any other at any level of government—can say very little with certainty about the likely condition of Minnesota's water resources in the year 2000," said Gerald Seinwill DNR's director of waters.

Those words are troubling to a state in which each resident consumes about 115 gallons of water a day, 25 percent more than five years ago.

In the Twin Cities area, studies have shown that dependence on the Mississippi River could lead to shortages in the future. Even with short-term emergency conservation, by the year 2000 Minneapolis and St. Paul will be withdrawing so much water from the Mississippi that it will equal the river's low-flow record of 380 million gallons a day.

Despite heavy rainfall early this summer, the Mississippi River has been running 60 percent below normal, according to John Seemann, U.S. Army Corps of Engineers chief of reservoir regulation.

"After the rains, the river rises a little. But it doesn't stay up, because the lakes and swamps are still low," Seemann said. "The rains can fool you into thinking we are back to normal. Then you look at the river and it's been running about 3,000 cubic feet per second this summer when the level should be around 7,500 cubic feet per second."

Minnesota is struggling to come up with a statewide water plan that will tell, for one thing, how much water is in the ground. What bothers most hydrologists is that there is detailed information about ground water supplies for only about 10 percent of the state.

"Heck, we are just in the infancy of having enough data to regulate and manage the use of water in most of the state," said Matt Walton, director of the Minnesota Geological Survey, which studies geology for the state. "We want to know how much water is in the ground if they install a well here or there and usually we can't tell them."

From what the state knows, ground water is limited in heavily developed northern and western areas of the state, especially where municipal systems need large concentrations of water. In the future major conflicts over distribution of water supplies in these areas may occur, a multiagency state report on water resources noted this year.

Most of the state's known ground water supplies are in southeastern Minnesota, said Edwin Ross, senior hydrologist for the Minnesota Health Department.

Based on limited geological information, he estimates there is about 300 cubic miles of ground water in Minnesota. That's greater than the total amount of water flowing at one time in all of the world's lakes and streams, except in the Great Lakes.

But nobody knows precisely how much water lies beneath the surface. So a drought-worried Minnesota Legislature last session gave the state geological survey $270,000 to go in the field and examine well drillers' logs for geologic information to plot the state's ground water resources. In addition, the DNR, water planning board and soil and water conservation board got $716,000 to gather ground water information.

However, in Koochiching, Lake of Woods and Lake Counties there is less than one well record for every 20 miles—meaning any ground water survey must be a limited one, at least in those areas. Only in the more heavily developed areas of the state are there well-drilling records at least every three miles.

Concern over a future water-shortage emergency also stirred up Minneapolis water planners, who have begun figuring out how the city can come up with $7 million to drill three or four city wells. Now Minneapolis is totally dependent on the Mississippi for its water.

The biggest drains on state water supplies are industries, which consume 38.6 percent of the water, DNR figures show. Next come rural domestic and livestock users, which consume 22.7 percent; electric power generation, 15.9 percent; irrigation, 12.8 percent, and municipalities, 10 percent.

Those statistics may change after this year's rush of irrigation permits submitted by Minnesota farmers who must deal with a lack of water There were 2,000 irrigation applications at last count in April, compared with 783 applications in the peak dry year of 1976.

As a result, the Legislature has tightened controls on permit applications, which will force irrigators through a lengthy review process.

Across the nation, irrigators generally are the heaviest water supply users. The U.S. Department of Agriculture estimates that by the year 2000, irrigation consumption will climb to 90 billion gallons a day, compared with 65 billion gallons daily in 1965. During that same time, municipal use is expected to rise from 5 to 17 billion gallons a day.

The thorny question of who manages the state's water supply has been dealt with only recently in Minnesota. The last session of the Legislature created a water planning board to begin drafting the state's first comprehensive water plan and to recommend changes to avoid duplication among more than a dozen state and federal agencies dealing in water management.

"There have been studies on studies on the state's water system. But there is precious little in these studies. Every time the question is raised, everybody says let's write a report," Walton said. "They gather together all the old studies and write papers without a solid factual data base. We need to buckle down and go out in the field for four or five years and get the data base."

In addition, there never has been a central clearinghouse for conflicting studies—often duplicating past efforts—in the state. So gathering information about water is a bit like chasing after a tumbleweed in a tornado.

"We are trying to catch up at this point," said Seinwill. "In the past we have been able to make mistakes in Minnesota because there didn't seem to be much concern about our water supply. We've had haphazard management because everything has been divided up between the states, county, watershed districts, everywhere. People shopped around until they got the right answer somewhere."

Although Minnesota is generally thought of as a water-wealthy state, its geographic position at the head of three of the continent's major watersheds means that essentially all of the state's surface waters originate as rain falling on the land. Instead of placing Minnesota at an advantage, its location is viewed by some hydrologists as a weakness.

"Minnesota is a headwater state. We have no major streams beginning in other states that flow through Minnesota," Ross noted. "With the exception of our boundary streams, rivers and lakes, Minnesota does not receive water in appreciable amounts from beyond her boundaries."

Only 12 states in the continental U.S. receive less annual precipitation than Minnesota, which averages about 25 inches a year, Ross said. Hydrologists point out that six of these 12, like Minnesota, receive only small amounts of stream flow from beyond their borders.

"In only one of these six, Nevada, do major streams receive less runoff than in Minnesota," Ross said. "With the exception of the northeastern part of the state and the Rainy River, most surplus water of Minnesota is in the Mississippi River below the Twin Cities.

"We should not necessarily believe that we are water rich in Minnesota because of our numerous lakes," he continued. "The majority of these lakes lose more to evaporation than they gain from precipitation in a year's time."

For every 25 inches of precipitation that fall on the state in a normal year, only five remain. Twenty inches either evaporate or are put back into the atmosphere by plants. So last year, when there was an average of 16 inches of precipitation across Minnesota, farmers suffered and many cities faced water cutbacks.

But the distribution of precipitation—rain and snow—varies markedly across the state. For example, it varies from an average of 19 inches in some western regions to about 12 inches in eastern regions.

If Minnesota somehow managed to contain this 25 inches of precipitation, in a year the state's land would be covered with about 2 feet of water. However, most of the water is lost through runoff, evaporation and seepage into ground water reservoirs.

"Imagine if we could contain all this precipitation," said Donald Baker, a University of Minnesota soil scientist. "People think of this as the land of lakes. But that can fool you. So what if you can't use the water. The water is not evenly distributed across the state."

In the backdrop of Minnesota's dry spell, the state departments of natural resources, agriculture, economic development, health and the energy agency joined together last fall in a water planning study. But in their first of a series of reports recently written, the team noted:

"Despite the very real current concerns over water shortages, it should not be forgotten that precipitation appears to come in cycles and problems of flooding and other water excess issues are likely to once again become more important in years to come."

After analyzing the climate trends of the mid-1930s, John Graff, chief meteorologist for the National Weather Service in Minneapolis-St. Paul, predicted: "1978 is the year of threat. If we get beyond that we are out of this five-year drought pattern." In his view, "We may be like the prize fighter who gets hit in the stomach in '76, takes a breather in '77 and then gets a blow to the chin in '78 if we have extreme dryness."

In dry years, the land acts as a giant blotter sucking up water and refusing to give it up in runoff to the lakes and streams. This happened in Minnesota early this spring when the levels of some northern lakes dropped 5 feet. At Kabetogama and Crane lakes, for instance, the water levels just began inching up to normal in recent months.

"The low level of the state's lakes and rivers could persist for one to three years, even with normal rain," Baker said. "In some areas the soil has been recharged by rain, but we are expecting below-normal precipitation and warmer weather this season.

"Water is the one big problem facing Minnesota and the country that has been overlooked the last 15 years," he continued. "There's an apparent low-precipitation period every 20 to 25 years and water becomes a stylish subject," he continued. "But we leap from crisis to crisis. We forget the past."

TOWN WITHERING IN WATERLESS OASIS

(By Jane Sims Podesta)

ARCO, MINN.—Rising from this dusty prairie farmland like an oasis, Arco ironically is one of Minnesota's thirstiest towns.

It has weathered the century without a city water system.

Town folks here routinely measure water the way some big city types pour a glass of aged cellar wine.

The signposts of a water-poor town are barely noticeable. But the old-timers recognize that without a water system this place may become a ghost town.

Slowly, during the past 35 years, Arco's population fell from 243 to 95. Businesses left and the town school closed. The year-old sign at Arco's borders showing 101 residents is already outdated.

"Without water, we are dead ducks," said Arco Councilman Erling Pedersen, usually the town's most optimistic forecaster. "People keep running to other nearby towns because they don't want to worry about where the next drop of water is coming from. I don't blame them."

For the past two years this southwestern Minnesota town has applied for federal Housing and Urban Development (HUD) money to build a $132,000 municipal water system. But both times its applications have been rejected because the average income in Arco is too high.

"I can't figure it out," puzzled Dennis Whitney, Lincoln County's planner. "It doesn't make sense when you consider that Arco's average family income is $4,800. How poor do the people have to be?"

But Charles Kreiman, Minneapolis-St. Paul area HUD field representative, explained: "Last year Arco asked for $132,000 for a city water system, and this year it asked for $269,000 for water and housing rehabilitation. But we could finance only 25 out of 180 projects. Arco didn't score high enough partly because everyone in town would have benefited from a water system, not just the low- and moderate-income families. That average income figure doesn't tell the whole story."

Arco Mayor Walter Gacke stared at his greased mechanic's hands and shrugged, "Last summer we got a $13,500 state grant for city parks, but not one cent for water. No wonder people are cynical about government."

For the past 25 years Gacke and his wife, Mary, have captured their water in a cistern, as most Arco residents have done. The Gackes always rationed themselves to 60 gallons of water a day, but last fall they started trucking in water from 25 miles away when the cloudless sky failed them.

"I had to laugh when I read these stories about California rationing water," said Mrs. Gacke, an English-born housewife occasionally seen pumping gasoline at the family station. "We have always used a half-glass of water to brush our teeth and don't flush the toilet except a few times a day.

"I'm constantly thinking of water. I have to stop and think, 'I can't do this or I can't do that,'" she continued. "And last year when it was real bad, I was saving my dish rinse water for the garden."

Across the street from the Gackes' stone-studded gasoline station and home, Annette Madsen, 81, can be seen walking to the town well every few days. She carries pails of milky-looking water back to her one-bedroom home a block away.

"She's a tough old bird," Mrs. Gacke said. But town folks occasionally worry about stubborn Mrs. Madsen when they watch her tromping through knee-high snow with a half-full bucket of water in the winter.

"I've always worried about water," said Mrs. Madsen, fingering a white hairnet. "Never known anything different. Lived on a farm most of my life until three years ago. Now I have a tea kettle I keep full of water to last a few days. I go up the street to the cafe for water whenever the city well goes dry."

But Councilman Pedersen, the town grocer, fumed, "I wonder how many of those city people have even seen a 70- or 80-year-old woman or man up to his butt in snow carrying drinking water from a well? They aren't strong enough to carry much so they fill it one-quarter full and keep going back. This gets to me. We need a water system."

Arco's water-scarce legacy may never end for the city's poor. But in two years Arco families who can scrape together $4,700 and $10 in monthly fees can hook up with the

494-mile water system planned in Lincoln County.

"It sounds good, but only about half of Arco's residents will be able to afford the system," Whitney said. In addition, the city will have to chip in about $18,000 to join the rural water pipeline system and this "could upset some people," he said.

"The trouble with these rural water system set-ups is that whenever they start running in the hole, they want more money. They have you over the barrel," Stan Ostergaard, the city postmaster, said. "If we controlled our own system, we could set the rates so that older people here could afford it."

In this roadside town 12 blocks wide, the Ostergaards and the Gackes sometimes sit around at the town "watering hole," the Brick Manor, and dream of tomorrow. They talk about water the way miners probably once fantasized about gold during boom-town days.

"I think Arco will die if we don't get water soon," said Mrs. Gacke. "We need something to draw people here. The retired people like the town, but they don't feel like hauling water. And the young ones just don't want to bother with it."

Arco, a fiercely protective working community, shows all the signs of a town suffering from its forefathers' mistakes. Long before water systems became standard plumbing in most homes, Arco's city fathers decided that a water system was a "frill" that farm country residents could ill afford.

Even today a few retired farmers in town, who still swear by their shallow private wells and cisterns, claim that a city water system is a waste of money. But most Arco families agree that the city's fire insurance rates are outrageously expensive.

"I spend $1,500 a year just on fire insurance here," complained Alfred "Babe" Dressen, the owner of the Brick Manor restaurant-bar. It's all because there's no water system."

In Arco's fire station, a cramped garage smelling of gasoline, sit the town's pride and joy: A pair of early-1940s fire trucks. These antiques are regularly filled with fishy-smelling water from Lake Stay, which lost so much water last fall farmers planted winter wheat in the lakebed.

The only time most of the townsfolks see these relics is when the city council meets in the fire house garage on cold winter evenings. A few years ago—nobody remembers exactly when—there was a brush fire in town and women were seen stomping sparks out with their shoes. The big red engines cranked up for the occasion and a few neighboring volunteer stations were called to the scene to squirt out flames that threatened the city's two-block main street. The town suffered little damage, but one woman said "it was more fun than the Fourth of July, watching those sparks."

Outsiders driving through Arco today often wonder why the two-story school house is now taken over by a TV repair shop and dry cleaner. Mayor Gacke will tell you that six years ago the town sold the building to the highest bidder—$500—to bring in more business. He said, "There won't ever be a school again here. We lost too much population."

"That really gets to me," chimed in Pedersen. "The towns around here just keep gnawing at us. First they got our creamery years back, then our lumberyard, then our school. Now they want our church. Maybe if we get some water in here things will change."

QUENCHING STATE'S THIRST NOT EASY

(EDITOR'S NOTE.—This is the second of a week-long series of articles that began yesterday examining Minnesota's water supplies.)

(By Jane Sims Podesta)

Deep in a deserted Iron Range ore pit, Chisholm has discovered a gold mine.

At the bottom of this man-made canyon just outside of town is a spring-fed lake that has suddenly become Chisholm's major source of water for at least the next decade.

"We've got enough water here to feed the whole Iron Range," said Chisholm Water Supt. George Hakala, surveying the narrow pipeline at the canyon bottom.

Until seven months ago, Chisholm—like many other Minnesota towns—seldom worried about the next year's water supply. But last year's dry spell robbed its shallow wells, dropping them to a dangerously low level.

By early May, a pipeline was linked over 1½ miles from the rust-colored canyon bottom to Chisholm's water treatment plant. The city is using 500 gallons of water a minute from the deserted pit-bottom lake owned by U.S. Steel, which is charging Chisholm only $1 for a five-year renewable lease.

But not every city has an unlimited supply of water. So Minnesota Health Department officials have been urging single-well communities to drill back-up wells. Partially in response to this, plans for 15 new municipal wells have been sent to the state this year.

During the past 10 years, Minnesota's municipal water consumption increased by nearly 100 million gallons a day, climbing to 356 million gallons a day this year, according to the state's health department.

However, about 800,000 persons have private wells that are not connected to one of the 658 ground-water or 47 surface-water municipal supply systems.

Six counties in Minnesota—Cook, Cass, Kanabec, Meeker, Rock and Waseca—are using at least twice as much water per person as the rest of Minnesota. In these areas, the average per capita consumption is more than 200 gallons a day, compared to a state average of 115.

Within these high water-consuming counties, there are 13 communities using an average of 300 gallons a person every day. State health officials questioned officials in those cities and found that in most of them, industry consumed 50 to 80 percent of the water every day.

The southwestern corner of Minnesota is plagued with some of the lowest-quality water in the state. In this area, the water is filled with heavy concentrations of sulfates, which have a laxative effect, and strong concentrations of nitrate nitrogen, which occasionally has poisoned infants who drank large amounts of it.

Although there are five communities in southern Minnesota that have high nitrate nitrogen concentrations, the state health department points out that in several cases poor water is being blended with quality water before it is distributed for public use.

State health department testing of wells in some southwestern Minnesota communities has disclosed that the highest concentration of nitrate nitrogen is in the town of Ihlen in Pipestone County. Recent tests show Ihlen's water supply is filled with 20 milligrams of nitrate nitrogen per liter—twice the health department's recommended concentration. Other cities that have high nitrate nitrogen counts are Jasper, 11 milligrams per liter; Edgerton, 12; Leota, 12; and Richmond, 12 and 9.3.

The water system in those cities will be watched closely this year by the state health department, which is expected by fall to become Minnesota's enforcer of new federal water-quality rules. The federal government now requires states to meet safe-drinking-water standards and have their water analyzed regularly for excessive nitrate nitrogen, bacteria, inorganic chemicals, pesticides, radioactivity or turbidity.

However, said Gary Englund, head of the state health department's water supply section, "Before taking someone to court, we will try to go in and negotiate."

But what price are people willing to pay for pure water in Minnesota? Would people be satisfied drinking polluted water if it was the only way to keep local industry?

A University of Minnesota survey of residents in five cities found that about one-third of 916 persons questioned believe that people may have to drink water that is not completely pure because of the cost of pollution control.

But these same residents in Duluth, Rochester, Grand Rapids, Fairmont and Alexandria overwhelmingly agree that drinking water should be free of any industrial waste or household sewage by-products. More than 95 percent of the persons polled held this view.

The water-quality survey, by university Profs. R. E. Rickson and Peter J. Nowak, asked residents in mid-1976 whether they agree or disagree that "some lakes and rivers around (the area) should be given up as lost because it is simply too costly to stop all pollution." In Duluth, 10 percent said they agree or strongly agree; in Rochester, 19.3 percent hold the same views; in Grand Rapids, 10.8 percent; in Fairmont, 23.4 percent, and in Alexandria, 20.9 percent.

"I'm not one bit surprised," Nowak said. "We saw the highest environmental consciousness in 1974. Now economic issues take precedence."

Then the pollsters randomly asked residents whether they agree or disagree with the statement: "If it is a question of losing jobs in the community, we may have to use water that is not completely pure." In Duluth, where sentiment about Reserve Mining Co. is high, 29.4 percent agreed or strongly agreed with the statement, as did 32.1 percent in Rochester, 31.6 percent in Grand Rapids, 29.7 percent in Fairmont and 31.5 percent in Alexandria.

Like most persons in the country, residents polled believe there should be a low price tag on water. In fact, two-thirds of them think it should be "free to all people."

"It's doubtful we will run out of water, but it should not be treated as a free good," said John J. Waelti, acting director of the University of Minnesota Water Resources Research Center, a clearinghouse for state water research. "But one thing we are going to have to realize is that we can't always have as much water as we want. And that's going to be hard convincing people to believe."

But when they were asked if they would pay special fees for excessive water use to "partially control environmental pollution" (caused by producing water), 50 percent in Duluth said yes, as did 65 percent in Rochester, 62.7 percent in Grand Rapids, 44.3 percent in Fairmont and 44.9 percent in Alexandria.

PIPELINES REVIVING DROUGHT-STUNNED HOPES

(By Jane Sims Podesta)

Throughout vast stretches of rural Minnesota, people are convinced it is as revolutionary as the invention of the light bulb.

For thousands of back-road towns and isolated farmsteads, rural water systems are becoming the biggest improvement in daily life since rural electrification.

"This could change our lives," said Albert Jorgensen, 45, a former southwestern Minnesota livestock farmer. "Twenty wells have been dug on this land and there's still no water."

Jorgensen is one of thousands of drought-plagued Minnesota farmers who called it quits last year. He cleared $309,000 for 440 acres of land in Lincoln County and got $51,000 for 300 hogs and cattle.

"Running out of water was probably the best damn thing that ever happened to me," said Jorgensen, a thick-framed man who now works part-time as a handy man. "But I want to keep living here, so I realize how important the rural water system is to the community."

By early next summer, construction is to begin on a 494-mile Lincoln-Pipestone County rural water system. When the $5-million

system is completed by the summer of 1980, it will pump water from four well sites to 725 families in Lincoln and Pipestone Counties and in portions of Nobles, Murray, Rock, Lyon and Yellow Medicine Counties.

It will cost the average family about $4,700 to hook up to the system, with a fee of $10 a month for 5,000 gallons of water.

From southwestern Minnesota to the northwestern tip, rural water systems are being organized by communities where poor water supplies have stifled development. The systems are being financed through the Farmers Home Administration.

"I strongly believe that the rural water system is the greatest thing to happen to this area since rural electricity," said Sen. Jim Nichols, DFL-Lake Benton. "There is some opposition in different areas, but mainly because people don't want that water line crossing their land."

Minnesota's first rural water system, costing $1.6 million, started pumping water to 330 customers in Kittson and Marshall Counties in November. Organization for the water system in this area—where some folks say wells are as scarce as cactus—began five years ago.

"The water seems to be getting worse" in Lincoln County, said Etler Jensen, 42, a Tyler farmer. "Been here 20 years. And the last two years the water has started eating through my pipes every 14 months. I cleaned out my well pipe, and it was covered with black soot that stunk like sin."

Jensen, chairman of the Lincoln-Pipestone water system, abandoned his hog farming business three years ago because young pigs were dying after they drank the water. He now has a 291-acre dairy farm, which netted $9,000 last year. But, he added: "Water pipe repairs are eating us out of house and home this year."

The situation is even worse for Francis Engles, 26, of Minnesota, whose children are frequently sick and blames the water for it. The water is so bad, Engels said, "an Alka-Seltzer won't fizz."

One Lincoln County farmer, Larry Johnson, 36, had another problem. He couldn't find water on his 200-acre farm. Finally, Johnson and his brother, Gerald, located water—at the bottom of a 1,015-foot well on their property. But tests of the water show a high mineral concentration—125 grains of hardness, 25 grains more than that recommended by the American Water Works Association.

"Maybe we have cast-iron stomachs drinking this stuff," said another Lincoln County farmer, Lyle Trautman, 53. "But I'll tell you one thing, that rural water system is going to be the greatest thing that ever happened here. It won't be the same place."

LOW LAKES LEAVE 'EM HIGH AND DRY

(EDITOR'S NOTE.—This is the third of a week-long series of articles examining Minnesota's water supplies.)

(By Jane Sims Podesta)

INTERNATIONAL FALLS.—On the water's edge—500 feet from the dock—fishing boats are stranded in the weed-covered sand in front of Kec's Kove resort.

On summer nights the long stretch of wooden planks at this northern Minnesota resort could easily pass for the Atlantic City boardwalk.

Fishermen often take one look at the knee-high weeds and pull their campers out of this lake Kabetogama resort, about 30 miles southeast of International Falls. They have abruptly canceled reservations, leaving behind $4,000 in unrented cabins, owner Al Kec said.

Those who stay frequently curse under their breaths as they drag their boats along the muddy beach to a makeshift floating dock.

This is among the more disastrous scenes at Minnesota resorts this summer—after the dry weather last year lowered Lake Kabetogama by 5 feet—the lowest level since the mid-1930s.

Every morning this summer, Lake Kabetogama resort owner Thor Herseth has climbed on his mud-caked tractor and pulled motorboats out to his narrow floating dock, 150 feet beyond the breakwater. And his resort-owner neighbor, Marty Narbo, has loaded up a shaky wheelbarrow with motors and fuel for boats moored hundreds of feet from shore.

"I'm worried," sighed Herseth, owner of Tomahawk Resort. "This is going to hurt us for years to come. Even the fishing is not what it was before because with the low water and bugs, fish have above-normal feed. You can't get into the shallow water in a boat to catch them."

Across the state, hundreds of shallow lake beds now resemble green-ringed swimming pools turned stagnant by the drought. The June rains replenished many lakes, but hydrologists predict that some will not return to their 1974 levels until 1980.

"A lake is not a bathtub with a tap and a plug. All the things that happen to the ground happen to a lake," said Gordon Morrison, environmental planner for the Minneapolis Parks and Recreation Board. "What determines the water in the lake is the ground water and rainfall."

The effects of thirsty land drinking up soil moisture are clear at Cedar Lake in Minneapolis, where the water level in early July measured 4½ feet lower than in mid-1974. Morrison said Cedar Lake's level is expected to rise gradually as the ground water is replenished.

At Crane Lake, south of Kabetogama, in northern Minnesota, fishermen at Nelson's Resort were playing badminton this summer on a sand bar that once was covered by water in front of the dock. A children's slide that normally dipped into the lake was 100 feet from the water's edge, and resort owner Gloria Pohlman was pulling out 1910 lake pictures that look as though they were taken yesterday.

"You kind of get the feeling that things are against you after a while," said Mrs. Pohlman, whose German ancestors settled what is now an expensive fishing resort. "You get disgusted, then mad and finally decide it's not gonna get to me. But I don't think things will improve unti 1978. The water level is 4 feet low now."

As if things weren't bad enough, north-central area forester Robin Nelson said he is worried that 70-year-old Jack pines lining the rock ridges are dying near Echo Trail, south of Crane Lake, because the timber is starved for subsoil moisture.

But what's even more disturbing is that the young forest stock in that area has been killed by dry soil conditions. The past five years' seedlings—1.5 million trees—are dead, Nelson said. Aerial surveys of the parched land are being taken to spot the dying trees, often barely visible from the road.

In Duluth-area state forests, about 170,000 seedlings have died this summer, according to asistant area forester Fred Wintermatter. He is concerned that by late this summer there could be "severe fire danger, unless there is above-normal precipitation" at the northeastern tip of the state.

Kec's Kove is still among the more tragic tales of the year at Lake Kabetogama. Kec, a Chicago railroad brakeman living on a pension, is sitting on lake front property that looks more like a golf course than a fishing dock.

"Tell the Vikings to come up here for summer training," Kec said jokingly. "How can I expect people on vacation to walk all the way down that boardwalk and then through the mud and water? It's a pain."

In desperation, Kec appealed to the state for a dredging permit to clear weeds and mud off his shallow lakefront property. But, he said, "The DNR (Department of Natural Resources) would only let me clear a strip 25 by 100 feet wide because this is supposed to be a spawning ground for northerns. How can fish spawn on land?"

Kec and several Lake Kabetogama resort owners are strongly critical of the 8- to 9-foot fluctuations allowed at the dam-controlled lake. The dry weather lowered the level even further and, Kec claimed, "They just let us go dry here."

But John Seemann, U.S. Army Corps of Engineers chief of reservoir regulation, responded; "The Kettle Falls Dam has always been a point of conflict between Rainy Lake and Lake Kabetogama. But with the drought and bad winter there were heavy demands for electric power and water is needed for that. We have done the best we can."

Resort owners in some hard-hit northern Minnesota areas worry that long after lake levels rise again their businesses will suffer because vacationers will remember ramming their boats on barely covered reefs in shallow water.

One morning, veteran fisherman Frank Forest, of Salem, Ill., rammed his motorboat into a reef that was once deep in the middle of Lake Kabetogama. He broke off the lower unit of his motor and talked of heading home. But he decided to stay, after paying $175 in boat repairs.

The same thing is happening to lake guides on other northern lakes, according to Don Cann, a salesman at Totem Pole sporting goods store in International Falls. He pointed to a pile of chipped boat propellers and said, "We've had to fix a half-dozen of them this week. Even local people fishing these lakes for 30 years are hitting rocks."

Next year, the same thing will happen all over again, DNR lake hydrologist John Clausen believes. It will take two to four years for the state's lakes to come out of debt because they have been receding for three years. This isn't something that will improve overnight."

That's bad news for Oveson Bait and Tackle near Kabetogama, where business has dropped 50 percent because of low lake levels. Owner Richard Oveson shook his head, "It's gonna get worse. It's a combination of poor fishing, low water and the fact people can't bring their big boats up here."

Throughout the nation, fishing equipment sales are slumping. And Dan Gapen of Gapen's World of Fishing Inc. at Big Lake has a theory about it.

"People think the fish have all dried up because of the drought, but they're wrong," he said. "Our sales are down 20 percent. Anticipation is half of fishing. People won't buy a new lure or go out if they haven't been dreaming of fishing. People seem pessimistic."

And fishermen can be fickle. Just ask Dean Litwiller of Voyager Park Lodge at Kabetogama, who is still fuming because a fishing group canceled at the last minute this summer and cost him $1,200 in food and lodging. "Next year," he said, "they may wait until the last minute to make reservations."

But at Rainy Lake in International Falls, Thunderbird resort owner Del Siewert painted a different picture. "We haven't had anyone cancel out on us this summer," he said. "Sure, the lake levels were low. But they are coming back up fast. And most of the fishing out of our lodge is guided so we know where to go."

Northernaire Houseboat owner Charles Levene of International Falls had similar comments. "All our 21 houseboats are rented. We are getting by OK, but I guess other areas might be having trouble."

Uel Blank, a University of Minnesota extension economist, hopes the industry learns

a lesson before it forgets the dry spell's effects.

"Resorts are living in the past, promoting this meat-fishing image," he said. Blank contends resort owners and tourists are still living with 1930s ideas about recreational water use.

Water-based recreational interests have "depended upon the abundant water to attract tourists, and they exploited the situation because they need to eat and sleep," said Blank, who believes resorts should move into land-based recreational activity.

In 20 years, Blank fears, the Minnesota resort industry may be dead. In the past 10 years the number of resorts in the state has dropped from 3,007 to 2,000.

During the past year, Minnesota has lost about 100 small lakes to dry weather. In fact, Minnesota's image as the land of 10,000 lakes is incorrect. There are actually 15,291 lake basins in the state, but 3,257 of them are dry.

"I can't figure out who started calling us the land of 10,000 lakes," said DNR water division chief Gerald D. Seinwill. "But there's one thing for sure: people just can't imagine them ever disappearing. And we've lost 3,000 lakes in the last 75 years."

STATE'S DROUGHT SCARS ARE SLOW TO HEAL

(By Jane Sims Podesta)

(EDITOR'S NOTE.—This is the fourth of a week-long series of articles examining Minnesota's water supplies.)

The drought-scarred land has come alive again.

Yet memories of last year's devastating drought come back when Minnesota farmers look at their bank accounts.

"You bet we are suffering," Westbrook farmer Morris Mitchell said. "We are still spending $400 a day on corn and protein because we didn't raise any last year for 1,800 cattle."

And it will take years for Mitchell to recover his $100,000 loss suffered last year when cattle prices slumped to 28 cents a pound and he started trucking in hay from Wyoming.

On his 1,100-acre southern Minnesota farm there are bumper crops this year. However, the rains still have not replenished his low wells.

Mitchell managed to survive the worst of Minnesota's four-year dry spell. Others weren't so lucky. In the past year, 1,000 of the state's 118,000 farms folded and 3,000 of the state's 34,000 dairy farmers quit farming or switched to meat or grain production.

Despite the relatively heavy rainfall this year, the state may not be out of the five-year "drought" pattern yet, according to John Graff, chief meteorologist for the Twin Cities office of the National Weather Service. He believes 1977 may be just a breather before another bout of dry weather next year, if the state follows the weather trend of the 1930s.

Because water is vital to agriculture, the whims of the weather seem to leave deeper and slower-to-heal scars on the face of Minnesota's farms than on other state industries.

Minnesota agribusiness—livestock and production and food processing—consumed 84.9 billion gallons of water last year alone. More than any other industry in the state, agribusiness consumes nearly all the water it withdraws from our supplies.

Aside from agriculture, the state's heaviest water-using industry is forest-product manufacturing, which last year consumed 59 billion gallons. Next comes iron mining, which drank 11.3 billion gallons of water last year, and petroleum refining, which consumed 2.3 billion gallons, Minnesota Energy Agency figures show.

Electrical utilities in Minnesota withdrew a whopping 665 billion gallons of water from state supplies last year. But they consumed only 7.5 billion gallons, returning the rest to local supplies.

On a hot July day, seven Northern States Power Co. (NSP) plants consume about 75 million gallons of water. That's the same amount used to water Twin Cities lawns in all July and August, according to William Seeley, NSP assistant administrator of government activities.

Until this year, Minnesota's thirsty industries routinely withdrew as much water as they needed with no close watch on their appetites by state government. But within the past few months, the Minnesota Department of Economic Development has started taking a closer look at heavy water-using industries to try to figure out how consumption can be reduced.

"Right now, we are trying to come up with a paper on generally how the state should allocate water to industry if there is a water shortage," said Norman Fox, department of economic development research analyst. "Should the cost of water reflect the cost of supplying it or should water be selectively allocated?"

At the same time, Fox is working fulltime to pull together figures on how much it would cost major state industries to convert to water-saving production systems. This, he has discovered, is an almost impossible job.

"A lot of this information industry is reluctant to give, because we need to know sales and purchases to see the primary and secondary effects. They (the firms) are afraid of tipping off competitors," Fox said. "So a lot of our information will be based on studies. That's really a lousy way to do things, but we don't have much choice."

Throughout the state, industries such as Hoerner Waldorf Corp. have started conserving by recycling water within their plants. At Hoerner Waldorf's two packaging mills in St. Paul, water withdrawal has been cut from 10.9 million gallons a day in 1969 to 6.7 million today by recycling 46 percent of the water used in both plants.

"Industries are finding that it's cheaper to conserve than use water as if there were no tomorrow," said Ted Shields, environmental affairs director for the Minnesota Association of Commerce and Industry. "There is a tremendous amount of voluntary conservation going on in the state, but it is impossible to guess exactly how much money has been spent on this."

State energy agency figures show that in 1976 industrial and commercial interests in Minnesota withdrew more than 13 times as much water as residential users. In that year, residential water withdrawal was 72.1 billion gallons and industrial and commercial users withdrew 993.4 billion gallons.

However, there is so much guessing involved in estimating water use that there are differences between agencies about exactly how much water was used in Minnesota last year. The state energy agency estimated 1.06 trillion gallons of water was withdrawn in Minnesota last year, but the Department of Natural Resources (DNR) estimated that 2 trillion gallons was withdrawn.

"You don't know which figure is right. It is just part of the game. Their methodology is different from ours," said Roger Hellebuyck, an energy agency research analyst. "Sounds like one is quite a ways off from the other, but I am sure there are limitations on both methodologies. This is one thing we have to deal with in the state, but we are trying to change it."

"We discovered our figures were wrong so we updated them from 1.5 trillion to 2 trillion (gallons of water withdrawn a year in Minnesota)," said John Clausen, a DNR hydrologist. "At this point, everybody is guessing. We have no way of knowing who is right."

In any case, the big push for water conservation in Minnesota will probably soon be aimed at the heavy water users—agricultural, industrial and commercial interests. A statewide government study of water resources is expected to result in several legislative proposals in 1979 aimed at making these water-draining interests cut back on the amount of water they use.

The Minnesota Department of Agriculture, for example, is examining how the state's agribusiness operations could conserve water and where irrigators could safely draw ground water without contaminating or draining underground supplies.

"There are about 2 million acres of land in the state that could be used for irrigation," said Jack Ditmore, state agriculture department planning director. "We are only irrigating about 250,000 acres—could go to 300,000 by the end of the year—in Minnesota and that is only about 1 percent of the state's total cropland."

Most of Minnesota's irrigated land is in five counties: Hubbard, Wadena, Pope, Sherburne and Dakota. In Sherburne County, for example, about 31 percent of the land is irrigated. But in Redwood County only two-tenths of 1 percent is irrigated. In large stretches of the northern one-third and the southern one-third of the state, less than 1 percent of the land is irrigated.

Crops drank 38.3 billion gallons of water in Minnesota last year alone, consuming every drop they withdrew, the energy agency estimated. Livestock consumed 21.3 billion gallons and processors of food and kindred products used 25.2 billion gallons last year.

In the aftermath of the long, dry spell, some Minnesota farmers planted crops this year that required less water, the Minnesota Crop and Livestock Reporting Service found. Planting of sunflowers doubled this year, climbing from 214,000 acres to 460,000 acres in a year, while corn planting dropped from 7.2 million acres to 6.9 million acres.

"Each year the farmers look at the moisture situation and price prospects when planting," said Sy Phillippi, field crop statistician for the reporting service. "We saw farmers looking for alternatives to wheat because of the drought and economics. Wheat acreage dropped 18 percent from 4.1 million acres (last year) to 3.4 million acres this year."

In the forest-products industry—the industry consuming the second-highest amount of water—pulp and paper-producing firms consumed 46.6 billion gallons of Minnesota water last year. And lumber and furniture industries consumed 12.4 billion gallons of water last year.

The wood pulp industry, in particular, has come under strict water-pollution standards in the past few decades, forcing it to adopt water-saving technology. The amount of water used to make a ton of paper has dropped from a national average of 100,000 gallons in 1935 to 35,000 gallons in 1965.

At Boise Cascade in International Falls, the paper and insulite plant is using 22 percent less water today than it was seven years ago. In 1970, before the plant installed a money-saving water recycling system and improved mill production designs, it used 53.2 million gallons a day. Today Boise Cascade uses 41.5 million gallons a day and production has increased by 23 percent.

In the future, iron mining probably will have an edge over many Minnesota interests, if the state ever decides to allocate water based on an industry's contribution to the economy. One percent of the 1.46 million industrial employees in Minnesota work in this heavy-water-using industry, the state department of economic development said.

"The heavy use of water by Minnesota's iron mining industry is more than justified by the importance of this industry to the economic well-being of the entire state," reported a recent economic development department study. The iron mining industry generated $190 million in personal income in 1974, when the state's total personal income was $21.2 billion, the study said.

But state administrators looking at industrial water conservation admit that they probably would have a difficult time convincing business officials that Minnesota is not necessarily water wealthy. As one researcher said, "It's like trying to tell someone in the middle of the Pacific that there is a water shortage."

STATE DRIFTS CLOSER TO WATER-SHORT FUTURE

(By Jane Sims Podesta)

Your morning shower will be shorter, your toilet smellier and your back-yard garden drier in the future.

Instead of brushing your teeth to the sound of running water, you will settle for a mouthful.

On the farm, you may watch rows of wilting corn and wonder why the state started making you pay for every drop of water used to irrigate your land.

And you may dream of the good old days.

Neighboring states, looking across the border at Minnesota, may start making noises about importing water—just like oil—and state officials will make speeches telling you to conserve water.

This is not a water-scarce state's nightmare. It's the forecast of some of Minnesota's most learned water experts, who generally agree that the good old days could become memories by the year 2000 unless we start conserving water today.

"Some day we could very well have shortages down the line," said state climatologist Earl Kuehnast. "California will probably be the leader in solving this water problem. But it's apparent that water will eventually be a factor in growth so that people will be living in one location instead of another because of water."

This certainly is not a new pattern. Half of Minnesota's population is clustered around the Twin Cities metropolitan region near the junction of three large rivers.

But only in recent years have we started worrying about how long our seemingly endless supply of water will quench the area's thirst in the future. Now we are only guessing about tomorrow.

"In a state like Minnesota, where you can drive two blocks to a stream or a lake, this (a future water shortage) is hard for people to grasp," said Sen. Gerald Willet, DFL–Park Rapids, chairman of the Minnesota Senate Agriculture and Natural Resources Committee. "A lot of people think that if there was water for my grandfather, there will be water for me. But we don't know enough about our water supply in Minnesota. We are just beginning to learn."

Before too long, Willet said, "North and South Dakota may start looking to Minnesota for water as their water tables go down. They could start talking about piping water there. We should be aware of how much water there is in Minnesota before that happens."

With this partly in mind, Willet helped push through the last legislature an omnibus water bill that included wording that "diversions of water from the state for use in other states or regions of the United States or Canada shall be discouraged, subject to the jurisdiction of the U.S. government."

At the same time, a collection of four state departments and the energy agency began last fall taking a two-year look at where future water supply shortages could occur in Minnesota. The departments of natural resources, agriculture, economic development and health and the energy agency—for the first time—are trying to figure out how everyone from industry to agriculture could begin conserving water.

Early this year, the Upper Mississippi River Basin Commission pinpointed where Minnesota's future water-supply problems could occur. The problem spots are the Minneapolis-St. Paul area, the Minnesota River Basin at Granite Falls, Mankato and New Ulm and around the Minnesota portion of the Cedar River Basin at Austin and Albert Lea.

By the year 2000, water demand in the seven-county Twin Cities area, which was 306 million gallons a day in 1970, will climb to between 599 and 679 million gallons a day unless conservation policies are established, the commission found. If water is conserved, the demand in the year 2000 would drop to between 362 and 414 million gallons daily.

Although limited studies have shown that the Twin Cities ground water supply would last beyond the year 2000, concentrated pumping in downtown Minneapolis and St. Paul has become excessive, the commission said. And the area is too heavily dependent on the Mississippi River, which often can't supply enough water for the Twin Cities in extreme low-flow periods, the commission found.

In the lower Minnesota River Basin, New Ulm and Mankato could have future supply problems during times of low river flow, the commission said. There also are "deficiencies in surface water" at Granite Falls, and the ground water has high concentrations of sulfates, iron and manganese.

It's the same story in the Cedar River Basin around Austin and Albert Lea. In these cities, ground water supplies are filled with high concentrations of iron and dissolved solids, and there could be problems with supply systems during annual peak demand periods, the commission said.

Long before last year's dry spell, the state water resources coordinating committee in 1971 warned that water supply problems would occur in Minneapolis-St. Paul, Worthington and the Iron Range by 1980; New Ulm by 2000 and Marshall by 2020. These areas were cited because limited groundwater studies and low-stream flow information show that they are vulnerable to shortages unless new water-supply sources are developed.

"Generally, it is pretty hard for the average person to think about water shortages," said Jim Ruone, water resource specialist at the Upper Mississippi River Basin Commission. "Water is just a given in the state. We usually don't talk about conserving until water is hard to come by."

But the problem is that there is little incentive for most people to conserve water. That's the view of Gerald Seinwill, the DNR director of waters.

"The person who forgoes watering his lawn, just as the person who turns down his thermostat for energy conservation, is basically saving resources so others may use them," Seinwill said. But he said, "People respond very quickly to something when they feel it in the billfolds."

Water pricing is one of the most controversial issues the state's newly formed water planning board will be looking at in the next two years, if Seinwill has his way. The board, established by the Legislature last session, will be formulating the first coordinated statewide water plan.

Among 334 water systems in the state, a University of Minnesota study found that water is priced the highest in Madison, where it is $17.37 for 10,000 gallons a month. And water is priced lowest in Marble, where it costs only 50 cents for any amount used a month, according to the study. The statewide average water bill is $5.54 a month, the study said.

"Water prices appear to be too low to place much of a constraint on water consumption," said Richard Gardner, a university research assistant who completed the study. He proposed a seasonal pricing system so that water would cost more during summer peak demand periods.

Climbing water prices would hit the state's agricultural interests with a one-two punch. Minnesota agribusiness industries—livestock, crops and food processors—consumed 84.9 billion gallons of water last year alone.

Water used for irrigation alone could increase from 47.3 billion gallons to 267.3 billion gallons annually by 1990, according to a recent Minnesota Department of Agriculture report.

This has brought calls for metering irrigation systems from such people as John Waelti, acting director of the University of Minnesota Water Resources Center.

"There certainly will be discussions in the future about metering irrigators," said Darryl Anderson, assistant state agriculture commissioner. "But I don't know if it will come to that. There is very little evidence that irrigators have lowered water levels in communities."

If water shortages occur, the Legislature stressed last session, water will be allocated first to residential users. Then water will be distributed to those consuming less than 10,000 gallons a day and, finally, to irrigators and power plants consuming more than that.

"What is going to happen in the future is businesses that need a lot of water may not locate in areas where the supplies are limited," said John Clausen, a department of natural resources hydrologist. "Water could become more important than local labor or taxes. And cities would have to prove they have enough water before attracting industry."

To prevent water shortages some state administrators have considered building giant reservoirs to capture the state's average 25 inches of rainfall every year.

"We are only using 3 percent of the 36.2 trillion gallons of rain in Minnesota every year," said Roger Hellebuyck, an energy agency research analyst. "If we could somehow capture this, it would be an enormous supply."

But Minnesota doesn't have the deep canyons of the west to store water, and reservoirs would be too costly or controversial, Seinwill said.

"We don't need any reservoirs right now, if people start thinking of conservation," he said. "Generally, there is plenty of water in Minnesota but not a drop to waste."

PANAMA CANAL GIVEAWAY VIOLATES CONSTITUTION

Mr. GARN. Mr. President, during the recess, President Carter announced the completion of negotiations with the Government of Panama over new treaties governing the management of the Panama Canal. Early indications were that the President would press for early ratification of the treaties by the Senate. In my opinion, that would be most unwise, Mr. President, and would lead to almost certain rejection by this body. More recently, the President appears to have moderated his haste, and seems ready to accept the fact that he has a big selling job to do if the American people are ever to accept these treaties.

Since his announcement, I have heard it argued that most Americans do not care very much about the Panama Canal, and are reacting emotionally to an issue which has little real significance.

In my opinion, that is both true and not true.

Arguments can be made that our defense is not affected by the canal, though equally good arguments can be made on the other side. Arguments can also be made that the loss of the canal would not have serious impacts on the economy of the United States, though again, there are some serious arguments to be made on the other side, particularly in view of the need to move petroleum from one coast to the other.

But if we call those questions even, there is still a sense in which the American people are quite correct in calling the Panama Canal an important issue. The American people have a surer sense than the State Department does of the importance of psychological factors in international relations. In fact, as far as the State Department is concerned, Panama appears to be a riddle, wrapped in an enigma, stuffed in a burrito. The people recognize instinctively what is at play in Panama. It is a clear-cut case of international blackmail, and the American people do not like it.

It may very well be that the present state of affairs is less than fair to the Panamanians, though it must be said that the original treaty was not negotiated under duress. It may very well be that Panamanians should take a larger role in the operation of the canal itself. It may also be said that there should be less insulation of the American community from the local Panamanian economy and society. But saying all that is quite different from saying that the United States should turn over effective control of the canal to Panama, whatever language is used to disguise what is happening, and allow itself to be pushed out of an area of arguably critical importance to the rest of the world.

Some time ago, I published an article exploring the difference that a positive attitude in foreign policy might make in Panama, and in some other critical areas around the world. I will not now repeat the arguments, except to say that even at this date, if we would stop beating our breasts over the injustice and inequity that abounds in the world, stop accepting responsibility for evils for which we are not responsible, and start asserting ourselves as practically the only example of freedom and justice in the world, we would find it easier to deal with dictators like Omar Torrijos.

I have no doubt that, even now, the Senate can operate on this proposed treaty to make it acceptable to the American people. As it stands, its terms are not advantageous to the United States, and no amount of talking by the President can make them seem so. Unless it is made advantageous to the United States, and acceptable to our employers, the American people, it will fail, and I will be glad to help it fail.

Mr. President, there is one more aspect of the Panama Canal argument that needs to be made, and since I am not a lawyer, I will turn to my colleague from Utah, Senator HATCH. Senator HATCH has written, in the current issue of the Conservative Digest, an excellent analysis of the constitutional arguments against the proposed treaty. As Senator HATCH points out in his article, the proposed treaties will set precedents with implications far beyond the simple foreign policy defeat they will constitute. Ratification will constitute acquiescence in yet another usurpation of power by the executive. We must think twice before condoning this usurpation.

Mr. President, Senator HATCH's analysis should be read by every Senator prior to the vote. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

PANAMA CANAL GIVEAWAY VIOLATES CONSTITUTION

(By Senator Orrin G. Hatch)

Our venerable octogenarian, Ellsworth Bunker, veteran of more than 25 years service to the State Department, and Ambassador-at-Large directing negotiations with Panama for a new treaty, says that "the United States does not own the Panama Canal Zone." His assistant, Ambassador Sol Linowitz, claims that "the Panama Canal is a colonial enclave carried over from the early part of this century and which has caused bitter resentment and indeed hostility."

The story of the Panama Canal, as they tell it, is rather like the leftist folklore surrounding the history of capitalism. They would have us believe that "Yankee Imperialists" descended upon a helpless people, wrongfully took possession of the isthmus of Panama under the guise of a fraudulent treaty, and built a canal to exploit the Panamanians in the selfish interests of commerce and militarism.

Like the Greeks, Bunker and Linowitz now come bearing gifts. And what are these wondrous gifts? They are the gift of redemption for past crimes and sins against the people of Panama, and the prospect of better relations with our Latin American neighbors. To get them, we need only make a gift of the Panama Canal. Besides, America doesn't really need this Canal, we are told. What we really need, so far as the Canal is concerned, is a clear conscience, a cleansing of the American soul, a real purging of guilt and shame. What better way to do this than by simply giving the Panama Canal away? Just so there are no hard feelings, we'll even go so far as to pay the Panamanians for taking it off our hands.

And so, negotiations begun under Secretary Kissinger in 1974 for a new treaty with Panama are now in their final stages. On July 29, President Carter met with American and Panamanian negotiators in the White House, and stated that he was pleased with the progress of negotiations and with "Panama's very constructive attitude." Expressing hope that the accord could be signed in time to bring it to the Senate before the Fall recess, Carter declared that the United States "will cooperate to the fullest degree to rapidly conclude an agreement for a treaty."

The last remaining obstacle, it appears, is the question of "conscience money." In addition to the territory of the Canal Zone and the canal itself, which are valued at approximately $7 billion, the Panamanians demand $5 billion for our continued use of the canal and the rental of military bases. Forget, if you will, that we already own all of this free and clear, and that the Panamanians already enjoy the highest per capita income of any people in Central America because of the annuities and other benefits derived from our Canal. But $5 billion is apparently too much even for our "hard-headed" diplomats, who have indicated that "more realistic amounts" will have to be agreed upon before the treaty is concluded.

In anticipation of the ratification struggle that lies ahead, the negotiators have been preparing the American people for acquiescence by attempting to discredit the treaty of 1903. One device relied upon rather extensively is the familiar one of rewriting history. The object of this ploy is to lay a moral foundation for the surrender of the Canal by creating guilt feelings and redefining the terms of the original treaty.

Thus the advocates of a new treaty have come up with the novel idea that we don't really own the Canal after all, and must return it to its "rightful owners." The original treaty, they say, simply transferred "rights" in the Canal Zone rather than full sovereign control—even though such an interpretation flatly contradicts the expressed intent of the 1903 negotiators and the terms of the treaty itself.

They have also expressed the curious view that the Canal Zone is "leased" territory and that the United States pays a "rental" for its use. In truth, of course, the Canal Zone is not a leased area but a "grant in perpetuity" for the perpetual maintenance, operation and protection of the canal. What Panama actually receives is an annunity, not a rental.

Article II of the 1903 treaty grants to the United States "in perpetuity" the use, occupation, and control of the Zone—meaning ownership. The word "lease" does not appear in the treaty with reference to the Canal Zone; but the word "grant" makes nineteen appearances. The phrase "in perpetuity" occurs seven times. The treaty, unlike a lease agreement, contains no provision for renegotiation and no terminal date for the obvious reason that it was intended to be a final and absolute transfer of sovereignty in perpetuity. Though an embarrassment to the negotiators, these are facts which they can easily manipulate, if not ignore; for once the treaty is signed, the question of U.S. sovereignty over the Canal will become moot.

What the supporters of the treaty cannot ignore, however, are the political, military and legal realities of the situation. For one thing, General Omar Torrijos of Panama, who will take possession of the canal, is a dictator. His administration is riddled with Marxists. These realities not only cast a cloud of suspicion on his intentions, but raise the issue of whether the Canal can be insulated against the harsh winds of ideology and political instability which so often sweep across Latin America. If the Canal were in the hands of this petty tyrant, the United States would surely find itself increasingly embroiled in Panama's internal affairs in order to maintain the Canal's security and protect the flow of Commerce.

For another, the American people are overwhelmingly against the giveaway of the Panama Canal. The drumming insistence of the negotiators that we must lie down and be sheared like sheep in the name of Latin American "justice" has not been convincing. More persuasive are American military leaders such as Admiral Thomas Moorer, former Chairman of the Joint Chiefs of Staff, and three former Chiefs of Naval Operations, who recently informed President Carter that "under the control of a potential adversary the Panama Canal would become an immediate crucial problem and prove to be a serious weakness in the overall U.S. defense with enormous potential consequences for evil." Little wonder that recent public opinion polls show that the American people oppose a new treaty by a ratio of 5 to 1. They understand the realities of the situation, even if Bunker and Linowitz do not.

We may be thankful that many of our representatives in Congress are already antagonized by the Administration's methods

and procedures. Resentment is widespread because the members have neither been informed of the substance of negotiations nor asked to authorize them—as is customary. Laboring at their self-appointed task in secrecy, the negotiators have defied our constitutional process, realizing that they lack congressional support and constitutional authority for their actions.

Though largely ignored by the press, constitutional issues of major proportions have recently surfaced in the Senate concerning the new treaty with Panama, adding another wrinkle to the controversy. One issue involves the economic assistance provisions of the treaty. The negotiators have not told Congress how much money will be given to Panama, or whether it will come in the form of a cash grant or loan package. But one matter is clear: a treaty cannot appropriate funds. The Constitution expressly provides that "No money shall be drawn from the Treasury but in consequence of Appropriations made by law." This means that the approval of both houses of Congress, and not just the Senate, must be given in order to validate this type of treaty. The Administration, however, has given no assurances to Congress that it will definitely seek implementing legislation regarding the economic and financial arrangements contained in the treaty.

The other issue is whether the President has the constitutional authority to transfer U.S. territory in the Canal Zone to the Republic of Panama by treaty and by-pass the House of Representatives. In hearings before the Separation of Powers Subcommittee of the Senate Judiciary Committee which I attended, legal advisors to the State Department argued that the President may make such a treaty because he possesses "concurrent" authority with Congress to give away U.S. property. Ratification of the treaty by the Senate, they stated, was all that was necessary. Under cross-examination, however, the witnesses were unable to give me a single valid judicial precedent for this extraordinary and unconstitutional view of the President's power.

My own studies lead me to the conclusion that the proposed treaty with Panama is unconstitutional, unless both Houses of Congress enact accompanying legislation authorizing the transfer of Canal territory. Article IV of the Constitution states, "The Congress shall have the power to *dispose* of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States." The courts have repeatedly ruled that this is an exclusive power of the full Congress. Any authority of the Executive to dispose of U.S. property, therefore, must first be derived from authority given by an Act of Congress.

In light of these considerations, a constitutional crisis is about to erupt between Congress and the President. There is no precedent in American history, to be sure, for the disposal by treaty, and without congressional authorization, of U.S. territory that has been acquired by purchase. Likewise, there is no precedent for the broad and sweeping exercise of the treatymaking power which the President is now claiming.

If he persists, and the Senate ratifies the treaty, Americans will lose more than the Canal, more than an important American territory, and more than a vital link in our strategic defenses and international trade. They will have lost another restraint on the powers of the President. "If the Executive is permitted to sidestep the House of Representatives on this vital constitutional issue of disposal of Canal property," John Murphy, Chairman of the House Merchant Marine Fisheries Committee recently observed, "it will try to sidestep the Senate on another issue, and the Judiciary on still another. The very fundamental precepts of the Constitution are at stake and we have already had one instance in which the Executive Branch attempted to expand its powers, resulting in the worst scandal in our nation's history—Watergate."

PERCEPTION OF GOVERNMENT AND GOALS OF EDUCATION

Mr. THURMOND. Mr. President, one of the most succinct and perceptive comments on current government and the goals of education was enunciated recently by one of our Nation's most outstanding educators, Dr. Robert C. Edwards, president of Clemson University.

Dr. Edwards comments were well summarized in an editorial written by Sam Woodring, editor of the North Augusta Star, which appeared in the August 25 issue of that newspaper in North Augusta, S.C., under the heading "Words of Wisdom."

Mr. President, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the North Augusta Star, Aug. 25, 1977]

WORDS OF WISDOM

Clemson University President Robert C. Edwards, addressing the graduating class of that university on August 6, made some penetrating observations into the realms of politics and education.

His comment on politics, worthy of consideration by anyone interested in our system, was:

"Someone has observed that one of the most tragic moments in recent American history was that moment when the phrase 'We the people' became 'They the government.' The growing belief in this country that the government is something over and beyond and different from the people who elect it and support it is one of the sad commentaries on our times. If local, state, and federal bureaucracies need to be controlled, reshaped, or eliminated then we the people must undertake to do what is needed. If governmental policy appears to be in error, what better method for correcting it is there than the expressed will of the electorate."

Then, after commenting on the fact that higher education has somehow come to be equated primarily in terms of improved income, he concluded his address with these observations:

"In this larger and I think much more rewarding view of education we can move beyond the fact that education does equip the individual to earn a better living and consider that it significantly helps a person to live a better life. The quality of life involves much more than improved living standards. It is related to the contribution which each of us can make to the improvement of the society in which we are living. It means carefully defining our concepts of justice and compassion.

"The educated person who withdraws from civic responsibility and involvement in the affairs of governing is failing to meet the responsibility which his education has conferred upon him. To create in our third century of existence as a nation the kind of just and peaceful world which we want will require the talents and the skills of our most highly educated citizens."

ERIC SEVEREID PUTS CASTRO IN PERSPECTIVE

Mr. GARN. Mr. President, the conduct of some American officials, who ought to know better, over the status of relations between the United States and Cuba, is little short of nauseating. I can understand people thinking that we ought to have diplomatic relations with Cuba. I can understand arguments, even though I do not agree with them, that we ought to mitigate the isolation in which Cuba is presently held. Farfetched as I think they are, I can even comprehend arguments that Cuban troops are in Africa only to keep the peace and promote better hygiene.

What I cannot understand is this pusillanimous fawning over Fidel Castro personally, treating him as Socrates, Abraham Lincoln, and Mahatma Ghandi all rolled into one. We see reporters doing it, elected officials, and representatives of the State Department.

Apparently I am not the only one adversely affected by the sight. In his commentary for August 16, Eric Severeid introduces a much-needed perspective into the question, and I commend it to the attention of every Senator. I ask unanimous consent that Mr. Severeid's commentary be printed in the RECORD.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

CBS EVENING NEWS WITH WALTER CRONKITE

(ROGER MUDD SUBSTITUTING)

ROGER MUDD. Cuba's recent efforts to improve relations with the United States and some of the reasons behind them are the subject of Eric Sevareid's commentary.

ERIC SEVAREID. We're all watching an artist at work these days, an artist at public relations. Fidel Castro is systematically repainting his own image on the great canvas of the American press. He spends endless hours charming American writers, broadcasters, businessmen, senators. Not that he loves the United States; after all, he still teaches millions of five-year-olds to hate Yankeedom, though, clearly he, himself, feels a sneaking respect and fascination for this country. He doesn't love the U.S.; he needs it. He is finally forced to face the truth. No small country so close to the U.S. can thrive outside the American economic orbit, certainly not a one-crop country only skimpily industrialized. The billions in Soviet subsidies cannot do the trick for Castro. In fact, not even the great Soviet headquarters of Communism, itself, can succeed in the twentieth century without the technologies and expertise bought, borrowed or stolen from the great industrial engines of the West, the true source of spreading world prosperity these last 25 years.

So there will be a sub-diplomatic Cuban mission in Washington and one of ours in Havana. But we can take our time about all this. Since Cuba is a supplicant, we can ask quite a few quids for our quo, as we ought to be asking of the North Koreans in return for our troop withdrawals from South Korea. Castro gives a bit at a time. He will now let some 84 Americans bring their Cuban families out of Cuba. From every such gesture, he will wring every drop of favorable imagery. "How humane of him!" his new American admirers exclaim. But how inhumane to have kept those harmless people there so many years. And no doubt he will release from prison a few of his domestic political opponents, old men now, sick, exhausted, long incapable of doing him any harm, but left in jail to rot all these years.

Castro completely gutted what was a steadily growing Cuban professional and business middle class without which free institutions and stability are not possible. It used to be said around here that while we can do busi-

ness with Latin America's right-wing military dictators, we don't have to pin medals on them. The same operating principle should apply toward this dictator. Senator Church may have, as he said, found a friend in Castro. Human freedom has not.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Charles M. Adkins, Jr., of West Virginia, to be U.S. marshal for the southern district of West Virginia for the term of 4 years vice Irvin W. Humphreys.

Richard J. Dunn, of Nevada, to be U.S. marshal for the district of Nevada for the term of 4 years vice Denny L. Sampson.

William J. Evins, Jr., of Tennessee, to be U.S. marshal for the middle district of Tennessee for the term of 4 years vice Leon T. Campbell.

James I. Hartigan, of Massachusetts, to be U.S. marshal for the district of Massachusetts for the term of 4 years vice John A. Birknes, Jr., resigned.

Bennie A. Martinez, of New Mexico, to be U.S. marshal for the district of New Mexico for the term of 4 years vice Doroteo R. Baca.

Paul J. Puckett, of Virginia, to be U.S. marshal for the western district of Virginia for the term of 4 years vice William A. Quick, Jr.

Edward D. Schaeffer, of Pennsylvania, to be U.S. marshal for the eastern district of Pennsylvania for the term of 4 years vice Charles S. Guy.

Howard J. Turner, Jr., of Pennsylvania, to be U.S. marshal for the western district of Pennsylvania for the term of 4 years vice Charles W. Koval, deceased.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Wednesday, September 14, 1977, any representations or objections they may wish to present concerning the above nominations with a further statement whether it is their intention to appear at any hearing which may be scheduled.

64TH CONFERENCE OF THE INTERPARLIAMENTARY UNION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. SPARKMAN be appointed chairman and Mr. STAFFORD be appointed vice chairman of the Senate delegation to the 64th Conference of the Interparliamentary Union to be held at Sofia, Bulgaria, September 21 through September 30, 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—this request having been cleared with the distinguished minority leader, with Mr. MUSKIE, Mr. BELLMON, with the managers of the pending measure, and with other Senators whose amendments will be specified—that at the hour of 9:30 a.m. tomorrow morning the pending measure be temporarily set aside and that the Senate proceed to the consideration of Calendar Order No. 363, Senate Concurrent Resolution 43, which is the second concurrent resolution on the budget; that there be a time limitation overall on the concurrent resolution on the budget of 6 hours to be equally divided between Mr. BELLMON and Mr. MUSKIE; that there be a time limitation on an amendment by Mr. Talmadge of not to exceed 2 hours, a time limitation on an amendment by Mr. HATCH, a time limitation on an amendment by Mr. ROTH, and a time limitation on an amendment by Mr. HAYAKAWA of not to exceed 1 hour each on such amendments to be equally divided in accordance with the usual form, that there be a time limitation on any amendment to any amendment of 20 minutes; that there be the same time limitation on any debatable motion or appeal, or point of order, if the Chair entertains such discussion on a point of order; that there be a time limitation on any other amendment in the first degree of 30 minutes; that the agreement be in the usual form, as to the division and control of time.

Provided further that time on amendments, debatable motions, appeals, or points of order if such are submitted to the Senate for its discussion come out of the overall 6-hour time limitation on the resolution; provided further that if the resolution is not disposed of by no later than 12:30 p.m. tomorrow the resolution be temporarily set aside and the Senate proceed to resume its consideration of the coal conversion bill, which at the moment is the pending business, provided further that in any event Mr. HATCH, Mr. ROTH, and Mr. HAYAKAWA will be protected with respect to their liberty to offer their amendments, and with respect to the time that has been specified on each of those amendments in the event that they cannot present themselves on the floor to offer their amendments prior to 12:30 p.m., it being understood that they will be necessarily away from the floor attending committee hearings during the morning of tomorrow; provided further that when the Senate resumes consideration of the coal conversion bill if it is at the hour of 12:30 p.m. tomorrow, or in any event no later than the hour of 1 p.m. tomorrow, Mr. KENNEDY be recognized to call up his amendment to the coal conservation bill. I believe that about sums it up.

Mr. BAKER. Mr. President, reserving the right to object.

The PRESIDING OFFICER. The Senator from Tennessee reserves the right to object.

Mr. TALMADGE. Mr. President, will the distinguished majority leader yield?

Mr. BAKER. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. I yield to the distinguished minority leader.

Mr. TALMADGE. Certainly.

Mr. BAKER. Mr. President, I make two inquiries, if I may. First, will the majority leader give me some indication of what time he intends to suggest the convening of the Senate tomorrow? I notice that his request suggested that we resume consideration of the budget resolution at 9:30 a.m.

Mr. ROBERT C. BYRD. Yes.

I would suggest, and I am prepared to offer a unanimous-consent request at this point—but before responding to that will the distinguished Senator from Georgia be ready to proceed with his amendment at 9:30 a.m. tomorrow?

Mr. TALMADGE. I think so.

The time limitation agreement on the amendment is 1 hour on each side, or 2 hours on the amendment; is that correct?

Mr. ROBERT C. BYRD. The Senator is correct.

Mr. TALMADGE. That is agreeable to the Senator from Georgia. The amendment will be offered on behalf of the Committee on Agriculture, Nutrition and Forestry and also a number of members of the Budget Committee will be cosponsors thereof.

Mr. ROBERT C. BYRD. Very well. I thank the distinguished Senator from Georgia.

ORDER FOR ADJOURNMENT UNTIL 9:15 A.M. TOMORROW

Mr. President, I ask unanimous consent, in response to the query by the distinguished minority leader, that when the Senate completes its business today it stand in adjournment until the hour of 9:15 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER addressed the Chair.

ORDER TO PROCEED TO CONSIDERATION OF SENATE CONCURRENT RESOLUTION 43 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, if my friend will allow me, that on tomorrow, after the two leaders or their designees have been recognized under the standing order, the Senate proceed to the consideration of the second concurrent resolution on the budget, Senate Concurrent Resolution 43.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, will the distinguished majority leader yield to me?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. On the proviso for returning to the coal conversion bill at 12:30 p.m., does the Senator from Tennessee correctly understand the request that at 12:30 p.m., but in no event later than 1 p.m., the Kennedy amendment will become the pending business?

Mr. ROBERT C. BYRD. Yes. The Senator is correct in his understanding, and I phrased it as I did for this reason: It is entirely possible that once the amendment by Mr. TALMADGE and others to the second concurrent resolution on the budget is disposed of there would be no other amendments to the resolution at that point by Senators who could be present on the floor. Conceivably, therefore, the Senate could complete action on the Talmadge amendment with a vote thereon if all the time were taken by both

sides. That action could be completed by 11:45 a.m., which would include a roll-call vote.

So, in that event, I would like for it to be possible if Mr. KENNEDY were ready, for him to call up his amendment then, but at no later than 1 p.m. tomorrow he be authorized to call up his amendment.

Mr. BAKER. I thank the majority leader.

If he will yield for one additional question, I assume that the time for roll-call votes is not charged against the total of 6 hours set aside for consideration of the resolution. Is that correct?

Mr. ROBERT C. BYRD. The Senator is correct.

Mr. BAKER. I thank the majority leader.

There is no objection, Mr. President, from me.

The PRESIDING OFFICER. Is there objection?

Mr. HANSEN. Mr. President, reserving the right to object, and I do not intend to object.

The PRESIDING OFFICER. The Senator from Wyoming reserves the right to object.

Mr. HANSEN. There are amendments pending that have not yet been disposed of. The proposal and request for a unanimous-consent agreement by the distinguished majority leader does not preclude in any way the consideration of those other amendments.

Mr. ROBERT C. BYRD. To the coal conversion bill?

Mr. HANSEN. Yes.

Mr. ROBERT C. BYRD. It does not.

Mr. HANSEN. I have no objection.

Mr. BAKER. I shall ask the same thing. If the Senator will yield to me one more moment, I assume further that the amendment to the agreement on the coal conversion measure does not vitiate or change any of the other provisions of the agreement entered into previously. I am thinking particularly of the proviso that, if the Kennedy amendment is not tabled, then there would be no further time limitation on the bill itself.

Mr. ROBERT C. BYRD. No. I believe the agreement was that if the Kennedy amendment is not tabled, there will be no further time limitation on that amendment. That was the original agreement.

Mr. BAKER. That is correct.

I am sorry I misstated it. But that portion of the previous unanimous-consent agreement is not changed by the present request. Is that correct?

Mr. ROBERT C. BYRD. The Senator is correct.

Mr. BAKER. I thank the Senator.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. I yield.

Mr. MUSKIE. Reserving the right to object.

The PRESIDING OFFICER. The Senator from Maine reserves the right to object.

Mr. MUSKIE. I am not sure the Senator indicated what time limitation will apply to amendments to the amendment. I think it is 20 minutes.

Mr. ROBERT C. BYRD. Yes, I did.

Mr. MUSKIE. It was a long, involved sentence at that point and I did not catch the 20 minutes. I wanted to be sure that the 20-minute time limitation was included.

Mr. ROBERT C. BYRD. May I ask the Chair if that is part of the agreement?

The PRESIDING OFFICER. That is part of the agreement.

Mr. ROBERT C. BYRD. All right.

The PRESIDING OFFICER. Is there objection?

The Chair hears none.

Without objection, it is so ordered.

The text of the agreement is as follows:

Ordered, That when the Senate proceeds to the consideration of S. Con. Res. 43 (Order No. 363), a concurrent resolution revising the Congressional Budget for the United States Government for the fiscal year 1978, time for debate on any amendment in the first degree (except an amendment to be offered by the Senator from Georgia (Mr. TALMADGE), on which there shall be 2 hours; and amendments to be offered by the Senator from Utah (Mr. HATCH), the Senator from Delaware (Mr. ROTH), and the Senator from California (Mr. HAYAKAWA), on each of which there shall be 1 hour) shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution, and time for debate on any amendment in the second degree, debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution: *Provided*, That in the event the manager of the resolution is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or his designee: *Provided further*, That no amendment that is not germane to the provisions of the said resolution shall be received.

Ordered further, That on the question of agreeing to the said resolution, debate shall be limited to 6 hours, to be equally divided and controlled by the Senator from Maine (Mr. MUSKIE) and the Senator from Oklahoma (Mr. BELLMON): *Provided*, That the said Senators, or either of them, may from the time under their control on agreeing to the said resolution, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order: Provided further, That time used on amendments, debatable motions, appeal, or points of order shall come out of the 6 hours on the resolution and that the Senators from Utah, Delaware, and California be guaranteed the 1 hour each on their respective amendments in any event, if offered.

TIME LIMITATION AGREEMENT—S. 1307

Mr. ROBERT C. BYRD. Mr. President, I further ask unanimous consent that upon the disposition—and this may slightly modify the agreement that has just been entered into—of the amendment by Mr. TALMADGE, and others, tomorrow, to Senate Concurrent Resolution 43, the Senate proceed to the consideration of S. 1307, with the following time limitation agreement thereon:

That there be a time limitation of 20 minutes on the bill, to be equally divided between Mr. THURMOND and Mr. CRANSTON, with the understanding that if there be an amendment thereto, the time on it be limited to not to exceed 10 minutes, to be equally divided, and that the time for such amendment or amendments come out of the time on the bill, S. 1307;

Provided further, that should there be a sufficient number of amendments—and it is not anticipated at this time that there will be—to require additional time beyond the 20 minutes on the measure, the distinguished minority leader and the majority leader be recognized to set the bill aside or to obtain sufficient additional time, not to exceed 10 minutes, if that would be sufficient, to provide for final disposition of the bill.

Mr. HASKELL. Mr. President, reserving the right to object, and I certainly do not intend to, I assume that the majority leader's present request in no way affects the scheduling of the pending business tomorrow at 12:30.

Mr. ROBERT C. BYRD. With this modification, which I see as a possibility: In the event the distinguished minority leader and the majority leader feel, under the circumstances prevailing at that time, that a limited amount of time is necessary to complete action on S. 1307—and I do not foresee that at all; I am just trying to provide for any contingency—that in any event not later than 1 o'clock p.m. tomorrow the Senate would resume consideration of the coal conversion bill, with Mr. KENNEDY recognized at that point to call up his amendment.

Mr. BAKER. Mr. President, reserving the right to object, will the Senator permit me to comment?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. I would say to the distinguished Senator from Colorado as well that an agreement on this subject has been in the mill for some time before we had our statutory break in August. I do not anticipate that the arrangement just made would take over 5 or 10 minutes, or that it would interfere with the schedule the majority leader has described; but I think it is an appropriate thing to do, and I am glad there is no objection to the request.

Mr. HASKELL. Mr. President, I have no objection. I assume we will try to resume action on the President's pending measure at 12:30 on tomorrow, but in any event not later than 1 p.m. tomorrow.

Mr. ROBERT C. BYRD. Mr. President, just to prevent any unanticipated problems in scheduling, I ask unanimous consent that the time on any debatable motion, appeal, or point of order in respect to S. 1307 likewise be limited to 10 minutes, to be equally divided in accordance with the usual form, such time to come out of the overall time on that bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Now, may I ask the Chair, if under the requests that

have been propounded and agreed to, is my understanding correct that upon the disposition of S. 1307 tomorrow, the Senate will resume consideration of the coal conversion bill?

The PRESIDING OFFICER. The Chair's understanding is that that is so.

Mr. ROBERT C. BYRD. Is my further understanding to this extent correct: That in any event the Senate will resume consideration of the coal conversion bill tomorrow not later than 1 o'clock p.m.?

The PRESIDING OFFICER. That is the understanding of the Chair.

Mr. ROBERT C. BYRD. I believe that 1 o'clock p.m. modified the previous 12:30 p.m. request.

The PRESIDING OFFICER. That is correct. Is there objection to the request of the Senator from West Virginia? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, there will be no more rollcall votes today, Mr. President. There will be no further business transacted today, except there is one bill on the Unanimous Consent Calendar which has been cleared since before the statutory break. There are certain measures at the desk which I understand have been cleared for action by unanimous consent. Other than those measures, there will be no further votes, by voice or otherwise, today. The Senate will proceed very shortly with consideration of the concurrent budget resolution. Mr. MUSKIE will call that up. Opening statements will be made today, but no votes or further action will be taken thereon.

UNANIMOUS-CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, if I may at this time, if the distinguished Senator from Maine will allow me, I ask unanimous consent that the Senate proceed to the consideration of one measure on the Unanimous Consent Calendar, S. 1752.

The PRESIDING OFFICER (Mr. METZENBAUM). Without objection, it is so ordered.

EXTENSION OF CERTAIN PROGRAMS UNDER THE ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965

The bill (S. 1752) to extend certain programs under the Elementary and Secondary Act of 1965 for 1 year, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Educational Amendments of 1977".

EXTENSION OF CERTAIN PROGRAMS UNDER THE ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965

SEC. 2. (a)(1) Section 102 of the Elementary and Secondary Education Act of 1935 (hereafter in this section referred to as the "Act") is amended by striking out "September 30, 1978" and inserting in lieu thereof "September 30, 1979".

(2) Section 125 of the Act is amended by striking out "October 1, 1978" and inserting in lieu thereof "October 1, 1979".

(3) Section 148(c) of the Act is amended by striking out "October 1, 1978" and inserting in lieu thereof "October 1, 1979".

(b)(1) Section 201(b) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "for each succeeding fiscal year ending prior to October 1, 1979".

(2) Section 204(b) of the Act is amended by striking out "July 1, 1978" and inserting in lieu thereof "October 1, 1979".

(c)(1)(A) Section 301(b) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "for each succeeding fiscal year ending prior to October 1, 1979".

(B) The second sentence of such section 301(b) is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "for each succeeding fiscal year ending prior to October 1, 1979".

(2) Section 305(c) of the Act is amended by striking out "October 1, 1978" and inserting in lieu thereof "October 1, 1979".

(3) Section 309(c) of the Act is amended by striking out "October 1, 1978" and inserting in lieu thereof "October 1, 1979".

(d)(1) Section 401(a)(1) of the Act is amended by striking out "each of the two succeeding fiscal years" and inserting in lieu thereof "each succeeding year ending prior to October 1, 1979".

(2) Section 401(b)(1) of the Act is amended by striking out "each of the two succeeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(3) Section 401(d) of the Act is amended by striking out "the fiscal year ending September 30, 1978" and inserting in lieu thereof "each fiscal year ending prior to October 1, 1979".

(e)(1) Section 501(b) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(2) Section 521(b) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(3) Section 531(b) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(4) Section 541 of the Act is amended by inserting the following new subsection:

"(c)(1) Notwithstanding any other provision of law the National Council established by subsection (a) of this section shall continue to exist until October 1, 1979.

"(2) Notwithstanding the provisions of section 401(b) there are authorized to be appropriated such sums as may be necessary to carry out the provisions of subsection (a) of this section.".

(f)(1) Section 807(c) of the Act is amended by striking out "each of the five succeeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(2) Section 808(d) of the Act is amended by striking out "each of the five suceeding fiscal years" and inserting in lieu thereof "each succeeding fiscal year ending prior to October 1, 1979".

(3) Section 811(d) of the Act is amended by striking out "July 1, 1978" and inserting in lieu thereof "October 1, 1979".

EXTENSION OF ADULT EDUCATION ACT

SEC. 3. (a)(1) Section 310(b) of the Adult Education Act is amended by striking out "1978" and inserting in lieu thereof "1979".

(2) Section 311(b) of such Act is amended by striking out "1978" and inserting in lieu thereof "1979".

(b) Section 313 (a) of such Act is amended by striking out "for each of the fiscal years ending June 30, 1977, and June 30, 1978" and inserting in lieu thereof "for the fiscal year ending September 30, 1977, and for each of the succeeding fiscal years ending prior to October 1, 1979".

(c) Section 314(d) of such Act is amended by striking out "July 1, 1978" and inserting in lieu thereof "October 1, 1979".

EXTENSION OF TITLE III OF THE NATIONAL DEFENSE EDUCATION ACT OF 1958

SEC. 4. The first sentence of section 301 of the National Defense Education Act of 1958 is amended by striking out "September 30, 1978" and inserting in lieu thereof "September 30, 1979".

EXTENSION OF APPROPRIATIONS PROVISION

SEC. 5. Section 412(b) of the General Education Provisions Act is amended by striking out "October 1, 1978" and inserting in lieu thereof "October 1, 1979".

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-392), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BRIEF SUMMARY AND PURPOSE OF THE COMMITTEE BILL

S. 1752 extends for 1 year, through fiscal year 1979, certain programs of Federal aid to elementary and secondary education. These programs include the following titles of the Elementary and Secondary Education Act of 1965:

Title I (Financial Assistance to Local Educational Agencies for the Education of Children of Low-Income Families;

Title II (School Library Resources, Textbooks, and Other Instructional Materials);

Title III (Supplementary Educational Centers and Services; Guidance, Counseling, and Testing):

Title IV (Libraries, Learning Resources, Educational Innovation, and Support);

Title V (Strengthening State and Local Educational Agencies);

Section 807 (Dropout Prevention Projects);

Section 808 (Grants for Demonstration Projects to Improve School Nutrition and Health Services for Children from Low-Income Families); and

Section 811 (Consumers' Education Programs).

In addition, S. 1752 extends the Adult Education Act, title III of the National Defense Education Act of 1958 (Financial Assistance for Strengthening Instruction in Science, Mathematics, Modern Foreign Languages, and Other Critical Subjects), and the carryover authority contained in section 412(b) of the General Education Provisions Act through fiscal year 1979.

Under current law, these programs expire at the end of fiscal year 1978. However, under section 414 of the General Education Provisions Act, if the Congress fails to act

on their extension prior to their expiration date, the authorizations of appropriations and provisions affecting program duration are contingently extended for 1 fiscal year. This contingent extension authority would extend these programs through fiscal year 1979.

It would appear at first glance that S. 1752 was unnecessary, given this contingent extension authority. However, the programs contained in S. 1752 are advance-funded. This means that the appropriations for the programs contained in S. 1752 which are included in the fiscal year 1978 Labor/HEW Appropriations Act are for fiscal year 1979, and are already taking advantage of the contingent authority. Unless the 1-year extension of authorizations contained in S. 1752 is enacted by Congress in this session, there will be no authorization of appropriations for these titles for the Congress to act upon next year.

Advance funding of these programs is of utmost importance to State and local educators. School calendars do not match the Federal fiscal year. Many State laws require that teachers and other educational personnel be notified of the renewal of their contracts in the Spring before the upcoming school year. In the past, late appropriations for education programs have forced school boards and school administrators to guess what Federal funds might be forthcoming. This is not only disruptive to good personnel practices, but also destroys any attempt to plan educational programs.

Advance funding has meant that educators know in advance how much Federal money will be available in their school district in the next school year. Decisions on personnel hiring and retention can reflect fiscal realities, and programs can be planned to make most efficient and efficacious use of funds.

As the purpose of this legislation is to eliminate uncertainty and preserve forward funding, the committee wishes to stress that this bill will not alter the timetable for review and multiyear extension of the programs affected by this 1-year extension. Rather, the committee expects to begin hearings in the Subcommittee on Education, Arts, and Humanities this fall, so that the regular Human Resources Committee procedure will be followed for reconsideration of major education legislation which is expiring. It is not expected that the passage of S. 1752 will put back the completion date of a new education law reauthorizing these programs.

However, it is unlikely that final action on such major legislation will be completed in time for the beginning of the appropriations cycle next year. Therefore, unless S. 1752 is enacted in this session, advance funding for these essential programs may be lost. This must not happen.

S. 1752 was requested by the administration, in the following communication to the chairman of the Subcommittee on Education, Arts, and Humanities:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, OFFICE OF THE SECRETARY,
Washington, D.C., May 6, 1977.

Hon. CLAIBORNE PELL,
Chairman, Subcommittee on Education, Committee on Labor and Public Welfare, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The administration is in the process of reviewing existing education authorities with a view toward making recommendations for possible legislative changes. We have therefore sought a 1-year extension of expiring authorities to allow us time to make our recommendations.

In our view of expiring authorities, we have determined that certain education programs which are forward-funded risk losing forward funding if action by at least one of the authorizing committees is not taken by May 15, 1978. Since there appears to be some question whether either the House Education and Labor or Senate Human Resources Committee will be able to act by May 15th on reauthorization of ESEA, we are requesting that a 1-year extension of those programs which are forward-funded be introduced.

We have worked with your staff in compiling a list of those authorities which authorize programs which are either forward-funded or affect the forward-funding aspect of those programs. It is my understanding that a bill is being drafted by your staff which would include the following agreed upon elements:

ESEA

Title I—Disadvantaged

Title II—School Library Resources, Textbooks and Other Instructional Materials

Title III—Guidance, Counseling, and Testing; Supplemental Education Centers

Title IV—Consolidation

Title V—Strengthening State and Local Educational Agencies Part A, B, C, D

Section 807—Dropout Prevention Projects

Section 808—School Nutrition and Health Services

Section 811—Consumers' Education Program

Adult Education Act

General Education Provisions Act: Sec. 412 (b)—Carry over authority for obligations and expenditures for additional fiscal year by educational institutions and agencies

NDEA

Title III financial assistance for strengthening instruction in certain critical subjects

We feel that such a bill would be in keeping with the Administration's policy of seeking 1-year extensions on expiring legislation and would prevent jeopardizing forward funding for these programs.

DICK WARDEN,
Assistant Secretary for Legislation.

Speedy enactment of the legislation is also supported by six major education organizations in the following letter:

MAY 31, 1977.

Hon. CLAIBORNE PELL,
Committee on Human Resources, U.S. Senate, Washington, D.C.

DEAR SENATOR PELL: The Big Six education organizations—the American Association of School Administrators, the Council of Chief State School Officers, the National Association of State Boards of Education, the National Education Association, the National Parent Teachers Association, and the National School Boards Association—strongly endorse the educational programs of the Elementary and Secondary Education Act. We agree it is imperative that attention be focused upon ESEA in order for it to continue to deliver quality educational services as it has done in the past. Our concern is focused upon the priority given to this necessary educational porgram.

Seldom has there been more unanimity among educators than the concensus over the need for forward funding of federal educational programs. The fairly recent accomplishment of this milestone was widely applauded by various educational constituents. And yet, despite the widespread support of this concept, forward funding may very well be lost in the upcoming reauthorization of the Elementary and Secondary Education Act.

Both House and Senate will hold extensive hearings on ESEA. No one expects passage before mid-1978 with numerous attempts to revise various programs. With such controversial subjects as the title I formula, floor fights are likely.

Unfortunately, budget and appropriations committees cannot wait on reauthorization but must proceed according to rather strict time deadlines with budget ceilings and funding for programs which are authorized.

Consequently, with no programs authorized for 1980 under ESEA, advanced funding cannot be provided during the regular 1979 appropriation process.

The only possible solution other than completion of reauthorization during 1977 (which is improbable) is a simple 1-year extension of forward funded programs with absolutely no changes in any of them. Such a procedure will allow for advanced funding for 1980 with plenty of opportunity for debate of all substantive issues on ESEA during late 1977 and early 1978. Regional and philosophical differences can be aired after a 1-year extension is authorized without jeopardizing forward funding.

Therefore, the member organizations of the Big Six endorse and support a 1-year extension of forward funded programs of the Elementary and Secondary Education Act. We look forward to working with you to move a bill through the legislative process.

Sincerely,

———— ————,
President, AASA.
———— ————,
President, CCSSO.
GRANT L. ANDERSON,
President, NASBE.
JOHN RYAR,
President, NEA.
GRACE I. BOISINGER,
President, NPTA.
WILL D. DAVIS,
President, NSBA.

In proposing this 1-year extension of advance-funded programs, the committee does not intend to render nugatory the provisions of section 418 of the General Education Provisions Act, relating to renewal evaluation reports. This section requires a comprehensive report from the Assistant Secretary for Education on an expiring program, not later than 1 year prior to the date of such expiration. A literal reading of this provision would make it never apply to advance-funded programs, since their authorization must always be 2 years from expiration to sustain appropriations actions. The committee hopes that the Department of Health, Education, and Welfare will provide renewal evaluation reports for the programs contained in S. 1752, as well as for the rest of those elementary and secondary education programs which are not advance funded, so that the Congress will have the benefit of the Department's recommendations when it considers the extension and amendment of all such programs later in this Congress.

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., August 1, 1977.

Hon. HARRISON A. WILLIAMS,
Chairman, Human Resources Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for S. 1752, Education Amendments of 1977.

Should the committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ALICE M. RIVLIN,
Director.

Enclosure.

CONGRESSIONAL BUDGET OFFICE—COST ESTIMATE

1. Bill No.: S. 1752.

2. Bill title: Education Amendments of 1977.

3. Purpose of bill: The purpose of this bill is to extend certain programs under the Elementary and Secondary Education Act of 1965 for 1 year.

4. Cost estimate:

[Fiscal years; in millions of dollars]

	1978	1979	1980	1981	1982
Authorization levels:					
Support and innovation grants	198	----	----	----	----
School libraries	168	----	----	----	----
Certain adult education programs	(1)	----	----	----	----
Salaries and expenses		----	----	----	----
Certain advisory councils	(1)	----	----	----	----
Total	366	----	----	----	----
Projected total outlays:					
Support and innovation grant	17	139	30	10	
School libraries	15	110	34	9	
Adult education	(1)	(1)	----	----	
Salaries and expenses, advisory councils	(1)	(1)	----	----	
Total	32	249	64	19	

[1] Less than $500,000.

5. Basis for estimate: It has been concluded by CBO that no additional cost over that presently authorized by law would be incurred by the Government in fiscal year 1978 as a result of enactment of this bill. The education programs included in S. 1752 are advance funded programs with current authorization through fiscal year 1978 under the Elementary and Secondary Education Act (ESA) of 1965.[1] In addition, these programs are covered by section 414 of the General Education Provisions Act (GEPA), which automatically extends their authorization for 1 additional fiscal year if during the terminal year Congress has not taken legislative action.

The House, Senate, and Conference fiscal year 1978 L/HEW appropriation bills assumed the 1 year authorization extension under the GEPA by including in the bills the fiscal year 1979 advance appropriation for these programs. If S. 1752 becomes law before the end of this fiscal year, the 1 year extension under the ESA of 1965 as amended would supersede the extension clause in the GEPA; however, the costs would still be those associated with the fiscal year 1978 appropriations. S. 1752 would, however, allow the automatic 1 year extension under GEPA to apply to fiscal year 1980.

Assuming, then, no further legislative action by Congress, there would be a cost to the Government in fiscal year 1979 resulting from the automatic extension. Since the GEPA extension clause authorizes the additional year at the current appropriation level, this estimate assumes the fiscal year 1978 L/HEW Conference advance appropriation level to be the fiscal year 1980 authorized level to be appropriated in fiscal year 1979. Both the adult education programs and the advisory councils are small pieces of larger programs with no specific appropriated dollar amounts but totaling less than $500 thousand. The outlays reflect the spendouts of the regularly appropriated Elementary and Secondary and Library Resources accounts.

6. Estimate comparison: Not applicable.

7. Previous CBO estimate: None.

8. Estimate prepared by: Deborah Kalcevic (225-7766).

9. Estimate approved by:

JAMES L. BLUM,
Assistant Director for Budget Analysis.

[1] Advance funds are appropriated in the fiscal year prior to the year in which the funds are used and become available on the July 1st preceding the fiscal year in which they are used.

REGULATORY IMPACT

In accordance with paragraph V of rule XXIX of the Standing Rules of the Senate, the following statement of the regulatory impact of the bill is made.

S. 1752 extends for 1 fiscal year those programs in the Education Division of the Department of Health, Education, and Welfare dealing with elementary and secondary education which are advance funded. It makes no changes in the substance of those programs. Therefore, the committee does not anticipate that any additional individuals or businesses would be regulated as a result of the bill's enactment. Since existing program regulations would be continued, there should be no additional economic impact imposed on individuals, consumers, or businesses affected by the legislation. Similarly, no additional paperwork will result from continuation of the program regulations, as the bill does not change their content or requirements. Finally, enactment of S. 1752 would not affect the personal privacy of the individuals affected by the programs it extends, since their provisions would remain unchanged.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CORRECTIONS IN THE ENROLLMENT OF S. 1153

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Concurrent Resolution 342.

The PRESIDING OFICER (Mr. METZENBAUM) laid before the Senate, House Concurrent Resolution 342, to correct technical errors in the enrollment of the bill S. 1153.

The PRESIDING OFFICER. The question is on agreeing to the Concurrent Resolution (H. Con. Res. 342).

The concurrent resolution (H. Con. Res. 342) was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

COMMITTEE REPORT ON S. 957

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to have until September 21 to report on S. 957, the consumer controversies bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO HOLD H.R. 8444 AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 8444 be held at the desk pending further disposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETING

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, on behalf of Mr. ALLEN, that the Subcommittee on Separation of Powers of the Judiciary Committee be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I reluctantly make that request because I do not like to have committees meeting tomorrow. In view of the fact that the towering giant from Alabama stands near me, I submit in this instance.

Mr. ALLEN. Mr. President, I thank the distinguished majority leader.

ORDER TO RESUME CONSIDERATION OF S. 977 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator from Maine yield briefly for a further request?

Mr. MUSKIE. I yield.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that notwithstanding the orders which have been entered into with respect to the program for tomorrow, the coal conversion bill will be considered the unfinished business.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. That concludes today's business.

Mr. President, I thank all Senators for their patience, and particularly Mr. MUSKIE and Mr. BELLMON, who have been waiting to begin on the budget resolution.

SECOND CONGRESSIONAL BUDGET RESOLUTION, 1978

Mr. MUSKIE. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 363, Senate Concurrent Resolution 43.

The PRESIDING OFFICER. The clerk will state the concurrent resolution.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 43) revising the congressional budget for the United States Government for the fiscal year 1978.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the following members of the staff of the Committee on the Budget be allowed to remain on the floor during the consideration of and votes on Senate Concurrent Resolution 43:

John McEvoy, Karen Williams, Sid Brown, Van Ooms, Jim Storey, Dan Twomey, Tom Dine, Jacques Cook, Elizabeth Tankersley, Bob Sneed, Charles Flickner, Terry Finn, John Giles, Roger Schlickeisen, Don Campbell, Tony Carvevale, George Merrill, Becky Beauregard, Mike West, Ira Tannenbaum, and Ann Kelley.

Also, Mike Joy, on behalf of Senator Hollings; Hal Gross, on behalf of Senator Cranston; Rick Brandon, on behalf of Senator Chiles; Alan Chvotkin, on behalf of Senator Abourezk, Dick Andrews, on behalf of Senator Biden; Alan Yuspeh and Wayne Neveau, on behalf of Senator Johnston; John Haynes, on behalf of Senator Anderson; and Paul Clark, on behalf of Senator Sasser.

Mr. BELLMON. Mr. President, will the Senator yield for a similar unanimous consent request?

Mr. MUSKIE. I yield.

Mr. BELLMON. Mr. President, I make the same request for the minority members of the committee staff. They are as follows:

Robert S. Boyd, Charles McQuillen, William Stringer, Letitia Chambers, Gary Kuzina, Barry Kinsey, Robert Fulton, and Becky Davies.

Also, Charles Gentry of Senator Domenici's staff, Jan Olson of Senator Hayakawa's staff, Gary Dickinson of Senator Dole's staff, and Mark Bisnow of Senator Heinz's staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I repeat the unanimous consent request that I find rather ridiculous, that the presence and use of small electronic calculators be permitted on the floor during the consideration of Senate Concurrent Resolution 43.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. MUSKIE. Without that request, we have to do our calculating on our fingers.

Mr. President, the Senate today begins debate on Senate Concurrent Resolution 43, the second concurrent resolution on the Federal budget for fiscal year 1978.

SUMMARY

The principal policies embodied in this budget resolution include:

Spending levels very close to the first budget resolution targets due to congressional restraint in spending decisions this summer. No change in national or international conditions has occurred since the first budget resolution which warrants significant changes in these amounts. They are adequate to meet the legislation already enacted or reasonably foreseeable in this Congress for fiscal year 1978.

A lower deficit than projected by the first resolution due to a slightly lower estimate of outlays and significant appropriations restraint.

Significantly increased spending and provision for tax reductions to implement energy legislation.

Support for legislative action to meet the financial problems of the social security system, provided that no new social security legislation take effect in this budget year.

An instruction to the Committee on Agriculture and Forestry to report legislation to reduce spending within its jurisdiction to the generous levels provided for agriculture in the second budget resolution.

BACKGROUND

Last spring, Congress adopted the first concurrent resolution which set targets to be implemented by subsequent congressional action. The Senate Authorizing and Appropriations Committees are to be commended for their substantial restraint in holding to the targets of the first budget resolution. I wish to commend especially Chairman McCLELLAN and the entire Appropriations Committee for their diligence in holding to the spending levels of the first resolution.

This second resolution is designed to revise the spending and tax decisions in the first budget resolution insofar as changed circumstances require. The spending and revenue amounts set forth in this second budget resolution set limits on further congressional fiscal action. After adoption, which must occur by September 15, a point of order lies against any legislation which exceeds the aggregate limits of the second budget resolution.

In sum, Mr. President, the committee now recommends the following aggregate ceilings for fiscal year 1978:

Total budget authority of $501.2 billion;

Total budget outlays of $459.0 billion; and

Total revenues of $395.0 billion.

These result in:

A deficit of $64.0 billion and a public debt level of $778.2 billion.

THE DEFICIT

Mr. President, the continuing national budget deficit in the second concurrent resolution is largely a result of low levels of economic activity—well below the productive capacity of the economy—and intolerably high levels of unemployment.

The first budget resolution estimated a deficit for fiscal year 1978 of $64.65 billion. The second budget resolution would reduce the deficit to $64.0 billion. This deficit would be even lower—over $4 billion lower—were it not for the following factors:

The sum of $2.2 billion for energy legislation; $1.25 billion for increased Agriculture spending; and $0.7 billion for on-budgeting funding of the housing for the elderly program.

No doubt should linger, Mr. President, as to the commitment of the Budget Committee to a balanced budget and full employment at the earliest possible date. Of course, the committee is disappointed that a more rapid economic recovery has not occurred which could produce more revenues for fiscal year 1978. However, the news of the current economic slowdown is no surprise to the committee. The committee recognized this possibility early last spring and has recommended in the second budget resolution a fiscal policy which will continue a moderate recovery. Indeed, the economy is following the moderate path predicted for it by the committee in the adoption of both the first and second budget resolutions. The fiscal policy of the second budget resolution is moderation.

Progress toward a balanced budget will be gradual. It will depend upon steady fiscal and monetary policies which maintain the recovery. Budget surpluses in future years can be a reality. But, increase in private sector demand is essential as Government spending must be complemented by strong business investment to achieve a balanced budget.

BUDGET DISCIPLINE

Mr. President, the need for fiscal restraint in congressional initiatives is all too clear. In its report on the first budget resolution last spring, the committee noted that holding to the tight budget targets contained in that budget would prove more difficult this year than ever before, since the temptation to relax the disciplines of the budget process would be stronger as the condition of the economy improved. The committee warned that a breach of the congressional budget could lower public confidence in the budget process, increase inflationary expectations, and retard the recovery. It stressed that an increase over the budget target in one function meant fewer resources available for meeting important competing goals.

The second budget resolution the committee has reported does not leave any room for excess spending in any functional category. It also assumes that significant savings will be made in health and income security programs within fiscal year 1978. Spending on any program in excess of the budget resolution or the failure to achieve the savings assumed means inadequate funds will be available for anticipated supplemental appropriations requirements during the next year. Programs overfunded now mean programs underfunded later.

The Budget Act provides that the limits contained in the second budget resolution are binding on the Congress. Any legislation which exceeds these limits will not be in order. The Budget Committee will meet its responsibilities to the Congress to see that these limits, once adopted by the Congress, are not exceeded.

Mr. President, I ask unanimous consent that a table showing the limits recommended by the committee in the second budget resolution be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—FISCAL YEAR 1978 BUDGET SUMMARY

[In billions of dollars]

	Function	1st budget resolution target		2d budget resolution recommended ceiling	
		Budget authority	Outlays	Budget authority	Outlays
050	National defense	118.5	111.0	116.6	110.1
150	International affairs	9.3	7.3	8.3	6.6
250	General science, space, and technology	4.9	4.7	4.9	4.7
300	Natural resources, environment, and energy	20.7	20.0	24.9	20.8
350	Agriculture	2.2	4.35	2.1	5.6
400	Commerce and transportation	20.0	19.4	20.5	19.6
450	Community and regional development	8.2	10.8	8.0	10.4
500	Education, training, employment, and social services	26.8	27.2	26.1	26.4
550	Health	47.9	44.3	47.7	44.2
600	Income security	179.9	146.7	178.8	146.6
700	Veterans benefits and services	20.25	20.2	19.9	20.2
750	Law enforcement and justice	3.7	3.85	3.8	4.0
800	General government	3.8	3.85	3.8	3.8
850	Revenue sharing and general purpose fiscal assistance	9.8	9.7	9.6	9.7
900	Interest	43.0	43.0	41.7	41.7
920	Allowances	.8	.9	.9	1.0
950	Undistributed offsetting receipts	−16.3	−16.3	−16.4	−16.4
	Total	503.45	460.95	501.2	459.0
	Revenues		396.3		395.0
	Deficit		64.65		64.0
	Public debt		784.9		778.2

Mr. MUSKIE. With regard to fiscal policy and economic recovery, Mr. President, let me repeat: this budget is designed to achieve a balanced budget and full employment at the earliest possible date.

The Budget Committee anticipated the slowdown in economic growth now being reported in the media. Indeed, last spring and again this summer, the Senate Budget Committee has adopted a fiscal policy which provides significant tax and spending stimulus spending, but does not allow unrestrained Federal expenditures.

The short-term goal of this resolution is to maintain steady economic recovery for the remainder of 1977 and for 1978.

The long-term goal is to help trigger increased business investment by the private sector required for full employment and a balanced budget.

GNP is presently about 5 percent below potential while at this stage in previous recoveries, it has averaged 1.9 percent below potential.

Substantial economic growth by the private sector is needed to increase productivity and generate additional revenues to move the budget into balance. Without adequate tax collections, a balanced budget cannot be achieved. In a recession, business investment is traditionally low. The fiscal policy of the second budget resolution is aimed at invigorating the private sector so that it will move with the Federal sector toward total economic recovery.

The Budget Committee believes that this recovery will continue and urges support of its fiscal policy to accomplish that goal.

ECONOMIC ASSUMPTIONS

The economic outlook is very similar to that of the first budget resolution. The committee's economic assumptions continue to be less optimistic than those of the administration for 1978, because they are based on a more conservative view of the likely growth of business investment and Federal outlays during the next year and a half.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table which shows the economic assumptions underlying the committee's recommendations in comparison with those of the administration's current budget estimates for fiscal year 1978.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF SENATE BUDGET COMMITTEE AND ADMINISTRATION ECONOMIC ASSUMPTIONS[1]

[Calendar year; dollar amounts in billions]

	1977		1978	
	Senate Budget Committee	Administration	Senate Budget Committee	Administration
Gross national product:				
Current dollars	1.896	1.894	2.100	2.120
Constant (1972) dollars	1.338	1.339	1.399	1.409
Rate of growth	5.0	5.1	4.6	5.3
Consumer Price Index (percent change)	6.5	6.5	5.6	6.0
Unemployment rate (4th quarter, percent)	6.9	6.6	6.4	6.1
Interest rate 91-day Treasury bills (percent)	5.6	[2]4.9	5.8	[2]5.0

[1] Senate Budget Committee assumptions are based on a revision of the CBO/SBC staff forecast of June 14 to take account of the July 21 revision of the national income and product accounts data. The administration "Mid-Session Review" assumptions have been adjusted by SBC staff on the same basis to take account of the revisions.

[2] The administration assumes a continuation of market rates current at the time of the forecast.

Mr. MUSKIE. Mr. President, the Budget Committee believes that the administration has made unrealistic and overly optimistic assumptions about the growth of the private sector and the collection of revenues. On the other hand, the committee has maintained its moderate course in establishing the economic assumptions which underlie this resolution. We believe that the latest indicators which reflect a softening of the economy justify our more cautious approach.

JOBS

Under the fiscal policy of the fiscal year 1977 budget, the unemployment rate has fallen from 7.9 percent in the fourth quarter of 1976 to 7 percent in the second quarter of 1977. This decline has taken place in spite of an exceptionally rapid increase in the labor force. Nevertheless, because of the high levels of unemployment and unused productive capacity at the beginning of the recovery, unemployment remains much higher, and production much further below capacity, than at a similar position in previous recoveries.

The steady economic recovery made possible by the proposed budget will continue to increase employment and lower the unemployment rate. The expansion of the economy and the jobs programs provided in this and previous budgets will create about 3 million additional jobs during fiscal year 1978, and unemployment should fall below 6½ percent by the end of the year.

Mr. President, the fiscal policy in this resolution is designed to achieve moderate growth. By holding down unemployment and inflation and sanctioning moderate Federal spending, the committee hopes to trigger increased private investment. Undoubtedly, some tradeoffs must be made. While the committee might like to believe unemployment could miraculously drop to less than 5 percent during fiscal year 1978, and the production will increase significantly with a changed fiscal policy, these objectives cannot be achieved now without enormous costs.

The very heavy cost to our society of the recession is shown by the gap between actual output and that which the economy could produce with high utilization of labor and capital. This lost production and income is very large. At present it amounts to about $100 billion per year, or nearly $500 per year for each American. It is still over one-half as large as it was at the bottom of the recession. This lost output could be used to meet private and public needs in our society. The importance of continuing the recovery, and bringing this unused capacity into production cannot be overemphasized.

INFLATION

Mr. President, the present recession and recovery have been characterized by the persistence of extraordinary inflation. The rate of increase in consumer prices during the recovery has been about twice that experienced during the decade ending in 1972.

The present inflation results primarily from inflationary momentum in the economy. Wage demands reflect previous increases in prices, and prices are increased to cover higher wages. It is extremely difficult to squeeze this underlying inflationary momentum out of the economy.

Deflationary policies which drastically reduce output and raise unemployment are excessively costly remedies for inflation. Only a continuing recovery will provide the increases in investment and productivity required to hold down costs and

prices, while allowing inflation to slowly decrease. The proposed budget will provide for moderate growth in demand and will therefore be consistent with a continuing reduction in the rate of inflation.

REVENUES

The committee has recommended a revenue floor of $395 billion. This revenue figure assumes a reduction of $0.9 billion to accommodate the significant energy tax legislation soon to be considered by the Senate. This substantial reduction will provide sufficient flexibility for the Senate to modify if necessary the energy tax measures recently approved by the House.

With respect to a very different area of revenue policy, the committee has not recommended any additional fiscal year 1978 revenues from social security tax increases. While the committee is concerned over the long-term solvency of the social security trust funds, the committee believes it would be imprudent to enact new tax legislation for fiscal 1978 since this could retard significantly the continuing economic recovery. The committee encourages the Finance Committee to take future action to solve the social security dilemma.

The recommended revenue floor reflects the continued practice of the committee to treat the entire cost of the earned income credit as a revenue reduction. The committee welcomes the recent decision of the administration reflected in the July 1 mid-session review also to treat these payments as a revenue reduction, and would hope that the House will agree to a similar rule which would result in a uniform budgetary accounting practice.

COORDINATION OF FISCAL AND MONETARY POLICY

Mr. President, the strength of the recovery will depend in part on the monetary policy of the Federal Reserve in the rest of 1977 and 1978.

Over the past year, the money supply has grown at about the top of the FED's target range. Short-term interest rates have remained relatively low, although some upward movement has occurred in the last few weeks in response to tighter monetary policy by the Federal Reserve. One trusts this indicates only a short-term adjustment and not a change in longer term policy and monetary growth targets. A permanent tightening of monetary policy would weaken investment and increase unemployment in 1978 without significantly reducing inflation. Continued monetary accommodation will be essential to support the fiscal policy contained in this budget.

The attainment of full employment with a balanced budget also depends critically upon monetary policy. To generate the private investment needed to attain this goal, monetary policy must remain accommodative enough to support the recovery while the level of fiscal stimulus is being reduced through declining budget deficits. This will require strong fiscal discipline by the Congress and administration, but it will also require a monetary policy expansive enough to allow for vigorous growth in private sector demand.

Now, Mr. President, let me summarize the major thrusts of the Committee's recommendations.

NATIONAL DEFENSE

The committee recommendation for national defense is $116.6 billion in budget authority and $110.1 billion in outlays. The recommendation reflects Senate action to date in the national defense function, assumes congressional acceptance of much of the proposed Presidential actions on the B–1 and cruise missile programs, and takes into account certain financial adjustments in the function which both branches will be making.

The proposed second budget resolution target by $1.9 billion in budget authority and $0.9 billion in outlays. The major reasons for these differences are Senate reductions in the Defense appropriation bill and Senate approval of the B–1 budget amendment.

The national defense ceiling allows for significant real growth in defense programs, aimed at modernizing our strategic and general purpose forces and insuring the readiness of our equipment.

Mr. President, the committee's recommendation also assumes that at least 15 percent of any October pay raise will be absorbed through savings in Department of Defense activities which is consistent with previous experience; for fiscal year 1977, the DOD is absorbing nearly 30 percent of the pay raise amount estimated in the fiscal year 1977 budget submission.

Mr. President, let me commend the Appropriations Committee, under the able leadership of Senator McCLELLAN, and the Armed Services Committee, under the distinguished guidance of Senator STENNIS, for their diligence in establishing and adhering to the spending targets of the first budget resolution. The spending levels here are consistent with the actions they have endorsed in the course of Senate deliberation on defense legislation.

INTERNATIONAL AFFAIRS

Mr. President, the committee recommendation for international affairs is $8.3 billion in budget authority and $6.6 billion in outlays, the recommended ceiling is consistent with congressional policy supporting our commitment to fulfill our international obligations and to support the dignity of human rights throughout the world. It includes appropriation actions completed or underway and supplemental funding for foreign economic assistance programs.

The proposed second budget resolution ceiling is less than the first budget resolution target by $1 billion in budget authority and $0.7 billion in outlays. The principal reason for the decrease is reduced activity by the Export-Import Bank. Lower estimates for spending by several other international programs contributed to the reduction in outlays.

The committee continues to believe that this country's stake in the economic well-being of its allies and friends is increasing, and multilateral and bilateral assistance should reflect this stake.

Mr. President, almost 10 percent of our gross national product is attributable to exports of goods and services. One quarter of those exports—nearly $50 billion—go to developing countries whose economies have been hard hit by the recession and the high cost of energy. Without strong financial supoprt from the United States and other industrial nations, international trade and U.S. markets will be severely handicapped. Without U.S. leadership, the multilateral development banks which administer much of this assistance are less likely to obtain larger contributions from other industrial countries and richer OPEC nations.

PHYSICAL RESOURCES

Mr. President, the committee's recommendations in the physical resources areas reflect the policy decisions made by the Congress at the time of the first resolution as well as a significant increase for a national energy program. The recommended ceilings will accommodate congressional action to date as well as those known supplementals which are consistent with the first resolution, including a continuation of the Federal grants for construction of municipal waste water treatment facilities.

The committee is sensitive to the plight of American agriculture and the American farmers, and has consistently provided the full amount requested by the Agriculture, Nutrition and Forestry Committee, including a significant increase in agriculture spending in this resolution designed to accommodate the cost of the Senate-passed farm bill.

Indeed, the ceiling for agriculture in this resolution is $1.25 billion in outlays higher than that contained in the first budget resolution. While this was designed to accommodate the Senate version of the farm bill, S. 275, it will not cover the more expensive conference agreement. Therefore, the committee has also recommended action to insure that the conference agreement will be consistent with this budget resolution.

The Budget Act provides that if spending or revenue decisions inconsistent with the provisions of the second budget resolution have already occurred, that resolution is to contain a "reconciliation instruction" directing the committee with jurisdiction over such legislation to report further legislation promptly to conform the inconsistent tax or spending legislation to the congressional budget resolution.

Mr. President, this congressional budget resolution contains, for the first time in the course of the budget process, such a reconciliation instruction, directing the Committee on Agriculture, Nutrition, and Forestry to reduce agriculture outlays to $4.1 billion which is that committee's share of $5.6 billion in total outlays set forth in this resolution for function 350: Agriculture.

The Budget Committee and its staff have worked very closely with the Agriculture Committee to inform them of our concerns and to assist them in efforts to reduce the conference agreement to be consistent with the Senate budget resolution. We are disappointed by the fact that no reduction has been achieved.

I will address this matter at greater length later in the debate.

Consistent with congressional action earlier this year, this resolution now includes, as an on-budget funding item, the housing for the elderly or handicapped program which accounts for $750 million in budget authority and $738 million in outlays.

Under the committee's recommendations, grants to State and local government for environment, transportation, community and regional development, and revenue sharing, as well as for human resources programs, are about at the same level as those in the first budget resolution. This will provide an increase of more than 15 percent over the level this fiscal year and will continue congressional support for the capital infrastructure of our Nation.

HUMAN RESOURCES

Mr. President, the committee recommendations in the human resources area reflect, by and large, a continuation of the policies Congress adopted in the first budget resolution last May. These policies include a major expansion of youth employment programs, forward funding of CETA public service jobs into fiscal 1979, substantial increases for education grants and for appropriated health programs, benefit increases for veterans, and improvements in veterans' medical care.

The committee addressed one major issue that has arisen since adoption of the first resolution—the question of new social security financing. While the Budget Committee shares the widespread concern that Congress must shore up the trust funds in a timely manner, there is no compelling need for new taxes for fiscal 1978. Added payroll taxes would be inflationary and would act as a brake on the economic recovery that must continue if we are to return to full employment as rapidly as possible. Therefore, the second budget resolution reported by the Budget Committee assumes no new social security funding will be effective for fiscal 1978. However, the committee encourages the Finance Committee to take further action to resolve the social security financing issue.

The Budget Committee and the Congress must be disappointed that for the third consecutive year committees charged with responsibility for health and income security programs have failed to achieve savings through the adoption of needed efficiencies in these programs.

As in previous years, the first budget resolution assumed enactment of savings legislation to control health costs and to achieve benefit reforms in income security programs. While such legislation has not yet been passed by the Senate, bills are presently under consideration by the Human Resources and Finance Committees which would achieve significant savings. The Budget Committee urges Senate passage of legislation to obtain net savings of at least $600 million in health and income security programs, and to avoid wasteful expenditure of tax dollars. Higher savings would, of course, permit cost increases for other program improvements now being considered.

RECONCILIATION PROCESS

Mr. President, let me take a few minutes to explain the reconciliation instruction and the process which it triggers. A reconciliation instruction is the procedure prescribed in section 310(a) of the Budget Act for enforcing the aggregate functional totals contained in the second concurrent resolution. Such instruction is appropriate where the second concurrent resolution is exceeded by spending, revenue or debt appropriations actions legislation contained in laws, bills, or resolutions within a committee's jurisdiction.

The second concurrent resolution and its reconciliation mechanism were designed to provide Congress with the opportunity to reaffirm or revise its judgment about budget aggregates and their allocations in light of enacted—and pending—spending and revenue legislation.

Hence, a reconciliation instruction from the committee is appropriate to reduce outlays within the jurisdiction of the Agriculture, Nutrition, and Forestry Committee so that the second concurrent resolution is not violated. The Budget Committee is disturbed that the conference agreement on the Food and Agriculture Act provides for outlays in the agriculture function which exceed the second budget resolution. Since the recommended ceiling of $5.6 billion is already $1.25 billion over the first budget resolution, the addition of further spending is wholly unjustified and would violate every principle of sound fiscal policy and budgetary restraint.

Therefore the committee reluctantly recommends a reduction in the spending of the Agriculture Committee to comply with the second budget resolution.

Under section 310(c) of the Budget Act, reconciliation legislation must be reported recommending changes in new budget authority initially provided for prior fiscal years, and new spending authority for fiscal year 1978 contained in laws, bills and resolutions within the jurisdiction of the Agriculture Committee so that the total outlays therefrom do not exceed $12.660 billion. This level of outlays reflects all spending which would be reflected in the crosswalk of the Agriculture Committee—including nonagriculture programs and programs within the spending jurisdiction of both the Agriculture and the Appropriations Committees. It should then produce total outlays for the agriculture function of $5.6 billion in fiscal year 1978. The committee reluctantly recommends that any reductions necessary to achieve consistency with the second budget resolution be made in the agriculture price support program.

DEBATING THE RESOLUTION

Mr. President, let me conclude with a word of caution about debating priorities.

As my Budget Committee colleagues know well, it is easy to drift into a discussion of individual programs or line items in a budget discussion. Favorite programs or areas of expertise are prime candidates for programmatic debate.

The Budget Committee has successfully avoided this pitfall. We recognize that program jurisdiction belongs to the authorizing and appropriations committees. We have focused our attention, instead, on aiding Congress in establishing its broad national priorities.

Of course, we discuss individual programs and utilize the special expertise of our members. But we do not vote to include or exclude a given program or even an amount for such a program except in rare cases where the program is of such magnitude as to constitute itself a significant national commitment.

AMENDMENTS

The Budget Act does contemplate the possibility of amendments to this resolution, which is the Budget Committee's considered recommendation to the Senate. The purpose of this debate is to allow the Senate to work its will in creation of an appropriate and comprehensive congressional budget.

The Budget Act provides a few important changes in Senate procedure affecting this debate. As you know, in creating the Budget Act, we limited debate on this second budget resolution to 15 hours, with no more than 2 hours allowable to each amendment and no more than 1 hour to amendments, debatable motions or appeals.

There are also several special rules affecting amendments. Amendments must be germane. In addition, amendments will be in order, even to sections of the legislation which have already been amended, as long as those further amendments propose to change a figure or figures then contained in the resolution so as to make the resolution mathematically consistent or to maintain such consistency.

Mr. President, as I have done often since the Budget Committee began its work 18 months ago. I commend my fellow committee members for their diligence, for their hard and successful work in a new field, and for their political courage in coming to grips with the conflicting demands that budgeting always entails.

I particularly commend and thank Senator HENRY BELLMON, whose bipartisan objectivity and support, more than any other single ingredient, have guaranteed our success to date. His courageous and consistent support of the budget process in the face of tremendous external pressures is indeed extraordinary.

Finally, I commend the staff of the Budget Committee for their highly professional support to the members of this committee in the preparation of the second concurrent resolution and in the operation of the budget process.

Through constructive, informed debate, I am convinced that we can produce a congressional fiscal policy and a congressional budget addressed to national needs.

Mr. President, I called attention in these remarks to problems associated with the agriculture function, which we shall discuss more fully tomorrow, when the Talmadge amendment is presented to the Senate. I urge Senators to give attention to those issues in connection with that amendment in the agriculture

function, because I think they carry serious implications for the future of the budget process.

Mr. President, with that, I am happy to yield the floor to my good friend from Oklahoma, the ranking Republican on the committee (Mr. BELLMON), who has been such a staunch supporter, as any colleague, in the process of making this budget discipline take hold.

Mr. BELLMON. I thank our distinguished chairman.

Mr. President, I call attention to the job which Senator MUSKIE has done as chairman of the Committee on the Budget, particularly making possible the discussion of the resolution in this timely manner. It has taken a considerable amount of negotiation and diplomacy to bring us to this matter. It is the leadership of Senator MUSKIE that is going to make it possible for us to deal with the budget resolution in a timely way.

Mr. President, our distinguished chairman, Senator MUSKIE, in his opening remarks, has discussed the aggregate and functional totals which are certainly the most visible aspects of the second concurrent resolution. I will not reiterate these same points. Instead, I choose to deal with some of the less obvious but no less important elements of this resolution.

A budget, any budget, is simply a plan expressed in financial terms. Like any plan, it shows us where we are, it instructs us with respect to where we are going, in what manner and at what cost. In addition, this budget reflects preceding budgets and sets the course of the budgets which will follow. Thus, it is more than a set of numbers or a series of constraints. It is a creative document and, at the margin, commits us to a series of priorities with which, for better or for worse, we and the Nation will have to live in the years to come. In this extended context, I intend to focus the attention of the Senate on a few of the more important elements of the second concurrent resolution.

The Budget Committee has recommended a level of revenues for fiscal year 1978 of $395 billion. Thus it permits the Federal Government to command, through taxes and borrowing, more than 21 percent of the national income. The figure assumes a cautious but realistic assessment of the resources which a recovering economy can make available to the Federal sector. This recommendation is stated in terms of a revenue floor. However, I view it to be a ceiling in that it precludes the diversion of additional resources from the private sector to support any funding of additional Federal programs.

The revenue figure, inasmuch as it extends current law, provides the flexibility which the Congress will require if it is to deal with fundamental tax reform within the context of a fixed share of GNP available to the Federal sector. In short, it challenges our creativity, as any budget must. It says that there is this much and no more. Within this constraint, Government must meet its commitments efficiently and effectively.

In function 300, energy and natural resources, budget authority has been increased by $4.2 billion and the outlay ceiling has been raised by $800 million. These generous allowances serve two purposes. First, they indicate that conservation and alternative fuel development are not without cost, budgetary and otherwise. Second, they encourage the Congress to avoid budgetary gimmicks such as loan guarantees or tax expenditures which disguise or remove from budgetary control the true cost of responsive energy legislation.

Any Federal energy plan is inherently limited by the level of resources which can be made available and effectively put to use. We are, therefore, put on notice that final energy solutions must be found in the private sector and that current energy plans can at best create an environment in which available supplies are not only conserved but also augmented through increased incentives for production, substitution, and exploration.

This budget resolution is sensitive to human needs as outlay levels for education, income security and health care demonstrate. However, in these same areas, the budget also provides a warning which I believe the Congress should and must heed. It places a heavy burden on those committees which are charged with the authorization and oversight of our now numerous social welfare programs. The constraints on spending and the savings anticipated in such programs will challenge this Congress.

That challenge, if it is to be met with success, will require each of us to abandon our old habit of incremental funding and "hold harmless" budgeting. If, for example, we desire welfare reform, we must become aware that such new programs cannot be added to those which already exist and that new initiatives must pass a stern test in which their true costs are related to their potential benefits. In this spirit, I make specific reference to a number of worthy initiatives which have been undertaken without adequate consideration of their final costs or their ultimate pragmatic efficiency. For example, the medicaid program enacted in 1965, with an estimated Federal cost of $268 million, now involves Federal outlays of $12 billion. Thus, the program costs 50 times the original estimate. Likewise, the social services program has within a decade grown to exceed original cost estimates by 100 times.

Those who project maximum benefits and minimum costs for welfare reform and national health insurance should be acutely aware of the above lessons of history.

Mr. President, this resolution anticipates, as did its predecessors, legislative action to achieve savings in income security and health care. Thus, it directs our attention, once again, to the painful but necessary task of increasing the efficiency of Federal programs. I am dismayed by our continued inability or unwillingness to effect recommended savings of $300 million in social security and $400 million in medicaid and medicare. Our words regarding such savings and efficiencies certainly come easier than our actions. However, words are idle. Effective action in both areas is overdue.

As we consider the merits of the second concurrent resolution, we should be aware that the significant changes are small and reflect the fact that priorities and their associated outlays change slowly over many budgets. The vast bulk of this particular budget has been committed by prior administrations and Congresses. In like manner, our actions today will determine the size, scope, and composition of future budgets. If we look carefully at the marginal commitments which this resolution contains, we can see in some manner the ultimate shape of things to come. Our defense commitment remains strong but more sophisticated and less manpower intensive. The Federal role in energy conservation and production will be an expanding one in terms of both regulation and cost. Likewise, natural resource and environmental programs will command ever larger budgetary resources.

Our commitments to developing nations are increased and made less political as demonstrated by our growing commitment to international financial institutions. Commitments to human needs remain high, but this budget encourages greater efficiency in the administration of key programs. The budget also initiates a new Federal policy for agriculture.

Finally, let me reaffirm my commitment to achieve a balanced budget in the context of a limitation of the Federal share of national income. This budget shows a higher deficit than the anticipated fiscal year 1977 deficit. Some believe this puts a balanced budget further away. Let me point out that the fiscal year 1978 numbers: first, include substantial spending resulting from stimulative programs put in place in fiscal year 1977; second, include spending for energy not included in fiscal year 1977; and third, have not yet been adjusted as 1977 numbers have for the phenomenon known as "shortfall." These are the primary reasons that the deficit appears higher in 1978.

I recognize that the level and the scope of this budget and what its enactment portends for the future will not satisfy the Senate in all respects. However, I judge it to be a fair compromise of competing views and a balancing of priorities which I can support.

I support the budget resolution which our chairman has just laid down. I congratulate him again on his work.

Mr. MUSKIE. Mr. President, I thank my good friend from Oklahoma and congratulate him for the record he has made in supporting the committee and myself over the years.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, I thank all Senators. I anticipate that the vote on the amendment to the budget resolution by Mr. TALMADGE tomorrow will occur at not later than 11:30 a.m., depending upon whether or not all of the full time of 2 hours is taken, and it could occur earlier.

I also would say that upon the disposition of the Talmadge amendment, the Senate will proceed to the considera-

tion of S. 1307. I do not anticipate a rollcall vote on that bill; would the distinguished minority leader care to make a statement on that point?

Mr. BAKER. Mr. President, I have no request for any rollcall, and I would anticipate there would not be one.

Mr. ROBERT C. BYRD. Mr. President, upon the resumption of action on the coal conversion bill, the Senator from Massachusetts (Mr. KENNEDY) will be recognized to call up his amendment, upon which there is a 4-hour time limitation; and, depending on whether or not all that time is taken, a vote would occur on that amendment at the end of that 4 hours unless an amendment is offered to the amendment, in which case I believe that under the previous agreement there would be a time limitation on any amendment to an amendment of 30 minutes.

So there will be rollcall votes throughout the afternoon tomorrow.

It is the intent of the leadership to try, if at all possible to complete action on the coal conversion bill tomorrow. Upon the disposition of the coal conversion bill the Senate will resume consideration of the second budget resolution. There is a time limit on that measure, and presumably at that point Mr. HATCH, Mr. ROTH, and Mr. HAYAKAWA, but not necessarily in that order, will call up their amendments, on each of which there is a 1-hour time limitation. There may be other amendments, though none is known of at the moment. If such are offered, there will be a time limitation of 30 minutes on any other amendment in the first degree.

A rollcall vote would undoubtedly then occur upon the adoption of Senate Concurrent Resolution 43.

Tomorrow being Thursday, I would suggest to my distinguished and very close friend, the minority leader, that we alert our respective colleagues to the great likelihood that the Senate will be in to a reasonably late hour tomorrow. If action is not completed on the concurrent resolution on the budget tomorrow, and that is entirely conceivable, then the Senate on Friday will resume consideration of that measure and will complete action on it.

It would be my thought that if the distinguished chairman of the Committee on Agriculture and Forestry then is so disposed and wishes to, he would probably want to call up his conference report on the farm bill. There may be some debate thereon, and maybe a vote thereon. I would believe it safe to predict that that action would proceed.

On the disposition of that measure, the leadership would hope to proceed to the consideration of the second energy bill which is on the Calendar, the energy conservation bill.

Of course, conference reports, being privileged matters, may be called up any time. It may be that Mr. PROXMIRE would want to call up his HUD appropriation conference report by Friday.

Mr. HANSEN. Will the distinguished majority leader yield for a question?

Mr. ROBERT C. BYRD. I yield.

Mr. HANSEN. If I understood the legislative possibilities for the remainder of this week, the distinguished majority leader said there might be action on the energy conservation measure?

Mr. ROBERT C. BYRD. Yes. My statement, of necessity, has to be nebulous at this point. I am trying to say that it is entirely conceivable and hopeful that if the Senate would complete action on the coal conservation bill, the second budget resolution, the conference report on the farm bill, and any other conference reports, that action can at least begin on Friday.

Mr. HANSEN. On the energy conservation bill?

Mr. ROBERT C. BYRD. Yes.

Mr. HANSEN. I thank the distinguished majority leader.

ADJOURNMENT TO 9:15 A.M. TOMORROW

Mr. MUSKIE. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 9:15 a.m. tomorrow.

The motion was agreed to; and at 6:25 p.m., the Senate adjourned until tomorrow, Thursday, September 8, 1977, at 9:15 a.m.

NOMINATIONS

Executive nominations received by the Senate August 15, 1977, pursuant to the order of August 5, 1977:

DEPARTMENT OF STATE

Maurice Darrow Bean, of California, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Socialist Republic of the Union of Burma.

Mari-Luci Jaramillo, of New Mexico, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Honduras.

William B. Schwartz, Jr., of Georgia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to The Commonwealth of The Bahamas.

NATIONAL SCIENCE FOUNDATION

George Claure Pimentel, of California, to be Deputy Director of the National Science Foundation, vice Richard C. Atkinson, elevated.

Floyd James Rutherford, of New York, to be an Assistant Director of the National Science Foundation, vice Harvey Allan Averch, resigned.

IN THE COAST GUARD

The following Reserve officers of the U.S. Coast Guard to be permanent commissioned officers in the Regular Coast Guard in the grades indicated:

Lieutenant

Timothy M. Armstrong	Joseph P. MacDonald
Leonard G. Bosma	Hugh M. O'Doherty
Roger G. Evans	Gerald O. Pando
Dale E. Goodreau	James M. Sherman
	Adolph E. Zimmer, II

Lieutenant (junior grade)

James E. Hatfield
Frank L. Whipple

IN THE ARMY

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

To be lieutenant general

Lt. Gen. Richard Ray Taylor, (age 54), [redacted] Army of the United States (major general, U.S. Army).

IN THE NAVY

The following-named commanders of the U.S. Navy for temporary promotion to the grade of captain in the line, pursuant to title 10, United States Code, section 5769, subject to qualification therefor as provided by law:

Adams, Thomas C.
Adgent, Robert B.
Albero, Carl M.
Allen, George S.
Alves, Arcenio, Jr.
Arnold, Thomas F.
Bacon, Roger F.
Baker, Donald A.
Baldwin, Edwin M.
Baldwin, Oa F.

MEDICAL SERVICE CORPS

To be lieutenant colonel

Cassady, Walter R., xxx-xx-xxxx
Cummins, Robert T., xxx-xx-xxxx

Executive nominations received by the Senate on August 31, 1977, pursuant to the order of August 5, 1977:

NATIONAL SCIENCE FOUNDATION

John B. Slaughter, of Washington, to be an Assistant Director of the National Science Foundation, vice Robert E. Hughes, resigned.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

Charles N. Van Doren, of the District of Columbia, to be an Assistant Director of the U.S. Arms Control and Disarmament Agency, vice Amrom H. Katz, resigned.

IN THE AIR FORCE

Brig. Gen. Walter D. Reed, xxx-xx-xxxx FR (brigadier general, Regular Air Force), U.S. Air Force for promotion to the grade of major general and for appointment as the Judge Advocate General, U.S. Air Force, under the provisions of chapter 839 and section 8072, title 10 of the United States Code.

Lt. Gen. John F. Gonge, U.S. Air Force, (age 55), for appointment to the grade of lieutenant general on the retired list pursuant to the provisions of title 10, United States Code, section 8962.

Executive nominations received by the Senate on September 2, 1977, pursuant to the order of August 5, 1977:

ENVIRONMENTAL PROTECTION AGENCY

Marvin B. Durning, of Washington, to be an Assistant Administrator of the Environmental Protection Agency, vice Stanley W. Legro, resigned.

David G. Hawkins, of the District of Columbia, to be an Assistant Administrator of the Environmental Protection Agency, vice Roger Strelow

Steven D. Jellinek, of Maryland, to be Assistant Administrator for Toxic Substances of the Environmental Protection Agency (new position).

Executive nominations received by the Senate September 7, 1977:

DEPARTMENT OF STATE

Frank J. Devine, of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to El Salvador.

HOUSE OF REPRESENTATIVES—*Wednesday, September 7, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

He that would love life and see good days, let him turn away from evil and do right; let him seek peace and pursue it.—I Peter 3: 10, 11.

Eternal God, returning to our tasks on Capitol Hill, we pray for guidance from Thee for strength for each day and for wisdom to be wise in the decisions we make. May Thy blessing rest upon our President, our Speaker, our Congress, and our new Representative now to take the oath of office. May Thy spirit move in all our hearts as we endeavor to promote justice in our land, good will among our people, and cooperation between the nations of our Earth. Crown our efforts with success that peace may come to our planet, freedom to all people, and human rights prevail everywhere for everyone.

God bless America and make her a blessing to all the world. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceeding and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, I wonder if the Chair would entertain a point of order of no quorum under the new rules, prior to swearing in the new Member from the State of Louisiana.

The SPEAKER. The Chair intends to do that.

Mr. BAUMAN. I thank the Chair, and I withdraw my reservation of objection.

The SPEAKER. Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the amendment of the House with amendments to a bill of the Senate of the following title:

S. 1528. An act to amend section 2 of the Safe Drinking Water Act (Public Law 93-523) to extend and increase authorization provided for public water systems.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 3199. An act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes;

H.R. 5294. An act to amend the Consumer Credit Protection Act to prohibit abusive practices by debt collectors; and

H.R. 7797. An act making appropriations for foreign assistance and related programs for the fiscal year ending September 30, 1978, and for other purposes.

The message also announced that the Senate insists upon its amendment to the bill (H.R. 3199) entitled "An act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RANDOLPH, Mr. MUSKIE, Mr. GRAVEL, Mr. BURDICK, Mr. CULVER, Mr. HART, Mr. ANDERSON, Mr. STAFFORD, Mr. CHAFEE, Mr. WALLOP, Mr. MCCLURE, Mr. DOMENICI, and Mr. BAKER to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 7797) entitled "An act making appropriations for Foreign Assistance and related programs for the fiscal year ending September 30, 1978, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. INOUYE, Mr. PROXMIRE, Mr. CHILES, Mr. JOHNSTON, Mr. LEAHY, Mr. DE CONCINI, Mr. SCHWEIKER, Mr. BROOKE, Mr. HATFIELD, and Mr. MATHIAS to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 71. An act to strengthen the supervisory authority of Federal agencies which regulate depositary institutions, to prohibit interlocking management and director relationships between depositary institutions, to amend the Federal Deposit Insurance Act, and to encourage officials of Federal agencies responsible for the supervision of financial institutions to complete their terms of office, and for other purposes;

S. 972. An act to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to

provide small businesses with advice and counseling on management development, technical information, product planning and development, and for other purposes;

S. 1462. An act to authorize the Secretary of Agriculture to undertake an emergency runoff retardation and soil-erosion prevention program, and to establish an emergency fund to carry out the program;

S. 1526. An act to establish an Associate Administrator for Women's Business Enterprise within the Small Business Administration; and

S. 1866. An act to amend section 222 of the Communications Act of 1934 in order to include Hawaii in the same category as other States for the purposes of such section.

The message also announced that the Vice President, pursuant to Public Law 95-45, appointed Mr. STAFFORD as a member of the Senate delegation to the 64th Fall Conference of the Interparliamentary Union, to be held in Sofia, Bulgaria, September 20-30, 1977.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 5, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on August 5, 1977, the Clerk has received this date the following message from the Secretary of the Senate:

That the Senate agreed to the amendment of the House of Representatives to the bill (S. 1935) entitled "An Act to amend Public Law 95-18, providing for emergency drought relief measures."

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 6, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on August 5, 1977, the Clerk has received this date the following messages from the Secretary of the Senate:

That the Senate passed H.R. 2563, an act for the relief of Velzora Carr;

That the Senate passed without amendment House Concurrent Resolution 330, a concurrent resolution relating to the adjournment of the Senate until September 7, 1977;

That the Senate agreed to the amendment of the House of Representatives to the bill S. 1153; and

That the Senate agreed to the amendment of the House of Representatives to the amendment of the Senate numbered 5 to the bill H.R. 7589.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Friday, August 5, 1977, he did on Saturday, August 6, 1977, sign the following enrolled bills:

H.R. 2563. An act for the relief of Velzora Carr;

H.R. 6161. An act to amend the Clean Air Act, and for other purposes;

H.R. 7589. An act making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes;

S. 1153. An act to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes; and

S. 1935. An act to amend Public Law 95-18, providing for emergency drought relief measures.

CALL OF THE HOUSE

The SPEAKER. The Chair recognizes the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 514]

Addabbo	Fascell	Mottl
Alexander	Fish	Myers, Michael
Andrews, N.C.	Flynt	O'Brien
Applegate	Foley	Patten
Archer	Ford, Tenn.	Pepper
Armstrong	Fowler	Pettis
Badillo	Fraser	Pritchard
Baucus	Frey	Pursell
Biaggi	Gephardt	Quillen
Boland	Gibbons	Rangel
Bolling	Hanley	Rodino
Bonker	Hansen	Roe
Brademas	Harrington	Rostenkowski
Burton, John	Holtzman	Roybal
Chappell	Johnson, Calif.	Scheuer
Chisholm	Jones, Okla.	Sebelius
Clausen, Don H.	Jordan	Sisk
Clay	Ketchum	Skelton
Cleveland	Kindness	Solarz
Coleman	Koch	St Germain
Collins, Ill.	Krueger	Stangeland
Collins, Tex.	Lent	Steers
Conyers	Long, La.	Symms
Cornwell	Long, Md.	Tucker
Crane	Lujan	Vanik
Cunningham	Luken	Weiss
Dent	Lundine	Wiggins
Derrick	McEwen	Wilson, Bob
Dicks	Markey	Wydler
Early	Marlenee	Young, Alaska
Eckhardt	Moakley	Young, Tex.
Edgar	Mollohan	Zeferetti
Edwards, Okla.	Moorhead, Pa.	
	Moss	

The SPEAKER. On this rollcall 334 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

HON. ROBERT L. "BOB" LIVINGSTON

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
September 7, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I am enclosing herewith a copy of the Certificate of Election, as issued by Governor Edwin W. Edwards, for the Honorable Robert L. "Bob" Livingston, who was duly elected Representative in Congress, First Congressional District, State of Louisiana, in a Special Election held on August 27, 1977, to fill the unexpired term of the Honorable Richard Tonry.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

The SPEAKER. The Representative-elect will present himself at the bar of the House for the purpose of having the oath of office administered to him.

Mr. LIVINGSTON appeared at the bar of the House and took the oath of office.

HON. ROBERT L. LIVINGSTON

(Mr. TREEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TREEN. Mr. Speaker, the Speaker has just administered the oath of office to ROBERT L. LIVINGSTON, elected on August 27 to fill the vacancy in Louisiana's First Congressional District. This is an historic occasion, especially for Louisianians, as BOB is the first Republican in 102 years to represent Louisiana's First District.

The efforts of many are responsible for BOB's victory, and a large number of those people, including BOB's wife, Bonnie, and his three sons, are here today to witness this great day in BOB's career.

While we Republicans take pride in the political significance of this event, I am confident that all of us, on both sides of the aisle, who are privileged to serve in this, the world's greatest representative assembly, will be proud of the contribution which this outstanding young man will make to the work of the Congress and to the security, progress, and well-being of the American people.

BOB is 34 years old and served in the U.S. Navy prior to attending college at Tulane University in New Orleans. BOB has a B.A. degree in economics and a law degree from Tulane. I first met BOB in 1968 when, following his graduation from Tulane, he joined the law firm of Beard, Blue, Schmitt & Treen. From 1970 to 1973, BOB served as an assistant U.S. attorney, and was awarded a citation for outstanding achievement. He then served as chief special prosecutor and chief, Armed Robbery Division, Orleans Parish District Attorney's Office. In 1975, he became chief prosecutor, Organized Crime Unit, Louisiana Attorney General's Office.

BOB's work experience, his academic background and his personal attributes of diligence, integrity, and high moral purpose will add to the quality of the Congress.

CLOUD HANGING OVER CONGRESS MUST BE DISPELLED—COOPERATION OF KOREA IS REQUESTED

(Mr. O'NEILL asked and was given permission to address the House for 1 minute.)

Mr. O'NEILL. Mr. Speaker, each of us who serves here knows that a cloud hangs over Congress. Allegations, rumors and innuendos of wrongdoing involving Members of Congress and representa-

tives of the Republic of Korea threaten to erode public confidence in the legislative branch of Government. And that public confidence is essential to the operation of our system of government. The cloud must be removed. Our Nation's mental and economic health depends on it.

For our own part, the House has directed the Committee on Standards of Official Conduct to pursue a thorough investigation of possible wrongdoing by House Members. The special counsel to the committee has been granted complete independence to proceed as he sees fit. Let the chips fall where they may, let no stone remain unturned in order that we may remove any cloud of suspicion.

Unfortunately, the Republic of Korea does not seem to share our desire to put this matter to an end. Today the individual alleged to have been the central figure in Korean influence peddling—a man who has been indicted on 36 felony counts, remains at large in that nation. Records of obvious relevance to the investigation and the important knowledge of Korean nationals are being withheld.

The attitude being taken by the Republic of Korea can only strain its relations with the United States. Doubts as to the continued advisability of our partnership with the Republic of Korea are being expressed all across America. Our alliance cannot thrive under these conditions.

Whatever the facts may be, they will ultimately come out. The American people will not tolerate suppression and coverup. I have no desire to embarrass or to infringe upon the sovereignty of the Republic of Korea. Rather, I ask for the help of a great ally. Cooperation has always been the hallmark of our relations with Korea. Let cooperation in this investigation be a symbol of the continued flourishing of our alliance.

Mr. CAPUTO. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. If I have any time left, I will be glad to yield.

Mr. CAPUTO. Mr. Speaker, I was going to inquire if the gentleman had any thoughts about legislative remedies for the problem that the gentleman identifies; namely, the lack of cooperation by the Korean Government. For example, is there something we can do with the budget resolution before the House this week?

Mr. O'NEILL. My personal feeling is that there is nothing we can do with regard to the budget resolution. Any restrictions added to that resolution would not technically hold up any money.

No. 1, Korea has always been an ally of America.

Thousands of our boys offered their lives over there. Many more were wounded. I have forgotten the exact figure, but throughout the years we have expended about $30 billion in various programs over there. For what purpose? Why? To maintain the peace in Northeast Asia. We are going to remove most of our troops from there. There have been conferences with our State Department people, Mr. Vance and others, with the South Koreans. We know that negotiations have taken place. We know that Japan is deeply concerned about the entire situation as an ally of ours in that section of the world.

I think taking precipitous action now to cut programs to South Korea would be the wrong thing to do. As Speaker of the House, I have taken the well today to ask the South Koreans to turn over relevant documents and any other information the man himself who has been alleged to be the person that was involved might contribute to a full airing of this matter.

I think we ought to wait for a response from South Korea. I surely would hope that they would respond favorably, because I am sure that I express the tenor and the will of all of the Members of this Congress when I make this appeal.

Mr. CAPUTO. Mr. Speaker, if the gentleman will yield further, I would like to explore the possibility of legislative treatment. I share the gentleman's view that the national security interests of the United States and its allies in Northeast Asia need not be reconsidered at this time. Those issues can be raised in other contexts. So apart from defense issues, we know we spend about $110 million a year in preferential Publice Law 480 support of wheat, cotton, and rice programs for South Korea. South Korea is a country with a robust economy, a relatively high per capita income, and relatively little starvation. Does the gentleman think we could consider suspending budget authority to them?

The SPEAKER pro tempore. The time of the gentleman from Massachusetts has expired.

(By unanimous consent, Mr. O'NEILL was allowed to proceed for 1 additional minute.)

Mr. O'NEILL. Mr. Speaker, I would be happy to follow the recommendations developed by the appropriate committee. I am not able now to give a response to a question of that nature. It never even occurred to me.

Mr. CAPUTO. Mr. Speaker, if the gentleman will yield further, then the gentleman has an open mind about the possibility of adjusting budget authority for nondefense South Korea programs?

Mr. O'NEILL. I have an open mind and would be happy to follow the thoughts and desires and the intelligence and the report of our committee.

Mr. CAPUTO. Mr. Speaker, if the gentleman will yield further, might I ask one last question. Would the gentleman's remarks about——

Mr. O'NEILL. I would be glad to give the gentleman a copy.

Mr. CAPUTO. I was merely asking, were the gentleman's opening comments instigated in any way by the indictment that was unsealed yesterday citing several high-level Korean officials as unindicted coconspirators for 36 separate offenses?

Mr. O'NEILL. Before I had known the indictment had taken place, it was my intent to take the floor.

The SPEAKER pro tempore. The time of the distinguished gentleman from Massachusetts has again expired.

(By unanimous consent, Mr. O'NEILL was allowed to proceed for 1 additional minute.)

Mr. CAPUTO. Mr. Speaker, if the gentleman will yield further, the alleged complicity of some high-level Korean officials in crimes against the United States substantially changes our attitude on what to do about inadequate Korean cooperation with our investigation. Does not the indictment of Korean officials make a material difference? What we have just learned in the last 24 hours——

Mr. O'NEILL. Would that change it? I would say we would have to obtain the moral judgment of that from our State Department. Nobody is more upset about the Korean situation than I am.

I am sure the gentleman, more than anybody else, is aware of the unfair stories that appeared in the paper about me in the last couple of weeks. I want to assure him—and he was the interrogator—that regardless of who the witness was, that never, never was Tongsun Park ever using my office. I only recall seeing him once myself in my office. My staff has told me that he was probably there two or three times. The gentleman can be assured that we have asked all of them.

When the gentleman went into this and asked so many questions, as I understand it—and I only understand it, because I have not seen any document, and I only know what has been leaked to the press, so that I have not got any knowledge of it except secondhand—the gentleman was there; he was the questioner. I do not know whether he questioned whether JOHN RHODES was at a party or JOHN RHODES' office was used, or BOB MICHEL's office was used, or whether any of the old leadership was involved.

I do know that the gentleman asked about Carl Albert and he asked about TIP O'NEILL. I could ask, why did the gentleman not go into others? Why was he partisan about it?

Mr. CAPUTO. I think we have wandered off my point.

Mr. O'NEILL. I just want the gentleman to know that I was the victim of a terrific smear. All I have is my reputation. I have been in public life for 43 years, and the only one thing I want to leave with is the satisfaction that I have done a good job; that I leave a heritage to my family, and I do not want anybody tearing my reputation apart.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. WRIGHT). The Chair will announce that it intends to receive unanimous-consent requests for remarks at this time. Then, the Chair will lay before the House certain messages and communications. Thereafter, we will go to unanimous-consent requests for business before proceeding to the budget resolution.

THE CONGRESSIONAL BUDGET FOR FISCAL YEAR 1977

(Mr. GIAIMO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. GIAIMO. Mr. Speaker, on behalf of the Committee on the Budget and as called for in the Congressional Budget Act, I am reporting to the House on the status of the fiscal year 1977 congressional budget under the resolution adopted by the House on May 17, 1977.

Since my last report to the House, the President has submitted his mid-session review of the budget. As a result, a number of reestimates for fiscal year 1977 have been incorporated into the current level of spending. The current level for revenues has been increased by $900 million mostly because of upward adjustments for corporate income taxes and social insurance taxes and contributions. The current level has increased $418 million for budget authority and decreased $5,758 million for outlays. A summary of the major reestimates which have been incorporated into the current level since the mid-session review of the budget is printed in the eighth scorekeeping report for fiscal year 1977 prepared by the Congressional Budget Office.

In addition, three fiscal year 1978 appropriations changed fiscal year 1977 amounts which have an effect on the current level for the budget year. The current level has been increased $71 million in budget authority and $46 million in outlays as a result of these fiscal year 1977 supplemental appropriations contained in the legislative branch and agriculture appropriations. The public works appropriation for fiscal year 1978 contains a rescission for fiscal 1977 in the amount of $12 million in budget authority and $3 million in outlays. The chart following details these changes:

CHANGES TO THE PARLIAMENTARIAN STATUS REPORT SINCE JULY 22, 1977

[In millions of dollars]

	Budget authority	Outlays	Revenues
Current level as of July 22, 1977	462,723	408,355	356,700
Changes due to subsequent legislative action:			
Legislative Branch, 1978	21	21	
Agriculture, 1978	50	25	
Public Works, 1978	−12	−3	
Changes due to reestimates	418	−5,758	900
Current level as of Aug. 5, 1977	463,200	402,640	357,600
3d budget resolution revised	470,200	409,200	356,600
Amount remaining	7,000	6,560	1,000

HOUSE OF REPRESENTATIVES,
Washington, D.C., September 7, 1977.

Hon. THOMAS P. O'NEILL, JR.,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: On January 30, 1976, the Committee on the Budget outlined the procedures which it had adopted in connection with its responsibilities under Sec. 311 of the Congressional Budget Act of 1974 to provide estimates of the current level of revenues and spending. I am herewith transmitting the status report under S. Con. Res. 19, the Third Budget Resolution revised for FY 1977. This report reflects the amended resolution of May 17, 1977 and estimates of budget authority, outlays, and revenues based on all completed action on spending and revenue measures as of close of legislative business, Friday, August 5, 1977.

Sincerely yours,

ROBERT N. GIAIMO,
Chairman.

REPORT TO THE SPEAKER OF THE HOUSE FROM THE COMMITTEE ON THE BUDGET ON THE STATUS OF THE FISCAL YEAR 1977 CONGRESSIONAL BUDGET ADOPTED IN S. CON. RES. 19

REFLECTING COMPLETED ACTION AS OF AUG. 5, 1977

[In millions of dollars]

	Budget authority	Outlays	Revenues
Appropriate level	470,200	409,200	356,600
Current level	463,200	492,640	357,600
Amount remaining	7,000	6,560	1,000

BUDGET AUTHORITY

Any measure providing budget or entitlement authority which is not included in the current level estimate and which exceeds $7,000 million for fiscal year 1977, if adopted and enacted, would cause the appropriate level of budget authority for that year as set forth in S. Con. Res. 19 to be exceeded.

OUTLAYS

Any measure providing budget or entitlement authority which is not included in the current level estimate and which would result in outlays exceeding $6,560 million for fiscal year 1977, if adopted and enacted, would cause the appropriate level of outlays for that year as set forth in S. Con. Res. 19 to be exceeded.

REVENUES

Any measure that would result in a revenue loss exceeding $1,000 million for fiscal year 1977, if adopted and enacted, would cause revenues to be less than the appropriate level for that year as set forth in S. Con. Res. 19.

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., September 2, 1977.

Hon. ROBERT N. GIAIMO,
Chairman, Committee on the Budget, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 308(b) and in aid of section 311(b) of the Congressional Budget Act, this letter and supporting detail provide an up-to-date tabulation of the current levels of new budget authority estimated outlays and estimated revenues in comparison with the appropriate levels for these items contained in the most recently agreed to concurrent resolution of the 1977 budget. The current level estimates are as of close of business August 5, 1977.

Since my last report, the President has signed the Legislative Branch, Public Works, and Agriculture Appropriation Bills making them public laws. In addition, a number of budget reestimates have been incorporated which reflect analysis of the July Mid-session Budget Review and having the net effect of increasing budget authority $418 million, decreasing outlays $5,758 million and increasing revenues $900 million.

[In millions of dollars]

	Budget authority	Outlays	Revenues

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 12, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:32 p.m. on Friday, August 12, 1977, and said to contain a message from the

President wherein he transmits the sixth annual report on the administration of the Railroad Safety Act of 1970.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

SIXTH ANNUAL REPORT ON ADMINISTRATION OF RAILROAD SAFETY ACT OF 1970—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and together with the accompanying papers, without objection, referred to the Committee on Interstate and Foreign Commerce:

To the Congress of the United States:

I transmit herewith the Sixth Annual Report on administration of the Railroad Safety Act of 1970 (84 Stat. 971, 45 U.S.C. 421 et seq.) as required by that act. This report has been prepared in accordance with section 211 of the act, and covers the period January 1, 1976, through December 31, 1976.

This report was prepared based upon activities of the Department of Transportation and the Federal Railroad Administration prior to my term of office.

JIMMY CARTER.

THE WHITE HOUSE, *August 12, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 12, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:32 p.m. on Friday, August 12, 1977, and said to contain a message from the President wherein he transmits the eleventh annual report of the National Endowment for the Humanities for fiscal year 1976.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

ELEVENTH ANNUAL REPORT OF NATIONAL ENDOWMENT FOR THE HUMANITIES FOR FISCAL YEAR 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Education and Labor:

To the Congress of the United States:

In accordance with the provisions of the National Foundation on the Arts and Humanities Act of 1965, as amended, I transmit herewith the eleventh annual report of the National Endowment for the Humanities for fiscal year 1976. This Report covers events prior to the beginning of my Administration.

JIMMY CARTER.

THE WHITE HOUSE, *August 12, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 8, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 11:30 a.m. on Saturday, August 6, 1977, and said to contain a message from the President concerning welfare reform.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

WELFARE REFORM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–205)

The SPEAKER pro tempore laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, without objection, referred to the Committee on Ways and Means, the Committee on Education and Labor, and the Committee on Agriculture, and ordered to be printed:

To the Congress of the United States:

As I pledged during my campaign for the Presidency I am asking the Congress to abolish our existing welfare system, and replace it with a job-oriented program for those able to work and a simplified, uniform, equitable cash assistance program for those in need who are unable to work by virtue of disability, age or family circumstance. The Program for Better Jobs and Income I am proposing will transform the manner in which the Federal government deals with the income needs of the poor, and begin to break the welfare cycle.

The program I propose will provide:

—Job opportunities for those who need work.

—A Work Benefit for those who work but whose incomes are inadequate to support their families.

—Income Support for those able to work part-time or who are unable to work due to age, physical disability or the need to care for children six years of age or younger.

This new program will accomplish the following:

—Dramatically reduce reliance on welfare payments by doubling the number of single-parent family heads who support their families primarily through earnings from work.

—Ensure that work will always be more profitable than welfare, and that a private or non-subsidized public job will always be more profitable than a special federally-funded public service job.

—Combine effective work requirements and strong work incentives with improved private sector placement services, and create up to 1.4 million public service jobs. Forty-two percent of those jobs may be taken by current AFDC recipients. Those who can work will work, and every family with a full-time worker will have an income substantially above the poverty line.

—Provide increased benefits and more sensitive treatment to those most in need.

—Reduce complexity by consolidating the current AFDC, Supplemental Security Income (SSI), and Food Stamp programs, all of which have differing eligibility requirements, into a single cash assistance program, providing for the first time a uniform minimum Federal payment for the poor.

—Provide strong incentives to keep families together rather than tear them apart, by offering the dignity of useful work to family heads and by ending rules which prohibit assistance when the father of a family remains within the household.

—Reduce fraud and error and accelerate efforts to assure that deserting fathers meet their obligations to their families.

—Give significant financial relief to hard-pressed State and local governments.

THE NEED FOR REFORM

In May, after almost four months of study, I said that the welfare system was worse than I expected. I stand by that conclusion. Each program has a high purpose and serves many needy people; but taken as a whole the system is neither rational nor fair. The welfare system is anti-work, anti-family, inequitable in its treatment of the poor and wasteful of taxpayers' dollars. The defects of the current system are clear:

—It treats people with similar needs in different fashion with separate eligibility requirements for each program.

—It creates exaggerated differences in benefits based on state of residence. Current combined state and Federal AFDC benefits for a family of four with no income vary from $720 per year in Mississippi to $5,954 in Hawaii.

—It provides incentives for family breakup. In most cases two-parent families are not eligible for cash assistance and, therefore, a working father often can increase his family's income by leaving home. In Michigan a two-parent family with the father working at the minimum wage has a total income, including tax credits and food stamps, of $5,922. But if the father leaves,

the family will be eligible for benefits totalling $7,076.

—It discourages work. In one Midwestern state, for example, a father who leaves part-time employment paying $2,400 for a full-time job paying $4,800 reduces his family's income by $1,250.

—Efforts to find jobs for current recipients have floundered.

—The complexity of current programs leads to waste, fraud, red tape, and errors. HEW has recently discovered even government workers unlawfully receiving benefits, and numbers of people receive benefits in more than one jurisdiction at the same time.

The solutions to these problems are not easy—and no solution can be perfect; but it is time to begin. The welfare system is too hopeless to be cured by minor modifications. We must make a complete and clean break with the past.

People in poverty want to work, and most of them do. This program is intended to give them the opportunity for self-support by providing jobs for those who need them, and by increasing the rewards from working for those who earn low wages.

PROGRAM SUMMARY

The Program for Better Jobs and Income has the following major elements:

—Strengthened services through the employment and training system for placement in the private sector jobs.

—Creation of up to 1.4 million public service and training positions for principal earners in families with children, at or slightly above the minimum wage through state and local government and non-profit sponsors.

—An expansion of the Earned Income Tax Credit to provide an income supplement of up to a maximum of well over $600 for a family of four through the tax system, by a 10% credit for earnings up to $4,000, a 5% credit for earnings from $4,000 to the entry point of the positive tax system, and a declining 10% credit thereafter until phase-out. A major share of the benefit will accrue to hard-pressed workers with modest incomes struggling successfully to avoid welfare.

—Strong work requirements applying to single persons, childless couples and family heads, with work requirements of a more flexible nature for single-parent family heads with children aged 7 to 14. Single-parent family heads with pre-school aged children are not required to work.

—A Work Benefit for two-parent families, single-parent families with older children, singles and childless couples. The Federal benefit for a family of four would be a maximum of $2,300 and, after $3,800 of earnings, would be reduced fifty cents for each dollar of earnings.

—Income Support for single-parent families with younger children and aged, blind or disabled persons. The Federal benefit would be a base of $4,200 for a family of four and would be reduced fifty cents for each dollar of earnings.

—New eligibility requirements for cash assistance which insure that benefits go to those most in need.

—Fiscal relief to States and localities of $2 billion in the first year, growing in subsequent years.

—Simple rules for state supplements to the basic program, in which the Federal government will bear a share of the cost.

COSTS

In my May 2, 1977 statement I established as a goal that the new reformed system involve no higher initial cost than the present system. It was my belief that fundamental reform was possible within the confines of current expenditures if the system were made more rational and efficient. That belief has been borne out in our planning. Thereafter, Secretary Califano outlined a tentative no cost plan which embodied the major reform we have been seeking:

—Consolidation of programs.

—Incentives to work.

—Provision of jobs.

—Establishment of a national minimum payment.

—Streamlined administration.

—Incentives to keep families together.

—Some fiscal relief for State and local governments.

Subsequently, we have consulted with State and local officials and others who are knowledgeable in this area. As a result of those consultations we have gone beyond the no cost plan to one with modest additional cost in order to provide more jobs, particularly for current AFDC family heads, additional work incentives, broader coverage for needy families and greater fiscal relief for States and localities.

The Programs For Better Jobs and Income will replace $26.3 billion in current programs which provide income assistance to low-income people. In addition, the program will produce savings in other programs amounting to $1.6 billion. The total amount available from replaced programs and savings is $27.9 billion.

CURRENT FEDERAL EXPENDITURES AND SAVINGS
(1978 DOLLARS)

Expenditures

	Billions
AFDC	$6.4
SSI	5.7
Food Stamps	5.0
Earned Income Tax Credit	1.3
Stimulus Portion of CETA Public Jobs	5.5
WIN Program	.4
Extended Unemployment Insurance Benefits (27–39 weeks)	.7
Rebates of per capita share of Wellhead Tax Revenues to Low-Income People if Passed by Congress [1]	1.3
Subtotal	26.3

Savings (1978 Dollars)

Decreased Unemployment Insurance Expenditures	$0.4
HEW Program to Reduce Fraud and Abuse	.4
Decreased in Required Housing Subsidies Due to Increased Income [2]	.5
Increases in Social Security Contributions [3]	.3
Subtotal	1.6
Total	27.9

[1] The National Energy plan calls for rebate of the wellhead tax revenues to taxpayers through the income tax system and to "the poor who do not pay taxes" in effect through income maintenance programs.

[2] This does not decrease housing programs nor reduce the amount of cash assistance paid to residents of the subsidized housing. It is merely an estimate of the savings to the Department of Housing and Urban Development's housing subsidy programs on account of higher incomes going to tenants under the new program.

[3] This does *not* increase anyone's Social Security Tax, nor does it take any money out of the Social Security Trust Funds. It merely recognizes that the millions of people taken off of dependence on welfare and given a job will become contributors to the Social Security System.

The new Program for Better Jobs and Income will have a total cost of $30.7 billion. The additional cost of the program above existing costs is $2.8 billion in spending. In addition, $3.3 billion of tax relief is given to working low and moderate income taxpayers through an expanded income tax credit.

COST OF NEW PROGRAM

	Billions
Work Benefit and Income Support	$20.4
Earned Income Tax Credit [4]	1.5
Employment and Training	8.8
Total	30.7

[4] This is the cost of the portion of the expanded EITC which will be received by those who do not pay income taxes. Income taxpayers with families will receive benefits totalling $3.3 billion.

The additional cost above current expenditures has been used to make important improvements in our original plan:

—Increased fiscal relief has been provided for states and localities, particularly for those which have borne the greatest financial burdens.

—Incentives which strengthen family ties have been improved by adopting a broader definition of eligible applicants to permit more generous payment than in the earlier plan to older persons and young mothers with children who live in extended families.

—Work incentives for low wage workers have been increased by expanding the Earned Income Tax Credit for those in private and non-subsidized public work to cover and supplement approximately twice the income covered by the existing EITC.

—A deduction for child care will permit and encourage single parents to take work which will lift them out of poverty.

—Up to 300,000 additional part-time jobs have been added for single parent families with school age children (if adequate day care is available, such parents will be expected to accept full-time jobs).

With these improvements the Program for Better Jobs and Income will help turn low income Americans away from welfare dependence with a system that is fair, and fundamentally based on work for those who can and should work.

PROGRAM DETAIL

EMPLOYMENT SERVICES AND JOB SEARCH

A central element of this proposal is a new effort to match low-income persons with available work in the private and public sector. It will be the responsibility of State and local officials to assure an unbroken sequence of employment and training services, including job search, training, and placement. Prime sponsors under the Comprehensive Employment and Training Act, state employment service agencies, and community-based organizations will play major roles in this effort.

JOBS FOR FAMILIES

A major component of the program is a national effort to secure jobs for the principal wage earners in low income families with children. The majority of poor families—including many who are on welfare for brief periods of time—depend upon earnings from work for most of their income. People want to support themselves and we should help them do so. I propose that the Federal government assist workers from low income families to find regular employment in the private and public sectors. When such employment cannot be found I propose to provide up to 1.4 million public service jobs (including part-time jobs and training paying at the minimum wage, or slightly above where states supplement the basic Federal program.

This program represents a commitment by my Administration to ensure that families will have both the skills and the opportunity for self-support.

This new Public Service Employment Program is carefully designed to avoid disruptive effects to the regular economy:

—Applicants will be required to engage in an intensive 5-week search for regular employment before becoming eligible for a public service job. Those working in public service employment will be required to engage in a period of intensive job search every 12 months.

—In order to encourage participants to seek employment in the regular economy, the basic wage rate will be kept at, or where states supplement, slightly above, the minimum wage.

—Every effort will be made to emphasize job activities which lead to the acquisition of useful skills by participants, to help them obtain employment in the regular economy. Training activities will be a regular component of most job placements.

The development of this job program is clearly a substantial undertaking requiring close cooperation of all levels of government. I am confident it will succeed. Thousands of unmet needs for public goods and services exist in our country. Through an imaginative program of job creation we can insure that the goals of human development and community development are approached simultaneously. Public service jobs will be created in areas such as public safety, recreational facilities and programs, facilities for the handicapped, environmental monitoring, child care, waste treatment and recycling, clean-up, pest and insect control, home services for the elderly and ill, weatherization of homes and buildings and other energy-saving activities, teachers' aides and other paraprofessionals in schools, school facilities improvements, and cultural arts activities.

EARNED INCOME TAX CREDIT

The current Earned Income Tax Credit (EITC) is an excellent mechanism to provide tax relief to the working poor. I propose to expand this concept to provide benefits to more families and provide relief to low and modest income working people hard hit by payroll tax increases, improve work incentives, and integrate the Program for Better Jobs and Income with the income tax system. The expanded EITC, which will apply to private and non-subsidized public employment, will have the following features:

—A 10 percent credit on earnings up to $4,000 per year as under currrent law.

—A 5 percent credit on earnings between $4,000 and approximately $9,000 for a family of four (the point at which the family will become liable for Federal income taxes).

—A phase-out of the credit beyond roughly $9,000 of earnings at 10 percent. The credit will provide benefits to a family of four up to $15,600 of income.

—The credit will be paid by the Treasury Department and the maximum credit for a family of four would be well over $600.

WORK BENEFIT AND INCOME SUPPORT

I propose to scrap and completely overhaul the current public assistance programs, combining them into a simplified, uniform, integrated system of cash assistance. AFDC, SSI and Food Stamps will be abolished. In their place will be a new program providing: (1) a Work Benefit for two-parent families, single people, childless couples and single parents with no child under 14, all of whom are expected to work full-time and required to accept available work; and (2) Income Support for those who are aged, blind or disabled, and for single parents of children under age 14. Single parents with children aged 7 to 14 will be required to accept part-time work which does not interefere with caring for the children, and will be expected to accept full-time work where appropriate day care is available. These two levels of assistance are coordinated parts of a unified system which maintains incentives to work and simplifies administration.

—For those qualifying for income support the basic benefit for a family of four with no other income will be $4,200 in 1978 dollars. Benefits will be reduced fifty cents for each dollar of earnings, phasing out completely at $8,400 of earnings. Added benefits would accrue to those in regular private or public employment through the Earned Income Tax Credit.

—An aged, blind, or disabled individual would receive a Federal benefit of $2,500 and a couple would receive $3,750—more than they are now receiving. That is higher than the projected SSI benefit for either group—about $100 higher for a couple and $120 higher for a single person.

—For those persons required to work who receive a Work Benefit, the basic benefit for a family of four with no other income will be $2,300. To encourage continued work, benefits will not be reduced at all for the first $3,800 of earnings and will thereafter be reduced by fifty cents for each dollar earned up to $8,400. Again, the Earned Income Tax Credit will provide added benefits to persons in regular private or public employment.

—We are committed to assure that inflation will not erode the value of the benefits, and that real benefits will be increased over time as federal resources grow. To preserve flexibility in the initial transition period, however, we do not at this time propose automatic indexing of benefits or automatic increases in their real value. (The figures contained in this message expressed in 1978 dollars will be adjusted to retain their real purchasing power at the time of implementation).

—Single parent family heads will be able to deduct up to 20% of earned income, up to an amount of $150 per month to pay for child care expenses required for the parent to go to work.

—No limits are placed on the right of states to supplement these basic benefits. However, only if states adopt supplements which complement the structure and incentives of the Federal program will the Federal government share in the cost.

Eligibility rules for the Work Benefit and Income Support will be tightened to insure that the assistance goes to those who are most in need.

—To reduce error and direct assistance to those most in need, benefits will be calculated based on a retrospective accounting period, rather than on the prospective accounting period used in existing programs. The income of the applicant over the previous six-month period will determine the amount of benefits.

—The value of assets will be reviewed to insure that those with substantial bank accounts or other resources do not receive benefits. The value of certain assets will be imputed as income to the family in determining the amount of benefits.

—Eligibility has been tightened in cases where related individuals share the same household, while preserving the ability of the aged, disabled and young mothers to file for benefits separately.

STATE ROLE AND FISCAL RELIEF FOR STATES AND LOCAL COMMUNITIES

Public assistance has been a shared Federal and State responsibility for forty years. The program I propose will sig-

nificantly increase Federal participation but maintain an important role for the states.

—Every State will be assured that it will save at least ten percent of its current welfare expenses in the first year of the program, with substantially increased fiscal relief hereafter.

—Every State is required to pay ten percent of the basic Federal income benefits provided to its residents except where it will exceed 90 percent of its prior welfare expenditures.

—Every State is free to supplement the basic benefits, and is eligible for Federal matching payments for supplements structured to complement and maintain the incentives of the Federal program. The Federal government will pay 75% of the first $500 supplement and 25% of any additional supplement up to the poverty line. These State supplements will be required to follow Federal eligibility criteria to help achieve nation-wide uniformity.

—Where States supplement the income support they must also proportionally supplement the work benefit and the public service wage.

—There will be a three-year period during which states will be required to maintain a share of their current effort in order to ease the transition of those now receiving benefits. These resources must be directed to payment of the State's 10% share of the basic benefit, to supplements complementary to the basic program, and to grandfathering of existing SSI and partially grandfathering AFDC beneficiaries. The Federal government will guarantee a State that its total cost for these expenditures will not exceed 90% of current welfare costs. States can retain any amounts under the 90% requirement not actually needed for the mandated expenditures. In the second year of the program states will be *required* to maintain only 60% of current expenditures, in the third year, only 30%. In the fourth year, they will only be required to spend enough to meet their 10% share of the basic benefit.

—States will have the option to assist in the administration of the program. They will be able to operate the crucial intake function serving applicants, making possible effective coordination with social service programs. The Federal government will operate the data processing system, calculate benefits, and issue payments.

—The Federal government will provide a $600 million block grant to the states to provide for emergency needs. These grants will assist the states in responding to sudden and drastic changes in family circumstances.

—The Federal government will provide 30% above the basic wage for fringe benefits and administrative costs of the jobs program, and will reimburse the states for costs of administration of the work benefit and income support program.

In the first year of this program, states and localities would receive $2 billion in fiscal relief, while at the same time ensuring that no current SSI beneficiary receives a reduced benefit and that over 90 percent of current AFDC beneficiaries receive similar protection.

In subsequent years as current recipients leave the rolls and as the maintenance of State effort requirement declines from 90 percent to zero within 3 years, the opportunities for increased fiscal relief will grow.

Under our program for fiscal relief, States will be required to pass through their fiscal relief to municipal and county governments in full proportion to their contributions. Thus, for example, in New York State, where New York City pays 33 percent of the State's share, New York City would receive 33 percent of the State's fiscal relief or $174 million.

REDUCTION OF FRAUD AND ABUSE

The few providers and recipients guilty of fraud and abuse in our welfare programs not only rob the taxpayers but cheat the vast majority of honest recipients. One of the most significant benefits of consolidation of existing cash assistance programs is the opportunity to apply sophisticated management techniques to improve their operation. The use of a central computer facility will permit more efficient processing of claims, reduce the incidence of error in calculating benefits, and facilitate the detection of fraud. No longer will people easily claim benefits in more than one jurisdiction.

We will strongly enforce current programs directed at assisting local officials in obtaining child support payments from run-away parents, as determined by judicial proceedings.

We will ensure that the Department of Health, Education, and Welfare will vigorously root out abuses and fraud in our social programs.

We will work for passage of current legislation designed to crack down on fraud and abuse in our Medicaid and Medicare Program. The administration of these programs will be a major challenge for Federal and State officials. It provides a valuable opportunity to demonstrate that government can be made to work, particularly in its operation of programs which serve those in our society most in need.

IMPLEMENTATION

Because of the complexity of integrating the different welfare systems of the 50 States and the District of Columbia into a more unified national system, we estimate that this program will be effective in Fiscal Year 1981. Moreover, we recognize that the National Health Insurance plan which will be submitted next year must contain fundamental reform and rationalization of the Medicaid program, carefully coordinated with the structure of this proposal. However, we are anxious to achieve the swiftest implementation possible and will work with the Congress and State and local governments to accelerate this timetable if at all possible.

Given the present complex system, welfare reform inevitably involves difficult choices. Simplicity and uniformity and improved benefits for the great majority inevitably require reduction of special benefits for some who receive favored treatment now. Providing the dignity of a job to those who at present are denied work opportunities will require all the creativity and ingenuity that private business and government at all levels can bring to bear. But the effort will be worthwhile both for the individual and for the country. The Program for Better Jobs and Income stresses the fundamental American commitment to work, strengthens the family, respects the less advantaged in our society, and makes a far more efficient and effective use of our hard-earned tax dollars.

I hope the Congress will move expeditiously and pass this program early next year.

JIMMY CARTER.

THE WHITE HOUSE, *August 6, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 15, 1977.

HON. THOMAS P. O'NEILL, JR.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:25 p.m. on Monday, August 15, 1977, and said to contain a message from the President wherein he transmits a report on the Nation's progress in space and aeronautics during 1976.

With kind regards, I am,
Sincerely,

EDMUND L. HENSHAW, JR.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

REPORT ON NATION'S PROGRESS IN SPACE AND AERONAUTICS DURING 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Science and Technology:

To the Congress of the United States:

I transmit herewith this report on the Nation's progress in space and aeronautics during 1976. This report is provided in accordance with Section 206 of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2476). The activities described in it occurred before I became President.

In the interest of efficiency and clarity,

the report next year will be simplified and shortened.

JIMMY CARTER.

THE WHITE HOUSE, *August 15, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 15, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:25 p.m. on Monday, August 15, 1977, and said to contain a message from the President wherein he transmits the Twenty-Sixth Annual Report of the National Science Foundation, covering fiscal year 1976.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, JR.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

TWENTY-SIXTH ANNUAL REPORT OF NATIONAL SCIENCE FOUNDATION, FISCAL YEAR 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Science and Technology:

To the Congress of the United States:

I am pleased to submit to the Congress the Twenty-Sixth Annual Report of the National Science Foundation, covering fiscal year 1976. This Report covers events prior to the beginning of my Administration.

The growth of scientific knowledge and its use in the service of mankind is an important concern of our times. The strength of our Nation depends in large part on the ideas and technologies that have emerged from our pursuit of questions at the frontiers of science. We must continue to invest in the development of fundamental knowledge to help meet the challenges and opportunities of the future. My 1978 Budget, now before the Congress, reflects the high order of importance this Administration gives to basic scientific research.

We are aware that the technological advances which result from scientific inquiry represent a mixed blessing, often creating strains upon the environment, our natural resources, and our ability to wisely manage progress. The remedy is not to retreat from new knowledge but to progress further in our understanding of the processes that underlie our universe, drawing upon the inventiveness of our people and keeping alive the political freedom that guarantees our scientists the right of free and open intellectual inquiry.

This annual Report of the National Science Foundation expresses in concrete terms the achievements of scientists and engineers supported by the Foundation's programs during the past fiscal year.

JIMMY CARTER.

THE WHITE HOUSE, *August 15, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 16, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 11:57 a.m. on Tuesday, August 16, 1977, and said to contain a message from the President wherein he transmits the eighteenth special message for fiscal year 1977 in accordance with the Impoundment Control Act of 1974.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

ONE NEW DEFERRAL AND ONE DEFERRAL REVISION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–206)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Appropriations and ordered to be printed:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report one new deferral of budget authority amounting to $11.3 million for the Energy Research and Development Administration's Intense Neutron Source Facility. In addition, I am reporting a revision to a previously transmitted deferral for the antirecession financial assistance fund in the Office of the Secretary of the Treasury.

The details of each deferral are contained in the attached reports.

JIMMY CARTER.

THE WHITE HOUSE, *August 16, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 18, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:38 p.m. on Thursday, August 18, 1977, and said to contain a message from the President wherein he transmits the seventh annual report on Hazardous Materials Control which covers calendar year 1976.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

SEVENTH ANNUAL REPORT ON HAZARDOUS MATERIALS CONTROL, CALENDAR YEAR 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committees on Interstate and Foreign Commerce, Merchant Marine and Fisheries, and Public Works and Transportation:

To the Congress of the United States:

I transmit herewith the Seventh Annual Report on Hazardous Materials Control, as required by the Hazardous Materials Transportation Act, Title I of Public Law 93–633. This report has been prepared in accordance with Section 109 of the Act and covers calendar year 1976, prior to the time I became President.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

REPORT ON SETTLEMENT OF CYPRUS PROBLEM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–207)

The SPEAKER pro tempore. (Mr. MIKVA) laid before the House the following message from the President of the United States; which was read, and, without objection, referred to the Committee on International Relations and ordered to be printed:

To the Congress of the United States:

As required by Public Law 94–104, this report describes our efforts over the past sixty days to bring about a negotiated settlement of the Cyprus problem.

My last report, submitted to the Congress on June 22, noted that talks between the two Cypriot communities during the preceding sixty days had accomplished little. Regrettably, there has been no substantial change in the general situation.

The efforts of U.N. Secretary General Kurt Waldheim's Special Representative to Cyprus, Ambassador Perez de Cuellar, to persuade the two communities to hold a new round of talks in Nicosia in July and early August have proven unsuccessful.

Despite the failure of these efforts, however, the Administration has persisted in its efforts to bring the parties together in an effort to promote a settlement. In meetings in Washington with Ambassador de Cuellar and with House of Representatives President Kyprianou (now Acting President of Cyprus), Administration officials continually reiterated our view that the intercommunal forum should serve as the basis for substantive talks, and that they should be resumed as quickly as circumstances warranted. Moreover, we took the position that no time should be lost in pursuing a settlement once a new Turkish Government was formally installed.

The death of President Makarios on August 3 was an unforunate development. The precise implications of his death for the future of the intercommunal negotiations are, as of this writing, difficult to assess.

Nonetheless, we see no reason to change course. As Clark Clifford stressed in his press conference in Nicosia on August 9, this Administration is as dedicated today to helping find a solution to the problems of Cyprus as it was last January, when he was appointed as my Special Representative. We are prepared at any time to offer guidance and counsel to assist in the negotiating process, should the parties to the dispute so desire. It is my strong hope that constructive talks will be resumed and that the two Cypriot communities will again focus, with renewed energy, on the goal of achieving a just and lasting settlement which will enable everyone on the island to live in peace, harmony, and freedom.

JIMMY CARTER.

THE WHITE HOUSE, *August 25, 1977.*

CORRECTING TECHNICAL ERRORS IN ENROLLMENT OF S. 1153, ABOLISHING JOINT COMMITTEE ON ATOMIC ENERGY

Mr. PRICE. Mr. Speaker, I send to the desk a concurrent resolution (H. Con. Res. 342) to correct technical errors in the enrollment of the Senate bill (S. 1153) to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes, and ask unanimous consent for its immediate consideration.

The Clerk read the title of the concurrent resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read the concurrent resolution, as follows:

HOUSE CONCURRENT RESOLUTION 342

Resolved by the House of Representatives (the Senate concurring), That the action of the Speaker of the House of Representatives and the Acting President Pro Tempore of the Senate in signing the bill (S. 1153) to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes, is rescinded, and the Secretary of the Senate shall, in the reenrollment of such bill, make the following corrections:

(1) Strike out "to read as follows" and insert in lieu thereof "by adding at the end thereof the following new chapter".

(2) In subsection b. of section 301 of the Atomic Energy Act of 1954 (as proposed to be added by the bill), strike out "effective date of this Act" and insert in lieu thereof "date of enactment of this section".

(3) In subsection a. of section 302 of the Atomic Energy Act of 1954 (as proposed to be added by the bill), strike out "Sections 201, 202, 203, 204, 205, 206, and 207 of the Atomic Energy Act of 1954, as amended, are repealed." and insert in lieu thereof "Effective on the date of enactment of this section, chapter 17 of this Act is repealed.".

(4) In section 302 c. of the Atomic Energy Act of 1954 (as proposed to be added by the bill) strike out "the Congressional Budget Act of 1974" and insert in lieu thereof "the Congressional Budget and Impoundment Control Act of 1974".

(5) In section 303 a. of the Atomic Energy Act of 1954 (as proposed to be added by the bill)—

(A) strike out "Energy Research and Development Administration" and insert in lieu thereof "Secretary of Energy"; and

(B) strike out "the Administration" both places it occurs and insert in lieu thereof "the Secretary".

(6) In chapter 20 of the Atomic Energy Act of 1954 (as proposed to be added by the bill) strike out "SEC. 304." and insert in lieu thereof "d.".

(7) At the end of the bill, add the following new section:

SEC. 2. (a) The table of contents of the Atomic Energy Act of 1954 is amended—

(1) by striking out the items relating to chapter 17; and

(2) by adding at the end thereof the following:

"Chapter 20. Joint Committee on Atomic Energy Abolished; Functions and Responsibilities Reassigned

"Sec. 301. Joint Committee on Atomic Energy Abolished.

"Sec. 302. Transfer of Certain Functions of the Joint Committee on Atomic Energy and Conforming Amendings to Certain Others Laws.

"Sec. 303. Information and Assistance to Congressional Committees.".

(b) The table of contents of the Atomic Energy Community Act of 1955 is amended by striking out the item relating to section 103.

Mr. PRICE (during the reading). Mr. Speaker, I ask unanimous consent that the concurrent resolution be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION TO FILE CONFERENCE REPORT ON S. 275, FOOD AND AGRICULTURE ACT OF 1977

Mr. POAGE. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tonight to file a conference report on the Senate bill (S. 275) to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

SECOND CONCURRENT RESOLUTION ON THE BUDGET—FISCAL YEAR 1978

Mr. GIAIMO. Mr. Speaker, pursuant to section 305(a), title 3, Public Law 93–344 of the Congressional Budget Act of 1974, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the concurrent resolution (H. Con. Res. 341) revising the congressional budget for the U.S. Government for the fiscal year 1978.

GENERAL LEAVE

Mr. Speaker, pending that motion, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter during the consideration of House Concurrent Resolution 341.

The SPEAKER pro tempore (Mr. WRIGHT). Is there objection to the request of the gentleman from Connecticut?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Connecticut (Mr. GIAIMO).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the concurrent resolution (H. Con. Res. 341) with Mr. NEDZI in the chair.

The Clerk read the title of the concurrent resolution.

By unanimous consent, the first reading of the concurrent resolution was dispensed with.

The CHAIRMAN. Pursuant to section 305(a), title 3, of Public Law 93–344, the Congressional Budget Act of 1974, the gentleman from Connecticut (Mr. GIAIMO) will be recognized for 5 hours, and the gentleman from Ohio (Mr. LATTA) will be recognized for 5 hours.

The Chair recognizes the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of House Concurrent Resolution 341, the second budget resolution for fiscal year 1978. I urge all Members to support the resolution so that we can

set in place the revenue floor and spending ceilings which are key parts of our system of budget control.

Adoption of this resolution will bring to an end a very hectic year of activity on the budget. We started this year with an unprecedented third budget resolution for fiscal year 1977, designed to stimulate a lagging economy. Before we actually completed work on that resolution, our committee began work on the fiscal year 1978 budget, the last budget submitted by President Ford, subsequently revised by President Carter.

Our first budget resolution, as Members recall, was defeated overwhelmingly because of the House's inability to agree upon a proper set of budget priorities. Yet a week later we passed a resolution by a substantial margin, and now the House has nearly completed action on all of its spending decisions for the fiscal year ahead in substantial compliance with those targets.

MAJOR FEATURES OF THE RESOLUTION

The resolution recommended by the Budget Committee, as modified by a committee amendment to be offered tomorrow, proposes the following budget totals for fiscal year 1978:

[In billions]

Revenues	$398.1
Outlays	458.7
Deficit	60.6

The deficit proposed is $4.1 billion below the amount targeted in the first resolution this spring. This reduction is due to higher revenues of $1.8 billion, which result from slightly more optimistic economic assumptions for 1978 than we had made earlier, and lower outlays of $2.3 billion, which result from various spending reestimates and appropriations actions below the amounts targeted in the first resolution.

The deficit is, of course, still too high. However, higher than normal rates of unemployment continue to dampen revenue levels and drive Federal spending upward. If the economy were operating at a 5-percent unemployment rate, revenues would be approximately $30 billion higher and spending $5 billion lower. The deficit would be at least $35 billion lower.

In addition, new spending needs continue to arise. This year the real problems in agriculture will increase spending for commodity supports very sharply. And the new energy legislation recommended by the President will mean substantially higher spending for a wide range of energy conservation and research and development activities.

I cannot stress too strongly the urgent need to accelerate our rate of economic growth. As has been stated many times over the past 3 years, strong economic growth is the surest and quickest way to reduce the budget deficit and to provide the resources for new program initiatives.

During the first 6 months of 1977, the economy rebounded strongly from the severe slump of 1976, with real growth in GNP reaching an annual rate of 7 percent. The committee expects a modest slowdown in real growth to about 5 percent during the second half of 1977 and 1978, which should reduce the unemployment rate to about 6.2 percent by the end of 1978.

Although the deficit projected in this resolution is substantially lower than we expected this spring, it should be noted that total budget authority has increased since adoption of the first resolution. The increase—$6.9 billion over the target set in the first resolution—is due primarily to two factors:

First, the energy bill recently passed by the House authorizes appropriations in fiscal year 1978 of $6.1 billion, which are included in this resolution; and

Second, the resolution includes $6.1 billion in budget authority to accommodate House consideration of the President's proposals to restore the financial solvency of the social security system. As Members know, in May the President proposed legislation to assure the financing of the social security trust funds over the next 5 years, including a $14 billion general revenue subsidy. The amount included in this resolution represents the fiscal year 1978 impact of those proposals.

The committee anticipates that the Congress will modify the administration's proposals in this area. At the same time, however, it recognizes that any financing action with respect to social security will increase the budget authority for the social security program.

These two proposals are thus responsible for the increase in the budget authority amount set in the first resolution. On all other budget authority actions targeted in the first resolution, the House has stayed well within the targeted amount.

I also want to call to the attention of the House the importance the Budget Committee attaches to enactment of the legislative reforms targeted in the first resolution.

The first resolution targeted a series of legislative reforms designed to achieve substantial budget savings in fiscal year 1978 and future fiscal years. Adoption of these reforms—such as control of hospital costs, reform of the wage board pay system, and the setting of higher rates for enrichment uranium services provided at Government-owned facilities—prior to October, would have saved approximately $740 million in budget authority and $1.9 billion in outlays during the coming fiscal year. More importantly, during a 5-year period, approximately $26.4 billion in outlays would have been saved.

However, because many House committees have been occupied this year with work on the President's energy proposals, we are now assuming later enactment of these reforms. Through these reforms, savings of $466 million in budget authority and about $1 billion in outlays can be achieved in fiscal year 1978.

On behalf of the members of the Budget Committee, I urge all House committees to move promptly to consider and pass these proposals (which are explained fully in appendix G of the committee report on this resolution). The 5-year savings that would result are substantial—approximately $7 billion in budget authority and $21.7 billion in outlays.

THE 5-YEAR IMPLICATIONS OF HOUSE CONCURRENT RESOLUTION 341

In this connection, I want to call Members' attention to material in our committee report that is becoming increasingly crucial with each passing year.

Appendix B of the report is entitled "the 5-year implications of fiscal year 1978 budget decisions." It presents information which is required by the Budget Act and which has been carried in each of our committee reports since the budget process was fully implemented in 1976.

Given President Carter's strong commitment to achieve a balanced budget by the end of his first term—in fiscal year 1981—it is more important than ever that the Congress analyze the 5-year impact of its annual budget decisions. This will be particularly true next year when we get the first real Carter budget—the fiscal year 1979 budget—which, I believe, will challenge the Congress to act with great restraint on new spending proposals.

The report sets forth two projections of this budget resolution, based on different assumptions with respect to the rate of economic growth and the level of Federal spending during the 5-year period, fiscal year 1978 through fiscal year 1982. I would like to summarize one of these projections, which is based on these assumptions:

First, that during the 5-year period the economy will grow in real terms at a 5.3 percent annual rate; and

Second, that during the same period Federal spending will increase only to the extent needed to adjust for inflation (that is, all Federal spending—not only those programs and activities which must by law be adjusted for inflation).

This projection shows the following in fiscal year 1982:

[In billions]

Revenues	$698
Outlays	590
Surplus	108

If economic growth is not as strong, however, and real growth in GNP during this period averages only 4 percent, rather than slightly more than 5 percent, the result would be as follows:

[In billions]

Revenues	$647
Outlays	592
Surplus	55

Obviously, the rate of economic growth is the key variable. The higher growth rate would produce higher revenues in fiscal year 1982 alone of $51 billion.

Clearly, we must work hard during the next several years to achieve the highest possible rate of economic growth. However, we cannot neglect the spending side.

During the 5-year period I am discussing, Federal spending will increase—merely through adjustments for inflation—from approximately $460 billion in fiscal year 1978 to $590 billion in fiscal year 1982, an increase of $130 billion. And that increase will occur with no new program initiatives whatever or any allowances for the inevitable emergencies that arise and make demands on our resources.

This is the reason why the Budget Committee, for the second consecutive year, has emphasized the need to reevaluate existing programs and activities and to weed out lower priority

spending. Last year, House committees saved $625 million in spending for fiscal year 1977 and $6.9 billion over a 5-year period by enacting reforms targeted in our first budget resolution. The best known of those reforms was repeal of the "1-percent kicker" legislation, which saved $81 million in fiscal year 1977 and $2.9 billion over a 5-year period.

The Budget Committee believes the Congress must continue the difficult task of reevaluating current programs and changing existing law to free dollars for other, higher priority needs. This task must go hand in hand with the development of more effective fiscal policies to achieve strong and lasting economic growth.

Finally, I want to express my appreciation to all of the members of the Budget Committee for their full cooperation during this budget year. In particular, I want to thank the ranking minority member of the committee (Mr. LATTA) for his full support, despite our often differing views, in working to achieve the goals of the budget reform act.

Mr. Chairman, I urge support of the resolution.

Mr. LATTA. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I wholeheartedly agree with the statements just made by the gentleman from Connecticut (Mr. GIAIMO), the chairman of our committee, that we do disagree philosophically, but we disagree agreeably, and there are many points of disagreement in a budget resolution of this size.

I might say we were working on this resolution this morning and that some committee amendments will be offered tomorrow which will make the deficit for fiscal year 1977 even larger than anticipated by the resolution that we now have before us. The anticipated deficit with the amendments will be $60,568,000,000 for the fiscal year 1978.

This resolution was reported out of the Committee on the Budget on July 27 by a party line vote of 16 to 8. The minority members opposed the resolution for the following reasons. The resolution provides for a budget deficit of more than $58 billion, and I have just indicated it is going to go to a $60 billion deficit, which will be $12 billion higher than the deficit expected for fiscal year 1977, in the face of improving economic conditions.

Also, much of this $10 billion increase, soon to be $12 billion increase, is accounted for by the so-called stimulus programs, public works and public service jobs, which in our opinion are an ineffective and an inefficient way of stimulating the economy and creating new jobs quickly.

Large deficits are only one big problem with this budget. Another problem is the tax program laid out in this resolution. Not only does it not call for an across-the-board tax cut, it makes room for new taxes totaling approximately $110 billion over the next 5 years. Thus in the short 4-month time since we considered the first budget resolution, the majority has worked up a plan to saddle every American taxpayer with $1,000 in additional taxes in each of the next 5 years. The majority's 5-year economic projections, as contained in this budget resolution, make it clear that the Federal Government's tax burden on the American people and private business will be increased to record highs over that period. Make no mistake about it: We are talking record highs. For example, from 1954 through 1976 the total tax burden on the American economy averaged 18.6 percent when you measure the ratio of tax revenues to gross national product; under President Carter and the Democratic Congress, it is projected to rise to 22 percent. Worse yet, the Democrats plan to increase the personal income tax burden by almost 50 percent over the same period. Only by increasing this tax burden can the majority show on paper a balanced budget by 1981. But this increased tax burden will take its toll in terms of reduced incentives to work and to invest.

The resolution does not address itself to the darkest clouds on the economic horizon: increasing inflation and the resulting lack or lag in capital investment. Increased capital investment is the only way we can provide the permanent and productive jobs we need to reduce unemployment to acceptable levels.

Mr. Chairman, we in the minority were sad to realize that this second budget resolution for fiscal year 1978 was based on a double-barreled program to simultaneously add new taxes and also raise the tax burden by allowing the rate of inflation to drive taxpayers into higher tax brackets.

I might stop at this point and emphasize the fact that our chairman has recently pointed this fact out and, as if that were not enough, it will impose additional taxes of $110 billion over the next 5 years. And make no mistake about it. This budget resolution makes provision for this $110 billion of new taxes.

Those new taxes provide the means whereby President Carter might succeed, and I emphasize "might succeed," in balancing his budget for 1981; however, it will be a budget balanced only by an increase in the Federal Government's control over the income and resources of the American people.

We would rather see the budget balanced according to the Republican principle of reducing the tax burden and at the same time returning to the American taxpayer more control over his and her hard-earned income. In fact, this budget resolution increases next year's deficit by some $12 billion when we include funds for the majority's "emergency" stimulus programs which do not work.

I might at this point state what is happening over in Baltimore with some of the programs which the majority has been telling us that we just have to have in order to increase employment and economic growth. The recent experience in the Baltimore case is a case in point showing how pitifully little stimulus these programs provide. When Baltimore received their $5.7 million share of the $2 billion public works funds appropriated by the Congress last fall, it was anticipated that the public works plan would instantly provide new jobs and economic stimulus to the lagging economy. The actual experience has been the opposite. Even though almost a year has gone by since Congress appropriated the money, few jobless workers have been added to the payroll. At the last count, less than 10 percent of the 420 workers hired in Baltimore had been jobless. Less than 15 percent of Baltimore's $5.7 million share has been injected into the economy. Moreover, the cost per job is running about $36,000 for each on-the-site job.

I might say that similar tales are being reported around the country, and with the same bottom line in every case: as a nation, we are spending a fortune and getting near zero bang for our buck. Certainly we want to take a look at how these other projects are working and how much they are costing the taxpayer per man job.

A recent General Accounting Office review of the Public Works job program revealed that many local governments qualifying for and receiving aid were suffering not from recession-related problems, but from the long-term erosion of the community's tax base and of the effects of inflation on local budgets.

On the other hand, other communities not affected by the recent recession have qualified and received windfall assistance under so-called emergency economic stimulus assistance programs. In short, these stimulus programs are an inefficient and costly means of stimulating the economy and creating new jobs. In Baltimore's case, stimulus costs over $36,000 per man job.

As the minority members of this committee, we must again remind our colleagues of the prevailing economic conditions and future economic projections and again ask, are these programs appropriate for an economy that grew at an annual rate of 7 percent for the first half of the year and created more than 3 million jobs? We think not. Thus, we urge the administration to reject the huge unspent residue of the emergency stimulus package and request a formal rescission of these programs' moneys which the economy cannot absorb in the near term. This is hardly an unrealistic proposal when one realizes that the Democratic administration, which just had to have an additional $4 billion in public works stimulus back in January or the economy would founder, now tells us that they will spend less than $40 million of the $4 billion this year, or less than 1 percent of what Congress provided.

As Republicans, we are deeply troubled that the Democratic majority and the Democratic administration have closed ranks behind a fiscal strategy of trying to balance the budget by 1981 by allowing the effective tax burden to reach record heights. We believe and repeatedly have proposed tax cuts, instead of tax increases, and believe that permanent tax reductions are the best way to stimulate increased capital investment and create lasting jobs.

Last May when Congress was considering the first budget resolution we proposed a 10-percent across-the-board tax cut. We said then that a permanent tax cut constituted the fiscal policy most appropriate to our economic needs and we

pointed out, according to a recent study of the Congressional Budget Office, that a 10-percent tax cut would create 1 million new jobs in 1978 and stimulate $8 billion in new capital investment. Today, as we did in May, we believe that this is the course to follow and we advocate that we follow that course, rather than go $60 billion further in debt.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois (Mr. SIMON).

Mr. SIMON. Mr. Chairman, first of all I want to praise the work of the chairman, of the members of the committee, and of the staff. It has been a real privilege to be a member of this committee and to see effective leadership, effective staff work, and members who show up. Certainly a higher percentage of members show up for Budget Committee hearings than in any other committee I have had a chance to serve on.

I jotted down just a few fundamental questions that I think we have to face as we make a decision on the second budget resolution. The first question is, is this a prudent budget? Is this a prudent resolution? I believe the answer to that is that it is.

Now, if we assume the accuracy of everything that was just said by the gentleman from Ohio (Mr. LATTA) on the job stimulus aspect of tax cuts, then I assume we would probably come to the conclusion that it is not prudent. But, if we recognize that Government has to play a role in creating jobs, I think we must come to the conclusion that it is a prudent resolution. It was not too long ago that we were talking about a $70 billion budget deficit for fiscal year 1978. We are now down to about $58 billion. Yes, we do have a prudent second budget resolution here.

The second question: is it adequate in view of the most recent statistics on unemployment, in view of some of the statistics on the economy, some of which are not too encouraging? Is this adequate? In that area we do not know for sure whether it is, but it would appear that this can help move us in the right direction. If, 3 months from now or 6 months from now, a greater stimulus is needed in the economy, we can make modifications at that point. But, it would appear that this will represent prudence and adequacy here in a reasonable fashion.

The third question is, are we guiding priorities adequately? The function of the Budget Committee is to act not only as a restraining force, but to help move us in the direction we want to go. Here, the answers are not quite as clear. If we could see where we are going 5 years from now—and somehow I would like to see us do a little more of that—we might have a little better sense of that, but we are putting a little more money into jobs and a little less money on defense, cutting back on some of the fat.

I think the fat—and my colleague from Maryland (Mrs. HOLT) might disagree with me—some of the fat is taken from the defense budget; we are going in the right direction as far as priorities.

Then, finally, are there problems? Yes, there are problems, but they are not problems intrinsic to this second budget resolution. Instead, they have to do with other things. A few minutes ago my colleague from Illinois (Mr. FINDLEY) was on the floor. I supported him in his attempt to limit any agricultural expenditure to any one farmer to $20,000. We were not successful, so this budget resolution reflects a little higher expenditure in the agricultural area for that than I would like to see. The problem is not the second budget resolution, but other action taken by this House.

This is a sensible second budget resolution. We have had effective leadership by the chairman of our committee in moving us in this direction. I strongly support the second budget resolution, and I hope my colleagues will do the same.

Mr. CONABLE. Mr. Chairman, I yield such time as she may consume to the gentlewoman from Maryland (Mrs. HOLT).

Mrs. HOLT. Mr. Chairman, inflation continues to race at a rapid clip, devouring the earnings and savings of the people. Capital investment continues to lag. Unemployment remains unacceptably high. Neither the people nor industry are confident in the future of the economy.

House Concurrent Resolution 341, the second concurrent budget resolution for the 1978 fiscal year, utterly fails to address those problems, but seems certain to aggravate the problems. It is a blueprint for excessive Government spending, meaning more inflation and continuing economic sluggishness.

The two foremost needs of the economy are these: One, fiscal restraint to reduce inflation; and two, general tax reductions to compensate for inflation and to release capital for job-creating investments. This budget resolution ignores the need for fiscal restraint and drains more capital away from productive and job-creating investments.

Before the House went into the August recess, it passed a large energy tax program that will have a heavy impact on industry and increase the prices consumers pay for most products. I consider the energy tax program to be a tremendous economic blunder and oppose it. We can only hope that the Senate will act to correct the grievous errors of the House majority.

And today we face a budget resolution which is another economic blunder of the kind Congress has been repeating for many years. Government spending will continue to grow faster than revenues. The Government will need to borrow $60 billion from the capital resources of the Nation to finance the deficit estimated for fiscal 1978.

This budget continues the erroneous strategy of attempting to pump up consumer demand with loose spending that penalizes the private, productive sector with inflation and heavy taxation. It is the road the country has been traveling for many years. It is the downhill slide toward the British condition.

We spend our time debating the macroeconomic consequences, but I want to focus your attention on the microeconomic matter of a youth without a job. Whether he is entering the job market with only limited education or a college degree, the policies we are pursuing will deprive him of economic opportunity.

The principal problem is not a mystery: The more Government takes from the private, productive sector of the economy, the sicker our economy will become. We cannot cure the unemployment problem by creating public jobs, because the consequence is to prevent the creation of jobs in the private sector. We cannot cure the inflation problem with more government borrowing and spending, because the sure consequence of free spending and lagging production is more inflation.

The costs of inflation, taxation, and suffocating regulation of private enterprise have prevented our economy from creating sufficient numbers of productive jobs for a rapidly growing labor force. The record of corporate profits over the past 30 years is mostly a downhill trend, and I believe we have reached a critical stage at which revitalization of private industry must be our priority.

Mr. CONABLE. Mr. Chairman, I yield such time as he may consume to the gentleman from Ohio (Mr. REGULA).

Mr. REGULA. Mr. Chairman, as our budget debate continues we become accustomed to an articulate seesaw operation—we give a little here, get a little there, and push our weight around till our aggregates may be a bit higher; our deficit a bit lower. It is these final figures in the second resolution, as compared to the first, that people will remember.

But this seesaw game with budget figures is just that—a game. If we talk about balancing the budget and just isolate the second resolution totals as compared to the first for fiscal year 1978, we are kidding ourselves and the public. We must look at all the totals in relation to an overall budget direction, not in and of themselves for fiscal year 1978.

It is then evident that if the budget is balanced by 1981, it will not be out of improved Federal management and reduced Government spending. It will be by the side door technique of increasing revenues by taxing the purchasing power of Americans—primarily middle-class working Americans—as they are squeezed into higher tax brackets in the next 5 years.

Let us look at the budget trend we are setting with this resolution. For example, the touting of the $58 billion deficit being $6 billion less than our first resolution is a case of premature enthusiasm by my colleagues. It is $6 billion less than we projected 3 months ago; but it is a $10 billion increase over that for fiscal year 1977. This is no example of the way to gradually keep a lid on spending. I cannot think of any business where you would increase your deficit 20 percent in order to become solvent. I hardly see that this approach can make sense to the Federal Government.

The same superficial progress is evidenced in the outlay figures. The second resolution totals $458.5 billion in outlays, a $2.4 billion decrease from the first resolution. But, compared to fiscal year 1977, outlays actually will rise by $12 billion. Each spending function in this

resolution constitutes an increase over fiscal year 1977.

These facts demonstrate that we are not exercising discipline in the process of setting floors and ceilings. Rather, we are designing what should be known as the Great Federal Sieve; with resolutions such as the one before us, spending smoothly shakes through at a constant increasing pace.

What then does this resolution present to us in terms of balancing the budget—since it will not be through reduced spending? It unveils the well-worn scheme of raising the tax burden by pushing people into higher tax brackets; and instituting $110 billion worth of new taxes within the next 5 years.

This resolution will be advertised throughout every district in the country. But no one will say we will balance the budget through increasing the tax burden. Congressmen will tell their constituents it will be balanced by reducing the deficit or decreasing spending, as this second resolution does compared to the first. Yet, we have just seen this is false. It is a shame the Federal Government is not required to practice truth in advertising. It would then have to admit that it is those taxes that will balance the budget if it is to be done at all in this administration; and not the improved management of Federal spending. From 1978 to 1982 there will be a cumulative tax increase of $275 billion produced under current tax law, real growth, and inflation. Under this resolution, there will be additional tax receipts of $97 billion in the next 5 years resulting from the President's energy program and the social security program. There will however, be no offsetting permanent income tax reductions.

From the variety of testimony received by the Budget Committee it can be surmised that the economy will continue to recover from the 1974 recession, although at a slower rate than the 7 percent of the first two quarters of 1977. This restrained recovery affords the possibility of achieving a balanced budget. However, it should not be attempted through the vehicles offered in this resolution before us. We should resort, instead, to a permanent tax reduction for Americans and a restraint on spending.

If this is not done, I suggest we add a new word to our glossary of budget terms. Immediately following the term "budget resolution," we should insert the word "euphemism," for this budget resolution will be nothing more than a euphemism for vandalizing the public of its tax dollars.

Mr. CONABLE. Mr. Chairman, I yield myself 9 minutes.

Mr. Chairman, one virtue of the Budget Control and Impoundment Act is its requirement that the administration submit its revenue projections for the coming 5 years. It forces any administration to "lay its budgetary cards on the table." The "cards" which this administration has shown us reveal how the deck is to be stacked against the American taxpayer.

The tax revenue-to-GNP ratio represents the effective Federal tax burden on the public and has been at the 18.6 percent level from the post-Korean war period through the Ford administration. The Carter administration's plan is to raise this figure to 21.9 percent by 1982. This will result in a tax increase of at least $275 billion over and above that which would be imposed if the 18.6 percent level were maintained. Put in different terms if the $275 billion tax increase were evenly distributed for the 1978 to 1982 time period, it would amount to over $1,000 in additional taxes annually for each taxable return.

This second budget resolution is a blueprint for sanctioning higher taxes. It increases the Federal deficit by $10 billion over the 1977 deficit; it imposes $110 billion in additional taxes over the next 5 years, but without any accompanying reductions in the income tax rate.

The ominous tax message contained in the revenue-to-GNP projections is convincingly reinforced in the projections of the personal tax burden through 1982. The ratio of personal income taxes-to-taxable personal income has averaged 11.3 percent from 1954 to 1976. The new projections call for it to rise to almost 16 percent by 1982. It will not require an extensive budgetary background for the average citizen to conclude that taxes are going up and by a large amount. The human effects are aggravated by the reality that as the tax burden increases the average American cannot maintain his standard of living because of the progressive nature of our tax rates and inflation. The taxpayer is trapped in a losing battle. The budgetary figures I have just outlined are not an isolated item in the administration's economic game plan but rather entirely consistent with the promises in the Democratic platform, with the President's campaign pledges and his proposals since taking office.

My purpose here is to show the impact of his taxing policies to date and place before the House the facts relating to where such policies will take us in the future.

The Democratic platform in its "contract with the people" endorsed 62 new Federal programs. Five of these proposals alone, including welfare reform and national health insurance, will add over $100 billion to the cost of Government. The platform also calls for a "tax reform at all levels" and the President has promised to balance the Federal budget by 1981.

The bottom line question is: How can these seemingly mutually exclusive and contradictory goals be achieved?

The answer is: By raising taxes—mainly on middle income workers.

Let us look at the record.

Earlier this year, the administration proposed an economic stimulus package with the ill-fated $50 rebate. During markup of that bill in the Ways and Means Committee, the administration actively supported an amendment to phase out the rebate for taxpayers earning more than $25,000 per year. I suppose the rationale was that journeymen carpenters, many of whom make $25,000 or more, are not as good as other workers in stimulating the economy. Republican efforts to effect a general tax cut, weighted to the lower and middle income brackets, were rejected. The legislation which finally passed Congress froze the standard deduction for single individuals at a flat $2,200. This is $200 below the $2,400 ceiling in the preceding tax law. This tax reform cost every unmarried taxpayer up to $58 if his income exceeded $13,750.

Next came the President's energy proposal which sought to tax America into conservation by imposing $100 billion in new levies on an already overtaxed populace. The national energy plan will cost the average four-member family $2,000 a year in tax increases when fully implemented.

Here again, Republicans stood for tax reduction but our efforts to return to the public much of the new energy tax revenue by a general tax cut were beaten back by the Democratic leadership. A general tax cut would assure the public of higher paychecks for the months and years to come. The Democratic leadership is committed to a limited 1-year tax rebate. Their objective is to divert the energy tax revenue in subsequent years to finance other programs.

The administration has not confined its tax raising compulsion to the income tax. Democratic plans for the social security tax will require everyone to dig deeper into their pockets. Their plan includes lifting the wage base for employers and employees as well as transferring $14 billion from general revenues to the social security trust fund. Estimates are that this will increase 1978 taxes by $6.1 billion, or a cumulative increase of $50.3 billion through 1982.

Another example of the administration's approach to raising taxes can be found in the "waterway user's tax" legislation, H.R. 8309, the Navigation Development Act. The act would impose for the first time a 4-cent-per-gallon tax on fuel used in commercial waterway transportation; it would rise to 6 cents per gallon beginning October 1, 1981. The ultimate goal is to tax waterway users at a level adequate to cover the entire cost of operating and maintaining the inland waterways and to provide one-half of the construction funds for new projects. The tax would have to be increased to about 42 cents per gallon to meet this objective, based on current waterway expenditures. The $350 million in waterway taxes raised by a 42-cent tax rate would certainly be passed along to the consuming public.

The approach is thus to impose new taxes at a relatively modest level with the expectation of increasnig it significantly in coming years. The pattern is to start out small and then increase the tax. Unfortunately, this approach may also be followed in matters concerning individual taxpayers.

This is the administration's tax hike record to date. The President's tax reform proposals are expected shortly. Will they be consistent with the record of tax increases or will they adopt the notion that the ultimate tax reform is tax reduction? We Republicans hope he takes the latter course, but we are aware that the tax reduction and balancing the

budget can only be achieved by reductions in spending.

Our record in this Congress is consistent with the philosophy that reductions in taxes must be accompanied by reductions in spending. In the first budget resolution we sought to reduce spending and proposed an across the board tax cut for all individual taxpayers. In the economic stimulus bill and the energy bill we proposed amendments to provide tax cuts. These were rejected by the administration and the Democratic majority. Despite our setbacks to date we shall continue our tax reduction efforts because they are consistent with what the American people want. The recent Roper poll indicating that the majority of taxpayers favor tax reduction over tax reform merely confirms what we have been advocating.

The second budget resolution before us today ought to serve as a vehicle for controlling spending and thereby enabling us to reduce taxes. Unfortunately, this resolution moves in the opposite direction as do the 5-year budgetary projections supplied by the administration. As I stated at the outset, they would increase the effective tax burden on the public enormously.

Now is the time to reverse this trend and to reorient our priorities toward tax reduction. Rejection of this resolution will be a step in the right direction.

Mr. GIAIMO. Mr. Chairman, I yield 10 minutes to the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, I rise in continued support of the budget process and also in general support of this second budget resolution which establishes a fixed ceiling on overall spending and places a firm floor under revenues for fiscal year 1978.

I rise also to commend the chairman for bringing this resolution to the floor in such a timely fashion.

In addition, I intend to endorse the committee amendment tomorrow which takes into account subsequent action by the House impacting on revenues and the conference agreement on the defense appropriations bill.

I would now like to review for a moment the performance to date of our new budget process. As most of you recall, we inaugurated the budget process at a time of great economic difficulty. Unemployment had reached almost 9 percent. The real gross national product had dropped by over $9 billion. When our Budget Act was adopted late in 1974, the annualized inflation rate hovered around 12 percent.

Since that time, we have adopted three target resolutions, two ceiling resolutions, and one "third budget resolution" specifically devoted to economic stimulus. We have recommended, passed, and implemented tax reductions and economic stimulus measures such as public service employment, youth employment, accelerated pubic works, and countercyclical assistance to our cities. Since 1975, we in the Congress, have approved over $25 billion worth of programs and tax measures specifically designed for economic stimulus purposes.

We would all like to create jobs cheaper than at the rate of $10,000 or $25,000 per job, and we are speculating on various kinds of tax credits and job credits which I hope will lead us to some more cost-effective remedies.

And what, might we ask, have all of these resolutions and stimulus measures done for us? Although we cannot ascertain with certainty the full extent of the impact our new budget process and stimulus measures have had on the overall performance of the economy, it is an acknowledged fact that we have recovered from our Nation's worst economic recession since the Great Depression; that the growth rate in real GNP has gone from −1.4 percent in 1974 to 7.5 percent and 6.1 percent in the first and second quarters respectively in calendar year 1977; that inflation as measured by the percent change in the CPI has moderated from an annual rate of 115 percent in 1974 to a seasonably adjusted annualized rate of just under 5 percent for July of 1977; that the trend in unemployment viewed over time has been downward from a high of 8.7 percent in the second quarter of 1975 to a still too high 7.1 percent in the second quarter of 1977; and that housing starts are continuing to advance strongly reaching a seasonally adjusted annual rate of 2.06 million units in July which is the second highest housing starts figure since July of 1973 topped only by March's rate of 2.09 million units.

In addition, during this period a major reordering of priorities has evolved. We have moved from 29.1 percent of our total Federal budget in 1974 to about 24 percent today in national defense. In the areas of education, training, employment, and social services, we have accelerated from 4.3 percent in 1974 to 5.9 percent today. Health expenditures have gone up, perhaps in large part due to inflation, but they are up from 8.2 percent to 9.6 percent today.

Mr. Chairman, I applaud such apparent progress to date and endorse the attendant shift in priorities and the striking of a reasonable balance between our national defense and international responsibilities, on the one hand, and our domestic and social commitments on the other.

Unfortunately, lest we pat ourselves on the back too much, let me remind the Members that we have not yet regained Camelot. We have a number of problems. We have some scattered bad omens on the horizon. We know we have had to readjust downward our expected growth rate in the second quarter of this year from 6.4 percent to 6.1 percent. We know that durable goods sales are not as they perhaps should be. They leveled off in July and in June. We have some weakness in food store sales, which has already been alluded to. Our car sales have degenerated from 12.2 million units in March down to 10.8 million units. Also, we have a shortfall that has been reviewed in some other committees in Congress which is now somewhere at the $12 million to $14 million level, so we do not really know what we have stimulated and what we have appropriated for and what is really just window dressing on the part of sitting bureaucrats downtown.

Some economists feel that such trends represent a welcome cooling of an overly hot growth rate. I do not subscribe to this view, and feel that we must keep alert to such early signs of a faltering or sputtering economy.

Far more damaging, of course, are the unemployment statistics that we have. We are all well aware of the fact that teenage unemployment is still over 18 percent.

Minority unemployment is an alarming 40.4 percent. Basically what this means is that for teenagers who are counted in the statistical examples under the system under which we were currently operating, this system simply is not working since we have 2.4 times as many minority unemployed as majority unemployed. These are not good signs, and we are going to have to do something in the basic committees themselves; it cannot be done just in the Committee on the Budget, it has to be done in the Committee on Education and Labor and the Committee on Appropriations in order to attack structural unemployment. Exactly how we can do that I am not positive, but I would hope the administration might make for formidable efforts to specify and promote the job credit program that was recently enacted by the Congress and signed by the President. I see no word whatsoever in the statistics or in the propaganda put out by the Government as to what the job credit program is doing.

I spoke to several business groups in California and advised them that on the first $4,200 of wages paid to teenagers and others, over and above their 1976 base, they can get a 50-percent credit. They do not really have to pay $2.50 as a minimum wage in California, they can really pay an effective $1.50 to hire new employees under the job credit program.

So, Mr. Chairman, I am very much concerned that we do something in the structural unemployment area.

Secondly, I am concerned about the passivity with which we have constructed the second budget resolution. There ought to be more people here on the floor, and there should have been, perhaps, a more vigorous debate in the Congress, but we have just come back now from our districts. As a practical matter, we are ratifying spending actions that have already been taken elsewhere with little or no thought to disciplining our collective actions as evidenced by some of the more inflationary energy package pricing initiatives and farm bill support payments and benefits assumed in this resolution. Lest we be accused of being mere scorekeepers, I feel that we should take a more activist and disciplined stance in setting future expenditure ceilings.

One final point, Mr. Chairman, and that is that I express some concern, and perhaps this would require an amendment at a later time, with respect to the budget process at some future date. This concern is the very real lack of Member continuity we have imposed upon the membership of the Budget Committee here in the House as a result of the limitations contained in our Budget Act. As you are all well aware, no Member of the House may serve on the Budget Committee more than 4 out

of every 10 years. Although this insures a high degree of participation in the budget process over time, it is becoming apparent to those of us genuinely concerned with the overall effectiveness and continued viability of our new process, that the practicality of this restriction can no longer be taken for granted. For instance, a 4-year tenure is merely long enough to become extremely knowledgeable about and proficient with the highly complex process we enacted back in 1974. It seems that as soon as Members master the process it is time for them to retire from the committee. The end result of such a lack of continuity is a continually expanded gap between the quality of the knowledge of the professional staff and the Members coming on the committee. So I believe this is a matter that we ought to look at and determine whether or not this is an item that we ought to continue with in this process.

The fact of the matter is that the members on the Senate committee are constantly and continually gaining in stature and posture and in aggressiveness, and this makes it extremely difficult for us to bargain with them when we are junior members and they have this high degree of seniority which they are continually gaining.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate my colleague, the gentleman from California (Mr. LEGGETT) yielding to me and I join with the gentleman in saying that I think it is important to support this process.

So I do not think we have offered enough discipline to the system as I think we should. But the gentleman is right that it is important to preserve the process and to force the Congress to review the budget on an overall basis instead of piecemeal as we did in the past.

I was interested in the gentleman's comments about a shortfall on the spending side—I would call it savings.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from California (Mr. LEGGETT).

Mr. ROUSSELOT. If the gentleman will yield further, regardless of the terminology applied, this morning in committee when we were discussing some of the overall figures, I was told that it is really hard to get a definitive figure for the end of this fiscal year ending October 1 for the 1977 budget as to whether the amount of savings—or shortfall, whichever one wants to call it—would be $9 billion, $10 billion, or $12 billion. I notice the gentleman mentioned $14 billion.

Mr. LEGGETT. That is what I read.

Mr. ROUSSELOT. The gentleman just read that in the paper. It is nothing fixed. But is not part of the reason for that that this administration has stated that they have had some difficulty in moving the money out as fast as Congress would like it to?

Mr. LEGGETT. I think the gentleman is exactly right. We do have a problem in moving funds.

Mr. ROUSSELOT. The gentleman means they cannot spend it as fast as they would like.

Mr. LEGGETT. As fast as appropriated. The thing is we do not want them to spend it foolishly.

Mr. ROUSSELOT. No. Certainly we have been seeing that for years.

Mr. LEGGETT. We may have a general plan, and that general plan just does not seem to work out sometimes in practice, so the money is not being spent out. I think we ought to be frank with ourselves in not saying we have stimulated the economy by $6 million, as an example, if only $3 million is spent out. So this is a method by which we have to be honest with ourselves, I think, in accounting for what is going on, and if there is a conscientious effort by the administration in fact to save money because they do not want to go into the market to borrow, or various and sundry other kinds of things.

Mr. ROUSSELOT. Those are all good things, by the way.

Mr. LEGGETT. Sometimes they may be, and sometimes they may intend to thwart the will of Congress. If there is an intent to circumvent the Impoundment Act, then I think that that is a matter we have to address ourselves to, but if this is merely an action under the so-called 1921 antideficiency legislation, then that is something else again.

Mr. ROUSSELOT. I agree with the gentleman that we should encourage them to save money wherever they can and that they should do it.

Mr. CONABLE. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Chairman, first of all, I commend those who labor on the Budget Committee. They undertake a very vital task, I am sure with very little applause at any point during the year, and it is one that I think is underrated in importance by most of their colleagues. I salute them for their endeavors.

I have a couple of questions to raise about function 350 which is agriculture, and perhaps someone on the committee can respond to my questions. I notice, for example, that the budget outlay for agriculture for the fiscal year is $6.1 billion and the latest data I have seen from CBO puts the best educated guess at $6.3 billion. President Carter and Secretary Bergland have announced what they intend to do in the way of target prices, loan rates, and other policies, assuming the bill that is now in conference does become law. This CBO estimate of $6.3 billion is based on the assumptions that follow from the announcements by the President and by the Secretary. The question I raise for any response that may be made is would it be proper for the committee to increase the item for agriculture from $6.1 billion to $6.3 billion?

I will be glad to yield to my friend, the gentleman from Connecticut (Mr. GIAIMO), the chairman, for a response.

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield, I do not think we should adjust that figure at this time. Bear in mind we are talking about estimates only. It is now $6.1 billion, and whether it should be $6.1 billion or $6.3 billion is a little uncertain at this time. The Administration is reviewing these estimates. The 20-percent set-aside which was recently announced, instead of the anticipated 30 percent, played a role in that. It means about $200 million in additional spending, so we have to restore that $200 million at some point. But there are reestimates for the feed grain programs still to be made and reestimates on sugar price supports and so forth.

So until we have a better handle on what these reestimates will show, and I suspect we will have that in a few days and undoubtedly by the conference, I would hesitate to add or subtract $100 million or $200 million to or from these budget estimates, which were the best we could possibly come up with at this time without additional and harder evidence.

Mr. FINDLEY. I thank the gentleman for that comment. I assume the gentleman will agree with me that the budget resolution when it is adopted by the House should however reflect the best estimates of expenditure that can be provided through official sources at that time.

Mr. GIAIMO. Even if we are unhappy with it, I think it should reflect the best estimates.

Mr. FINDLEY. And I am sure the gentleman is unhappy with many aspects of this resolution. For example, even if we assume the budget outlay for agriculture is $6.1 billion, it is an all-time record high for agriculture in the history of the country.

Mr. GIAIMO. It may well be and I would not be surprised if it is, but do not have the estimates.

Mr. FINDLEY. I understand 1969 was the closest to this figure and it was $5.8 billion, so this is $300 million above that, and probably even higher.

And I believe I am correct and I hope the gentleman will correct me if I am not correct, this estimate of $6.1 billion as the cost to the American people of the agricultural programs does not include the cost which is represented by the new sugar program which will increase costs to the American people as consumers. Am I correct on that, Mr. Chairman? It does not include an estimate of increased consumer costs as a result of the legislation.

Mr. GIAIMO. The gentleman is absolutely right. In addition to what the Government may spend there is the question of consumer costs in agricultural products, particularly in sugar.

Mr. FINDLEY. Yes. And this legislation which is now in conference will mandate a price on sugar which will increase costs to users of sugar. Some estimates have put that as high as $1 billion in increased costs for the year. If that is accepted as an accurate estimate, then the price tag to the American people of the agricultural programs for the coming fiscal year is closer to $7 billion than it is to $6 billion.

I have a suggestion which I hope my colleagues in the committee, those on the Budget Committee and off the Budget Committee, will give consideration to. I was heartened to see the an-

nouncement by the chairman of the Budget Committee in the other body, the gentleman from Maine, to the effect that he intends to offer language to the budget resolution which will direct the Senate Committee on Agriculture and Forestry to go back to the drawing board to cut back on the budget outlays for agriculture, to bring them in line with a level of $5.6 billion. I find that very heartening that the chairman of the Senate Budget Committee would seek to bring about this discipline which seems to me a logical procedure if we are going to make the Budget Act really function.

I would raise the question to any of the Budget Committee members if they would support language to the House resolution which would direct the House Agriculture Committee to go back to the drawing boards to redesign the farm programs so that in the budget outlay for the coming fiscal year there is a cutback to $5.6 billion. I would be heartened if my friend, the gentleman from Connecticut, will support the idea.

Mr. GIAIMO. Mr. Chairman, if the gentleman from Illinois will assure me of the chances of passing that, I might go along with the gentleman in trying to get that kind of reconciliation language passed.

Mr. FINDLEY. We have stood almost alone on other occasions, maybe we can do it again.

Mr. GIAIMO. I recall one vote where there were only three; the gentleman from Illinois, myself, and I think the gentlewoman from New Jersey.

Mr. FINDLEY. And we were right.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. CONABLE. Mr. Chairman, I yield 1 additional minute to the gentleman from Illinois.

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield further, we fought that problem and, frankly, the House clearly expressed its will on the question of agriculture quite forcefully. We did not think we ought to resume that struggle. Therefore, I do not think we should go down the reconciliation road in this instance.

Mr. FINDLEY. I can understand the gentleman's feelings. Certainly, the President has not put his weight behind budget restraints. Back in March he talked about a $2 billion ceiling for agricultural outlays. Now he is on the verge of signing a bill that is over $6 billion.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I am glad to yield to the gentleman from Illinois.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. CONABLE. Mr. Chairman, I yield 1 additional minute to the gentleman from Illinois.

Mr. FINDLEY. I yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, my colleague from Illinois touched on one point that is part of this fundamental problem in the budget and in the agricultural field, that is, some of the expenditures we make in the agricultural field in fact twice tax people, because they call for subsidies and at the same time raise prices which cost the consumer something. I hope my colleagues and some others on the Committee on Agriculture will take a good, hard look at target prices more and more as the answer in this area, so the consumer can get that product at a lower price that is deflationary and we do not impose in a double way, as we do on too many things right now.

I commend my colleague for his leadership.

Mr. FINDLEY. Mr. Chairman, in view of the professed concern of the Carter administration over the need to curtail Federal spending, it is instructive to see just how this same administration has performed on its promises to hold the line on Federal farm program costs in the new farm bill.

Things are not always what they appear to be in Washington, and words in this town often don't mean what they seem to say. But in this case it looks as though someone has really been taken down the primrose path. Originally, President Carter set a $2-billion ceiling on spending for agriculture programs. A few months later, he changed his mind and said he would accept a farm bill that would raise the cost of agriculture programs to $4 billion. Now, he is about to sign a farm bill that will up the first-year cost of farm programs to a whopping $6.3 billion—a threefold increase over what he said he would accept just 6 months ago.

Surely the administration is not following a premeditated policy of deliberate misstatements and false positions on the farm spending issue. More likely, the President, who has been characterized as a "guy" who "is going to be brutal on spending," seems inclined to yield easily to pressure groups.

Back in April, Secretary Bergland was quoted as saying the President had warned him of his determination to hold the line on farm spending, and had given the warning while "he gazed at me with those big blue eyes." "This guy is going to be brutal on spending," the Secretary is reported to have said.

It looks like those big blue eyes blinked.

The following chronology traces the course of the farm bill, and the administration's constantly shifting positions on it, from the first Carter/Bergland proposal to the House and Senate Agriculture Committees back in March to the present crisis over the budget resolution. It consists of excerpts from the public media, from USDA press releases and from the testimony of Agriculture Secretary Bergland before the Congress, which outline the numerous policy shifts of the administration as the farm bill moved through the legislative process.

"THIS GUY IS GOING TO BE BRUTAL ON SPENDING!"

March 23–24, 1977: Agriculture Secretary Bergland appeared before Senate and House Agriculture Committees with Administration's farm program proposals. He said, "The fact is that we are going to do all we can to curtail Federal spending. The program we are offering today will have very modest costs to the Treasury—estimated, variably, between $500 million and $1 billion, depending on weather." (House Hrgs. p. 160)

April 19: President Carter approved changes in farm program proposal costing an estimated $1 billion over the Administration's original proposal. Secretary Bergland warns that the estimated $2 billion total cost of the program is "dangerously close to the administration's spending limit" and that a program with higher total costs "faces a serious threat of veto." (USDA Press Release)

April 26: (Associated Press) The Secretary of Agriculture, Bob S. Bergland, said yesterday that any Congressional increases in President Carter's proposals for major crop support levels "will increase the possibility of veto."

"I have delivered the message in terms no one can misunderstand, publicly and privately," he told a group of newspaper and farm editors. . . .

(New York Times News Service) The Secretary said he was convinced of the President's determination to hold the line on farm spending at the newly proposed level after Carter, at a White House meeting Monday, gave the warning while "he gazed at me with those big blue eyes."

"This guy is going to be brutal on spending," Bergland said privately to a few reporters after his speech. . . .

May 4: (Commodity News Service) Agriculture Secretary Bob Bergland told CNS today President Jimmy Carter would veto the farm bill approved by the Senate Agriculture Committee this morning. The Senate's bill costs an average of $3.9 billion a year for its commodity programs, and the President has set a ceiling of $2 billion. Bergland said there is not a chance the President would approve the bill. He said, "I have never been more sure of anything in my life."

May 10: (UPI) President Carter has offered to accept a proposal by House farm leaders to raise support targets for this year's wheat and corn crops if the lawmakers will scale down their proposals for target rates in 1978 and future years, Agriculture Secretary Bob Bergland disclosed yesterday.

The potential 1977 increases would not result in any payments to corn growers but would put about $360 million into the pockets of hard-pressed wheat farmers, the Secretary estimated.

May 13: (Washington Farmletter) Legislation taking national farm policy into the 1980's has been in the making since last year and still travels a rocky, uphill road. If the initial versions win approval a House-Senate Conference rewrite job will be required, and after that there is a veto hazard.

No one is sure where the White House will draw the line—so far it has made 3 "final offers." The latest was to trade off an increase in 1977 target prices for lower 1978 guarantees than the Committees favor.

May 24: (Washington Post) In an atmosphere of confrontation backed by veto threats the Senate took up the multi-billion dollar farm bill yesterday and President Carter promptly held out a $446 million olive branch.

Spokesmen for the White House offered to boost the price-support ante by $446 million for wheat farmers on this year's crop if the Senate, in exchange, would reduce its proposed future wheat and corn supports by up to $1.8 billion a year from 1978 to 1982. It was not immediately clear whether the President would have any takers.

May 26: (Washington Star) President Carter is inclined to veto legislation raising farm supports far higher than requested by the administration, and he may also veto a bill funding 17 water projects, according to a White House official. . . .

"The President is concerned about overspending," Press Secretary Jody Powell said yesterday. . . .

Administration officials have complained that the Senate version would cost at least $2 billion a year more than under Carter's plan and would threaten the President's effort to balance the budget by fiscal year 1981. . . .

July 14: (UPI) President Carter would approve a pending farm support bill even if a final Senate-House compromise on the measure is slightly more costly than the House version which Agriculture Secretary Bob Bergland endorses, a congressional leader predicted Wednesday. "I think the bill . . . is going to have to come closer to the ($2.2 billion) House version than the ($3.8 billion) Senate version to get Administration approval, but I think there is some room for adjustment," Chairman Thomas Foley, D–Wash., of the House Agriculture Committee said in an interview.

July 18: (CNS) After discussing the farm bill for over two hours Thursday with U.S. Agriculture Secretary Bob Bergland, President Jimmy Carter has decided to continue to stand by the House Agriculture Committee's wheat and corn target and loan figures, according to Administration sources. . . . the Office of Management and the Budget stressed that accepting the Senate 1977 corn and wheat rates would mean a $1.5 billion budget exposure which is unacceptable.

July 21: (Wall Street Journal) The Carter administration has abandoned efforts to head off sharp increases in farm price supports expected to easily clear the House today, and has quietly promised no veto. . . .

"There's no way we can win now, so why fight and make everyone mad?" said one administration official. . . .

If the House approves the higher farm price supports with presidential acquiescence, it will be the third boost to win Mr. Carter's grudging support. The administration unveiled its farm price recommendation in March, only to raise price support levels a few weeks later. Then last week the administration agreed to go along with the even higher support prices in the House Committee farm bill and now is surrendering to the still more generous levels expected to be adopted by the House today.

"There's been total mismanagement of this farm bill from the very beginning," said a key House Agriculture Committee official. "The administration never got its act together."

July 22: (Wall Street Journal) Confident of White House acceptance, the House adopted without any apparent dissent costly increases in farm price supports for the 1977 corn and wheat crops. . . . For months, supporters of the higher prices had privately conceded they had little chance of success.

But all that changed early this week when Agriculture Secretary Bob Bergland, at a private meeting with House Democrats, declined to promise a presidential veto. . . .

The only Congressman to seriously oppose the increases during the quick debate was House Budget Committee Chairman Robert Giaimo (D., Conn.). Mr. Giaimo said the higher prices would push the cost of the farm bill above $5 billion in fiscal 1978, which begins Oct. 1. That spending level, he said, is double what his Budget Committee had hoped the farm bill would cost. . . .

Mr. Foley said the higher wheat support prices will cost the Treasury $470 million in fiscal 1978, when the payments are made on the 1977 corn and wheat crops. . . .

Mr. Foley said that by making the target price and loan rate identical, the government won't make any direct payments to corn farmers, thereby saving the Treasury $300 million. But the amount of loans to farmers is expected to increase $170 million, he said. Mr. Giaimo disputed Rep. Foley's figures.

August 4: (Washington Post) House and Senate conferees yesterday reached a compromise agreement on a major farm bill giving wheat and corn growers higher price supports and payments, but at levels which congressional sources said should prevent a presidential veto.

Administration officials had warned that President Carter would probably veto the measure if it contained the farm payments approved by the Senate. Agriculture Secretary Bob Bergland visited the conferees to stress that the administration was adamantly opposed to the higher Senate levels. . . .

The heated, five-hour debate in yesterday's conference centered on the level of direct payments to farmers to cover their costs. The Senate had sought a $3.10 a bushel guarantee, but the House had approved only $3 a bushel. . . .

The conferees compromised on $3.05 a bushel, but that would drop to $3 a bushel if the 1978 wheat crop exceeds 1.8 billion bushels. . . .

Administration economists had warned that the extra 10 cents sought by the Senate would cost $100 million in direct payments to farmers.

(Journal of Commerce) How politics creates strange voting alliances at times has seldom been better illustrated than by the treatment this year's farm bill has been given on Capitol Hill. Unless this measure is vetoed by the President, a doubtful possibility at this point, it is certain to prove a costly affair and pose another big threat to whatever remains of Mr. Carter's budget. . . .

August 13: (Des Moines Register) Agriculture Secretary Bob Bergland surprised a luncheon audience here Friday by refusing to rule out the possibility that President Carter might veto Congress' new farm bill. . . .

A Bergland aide said later that the secretary was being cagey "because we haven't finished adding up the figures on what the exact cost of the bill will be." . . .

In Iowa earlier this week, the agriculture secretary predicted flatly that "President Carter will sign what is the best farm program ever written." . . .

August 14: (Washington Post) Remember last spring? The Congress wrestled mightily and long with its preliminary spending plan for fiscal 1978, but nearly collapsed in disagreement over how much money to spend on defense. . . . Congress now must write a binding budget for the fiscal (or federal spending) year that starts Oct. 1.

Congress has spent more than it planned to last spring in several areas. There could be at least one more nasty battle on the Senate floor as budget committee chairman Edmund S. Muskie (D-Me.) tries to pare agriculture spending. . . .

Congress hewed to the budget tenets it set down in the spring with the exception of agriculture—where farm bloc legislators horse-traded their support for some urban social programs such as food stamps in return for urban votes for higher price supports for crops.

In the resolution it sent to the floor, the Senate committee held farm spending to $5.6 billion and directed the Senate to redraw the spending levels set in the farm bill if it exceeds $5.6 billion. The process is called reconciliation. It is an avenue that Giaimo rejected on the House side, arguing that if the House knowingly votes to spend $6.1 billion or $6.2 billion on agriculture, it is a waste of time to lean against the will of the House when drafting a budget ceiling.

Senate observers expect the reconciliation directive to be taken out of the budget on the floor of the Senate, if the costs of the Senate budget contains for agriculture farm bill exceed $5.6 billion in outlays the spending. In the first budget target, the House and Senate provided $4.35 billion for agriculture. . . .

August 15: (Chicago Tribune) Despite threats of a veto and disagreement regarding some parts of the proposed farm bill, spokesmen for leading farm organizations believe it is virtually certain President Carter will sign the measure when it reaches his desk in September.

The bill, agreed to last week by a Senate-House conference committee, is expected to inject at least $4 billion into the lagging farm economy in the next year through subsidies and loans to producers of grains, tobacco, and sugar.

Chairmen of congressional budget committees have warned that the bill could cost at least $6 billion in the next year, about three times more than Carter has asked for. . . .

In discussing the likelihood that Carter will sign the bill, a Washington spokesman for one of the leading farm organizations said: "I don't know anyone on the House or Senate Agriculture committees who seriously thinks that Carter will veto this bill. If he did veto it, Congress would either have to pass a one-year stopgap law or go back to basic laws written as far back as 1938 with wheat acreage allotments and marketing quotas, and nobody wants or expects that.

"If he did veto it, Congress just might pass it over the veto. When was the last time a Democrat vetoed a farm bill?"

August 17: (Reuters) Skidding prices for farm commodities and congressional largesse have combined to send the likely cost of government farm programmes next year spiralling to the highest level in at least a decade.

The combination also sets up a credibility test for President Carter, who first sought to hold costs below a billion dollars a year. then warned as late as mid-April that he would veto any bill lifting commodity programme costs to much over two billion dollars.

Now, just four months later, the President appears ready to sign a bill which congressional budget experts estimate will cost perhaps twice that much in the first year alone.

Both the House and Senate still must take final action on the four year farm bill when Congress returns from its summer recess after Labor Day.

But approval is seen as a foregone conclusion, even though Senator Edmund Muskie and others are incensed over a bill they consider so excessive as to undermine Congress' new overall budgeting procedure.

When Secretary of Agriculture Bob Bergland reported Mr. Carter's veto threat in April, he said that the President delivered the warning while "he gazed at me with those big blue eyes.

"This guy is going to be brutal on spending," Mr. Bergland opined.

But after a series of "compromises" upward as the bill worked its way through the legislative process, Mr. Carter sent word through Mr. Bergland and other spokesmen that he probably would accept the final product. Says one congressional critic, "it looks like those big blue eyes blinked." . . .

House budget committee staff estimate that basic wheat, feedgrain and cotton programs covered in the bill will cost almost $3.5 billion in fiscal year 1978, starting in October.

When disaster payments, supports for producers of food, soybeans, peanuts and dairy products, and other agriculture programs are figured in, they say, the expected outlays rise to between $5.8 and $6.1 billion.

The last time farm programs cost as much as $5.8 billion was in 1969.

Even the $5.8 to $6.1 billion figure does not include such other programmes as food for peace overseas food assistance and the domestic food stamp plan. Adding those brings the grand total to over $13 billion. . . .

Aides to Senator Muskie, chairman of the Senate budget committee, say he plans a confrontation on what he sees as the budget-breaking nature of the farm bill almost immediately after congress returns.

Toward that end, he has included in the overall budget resolution on which congress must act by September 15 an unprecedented requirement for the agriculture committee to trim back its total 1978 spending to $12.6 billion.

The committee would have to detail by September 22 how it planned to achieve the cut—as much as $500 million.

An aide says Muskie is "very serious about this. He's not undertaking the effort lightly." But he admits chances of success are limited, in view of congressional action to date.

Both Mr. Muskie and House budget committee chairman Robert Giaimo have raised the issue of Mr. Carter's credibility in relation to the farm bill.

Even before final action by the conference committee, an angry Senator Muskie said he was "disappointed that the administration has capitulated to those advocating ever higher farm income supports.

"One wonders what further surprises from the President are in store for those of us who believe that this administration is trying to control spending," he declared.

September 2: (NAWG Newsletter) The 1977 Agriculture Act, which was approved by a House-Senate conference committee early last month, faces delay and deep cuts in program levels before finally clearing the Congress. If cuts come, increased 1977 target price payments to wheat producers will almost certainly be eliminated.

The first challenge is set to occur on September 8 when the Senate is scheduled to act on the Second Budget Resolution (S. Con. Res. 43) which places binding limits on Congressional spending. The Resolution provides only for $5.6 billion in outlays for agriculture, or $700 million less than the Senate Budget Committee estimates is needed to fund the new farm bill in FY 78. It also requires that the farm bill be sent back to the Senate Agriculture Committee where program levels are to be cut back to fall within the budget limit. Elimination of higher 1977 crop benefits is the only means of complying with the $5.6 billion spending restriction.

The situation in the House is much the same, but to a lesser degree. The House budget resolution provides a ceiling of $6.1 billion for agriculture, $200 million less than that estimated to be needed to cover provisions of the conference bill.

Edmund Muskie (Maine), Chairman of the Budget Committee will lead in the effort to reduce the FY 78 cost of the farm bill. . . .

Mr. GIAIMO. Mr. Chairman, I yield 2 minutes to the gentleman from Florida (Mr. LEHMAN).

Mr. LEHMAN. Mr. Chairman, I rise in strong support of House Concurrent Resolution 341, the second concurrent resolution on the 1978 Federal budget. The revenue floor and the outlay ceilings imposed by this resolution reflect both congressional actions on spending and the best economic assumptions available to Congress at this time. They also provide for an appropriate level of Federal activity aimed at continuing our economic recovery, and moving toward full employment and a balanced budget. This is no small achievement for a process only just completing its second full year of operation.

Of course, by this time in the budget year, we have already set congressional budget priorities in the first resolution. In addition, we have the benefit of House and conference actions on spending measures and a fairly good idea of what is still to come, as we arrive at the second resolution's binding revenue floor and spending ceilings. The major question, then, is the state and direction of the Nation's economy.

It is abundantly clear, from economic data recently made available, that the rate of our economic recovery has slowed. However, this development was expected and was accounted for in the Budget Committee's economic assumptions. Indeed, in our committee report, you may read on page 9, and I quote:

The committee expects a slowdown in real growth during the balance of 1977 and 1978, to a 5 percent annual rate. It does not expect a repetition of the sharp slowdown that the Nation's economy experienced in mid-1976.

This was written before the most recent figures became available, but the committee does not believe the latest data require any change in our assumptions.

The question, then, is how much of a slowdown we will experience and how long it will last. Most discouraging is the increase in unemployment rates and, particularly, in unemployment among blacks, but it should be noted that total employment has increased faster than the growth of the labor force in the year since last August.

There are favorable signs, as well, including business investment, housing starts, and personal income. Finally, the stimulus programs designed last spring are now ready to spend out this fall and on into next year. Where an estimated $3.3 billion was spent for economic stimulus in the last 6 months, it is expected that nearly $9 billion will be spent during the 6 months beginning October 1.

Again, Mr. Chairman, I strongly support this resolution and the congressional budget it establishes for fiscal year 1978. I believe the process has worked well and the Congress has responded admirably to the disciplines it imposes. It is only with discipline, and a balance of the competing demands on the Federal Treasury, that we in Congress will be able to keep our control of the purse strings and keep moving toward such goals as full employment, a balanced budget, and a decent life for all our citizens.

Mr. Chairman, I urge all my colleagues to join me in voting for House Concurrent Resolution 341.

Mr. CONABLE. Mr. Chairman, I yield 2 minutes to the gentleman from Louisiana (Mr. TREEN).

Mr. TREEN. Mr. Chairman, I thank the gentleman for yielding.

I have asked for this time so that I could ask the chairman of the committee a question with regard to the sugar support program that was part of the farm bill as it passed the House.

I understand that the House and the Senate conferees on H.R. 7171 have agreed to put sugarbeets and sugarcane in the Agriculture Act as basic commodities that the administration must support at a price no less than 52½ percent of parity.

On page 32 of the report on the budget resolution, in the middle of the first paragraph, there is reference made to a $0.2 billion—that is $200 million—for the sugar program recently initiated by the administration.

Then, in the next paragraph, it is indicated that the resolution includes an increase in outlays of $1.4 billion over the first budget resolution. That adjustment is made to accommodate provisions in the farm bill related to support payments for 1977 crops. As I understand it, the administration has abandoned its initial program of support payments which it proposed to make under existing law. If that is the case, of course, the $200 million for that would not be required. My main purpose in rising and asking this question is to make sure that we have in the budget resolution sufficient budget authority and outlay authority to accommodate the sugar support program mandated in the farm bill.

Of course, I do not know that anyone knows what that will cost, because we do not know which method the administration will adopt to support the price of sugar. We do not know whether the administration will adopt import quotas or tariffs or some other method. My concern is to make sure that, whatever program is adopted by the administration, pursuant to the farm bill, it is taken care of in this budget resolution.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. CONABLE. Mr. Chairman, I yield 2 additional minutes to the gentleman from Louisiana.

Mr. GIAIMO. Will the gentleman yield?

Mr. TREEN. Yes.

Mr. GIAIMO. The gentleman knows that, as a result of the actions taken in the House on the agriculture bill, we had to increase substantially the agriculture outlays in the second budget resolution. We increased them about $1.7 billion over the first budget resolution to take care of the increased requirements brought about by the passage of the agriculture bill.

Included in that was an estimate of what would be required to take care of payments on sugar. Now, remember that at the time we worked this out, it was based upon the arguments made by the members of the Agriculture Committee as to their best estimates of what would be required. What we do not know yet are the exact dollar amounts. They are still estimated amounts. It is still rather early.

In addition to that, it is highly questionable whether the administration approves of going down that road of payments in regard to sugar. They may well want to approach it via the import-tariff route. So, that would have an effect on costs also, but it is very difficult to say precisely to what extent.

The best statement I can give to the gentleman is that we have tried our best. We believe that we have provided for either eventuality in agriculture with respect to sugar. We think that there will be enough in the budget resolution, as it will be adopted, to provide for the gentleman's concern.

Mr. TREEN. I thank the gentleman very much.

Mr. GIAIMO. Mr. Chairman, I yield such time as he may require to the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. I thank my distinguished friend for yielding to me.

Mr. Chairman, it has been the good fortune of the Congress and the American people that a budget process is now firmly in place. This is the seventh budget resolution to come before the House of Representatives. It brings to a close the second full year of implementation of our new budget process. I am proud to

say that I support this ceiling resolution as yet another example of Congress capacity to appraise the economy realistically, establish reasonable national priorities, and control excessive spending.

I must admit that the deficit, as high as it is in this resolution, remains a cause for grave concern. I am equally disturbed by the increasing unemployment rate, particularly among our black teenagers, where unemployment has increased to the horrendous rate of 40.4 percent. At the same time, however, the stimulus program we provided for earlier this year will reach its full impact in fiscal year 1978.

It is also encouraging to note that the economy has shown some substantial improvements in business investment, in housing starts—up to 2.1 million annualized—and in real income. I firmly believe that had it not been for the budget process, our economy would be in far greater difficulty than it is at present. This is not to say that the Budget Committee does not have a heavy responsibility next year. Although the current slowdown was expected, Congress must continue to provide the necessary stimulus for sustained recovery.

I again applaud the work of Chairman BOB GIAIMO, the members of his committee, and the staff for the fine work they have done. I want to make special note of the close cooperation on sensitive program issues that has emerged between the standing committees and the Budget Committee. I urge all Members to support these expenditure ceilings and revenue floor for fiscal year 1978.

Mr. CONABLE. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I, too, as my colleagues have previously stated, believe that the budget process that we now go through forces the various committees in Congress to coordinate in a better manner the overall budget responsibility which we share with the executive branch, particularly in trying to do a better job on a more responsible basis explaining and coordinating the various appropriations and authorizations from the various committees.

If I may, I would like to ask the chairman of my committee a couple of questions relating to social security, the statement made in the committee report on page 64 and on page 59 relating to Function 600: Income Security. Under the portion on page 59 entitled "Social Security," there is a request in here for additional budget authority of $6.4 billion. I notice that there is a statement that this is to potentially accommodate some of the proposals that have been made relating to social security.

Again on page 64 there is a statement, "Inclusion of this budget authority does not imply an endorsement of the administration's financing proposals; instead, it simply retains the option for the House to approve additional financing within the budget authority ceiling which will be imposed under the Second Budget Resolution."

That language is very clear that this is merely to give us the option to adopt some of those proposals.

Does it also include a proposal for a tax increase to cover that, as the administration has recommended?

Mr. GIAIMO. If the gentleman will yield, it is not intended to provide for a tax increase. It is not intended to endorse fully the administration's financing proposals. What it does do is recognize that there is a problem with the social security fund which has to be addressed by the Congress, which the administration has addressed in its proposals.

We know that these proposals will have a difficult and rocky road through the Congress. But we do think it is a priority item. We think it is one which has to be addressed by the Congress.

Therefore, we are highlighting this as a priority. We are making provision for $6.4 billion in budget authority for however the Congress decides to address the problem. Whether it is from general revenue, from transfer from one fund to another, or from whatever source, we are making that amount of budget authority available because we think it is a crucial issue.

I hope there will be action this year, although I am not in a position to say how quickly Congress will act.

Mr. ROUSSELOT. Mr. Chairman, I appreciate the comments of the committee chairman, and I share with him the concern that something has to be done in the social security area. I testified before the subcommittee of the Committee on Ways and Means that held hearings and is still holding hearings on this subject.

The committee chairman can assure us that there is no inclusion of tax increases in this resolution or there is not contemplated to be included any tax increases on the revenue side?

Mr. GIAIMO. Mr. Chairman. I can assure the gentleman of that.

Mr. ROUSSELOT. Mr. Chairman, I appreciate the gentleman's comment, and I thank him for that clarification.

Additionally, I might make the comment that we had some discussion in committee this morning, and I would like to ask the gentleman another question.

The CHAIRMAN. The time of the gentleman from California (Mr. ROUSSELOT) has expired.

Mr. CONABLE. Mr. Chairman, I yield 3 additional minutes to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, my question is this:

What does this resolution contemplate in the way of producing or creating new jobs?

There is always a great emphasis in budget resolution discussions as to the amount of "stimulus" that we are providing by spending on the part of the Federal Government.

How many new jobs are provided on a proposal basis in this resolution?

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Connecticut.

Mr. GIAIMO. Mr. Chairman, this budget resolution provides jobs in nearly every category. It is difficult to determine which are new jobs and which are jobs that are part of the economic stimulus.

Mr. ROUSSELOT. Mr. Chairman, let me say to the gentleman that this is always a big argument for substantial amounts of deficit financing, and it is given as the reason our Treasury has to go out and borrow money, because we are creating all kinds of jobs, primarily through the Federal Government.

I was just wondering if we have some kind of an overall figure or target so we can answer our constituents when they ask us how many jobs we are producing by this resolution.

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield further, I will try to respond to his question. I would like to insert a table at this point to summarize the CETA job and training programs.

EMPLOYMENT AND TRAINING OPPORTUNITIES, FISCAL YEAR 1978

Program:	(1)	(2)
Comprehensive Employ- and Training Act:		
Title I	441,800	$1.880
Title II	125,000	1.000
Title III and VIII (exclusive of summer youth)	485,500	1.180
Title III summer youth	1,165,000*	.690
Title IV	44,000	.300
Title VI	600,000	4.400
Community Service Employment for Older Americans Act	47,500	.150

[1] Estimated end-of-fiscal year enrollment.
[2] Second resolution estimated outlays.
*Represents summer enrollment rather than end-of-year enrollment.

In the Comprehensive Employment Training Act (CETA), under title I employment and training there is included in this budget a provision for an end-of-year enrollment of 441,800.

Mr. ROUSSELOT. What is the cost of those jobs under title I? The gentleman says there is provision for 441,800 jobs, and what will the cost of that be?

Mr. GIAIMO. For title I, it is $1.88 billion.

Mr. ROUSSELOT. $1.88 billion?

Mr. GIAIMO. That is for 441,800 jobs and training slots.

Mr. ROUSSELOT. All right. And the next item is what?

Mr. GIAIMO. Under title II there is provision for reaching 125,000 jobs.

Mr. ROUSSELOT. Are those new jobs, are those full-time jobs, and how much will that cost?

Mr. GIAIMO. The gentleman is asking for a good bit of technical information which I can get for him and put in the RECORD.

Mr. ROUSSELOT. Let us talk about it now.

Mr. GIAIMO. If the gentleman wants to talk it out now, I can get the information for him.

Mr. ROUSSELOT. We are always talking about how many new jobs are provided, and I would like to have the information.

Mr. GIAIMO. Under the title II CETA jobs included in the budget, the outlay estimate is $1 billion.

Mr. ROUSSELOT. $1 billion for 125,000 jobs?

Mr. GIAIMO. Then we have title III jobs and training, and the new title VIII which includes a portion of the new youth initiative. The anticipated end-of-fiscal-year enrollment in these programs is 485,500.

Mr. ROUSSELOT. And that costs how much?

Mr. GIAIMO. I might add that title III also includes the summer youth program.

Mr. ROUSSELOT. And how many jobs is that?

Mr. GIAIMO. That is 1,165,000 jobs.

Mr. ROUSSELOT. Does the gentleman wish to give us the figure for title III as one item?

The CHAIRMAN. The time of the gentleman from California (Mr. ROUSSELOT) has expired.

Mr. GIAIMO. Mr. Chairman, I yield 3 additional minutes to the gentleman from California (Mr. ROUSSELOT).

Mr. Chairman, if the gentleman will yield further, the total cost of title III jobs and training plus the title VIII youth program is estimated in the resolution at approximately $1,870 million.

Mr. ROUSSELOT. That is $1,870 million for those 1,165,000 jobs that are estimated to be produced.

Are those jobs all full-time, or are they part-time or are they seasonal?

Mr. GIAIMO. They are mixed.

Mr. ROUSSELOT. They are mixed?

Mr. GIAIMO. The 1,165,000 summer youth jobs are part-time summer jobs. The other title III and title VIII slots represent job and training opportunities which may be filled by several persons over the course of a year in individually tailored situations.

The chart describes the programs in terms of the enrollment projections for the end of fiscal year 1978 which are anticipated in the Second Resolution. For some programs, such as those established under the new Youth Employment Demonstration and Projects Act, included in the titles III and VIII chart line, it is somewhat speculative as to when prior to the end of the fiscal year those enrollment levels will be reached. I present this information with the caveat that dividing the end-of-year enrollment figures into the estimated outlay figures will not give you annualized slot costs. Nor do these figures reflect the number of actual individuals to be served by these programs, as several people may move through the same training or job slot over the course of the year. For example, the Department of Labor estimates that over 2 million individuals will be served under title I of CETA in fiscal year 1978. However, I believe the figures in this chart will answer your question.

Mr. ROUSSELOT. All right. With respect to title IV what do we have there?

Mr. GIAIMO. Under title IV, Job Corps, we have an estimated end-of-year enrollment of 44,000.

Mr. ROUSSELOT. What does that cost?

Mr. GIAIMO. The estimated outlay is $300 million.

Mr. ROUSSELOT. Only $300 million for 44,000 jobs? Those are bargain-basement rates.

What about title VI?

Mr. GIAIMO. We anticipate that a level of 600,000 jobs will be reached in mid-1978, and sustained throughout the fiscal year.

Mr. ROUSSELOT. Roughly 600,000 jobs?

Mr. GIAIMO. Roughly 600,000 jobs.

Mr. ROUSSELOT. What does that cost?

Mr. GIAIMO. That is $4.4 billion.

Mr. ROUSSELOT. $4.4 billion?

Mr. GIAIMO. $4.4 billion.

Mr. ROUSSELOT. And that is for 600,000 jobs.

What about the Community Service Employment for Older Americans?

Mr. GIAIMO. We anticipate an end-of-year enrollment of 47,500.

Mr. ROUSSELOT. How much does that cost?

Mr. GIAIMO. About $150 million.

Mr. ROUSSELOT. About $150 million for 47,500 jobs?

Mr. GIAIMO. That is the Community Service Employment for Older Americans program.

Mr. ROUSSELOT. How many jobs are included in the public works section; do we know that? How many are produced there?

Mr. GIAIMO. Accelerated public works construction.

Mr. ROUSSELOT. The gentleman can take it all together or separately, whichever way he wants.

Mr. GIAIMO. The outlays for the accelerated public works program are estimated at $2.9 billion, and will create approximately 116,000 man-years of employment.

Mr. ROUSSELOT. That is $2.9 billion?

Mr. GIAIMO. That is $2.9 billion.

Mr. ROUSSELOT. How many jobs do we get out of that?

Mr. GIAIMO. That will fund 116,000 man-years of employment.

Mr. ROUSSELOT. That is 116,000 man-years, and that is roughly how many jobs?

Mr. GIAIMO. Again, we are talking of man-years and jobs, so the total number of people employed on such projects for some period of the year is something more than that. This is because of job turnover.

Mr. ROUSSELOT. As I understand it, the formula is almost twice of what is it exactly?

Mr. GIAIMO. We are not going to get into breaking down man-years into jobs.

Mr. ROUSSELOT. I will state to my Chairman that that is one of the big things we always hold up to the American public, that by spending all of this extra money we are producing jobs, and we should begin to pin down what they cost.

The CHAIRMAN. The time of the gentleman from California (Mr. ROUSSELOT) has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman for yielding me this additional time.

To continue, I think we should pinpoint what we are producing or what we think we are going to produce in numbers of jobs so that the American people know what to expect for this money we are spending.

Mr. GIAIMO. I think the American public is fully cognizant of the high unemployment rate in this country. In fact, the rate just increased in the last week, to 7.1 percent.

Mr. ROUSSELOT. Yes. I noticed that, and I thought deficit financing was going to solve that problem.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield further?

Mr. ROUSSELOT. Absolutely.

Mr. GIAIMO. This issue is of extreme importance to the American people and to the Government. We have to do something to get the unemployment rate down below the 7.1-percent figure, down into the 6-percent range at least. The only means that we in Government have is through these various job programs, whether they are public service jobs or whether they are accelerated public works jobs. Admittedly these jobs take time to develop and implement, but they are beginning to come on stream now; and it is estimated that in 1978 they are going to be coming on strongly.

The same is true with respect to our stimulus package jobs, provided for in the legislation we passed this spring. The effect will be felt in 1978, so we are spending a great deal of money.

Mr. ROUSSELOT. Yes, that is certainly true.

Mr. GIAIMO. We are providing for 7 million jobs or more, and I think we have to do this sort of thing. Even this is not enough.

If the gentleman will look at the latest statistics, he will see that regardless of what we do in the private sector, regardless of what we do in the public sector, regardless of how well the economy moves upward and onward to a higher level of production, the fact is that there are many people in this country, whom we call structurally unemployed, who are not being employed and will not be employed under the normal course of events.

We are going to have to do something about this because they are not going to find jobs easily, if at all, in the private sector.

Mr. ROUSSELOT. Mr. Chairman, I could not agree with my colleague more. The thing is, what do we do to put those people back to work? For instance, I wonder if we have compensated for the President's action to terminate the B–1 bomber?

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CONABLE. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. ROUSSELOT. We certainly felt the impact of that in California, as I can tell my colleague.

Mr. GIAIMO. I can well imagine.

Mr. ROUSSELOT. Also the administration was going to help all of the people who were on the unemployment rolls, but it would appear that they went in the opposite direction on the B–1 bomber where in California, alone it is estimated that approximately 1,000 jobs will be lost. Of course, I know that that is a minor item to the gentleman from Connecticut (Mr. GIAIMO) who probably

does not have as many people affected as we do in California.

But, as I say, the administration went the other way.

I wonder, what does the gentleman have to recommend, or the leadership of his party, in the way of putting these people to work who were put into the unemployment field as a result of terminating the B–1 bomber?

Mr. GIAIMO. I am delighted the gentleman has brought in the matter of unemployment from the B–1 bomber controversy, but that only magnifies and adds to an already intolerable situation. I would hope that my friend, the gentleman from California (Mr. ROUSSELOT), would join with me in doing even more in the area of finding work for more Americans who are unemployed, whether they are unemployed because of the B–1 bomber layoffs or whether they are unemployed because of the fact that there are not enough jobs for the youth in America, or for the minorities in America, or for whatever reason. We have to find jobs for them. This is one approach, and perhaps we could offer a newer approach and a better approach. But certainly the answer is not to cut back on Government job-creation efforts. We have to encourage our unemployed until they can be absorbed into the private sector. Until we can do something with structural unemployment either through training or otherwise, we simply have to find jobs for them. But certainly the answer is that no government, and certainly not the Government of the United States, should turn its back on the needs of unemployed in this country.

Mr. ROUSSELOT. Of course it cannot do so, and certainly we must continue to find ways to lead them to new jobs, not only with the Government but also with the private sector where most of the jobs are, in fact, created.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CONABLE. I yield 2 additional minutes to the gentleman from California.

Mr. DEVINE. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to my distinguished colleague, the gentleman from Ohio (Mr. DEVINE).

Mr. DEVINE. Mr. Chairman, I thank the gentleman from California for yielding to me.

Mr. Chairman, one of the great mysteries to the American people is that when we come out with figures such as showing a jump from 6.9 percent to 7.1 percent unemployed, is that if we look at the newspapers across the country, for example, take my own district, in Columbus, Ohio, where our rate of unemployment is 5.7 percent, that if you look at the papers you will find six or eight pages—not six or eight columns, but six or eight pages of help wanted ads.

And that goes also for the Washington Post here in the Nation's Capital where you will find 8 or 10 pages of help wanted ads.

The gentleman from Connecticut (Mr. GIAIMO) says that all we have to do is have more governmental aid. It seems to me that the more jobs we produce out of more and more governmental aid, through the millions that we pour into it the more jobs that are needed, I am talking about the literally billions of dollars we put into such programs to find more people more jobs, and it just seems that the more millions and millions of dollars we pour into job creation that there seems to be more and more unemployment. Perhaps that approach is wrong. I do not know if the gentleman is in position to respond as to why there are 6 to 8 to 10 pages of help wanted ads and unemployment continues to go up? Can the gentleman tell me why that is so?

Mr. ROUSSELOT. I will say to my colleague, the gentleman from Ohio, that the problem of structural unemployment, those people who remain continually unemployed, as we know through studies conducted by our committee, the Committee on the Budget, and the Joint Economic Committee, show that something like 80 percent of the people who are listed as unemployed in any one month are people who are unemployed for anywhere from 20 weeks to less. So that we can tell you, as I think the gentleman from Connecticut has done so, it is not those who are in transition, that is, moving from one job to another, or those who have been terminated and who will find another job within a given period of time. Those people seem to be flexible enough to be able to go on to another job, find another job eventually.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CONABLE. Mr. Chairman, I yield three additional minutes to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman for yielding me the additional time. I think that this is an important issue. Those people who have the capability to move on to other jobs will seek out and find a way to move to another job, whether they are in the government or in the private sector as the overwhelming majority are. What the gentleman from Connecticut is addressing is what has become known as the structurally unemployed, those who are more permanent, who find it more difficult to find either permanent jobs or long-term jobs and do not have the skills or the capability or the know-how to find those advertisements in the paper of which the gentleman from Ohio speaks. But there is a surplus of jobs constantly being advertised, and many employers will tell us, as they have in my district in southern California, that they have more jobs available than there are people to fill them.

Mr. DEVINE. The gentleman is right. The Bureau of Labor Statistics traditionally has held that 4 percent unemployment is considered by them as full employment. So I presume that the 4 percent are those structurally unemployed or unemployable, as the gentleman pointed out. But we are talking about that segment above. There are many who are qualified for unemployment benefits who go on and collect them until they run out, and they are out in the market. I suppose they are included in the statistics.

Mr. ROUSSELOT. I think that is true, but none of us likes to talk about that segment or that percentage of people who have great difficulty becoming employed or who do not know how to find jobs, or who do not have skills for jobs other than what they have been working in the past, or who do not have the understanding of how to look for something new or different. But the point I was trying to make in this discussion is that I do not think the billions we poured into many of these so-called emergency programs or accelerated job programs really have solved the problem of finding ways to employ these people in that unfortunate category of what we have come to term—and I think it is a bad term—the structurally unemployed. We really are not solving it in some of these cases by just pouring these billions of dollars into these programs.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Connecticut.

Mr. GIAIMO. I thank the gentleman for yielding.

Of course, public service jobs have not solved the problem of unemployment. But the fact is that these jobs contribute to the solution. Perhaps we are not doing enough. Perhaps we have to adopt other means. I would not want the gentleman to think that the public service jobs are all filled by people who are structurally unemployed.

Mr. ROUSSELOT. Some of them are.

Mr. GIAIMO. Some are, but many are not. Many are not. There are many skilled people who are working in public service jobs.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GIAIMO. I yield 2 additional minutes to the gentleman from California.

If the gentleman will yield further, I was back home in Connecticut last week, and many people came into my office asking me to help them find jobs. I had great difficulty. I could not find them anything. I do not even know where to recommend they look, there are so many jobseekers. We have to find some answers, and until we do, until we can absorb most of them into the private sector, we are going to have to use this type of approach. We may have to try new approaches.

Now to get to the question of unemployment in general, the fact of the matter is that new jobs are being created in the private sector each month, but the other part of the equation is that the labor force increases each month.

Mr. ROUSSELOT. More rapidly than the number of jobs.

Mr. GIAIMO. More rapidly, so we have to find more jobs than we are finding in the private sector.

Mr. ROUSSELOT. Some of us in this House believe that one of the ways to stimulate that is to give an across-the-board tax reduction to all taxpayers because individual Americans do have ways of investing in new job opportunities. They may put their money into a savings and loan, and that will help the housing field. If they are individual small businessmen, they may put their money into

expanding their own businesses, and that will create jobs.

We believe in, and many of us have tried to advocate, the concept of an across-the-board tax reduction because that will give the stimulus to the private sector in many cases. We do not say it is the only answer but we say we ought to try it.

Mr. GIAIMO. There are many ways of stimulating the private sector and I think the new administration under President Carter is making great strides in that direction, in giving encouragement and incentives in tax legislation, and in many ways giving this stimulus to the private sector to develop greater participation and greater activity and greater expansion in private investment to bring us out of the recession and to better economic conditions. We think it is working but I think we have to allow some time for the effects of these efforts to be felt.

Mr. ROUSSELOT. We hope the gentleman can persuade the Ways and Means Committee leadership to come up with a tax reform package that will in fact give an across-the-board tax reduction to all the people in this country.

Mr. GIAIMO. I do not want to leave the gentleman under a false impression. I did not endorse any specific type of stimulus to the private sector. I do not think the gentleman's across-the-board tax cut, which has been tried in the past, has sufficient validity to warrant its adoption. There are many other ways to stimulate the private sector.

The CHAIRMAN. The time of the gentleman from California (Mr. ROUSSELOT) has expired.

Mr. GIAIMO. Mr. Chairman, I yield 10 minutes to the gentleman from California (Mr. MINETA).

Mr. MINETA. Mr. Chairman, I rise in support of House Concurrent Resolution 341, the second budget resolution for fiscal year 1978.

First, I want to thank the distinguished gentleman from Connecticut, BOB GIAIMO, for the tremendous amount of effort he has put into his assignment as chairman of the Budget Committee. His dedication and hard work over the past year have been an important element in the continued success of the congressional budget process.

Mr. Chairman, it is with considerable enthusiasm that I urge my colleagues to vote in favor of this resolution. For it is with this measure that we will complete the second year of full implementation of our new budget process. One of the significant contributions which this process has made, one which is often overlooked, is the timeliness with which spending bills have been considered in the past 2 years. The deadlines in the Budget Act are effective and for the second year nearly all spending bills have been completed before September. Appropriations bills voted on halfway through the fiscal year and continuing resolutions are fast becoming a thing of the past. If this process did nothing more than that, I believe it would still be viewed as one of the most important legislative developments in the past decade.

As you all know, when this second budget resolution is adopted it will set a binding ceiling on spending and a binding floor on revenues, and no legislation which will breach those limits may be considered. For only the second year in its history, the Congress is voting on the Federal budget in its entirety. This resolution stands as a testament to the ability of Congress to assume an active and responsible role in establishing budgetary priorities.

While many individuals might easily find something to bicker with in the figures which we on the Budget Committee are recommending, it is important to cast off personal desires and to support the budget process during the vote on final passage. Rising above special interests, saying no to parochial concerns in order to view the Federal budget in its entirety is the nature of the game when we try to establish priorities with limited resources. As we saw during consideration of the first budget resolution in May, without such a willingness to compromise, the budget process can break down. Such a failure is something I am sure none of us want to see.

Mr. Chairman, this second resolution recommends a budget that deserves the support of a substantial majority of the membership of this House. It reflects the actions taken over this past summer and for the most part, is within the guidelines established by the first budget resolution. Outlays were reduced from the first resolution in 10 functional categories, and increased in 6. The major reductions were in national defense, international affairs, and interest. The major increase in outlays was in the agriculture function.

Compared with the targets set in the first budget resolution, this second resolution shows considerable progress in reducing the deficit projected for fiscal year 1978. The figure included here is some $4 billion below the first resolution target. That reduction is due to higher revenues of $1.8 billion, attributable to more optimistic economic assumptions, and to lower outlays of $2.2 billion, the result of lower than expected appropriations actions and program reestimates.

While the deficit is still considerably higher than we would like it to be, I believe it is necessary and prudent if we are to have a fiscal policy that can sustain our current recovery through 1978.

Indeed, if the disappointing economic news of last week continues, we may be faced with the necessity of even more fiscal stimulus before fiscal year 1978 is completed.

For the present, however, I still believe there is good reason to be optimistic about economic prospects for the coming year. While indicators of prospective business conditions do not point to booming growth, neither do they indicate any significant weakening in the months ahead.

For example, housing starts continued to show remarkable strength in July—rising at a seasonally adjusted rate of 2.06 million units; the second highest level since July of 1973. In addition, savings and loan associations still hold unusually large deposits—thus insuring an adequate flow of mortgage money in the future.

Another encouraging development is the continued strength in capital spending: contract awards for commercial and industrial building are advancing sharply, capital appropriations for manufacturers is high and rising, and machine tool orders continue to be strong.

To me, this strength in capital goods spending is one of the most promising economic developments of the last year. I think it is a pretty good indication that we can expect good growth in the foreseeable future.

Finally, the stimulus package which we voted on last spring is just starting to get into full swing. The most recent estimates show that the impact will be $3.3 billion in the fourth quarter this year, and about $5.3 billion each in the first and second quarter of next year.

All of this leads me to believe that economic prospects are still good and that it is premature to say we are headed for another slowdown like we had last year. The fiscal policy implicit in this budget recommendation remains the most prudent course to follow.

A considerable amount of the stimulus included in the budget recommendation is in the form of Federal grant outlays to State and local governments. The committee recommendations amount to slightly more than $78 billion in total—a 16-percent increase over the current estimate for the 1977 fiscal year. Almost $24 billion of that sum is for programs providing income security and minimum services to needy individuals. The remaining outlays support ongoing public services, demonstration projects, and capital development efforts. Such aid to State and local governments represents one of our most important antirecession tools. When the economy turns down, State and local governments are especially hard hit, and their actions can be a further drag on the economy, working to counter other Federal stimulus plans.

Thus, the recommendations in House Concurrent Resolution 341 provide for important and substantial support to State and local governments. This is an essential element of the fiscal policy projected for fiscal year 1978.

Mr. Chairman, I would also like to point out the legislative savings included in this resolution. The budget resolution recommended assumes the enactment of program reforms that would save over $460 million in budget authority and $1 billion in outlays in the coming fiscal year. In 5 years we would realize cumulative savings of $21.7 billion in outlays. These savings would result in areas such as the control of hospital costs, reform of the wage board pay system, and revision of certain social security benefits.

To me this is one of the most important functions the budget process can serve—it points the way toward more efficient Government programs. The successful implementation of these reforms would mean the fulfillment of many campaign promises I am sure many of us made during the last election to cut down on waste and improve ineffective programs. I would urge my colleagues to vote for this second budget resolution, and to support the program reforms we have suggested.

While the overall recommendations

made here are excellent and deserve the support of all my colleagues, there is one major budgetary development which cannot be accommodated by the congressional budget process—and that is the continued Federal budget shortfall. Current projections show that the shortfall will be between $12 and $14 billion in fiscal year 1977. The 1976 shortfall of $11 billion has been cited by many economists as one of the reasons for the slowdown in the economy in the second half of last year. If another shortfall occurs in 1978, it will be an additional drag on the economy—one which the already weakening economic signals indicate we can ill afford. Spending shortfall is a problem that is not peculiar to any one program, but rather is apparently an across-the-board bias in the executive branch which overestimates outlays at an early point in the budget process.

Mr. Chairman, I believe such shortfalls are one of the major shortcomings of Federal budget process—it makes effective planning impossible, and can wreak havoc with our congressional attempts at budget control. Inasmuch as this is an across-the-board failing, I hope that over the coming year all of us can work to resolve the problem. It certainly will be one of my priority items on the Budget Committee.

Mr. Chairman, final passage of this concurrent resolution will mean the end of the second full year of implementation of the congressional budget process. It will show that Congress is determined to make this experiment in fiscal responsibility work.

As I said earlier, this resolution will not please everyone. All of us hold strong beliefs in the value of some programs and the wastefulness of others—many of you will continue to believe that the wrong programs have been emphasized. I, for one, feel that considerably more progress could be made in reducing spending in the defense category and improving the effectiveness of many of our social programs. But I am going to vote "yes" on final passage, and I am going to work hard to convince each of you to do the same—because it is the process that holds the real hope for better government and because it is the process that makes constitutional power over the purse more than an empty phrase. And it is the discipline of the second budget resolution which invigorates that phrase with renewed substance. I urge all my colleagues to vote yes on House Concurrent Resolution 341.

Mr. ROUSSELOT. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. MILLER), a distinguished member of the Committee on Appropriations.

Mr. MILLER of Ohio. Mr. Chairman, I thank the gentleman from California for yielding. I would like to ask the gentleman from Connecticut, the chairman of the committee, how can we rationalize the fact that we would have a $58.6 billion deficit, which amounts to approximately $160 million a day that we will be spending in this coming year that we will not be taking in? We will be going in debt $160 million a day.

I heard the discussion concerning the public works jobs, but I also know the problem we have when we spend more than we take in, and the inflation that this will create, and the higher interest rates that will result. How can we rationalize spending $160 million a day more than what we will be taking in?

Mr. GIAIMO. Well, if the gentleman had listened to my opening remarks when we began the debate on this budget resolution, the gentleman would have heard the comments that I made, based upon the fact that most of this deficit is caused by the high unemployment rate. Unemployment means two things, both of them bad.

It means that we have to pay out more in governmental expenditures to take care of people who do not have the wherewithal to take care of themselves, because they are unemployed. Second, it means that we do not take in revenues which they would be paying in taxes if they were employed. If we could get the unemployment rate down from 7.2 percent to about 5.2 percent, I think we would cut the deficit by about $35 billion.

It is this kind of effort that Government is going to have to make to stimulate the private economy and the private sector so that we have a better rate of economic development to get unemployment down. Once we do that, we are going to get our deficits down, and then we are going to be able to meet some of our many problems that beg for solution, which have been waiting and which Government has not been able to address itself to, because of these high deficits.

I do not like these high deficits any more than the gentleman does, and I do not like them any more than former President Ford did, who sent up budgets year after year with high deficits; not because he wanted them, but because that was the state of the economy. It is something that none of us like, but it is a fact of life; it is a reality, and we have to address ourselves to it. We have to meet the necessary needs of Government and we have to take those steps which will encourage the economy, both in the private sector and in the public sector, to do a better job so that we will have less unemployment and controlled inflation, and therefore an absence of deficit.

Mr. MILLER of Ohio. I thank the gentleman for those remarks but let me clarify that. I did hear that unemployment was the problem, and I understand that unemployment is a problem. But, I also understand, in the remarks that the gentleman just made, that if we reduced our unemployment from 7.2 to 5.2 percent, we would reduce our deficit some $35 billion.

Incidentally, that would leave a $23.6 billion deficit. How can we justify and rationalize, then, that part of the deficit?

Mr. GIAIMO. By reducing unemployment even further.

Mr. MILLER of Ohio. By reducing unemployment we have only taken the deficit down $35 billion. There is still $23 billion left, and we have been told that it is not practical to go very far below 5.2 percent. Remarks not long ago made here in the Chamber, stated that a 4-percent unemployment rate is practically zero. So, does the gentleman have any other words that could help enlighten us as to how we can rationalize that last $23 billion deficit?

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. ROUSSELOT. Mr. Chairman, I yield 2 additional minutes to the gentleman from Ohio.

Mr GIAIMO. Will the gentleman yield?

Mr. MILLER of Ohio. I yield to the gentleman from Connecticut.

Mr. GIAIMO. Most, if not all, of the deficit is made up of the unemployment problem—not all of it, but most of it. I pointed out to the gentleman $35 billion that we could reduce the deficit by, which translates itself to a reduction of approximately 2 percentage points. I think that if we got the unemployment rate down to about 4 percent, we would have a very minimal deficit, if any at all. Part of that deficit is brought about by other requirements, and by very necessary requirements, which translates itself into areas of defense, areas of foreign relations. We have just got $6.1 billion in this bill to take care of the agricultural problems.

We have all kinds of other requirements in this legislation. I think that by encouraging the private sector, creating the climate which will give us a better rate of economic growth and therefore will get unemployment down, by prudence in governmental spending, including the areas in agriculture, I will submit to the gentleman, if we do that, then I think we can have a balanced budget. I think we can get there, and I know that President Carter is determined to get there, and that this Congress is going to do all that it can to see to it that we can arrive at that point.

Mr. MILLER of Ohio. I thank the gentleman.

I understand that the gentleman does not have an easy job to attempt to balance the budget. And, theoretically, I guess if we carry it far enough down the road, that is what the gentleman's responsibility ultimately would be. Because of the spending in the past and because of the people who would not want to cut the various programs and not want to increase the taxes for the programs, it is not an easy task the gentleman has.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. MILLER) has expired.

Mr. ROUSSELOT. Mr. Chairman, I yield 2 additional minutes to the gentleman from Ohio.

Mr. MILLER of Ohio. But what disturbs me about this budget process is undoubtedly something that is out of hand and out of control as far as the chairman of the Budget Committee is concerned. When the Budget Committee requests the various committees to present the amount of money they need to cover the various agencies, departments, commissions, and committees, most respond with whatever is in the budget that was presented to them by OMB for that particular year. They carry that figure over to the gentleman's Budget Committee. Then when it is added up, and it does not

match the amount of revenue that we would have forthcoming, it is necessary to put in a red figure. Now, as has just been witnessed, we go back and blame it on unemployment, which is certainly true to a great degree, at least about 50 percent on unemployment. But I believe that we have to find a better way if we are going to truly balance the budget in the future.

Mr. ROUSSELOT. Mr. Chairman, I yield 3 minutes to the distinguished gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. Mr. Chairman, I thank my colleague for yielding.

Mr. Chairman, I, too, would like to congratulate our chairman of the Budget Committee for his hard work.

I wonder, sometimes, in this House how we are going to make out. How serious are these deficits, piled up year after year? Is it perhaps true that Congress has developed an addiction to spending? How, otherwise, is it true that just a month ago three of us stood here on the floor to defend President Carter's efforts at restraint—the chairman of the Committee on the Budget, the gentleman from Connecticut (Mr. GIAIMO), the gentleman from Illinois (Mr. FINDLEY), and myself—and 81 Members, on a division, rose against it.

This indicates something very interesting about the Members of this House. Are we wrong? Is the President mistaken when he feels that a balanced budget is necessary for the economic health of this country?

Unless we have economic health, we are not going to have jobs—and we all know it.

Is the President mistaken? Or are the people who feel that throwing more money against this terrible tragedy of unemployment are somehow right and that is the first consideration, and that any thought about prudence or a balanced budget is somehow inappropriate to the time, and unnecessary in the face of the problem?

In stating my 2 cents worth—and I am not on the Budget Committee— I think we have to examine what works and what does not work. We have to question sometime or other whether we are approaching these tragedies in a useful and constructive way.

We should never be indifferent to them, but we should question whether or not we are addressing them properly.

During this recess, when I have had a little time, I have been reading Dr. Kenneth Clark's "The Pathos of Power." There is so much there that we all need to know.

What do human beings need? We throw this money into these great agencies, and they take a great deal of money. What happens before the money gets down to the people? Are we doing anything useful at all?

Anyway, Mr. Chairman, I know the chairman of this committee has struggled, and I do respect him for that and I thank him for his efforts.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. CONYERS).

Mr. CONYERS. Mr. Chairman, as we move to consider the second budget resolution for fiscal year 1978, I suggest we keep clearly in mind the current unemployment picture.

The Bureau of Labor Statistics has reported these August figures: Overall unemployment, 7.1 percent, as high as the average since the new administration and Congress took office; unemployment rate among black Americans, 14.5 percent—and that, incidentally, is the highest unemployment rate since World War II—and black teenage unemployment rate. 40.4 percent. The disparity between black and white joblessness, which is growing, now is of the ratio of 2.4 to 1. And these figures, bad as they are, under report the true dimensions of unemployment, including those who have dropped out of the labor force out of discouragement and those who are forced to work less than full time.

The question is this: How has the economic stimulus package of the President and the Congress and the other budgetary tinkering helped to ameliorate this unemployment crisis? Has it done anything? I do not think that it has.

The Congressional Budget Office projects an unemployment rate of 7 percent for the remainder of this year, and looking toward next year, it does not see much improvement. Our own Committee on the Budget projects a 6.8 percent unemployment rate in the 4th quarter which means for black Americans 14 percent or more into the indefinite future.

Ironically, even with these high unemployment rates, which the previous administration justified as the means to combat inflation, inflation still remains at its consistently high level. Despite the failure of the economic stimulus program and the budget to make a significant dent in unemployment, this, the second budget resolution, calls for cuts in training, employment, social services, and community and regional development. From the levels established in the first resolution, while at the same time recommending increases in budget authority and outlays for defense.

The question to be answered is this: What happened to section 2 of the Budget Act which mandated establishment by Congress of national budget priorities in the light of national needs? Two years ago, in creating an independent congressional budget process, we fashioned a tool that not only would enable us to relate overall spending to revenue, but, equally important, to relate Federal spending and taxes to overall economic needs.

I have watched closely this budget process unfold over the past 2 years, and rarely have I seen us come to grips with its purpose of setting budget priorities in the context of national needs, which to me is the source and the crux of the problem. We have evaded our obligation to utilize the budget process to set priorities.

Economic issues have always been central to the public life of the country but, I submit, today the economy itself is the issue. I think this body is failing to own up to the issue of putting a stop to the terrible waste of people and of resources, of redirecting the economy to decent and adequate investment in our own people, in the communities in which they live, and in the well-being of future generations. I submit that is not being accomplished in our budgetary process now, though I have not lost hope in its future course.

Recent opinion polls report that the American people are deeply disturbed about the economy. They are disturbed both about the massive unemployment and the unrelieved inflation, which are our twin sources of concern. They are pessimistic about economic recovery, significantly reducing unemployment and restraining inflation, given current assumptions and policies.

This budget resolution, it seems to me, offers the American people little ground for optimism. It is testimony to our collective complacency over the state of the economy, and not to our inventiveness and wisdom in fashioning a better economy, which I understood to be a principal goal of the congressional budget process.

Under the circumstances, then, I cannot support the budget resolution because it fails to seize the opportunity we surely have to allocate the resources of this country in a more decent and just way, so as to give hope to the millions of Americans who are excluded from wholesome economic life.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. CONYERS. I yield to my colleague, the gentleman from Illinois (Mr. SIMON), a member of the Committee on the Budget.

Mr. SIMON. Mr. Chairman, I thank the gentleman from Michigan (Mr. CONYERS) for yielding.

I have just a couple of points. I come to a different conclusion than the gentleman does on what we do with the second budget resolution. I think, in fact, the second budget resolution reflects the action taken by the House with respect to the agricultural bill and other bills, for example. However, the fundamental point that the gentleman makes that we have not aggressively enough tackled the problems of employment or unemployment I do not think anyone can gainsay.

The statistics the gentleman cites, for example, the 7.1 percent unemployment rate, do not count; these Bureau of Labor Statistics figures do not count discouraged workers, the persons who are not even seeking a job because they have given up.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. CONYERS) has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from Michigan (Mr. CONYERS).

Mr. SIMON. Mr. Chairman, will the gentleman yield further?

Mr. CONYERS. I yield to the gentleman from Illinois.

Mr. SIMON. Incidentally, let us take youth statistics. I saw the New York Times story in which they cite an 84 percent unemployment figure among black teenagers in New York City. That is just incredible.

I have one final point: We talk about inflation and how deficits speed inflation;

and to some extent they do, unfortunately; but our inflation has been least when we have had high employment because people have a chance to be productive. It is inflationary to pay people to do nothing.

Mr. CONYERS. Mr. Chairman, has my colleague, the gentleman from Illinois, seen the study recently released by Gar Alperovitz of the Economic Alternatives Institute?

Mr. SIMON. I have not.

Mr. CONYERS. It made a very fundamental point that I would like to bring to the attention of our colleagues, and perhaps I will put a summary of it in the record. In that study he points out that the major inflationary consequences occur in four sectors of our economy: housing, energy, health, and food, which, of course, are the most critical. He points out, therefore, that workers as well as the unemployed are the victims of an economic policy that neither creates an adequate supply of jobs nor relieves the inflationary pressure.

Mr. Chairman, let me get to the point of our friendly difference, because I certainly respect my colleague, the gentleman from Illinois (Mr. SIMON), and his service on the committee.

The way in which I am trying to get us to address these points that we have failed to address is to vote against the budget resolution and send it back for reconsideration. It is not out of any disrespect for the chairman of this committee. I support the budgetary process; but I submit to my colleague, the gentleman from Illinois, that it has become a tool of evasion. We are now back in the same position in which we were before there was a budgetary process. It is being used to lock us into huge defense expenditures, and only the slightest incremental adjustments in spending for human resources. There is no way under these circumstances in which we can deal forcefully with the pressing need for full employment.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. CONYERS) has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from Michigan.

Mr. Chairman, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from Connecticut (Mr. GIAIMO), our chairman.

Mr. GIAIMO. Mr. Chairman, I thank the gentleman for yielding.

I have to disagree with the gentleman when he says that the Committee on the Budget is the tool or a force designed not to address these problems which confront us.

I would submit to the gentleman that I think the Committee on the Budget has been in the forefront of this whole concern this year for, one, the necessary stimulation of the economy, and, two, jobs.

The gentleman will recall that in the spring it was the Committee on the Budget, with the great assistance of the leadership, that concerned itself with this problem and addressed itself to this problem as the No. 1 national priority. We have been consistently concerned with this problem.

Mr. CONYERS. The gentleman himself has been consistently concerned with jobs. But I submit that a budget resolution, such as the one under consideraiton, that countenances 7 percent overall unemployment at present and admits of little relief in the coming year is a resolution that fails to come to terms with solving unemployment as the No. 1 priority.

Mr. GIAIMO. The committee has, too. We can do certain things in the Budget Act, such as making jobs a priority; and we have done that consistently, both in the third budget resolution and in this one, but this has to be translated into action.

There is a great deal of money that has been made available by this Congress that still has not been utilized to employ people because it takes time, for one reason or another, to get people on board, or for whatever reason. Perhaps many of our programs are not as good as we should like them to be and perhaps we have to do more. But I would not lay the blame at the doorstep of the Committee on the Budget, and perhaps we will have to blame everyone in the Government.

Mr. CONYERS. I want to make it clear that the person I come to to get these additional several hundred thousand jobs, and to get the extra few hundred million dollars, has been the chairman of the committee.

The point that I must make is that for me to go back to Detroit, Mich. and tell the citizens, those who are working and those who are unemployed, that this resolution actually represents the goals of the Government that I want them to follow, would be an absolute travesty.

And so I believe my colleague fully understands the reasons that I must reluctantly vote against this resolution.

Mr. ROUSSELOT. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Chairman, I thank my distinguished colleague, the gentleman from California (Mr. ROUSSELOT) for yielding me this time so that I am permitted to address this "packed" House.

Mr. Chairman, I would like to go back a few minutes, if I may, and try to answer the question posed by the gentlewoman from New Jersey (Mrs. FENWICK) to the chairman of the Committee on the Budget, the gentleman from Connecticut (Mr. GIAIMO).

I know that this is a very difficult issue and a very complex problem, but the gentlewoman from New Jersey raises a very important question. She asked if President Carter was right in placing as a goal the balancing of our budget by 1981, or if others were right in perhaps trying to throw more money at our unemployment problem.

First of all, let me say that I know the gentlewomen from New Jersey (Mrs. FENWICK) was very sincere in her question. This is an area in which I have been involved myself. I am very concerned with and very cognizant of what jobs do for an individual in terms of self-esteem and in terms of what a job does toward reducing the crime rate. But I believe that throwing too much more money at the problem is not the answer. I think if that was the case, then New York and Great Britain would be in great shape today. But I do not think Great Britain is in great shape today. In fact, I think we are in danger of "Britainizing" our country.

I believe that the answer is to try to achieve the goal of a balanced budget by 1981 and in trying to provide jobs for our people in the private sector.

I think it is high time for all of us in the Congress of the United States, and especially in this body, the U.S. House of Representatives, to start making the means to achieve the goal of reaching a balanced budget by 1981. I think we could pick this time and this place in which to start.

Mr. ROUSSELOT. Mr. Chairman, I want to compliment my colleague, the gentleman from Delaware (Mr. EVANS), for his excellent perception of what we have not done in this House of Representatives and that is to make sure that the money we spend and save goes to solve unemployment. We really have not tested some of the reasons in order to find out if it produces the results that we say it does.

I am not claiming that some of these programs have not had a beneficial effect. I am sure some of them have. But I further believe that President Carter and his administrative peoples have had to face up to the fact that they could not possibly spend as much money as this Congress has appropriated for some of these programs that were supposed to lead to jobs.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CONABLE. I yield 2 additional minutes to the gentleman from California.

Mr. ROUSSELOT. They have found that they cannot even distribute the money fast enough. The Carter administration realizes that it has the responsibility not just to spend the money in a way that will not be productive, so they have had to exercise more care and judgment than I am afraid sometimes the Congress exercises in appropriating a lot of that money in the honest belief that it is going to produce jobs, but which does not.

My good colleague, the gentleman from Michigan—and I am sorry that he is not here—has mentioned the problem of the underemployment and lack of employment for minorities. We are probably going to take up the issue of the minimum wage that according to a black economist, who produced a report for our Joint Economic Committee, will have a very serious effect on minority groups, on youth, and on the elderly who want to work on a part-time basis.

The gentleman from Delaware has properly raised the issue here in this budget resolution that is before us that this body, this House, Congress as a whole, has not accepted its responsibility in analyzing to see if this money we are spending really produces all of these jobs,

or if the Federal money we are spending improperly competes with the private sector that would like to go ahead and expand their plants, and would like to go ahead and produce new jobs in the private sector, but cannot because of the way this tremendous Federal machine spends money, which in this resolution talks about spending $460 billion in this coming fiscal year. I compliment my colleague for his comments.

Mr. GIAIMO. Mr. Chairman, I reserve the remainder of my time.

Mr. ROUSSELOT. Mr. Chairman, I yield 3 minutes to my distinguished colleague, the gentleman from Ohio (Mr. MILLER).

Mr. MILLER of Ohio. I thought perhaps someone on the Budget Committee could answer a question I have. I have not been able to receive an answer up until now. We are presently on the fiscal year 1977 budget. October 1 we move into the fiscal year 1978 budget. The 1977 budget has a deficit of more than $60 billion, and we have a deficit built into the 1978 budget of $58 billion. It so happens that right now the Office of Management and Budget is working on the 1979 budget. That means that as far as the President is concerned, who stated that he would balance the budget, he only has 1 year left in his term, and then it will go into the 1981 budget where it is supposed to be balanced.

My question is, Do we really believe that we are going to have a balanced budget by 1981? Can anyone on the Budget Committee give his views on this?

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Ohio. I would be glad to yield to the gentleman from Connecticut.

Mr. GIAIMO. I thank the gentleman for yielding.

First of all, I would like to correct the gentleman's statement of the deficit for fiscal year 1977. The fiscal year 1977 deficit for the year which will end September 30 is estimated to be a deficit now in the high forties.

Mr. ROUSSELOT. If the gentleman will yield, 48.

Mr. GIAIMO. Forty-eight, but it keeps coming down from month to month, so when the figures will be finally added up, which will be sometime after the end of the fiscal year, it probably will be in the middle of the forties someplace.

In response to the gentleman's other question, the President is working on the 1979 budget, but the President's goal is to balance the budget in fiscal year 1981.

We have fiscal years 1979, 1980, and 1981—3 years. If we do our best, if we try to exercise discipline better than we have, better than we did, in my opinion, when we took up the agriculture bill here a month ago, if we do that in many areas and if we can give the kind of encouragement to the private sector that the President is trying to give to encourage greater capital investment, greater activity in the private sector, if we do that the unemployment will drop, there will be greater activity in the private sector, there will be a greater economic growth rate in those years, and it will be very possible to balance the fiscal budget by 1981.

Mr. MILLER. Is it possible we will not have that $60 billion deficit in 1977 because it is impossible for the bureaucracies to spend that much money that quickly?

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Ohio. I yield to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I will answer. The answer to the gentleman's question, according to testimony we received in the Budget Committee, is, in many instances—not all—that the administration stated they did not see how they could spend much of the money we were appropriating in this House for many of these programs as fast and put it in place effectively, and so they just have not spent it, or in some cases, such as the food stamp program, the demands were not quite as great as the House had anticipated. There were some defense programs that were not completed or negotiated. Of course, as the gentleman knows, the President rescinded or stopped production of the B–1 bomber.

So all of those things have created a saving on the expenditure side, and it is still not finalized as to what it will be by September 30, of anywhere from $9 billion to $12 billion. So the answer to the question of the gentleman is "Yes." Even this administration was not able to spend the money as fast as Congress appropriated it.

Mr. MILLER of Ohio. I have one other question. We had an opportunity to have before our Appropriations Committee the Director of the Office of Management and Budget, Mr. Lance. I asked a question at the time. If we are going to balance the budget by 1981, as we do not seem to be able to right now, are we going to be reducing expenditures or are we going to have to increase taxes? Are we going to hold the line on expenditures, and if so where will the push come from?

We have Members on the floor that vote for many spending measures and who go back and tell their people in their districts what nice things the Members are doing for the people. We also understand that by all possibilities the President would like to run for the second term. As we know we have been operating fiscally in this way for so long until we have built up these deficits we have been discussing today. Where will the push come from to balance the budget? Will the gentleman from Connecticut answer the question?

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield, I think I have answered the gentleman's question before. The push will come from many directions: prudent spending; increasing revenues, which means getting our economy on a better footing. Those are basically the two areas that we are going to have to address ourselves to in order to get a balanced budget.

Mr. MILLER of Ohio. I thank the gentleman.

Mr. BAUMAN. Mr. Chairman, I address myself to the matter of a balanced budget. Certainly if the avowed purposes expressed by the Budget Committee in reporting this legislation could be accepted at face value, there would be no problem. In fact, we would probably see a unanimous vote for passage by all of us here on the House floor. We could then move on to other business.

We all favor these stated purposes. We all favor reducing the unemployment rate and limiting the rate of inflation. We all favor so-called "tighter target estimates to reduce overall spending outlays." And certainly, we favor the grandly expressed goal of a balanced budget.

The resolution which has been reported, however, and which we are here to consider makes all of this impossible. The committee's majority, perhaps influenced by President Carter's earlier and identical position, has locked itself into balancing the budget by 1981. Making this budgetary goal an end in itself, and irrespective of other economic factors, it would do this; it would balance the budget, but do so through greatly increased taxes. And by increasing taxes, we court a policy of zero economic growth at a time when we need such growth as our primary weapon in the fight against unemployment. Retard this growth, increase taxes as the second budget resolution would require, and we will greatly weaken America. We will have effectively "kissed off" already fledgling capital investment, while increasing the rate of inflation to the detriment of all of us. Especially hard hit would be the elderly the handicapped and all citizens living on fixed incomes.

The sad irony in all of this, of course, is the matter of the balanced budget itself. Still, we will not have one. The increased taxes President Carter recommends parallel almost proportionate increases in Federal spending. The latest Congressional Budget Office report explodes the myth that the President can have a balanced budget by 1981. One cannot reduce the size of our standing deficits merely by increasing the size of the budget authority, as this bill clearly does.

In fact, the bill increases the Federal deficit for fiscal year 1978 over last year by $10 billion. This is a 22-percent increase in the deficit. It is an increase which does not have to be, yet an increase we will encourage if we vote for the proposed budget resolution in its recommended form as blessed by the Budget Committee and the White House.

Somewhere between the time candidate Carter became President Carter, the earlier idea he expressed which coupled balanced budgets with limited spending and decreased taxes to encourage productivity got lost in the shuffle. No matter when or how this happened, it is clear by reading the provisions of the resolution before us that what the White House is recommending is that room be made for nearly $110 billion of new taxes over the next 5 years. This reflects an average tax burden for every American of 21 percent or a $67 billion tax increase in 1981. Simply put, this boils down to an added Federal tax burden of almost $300 for every man, woman, and child in our country.

In short, a balanced budget is a laudable policy and it can be done without retarding growth and imprisoning our economy in the process. A balanced budget is a realizable goal without having to raise taxes and increase the deficits fashioned by the legislation before us. The way to do this; the way to balance the budget without making life ruinous for every American is by following the course of action many of us have been advocating from this side of the aisle. And we have been advocating this with the introduction of every budget resolution proposed during this session.

This recommended policy, of course, is a minimum 10 percent across-the-board tax cut as well as cuts in spending. Cut taxes and you stimulate supply and encourage capital growth. Cut taxes, as the CBO study concluded earlier this past summer, and you can create 1 million new jobs and $8 billion worth of new capital investment. Cut taxes and provide real relief for the individual taxpayers on whom the burdens of what is done in this room are greatest. At the same time we should cut Federal spending.

Mr. Chairman, all of us are constantly being told by the professional economists and watchful businessmen who follow such things that we are in the second year of a so-called business recovery. But even to less seasoned market watchers, it is evident that this business recovery is not inevitable. Already the signs are beginning to appear. Unemployment according to last Monday's released figures is increasing again. Capital growth investment remains unimpressive. All of this is set against a $170 billion national debt and a crippling inflation which some people seem to take for granted.

We are facing a period which promises to see, according to CBO figures, the highest tax rates since the Korean war. Americans see no relief and have ever-decreasing confidence in their fiscal future.

I am not talking here about "projected figures" or anticipated conditions. I am talking about the way it is now, the way it is for a majority of average Americans who want and desperately need tax relief. To talk tax relief and yet include an incremental program for higher taxes as this bill does is simply cruel. It is certainly no solution, and it ought to be rejected. This is why I cannot support this legislation.

I have always supported the concept of a balanced budget. A balanced budget can be one of many considered means by which we make life better and freer for every citizen. Taxing our citizens out of existence, recklessly reinforcing the rate of inflation and polluting the fiscal environment with big spending programs are not answers. The pending resolution embodies the near total bankruptcy of the majority party's economic policy. I cannot support it.

Mr. GRASSLEY. Mr. Chairman, the record should, at this point, reflect my opposition to the second concurrent budget resolution for the upcoming fiscal year. As you know, this legislation places a floor on Federal revenues and a ceiling on spending by the Federal Government for fiscal year 1978.

This resolution contains very little, if any, good news for the American people—and especially the taxpayers of this country. On the plus side there is a small reduction in Federal outlays, as well as a $6 billion decrease in the deficit, from the first budget resolution which cleared the House on May 17. However, House Concurrent Resolution 341 still provides for budget authority of $458.5 billion and a projected deficit of $58.6 billion. Even more ominous, to my perhaps outmoded way of thinking, is that this measure contains the following language regarding the national debt:

* * * the appropriate level of the public debt is $778,900,000,000, and the amount by which the statutory limit should accordingly be increased is $78,900,000,000.

I, for the life of me, cannot fathom how anyone could believe that the "appropriate" level of public debt for this, or any other nation, should be in the hundreds of billions of dollars.

As we consider this matter, it is worth noting that in 1968 the budget authority was approximately $180 billion. The deficit was $25.2 billion. Within only 10 years, we, and by this I refer to the Congress of the United States, have more than doubled Federal spending and the annual deficit. The only break in this alarming trend came in 1969 when the Federal Government—believe it or not—actually operated in the black. Then we had a surplus of $2.7 billion.

The point must be made again and again that when we, as a nation, live on borrowed money, we are living on borrowed time. Unless and until we see to it that Federal revenues equal expenditures, then we are sentencing our children, and their children, to debtors' prison in perpetuity. Our descendants will become little more than indentured servants working to pay off the debts incurred by their profligate ancestors.

Members of the House will have the opportunity to demonstrate their commitment toward achieving a balanced budget when the gentleman from California (Mr. ROUSSELOT) offers his traditional amendment. His is the voice of sweet reason and commonsense crying out in a wilderness of fiscal recklessness. The gentleman's amendment, as I understand it, would return Federal spending to last year's level—approximately $410 billion—and also provide for a permanent tax cut.

Let me conclude by saying that the first budget resolution, which is intended to be a target for appropriations planning, missed the mark. If House concurrent resolution is passed without the Rousselot amendment, then we will have strayed even farther from the mark. A vote against the resolution in its present form is a vote against fiscal integrity and contrary to commonsense.

Mr. KEMP. Mr. Chairman, tomorrow the House will vote on the second budget resolution for fiscal year 1978. This resolution demonstrates once again that the Democratic Party is determined to increase taxes and Government spending. This can only result in further economic stagnation and high unemployment.

America is never going to create the jobs it needs or restore a high level of economic growth until government reduces the disincentives to work, production, and investment resulting from high taxes. Yet President Carter has proposed—and the House has passed—the greatest tax increases in American history under the guise of an energy program. This morning's Wall Street Journal goes into detail about the increased tax burden which will result from passage of the President's energy bill. I would like to include it with my remarks at this point and I urge my colleagues to read it before voting on the second budget resolution.

The article follows:

[From the Wall Street Journal, Sept. 7, 1977]

THE CARTER TAX INCREASE

As the Senate returns from its recess, it finds on its desk the largest peacetime tax increase in the nation's history. Mr. Carter calls his tax boost an "energy program," but in fact it is a cleverly disguised grab for the nation's paychecks.

A great deal of pettifoggery has been devoted to camouflaging the enormity of the tax implications in the energy package. The Treasury, the House Ways and Means Committee and the staff of the Joint Committee on Taxation have made estimates of its revenue effects based on a common set of figures. The estimates vary depending on how the figures are stacked up, but the most common result is a finding that the House-passed bill would produce "net" revenues of $52.9 billion between now and 1985. This is a tax increase averaging $6.6 billion a year, not inconsiderable in itself. But the estimate is so loaded with gimmicks it borders on fraud.

First, by "net" revenues the estimate means what's left over after various rebates. In other words, the $6.6 billion a year is what's left over in receipts after the bill's expenditures. Second, the period chosen is the time over which the taxes are phased in, thus underestimating their ultimate impact. Third, because the House bill extends the crude oil tax only until 1981, the $52.9 billion estimate assumes this tax will expire halfway through the period studied, though it is both a huge money raiser and the guts of the Carter energy program. And of course, this estimate entirely excludes the administration's 50-cents-a-gallon standby gasoline tax, which was not included in the House package.

A somewhat more realistic picture can be developed by sorting out the gross figures in the Joint Committee tables, isolating its 1981 estimates to avoid the distortion of assuming the expiration of the crude oil tax. This reveals a tax boost of $18.5 billion a year. But by 1981 the bill's taxes would not yet be fully applied. In 1983, for example, there would be a new tax of $1.50 a barrel on all oil used to generate electricity, surely not a small item. Even on the official numbers, the Carter tax increase ultimately exceeds $20 billion a year.

Watching the pea-and-nutshell shuffling being done with these official figures, though, one wonders what other games were played in generating them in the first place. The estimates of revenue effect depend heavily on assumptions about how fast the economy will respond to conservation incentives. Will people pay the gas guzzler tax, or simply stop buying cars? Will industry actually be able to convert to coal, or will it get stuck with the tax?

An independent estimate by the U.S. Chamber of Commerce came up with con-

siderably higher revenues from both the gas guzzler and industrial use taxes. The Chamber also calculated the higher taxes the program would cause by generating inflation and pushing taxpayers into higher personal income tax brackets. The Chamber points out that as originally proposed the energy package would increase the federal government share of GNP to 25% from 21%.

To grasp the general magnitude of the program, it's also useful to go through a few back-of-the-envelope calculations of what the ultimate tax rates would do if applied to the 1977 economy. At current consumption levels, for example, a penny-a-gallon tax on gasoline would yield a billion dollars, so 50 cents is worth $50 billion. Based on current production of "old" and "new" oil, the crude oil tax would yield something like $15 billion.

The gas guzzler tax is more complicated. This year the auto industry will sell about 10 million cars with fuel economy averaging 16 to 17 miles a gallon. By 1985 such a car would be taxed about $2,000, so the tax is worth $20 billion. If you can cajole someone in the auto business to do a more exact calculation applying the 1985 rates to present auto models, you get a figure of about $12 billion. Even without the new tax, of course, auto sales over the next few years will tilt toward high-mileage models. But will the adjustment be enormous enough to justify estimating the gas guzzler tax receipts at only $100 million?

If you look at the tax on industrial use of oil and gas, finally, you realize that a good prediction of its revenue effect is impossbile. No one has more than the fuzziest notion what this part of the bill means. Burning the light bulbs of the accountants and lawyers as they work through that monster will take enough oil to keep the sheiks in business for at least a decade.

In all, the Carter program would increase taxes by well over $20 billion, and perhaps more than $100 billion if the administration succeeds in its attempts to revive the gasoline tax. To judge the resulting jolt, note that $100 billion is the total after-tax profit of all U.S. corporations. Somehow the economy would have to adjust, either by paying the new taxes or by avoiding them, for example, by closing down Detroit for a year or two.

Now, conventional Keynesian economics holds that taxes won't hurt output so long as government expenditures at least keep pace. If this were true, the world's top economic performer over the last decade would have been Great Britain. The general Western economic problems today are that governments route too much of income away from productive private uses, that high tax rates destroy the rewards for production and capricious economic policies and tenacious inflation destroy the climate for investment to produce jobs and income. No matter how the receipts were spent or rebated, the energy taxes would be a massive new dose of precisely these kinds of poison.

And for what? There is no danger that the earth will run out of energy in any time span the mind can comprehend. Even the government is not truly serious about an "energy crisis"; if it were its programs would include production incentives. Dependence on imported oil is a legitimate national security problem, but the answer lies in the ongoing oil storage program and not in a huge tax increase. The real energy problem, and the real chance for a crisis, is the government refusing to let market pricing mechanisms work.

The Carter tax increase would do nothing whatever to solve any of our real energy problems, but it would run terrible risks with the economy on which we all depend. If Congress does pass this bill, it will be the most ill-conceived piece of economic legislation since the Smoot-Hawley Tariff of 1930.

THE CARTER TAX INCREASE

[Billions of 1977 dollars]

	Joint committee staff, 1981	Chamber of commerce, 1985	Final rates applied to, 1977
Gas guzzler	0.1	2	12
Crude oil	14.6	12	15
Industrial use	2.8	8	God knows
Miscellaneous	1.0		1
Subtotal	18.5	22	28+
Gasoline tax		35	50
Subtotal	18.5	57	78
Inflation impact		16	Sigh!
Grand total	18.5	73	78+

Mr. ROUSSELOT. Mr. Chairman, today I am introducing in the House an amendment in the nature of a substitute to House Concurrent Resolution 341, the second concurrent resolution on the budget for fiscal year 1978. This substitute resolution is necessary because the majority has failed to create the kind of Federal budget atmosphere that will either stimulate the economy or encourage the American people as a whole to produce the right end results of jobs and appropriate economic growth.

The minority views on the second budget resolution of fiscal year 1978 show the administration's plan for what it is—a plan to "tax and tax, and spend and spend, and create and create." The minority views show quite well that the American people will have cause to "protest and protest" at the resulting role of government in their lives. There is one further point, however, which ought to be stressed: This formula does not work. High Federal taxes, which high Federal spending requires, will destroy the very jobs and economic growth the administration is seeking to create.

Some examples of the administration's new taxes, and their effects, are in order.

First. The administration has projected a $40 billion rise in tax revenues over a 5-year period because of the effect of inflation on income taxes. Each year, millions of Americans find themselves pushed into higher tax brackets by inflation, even if their incomes have only risen to keep pace with prices. But it is upon the value of take-home pay, after taxes, that an individual decides whether his work effort is worth the sacrifice. Higher tax brackets, higher marginal tax rates, make work less rewarding relative to leisure. Employees find overtime less attractive. Professionals and self-employed vacation more and produce less. the Nation's labor force works less, output diminishes, and after-tax earnings decrease. There is less money saved, interest rates go up, borrowing goes down, and this reduced level of investment creates fewer jobs. It is clear that $40 billion in additional real taxes over a 5-year period will crimp economic growth.

Second. The administration has also recommended new social security taxes. Part of these will be assessed against employers, thus raising the cost of employing workers. But of course, when labor is made more expensive business uses less of it, firing those who are newly uneconomical, and replacing them with what used to be a higher priced machine. These higher costs clearly result in lost production, lost wages, lost savings, and lost investment. The rest of the new social security taxes the administration is planning to raise will come from increasing the taxable wage base. Unfortunately, studies have shown that, at the income levels affected, a substantial portion of the increase in taxes will not come from reduced consumption, but from savings. Reducing the Nation's already low savings rate will raise interest rates and discourage new investment. High marginal tax rates and low savings rates will create unemployment and low economic growth.

Third. The administration has recommended a complex energy plan which, it has been estimated will cost the American consumer an additional $500 billion by 1985. Even if every penny of the direct taxes is rebated, this complicated series of direct and indirect taxes will affect the prices and take-home pay that employees and employers will face.

Mandating the use of coal, for example, will raise the cost of electricity. Businesses, instead of investing in new productive capacity, will invest in electricity-saving devices just to maintain the same or lower rate of production. This will divert scarce savings from investment in new capacity and real growth. Consumers, in turn, will spend more of their paychecks on electricity, and will have less to save and invest for future growth.

The continued regulation of natural gas is another example. The price of natural gas, by administrative decree, is going to be kept artificially low to household consumers, thus signaling them that natural gas is relatively cheap. They will therefore be encouraged to use a great deal of it, while substitutes for home heating are in fact readily available. Industry uses natural gas in processes for which substitutes are not readily available; but the administration would limit their use of natural gas. They will have to spend a great deal to use alternative fuels—just to maintain the same or lower rate of production—if in fact they can convert at all. Some plants are going to close and jobs will be eliminated. Others will invest in conversion with money that would have gone into expanding capacity. Output will be immediately reduced, prices of finished products will go up. Consumers will spend more to get less, savings and investment will go down, and economic growth will decrease. Furthermore, because natural gas is a substitute of imported energy, the price of which is set by a cartel, OPEC will find it easier to jack up the price of oil—adding further to inflation.

The administration has also planned other indirect tax increases.

Fourth. The administration, for example, has recommended a maritime preference bill which will require a fixed percentage of imported oil to be shipped in American tankers with American crews—even though shipping rates in those tankers are three times those of competitors. By 1985, it has been estimated, $7 billion will be levied upon American consumers (and, incidentally,

put into the pockets of maritime businesses and unions). Again, the price will be passed on. Businesses will have to spend more to produce less, while the American public will spend more for a lower standard of living. The economy as a whole will lose output, jobs, wages, and future growth.

Fifth. The Administration has recommended that import quotas be negotiated with foreign countries in an attempt to force Americans to buy higher priced shoes. The nonshoe producing part of the American economy will have to compete with a subsidized industry for investment capital, thus diminishfor their future output. Americans who buy shoes will pay higher prices, and have less money for savings and investment. Again, future economic growth will suffer.

It is possible to list many more direct and indirect taxes that the Administration is contemplating. After all, government regulations, from mandatory airbags to stripmining reclamation, are in effect indirect taxes. Even if the Federal Government initiates no new spending programs our regulatory system may impose record high tax levels.

High taxes distort and hinder economic growth. One way or another, if we want the economy to grow, we must cut taxes and restore adequate rewards to those who labor and save. I have said it before, and I will say it again, our first step should be a permanent across-the-board personal income tax reduction for the 90 million working people of this country.

This substitute resolution provides for an across-the-board tax cut of 10 percent off the personal income tax. It further requires the Federal Government to provide a restraint on expenditures by spending no more than we will in the current fiscal year of 1977. The resolution is as follows:

SUBSTITUTE AMENDMENT TO HOUSE CONCURRENT RESOLUTION 341

(Amendment in the nature of a substitute.)

Strike all after the resolving clause and insert in lieu thereof the following:

That the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $406,571,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $18,000,000,000;

(2) the appropriate level of total new budget authority is $446,824,000,000;

(3) the appropriate level of total budget outlays is $406,571,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $0,000,000; and

(5) the appropriate level of the public debt is $710,000,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 310 (a) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $116,324,000,000.
(B) Outlays, $110,338,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,000,000,000.
(B) Outlays, $3,800,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,600,000,000.
(B) Outlays, $4,400,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $20,000,000,000.
(B) Outlays, $16,500,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,100,000,000.
(B) Outlays, $2,333,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $18,000,000,000.
(B) Outlays, $16,000,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $6,200,000,000.
(B) Outlays, $7,200,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $17,900,000,000.
(B) Outlays, $19,000,000,000.
(9) Health (550):
(A) New budget authority, $41,000,000,000.
(B) Outlays, $39,500,000,000.
(10) Income Security (600):
(A) New budget authority, $159,000,000,000.
(B) Outlays, $134,000,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $19,600,000,000.
(B) Outlays, $19,600,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,100,000,000.
(B) Outlays, $3,000,000,000.
(13) General Government (800):
(A) New budget authority, $3,000,000,000.
(B) Outlays, $2,900,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850).
(A) New budget authority, $7,000,000,000.
(B) Outlays, $6,000,000,000.
(15) Interest (900):
(A) New budget authority, $37,000,000,000.
(B) Outlays, $37,000,000,000.
(16) Allowances:
(A) New budget authority, $1,000,000,000.
(B) Outlays, $1,000,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$16,000,000,000.
(B) Outlays, —$16,000,000,000.

SEC. 3. Pursuant to section 310 of the Congressional Budget and Impoundment Control Act of 1974, the House Committee on Ways and Means and the Senate Committee on Finance shall submit promptly to the Budget Committee in their respective Houses reconciliation legislation to decrease Federal revenues by approximately $18 billion; the Appropriations Committee of both Houses shall submit promptly to the Budget Committee in their respective Houses, reconciliation legislation to decrease budget authority by approximately $32.18 billion and outlays by approximately $43.635 billion.

Mr. ROUSSELOT. Mr. Chairman, we yield back the balance of our time.

Mr. GIAIMO. Mr. Chairman, I yield back the balance of my time.

Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. MIKVA) having assumed the chair, Mr. NEDZI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the concurrent resolution (H. Con. Res. 341) revising the congressional budget for the U.S. Government for the fiscal year 1978, had come to no resolution thereon.

THE TANGLED ENERGY BILL

(Mr. JOHNSON of Colorado asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. JOHNSON of Colorado. Mr. Speaker, just prior to the August recess, the House passed H.R. 8444, the National Energy Policy Act, and sent it on to the Senate for consideration. There are indications the Senate may make an effort to modify the House passed bill to make it more responsive to the needs of the Nation.

Many of us are of the opinion that the House passed legislation does not provide an acceptable response to our critical energy supply situation. Indeed, the House version of the legislation is more of a revenue raising bill than a comprehensive program designed to free this Nation from the hold of foreign energy sources.

The energy supply problems are especially important to the Rocky Mountain States and other areas of the West where much of our domestic energy supplies are produced. The importance of the current congressional debate on national energy policy is well detailed in a recent editorial in the Denver Post. The editorial points out the need for legislation which removes excessive Government controls from the private market to allow the marketplace to determine the price and allocation of our energy products. The editorial also states the feeling of many of us, that while energy conservation is certainly important and should be encouraged, a national energy program must also focus equal attention on increased development of our conventional energy supplies as well as the development of synthetic fuels and other alternate energy sources. The way to accomplish that is for the Government to remove existing roadblocks and allow adequate incentives for private industry to do its job.

Mr. Speaker, I offer the Denver Post editorial to my colleagues for their serious consideration as the Congress continues in its efforts to develop realistic, reasonable and reliable energy policy goals.

THE TANGLED ENERGY BILL

The Rocky Mountain region has a major stake in deliberations on energy legislation beginning in Congress Wednesday. As its actions affect coal, oil, natural gas and possibly oil shale, Congress will take steps of fateful importance to this energy-rich area.

In addition, we are—like all Americans—consumers of huge quantities of energy. Our pocketbooks are on the line.

Before leaving for summer vacation the House of Representatives passed a significant share of President Carter's energy bill and sent it to the Senate.

The month intervening has provided an opportunity for study and discussion of the House's handiwork. Much dissatisfaction has emerged. This newspaper joins in some of

these concerns and urges as number of alterations when the Senate takes up the bill.

What stands before the Senate is a legislative hodge-podge which, increasingly, is serving more to baffle Americans than to assist them in accepting a clear and equitable policy on energy.

Symbolic of the tangled web of legislation, which is complicated by misplaced attempts at social engineering, is the administration's monolithic tax on crude oil at the wellhead.

This is what is left of the plan for discouraging consumption.

The wellhead tax would hit every user of petroleum products, and not just the automobile driver with optional uses for his income. The farmer buying petroleum-based fertilizer would feel the impact just as would the automobile driver (who will get nicked for seven cents a gallon) when the levy is imposed.

The levy is expected to amount to $14 billion each year. Much of this—minus a bureaucratic handling fee—is earmarked to go back to all taxpayers, although the details are still vague.

Many aren't buying. Some see the wellhead tax more as a revenue-raising bill than a conservation measure. A broad-based coalition is asking the levy's defeat. Among them is the Oil, Chemical nad Atomic Workers Union (OCAW) based in Denver. No friend of the oil industry, OCAW nevertheless rejects the thinking behind the wellhead tax. Says a spokesman:

"We feel this heavy increase per gallon would be a terrible burden on the average person who has to have a car. We're wary of bureaucracies which want to equalize things. We've learned the rich will still ride when the poor are walking."

That's the popular case against the wellhead levy.

The economic thrust may be more significant. The tax seems to symbolize Washington's surrender to shortages.

Throughout the Carter package little attention is given to encouraging the oil industry to increase U.S. production. Rather than giving the industry incentives, the administration seems to be saying: "The way to meet the shortage is to tax the oil companies and give the money to the people."

The only way this proposal makes sense to the law of supply and demand is that it would increase the cost of gasoline and force the driver to dig deeper at the pump. Eventually the poor would be reimbursed for some of the price increases which will weigh most heavily on them. But the average rebate would be only $22 a year.

The effect of the wellhead tax would be to raise the price of domestic crude to the international level. But domestic producers would get no benefit from the price increase; the added costs paid by the consumer would be siphoned off by the tax.

Put another way, the tax would have the effect of denying oil and gas producers the extra income necessary to step up exploration for new sources of gas and oil. Congress should increase the dollars allocated to exploration and drilling.

There is still a lot of oil to be found in this country. One major source is the outer continental shelf areas which are 95 per cent unexplored. Advanced technology has made production from these fields feasible, but it costs a great deal of money to find and bring these fields into production.

The oil industry needs encouragement to increase the supply. That approach should get at least equal billing with conservation.

In general, history shows the market function is a better allocator of resources than governmental planning. In the present instance, providing a means whereby the domestic oil supply can be increased makes more sense than binding the nation's energy industry into a cocoon of federal controls.

Is there a danger of industry profiteering with price deregulation? Yet. But that danger can be eliminated with a windfall profits tax. The industry would be urged to plow back earnings into more drilling. But if a firm failed to do this, then taxes would be applied to the obvious windfall profits. There's a 200-year record that says such an approach works more creatively than state planning.

In its other details the Carter package has both strengths and weaknesses.

Few can disagree with its provisions for tax writeoffs for homeowners and businessmen who opt for solar energy or save energy through insulation and other conservation measures.

The coal portions of the package are troublesome. The provision aimed at forcing utilities to scrub clean Western coal as thoroughly as they do the sulfur-ridden Eastern coal is bad legislation. It feeds the suspicion the administration is paying off its Eastern coal union supporters (Western strip mines are largely non-United Mine Workers) with a gimmick.

The Carter program is right in pushing research into alternative sources of energy. Federal grants, prudently administered, are necessary to speed discovery of cheaper and better energy sources.

But the administration is wrong in trying to use the energy crisis, serious as it is, to nationalize the oil industry. Such a step would not help supply. And it might needlessly damage a critical component of the national wellbeing.

DICKEY-LINCOLN SCHOOL LAKES HYDROELECTRIC PROJECT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maine (Mr. COHEN) is recognized for 20 minutes.

Mr. COHEN. Mr. Speaker, the Dickey-Lincoln hydroelectric project proposed for my congressional district in Maine has now advanced to a critical stage with the release of the draft environmental impact statement (EIS) on August 31.

After nearly 3 years of intensive study, the Army Corps of Engineers has provided the citizens of Maine and New England with the requisite information upon which to base a rational and responsible decision on this controversial project. Refined to its basics, the report clearly indicates that we must choose between the advantages of an additional 1.2 billion kilowatt-hours of peaking power annually, and the "irreversible and irretrievable loss of all the resources identified with the impoundment areas."

For me, the choice is now clear. The environmental, economic, and social costs of the Dickey-Lincoln project are too severe to justify its construction. A partial list of the project's adverse effects emphatically underscores this fact:

Flooding caused by the project would totally destroy over 88,000 acres of terrestrial habitat and its associated aquatic ecosystem.

Impoundment would raise the local ground water levels. This is expected to lead to localized ponding by altering drainage patterns and the creation of new springs. Wells and septic systems downstream of the Dickey reservoir would be adversely affected by this action.

At least 161 households would have to be uprooted and relocated if Dickey-Lincoln is built. Unavoidable economic, physical, psychological, and social hardships would inevitably occur, and destroy the sense of community which now exists in the affected areas.

According to the EIS the influx of construction workers to the area could spawn a series of social problems such as prostitution, alcoholism, and increased levels of crime.

The project would have a deleterious effect on the timber industry in the region. Current management plans would be seriously and permanently disrupted. Costs due to timber lost would range between $206 and $311 million in direct and indirect costs over the projected 100-year life of the project.

Tax revenues which currently accrue to the townships and the State on lands which would be destroyed would be lost. The estimated losses would be $97,000 annually for forest lands, and $40,000 for the town of Allagash. Additionally, it is possible that municipalities which expand services to meet short-term needs during construction would not be fully compensated for these efforts. This could spell a tax increase for the permanent residents of the area.

Whitewater canoeing would be eliminated.

Inundation would result in the direct loss of over 268 miles of free-flowing streams and rivers within the Dickey impoundment. These waterways provide habitat for native brook trout and other important species.

Wildlife population in the planned reservoir area would be adversely affected in varying degrees. Approximately 80,455 acres of terrestrial habitat would be permanently lost. Inundation would destroy 36,893 acres of deer wintering habitat, with the resulting loss of approximately 50 percent of the deer herd and those species dependent upon it for survival.

The cultural resources of the region would be adversely affected. Salvage of known archaeological and historical sites would be required to mitigate a total loss of these irreplaceable resources.

Construction of Dickey-Lincoln would have several major effects on the esthetics of the region. The greatest impact would result from the flooding of nearly 66 miles of the St. John River. As the report points out, the visual quality of this portion of a scenic river valley would be lost foreover. The effects of construction would scar the region permanently.

An increase in seismic activity as a result of reservoir loading and water fluctuation is likely to occur.

Some price inflation is likely to occur in the area due to the large infusion of funds into the economy during construction.

Further environmental damage and loss of land would certainly occur as a result of the construction of transmission facilities for the project.

Critical as these findings are, there are additional factors which lead me to conclude that we should pursue other less costly and less damaging alternatives than the Dickey-Lincoln project.

Not the least of these factors is the changing attitude in Congress and the executive branch toward Federal water resource projects.

To his credit, President Carter has put Congress on notice that the era of public works politics is over. It must be replaced by a process which establishes rational criteria for judging future projects solely in terms of economic, environmental, and social costs. These factors, in turn, must be carefully balanced against the projected benefits of the project, whether they be power, irrigation, flood control, or recreation.

I believe that it is highly probable that the Dickey-Lincoln project would eventually fall victim to this reform climate should construction funds be sought. In addition to the devastating environmental impact of the project, Dickey-Lincoln's questionable economics make it an easy target for extinction. This will become more true as pressures to balance the Federal budget increase, as they certainly will and must.

Indeed it would be a tragedy of immense proportions if Dickey-Lincoln were to gain initial approval and later be abandoned in mid-construction due to budgetary pressures or protracted litigation, which is another very real possibility. If this situation were to eventuate, Maine would be left with a massive concrete monument to misjudgment, and untold thousands of acres of despoiled wilderness. Those who doubt the possibility of this scenario need only consult with the Members of Congress who have partially constructed public works projects in their districts which fell victims to recent budget-cutting actions. Another important factor which prompts me to oppose this project is my belief that it is incompatible with the energy conservation ethic we must embrace as a society.

I am not suggesting that conservation and the more efficient use of energy can alone mitigate the need for additional generating facilities in New England, whether they be baseload or peaking units. What I am suggesting, however, is that it is absolutely imperative that we find smaller, less costly ways to meet our future energy needs beyond 1990. Moreover, we must pursue alternatives which respect, not destroy, the power and natural resource options of future generations, rather than paying sole allegiance to the energy needs of today's society.

One of the most critical challenges facing elected officials is to look beyond the possible short-term gains in any situation and fully consider the long-term consequences. I have tried to do this in arriving at my decision to oppose further funds for the Dickey-Lincoln project.

Energy policymaking inevitably involves difficult choices and painful tradeoffs, and Dickey-Lincoln is certainly no exception. Just as there are costs involved in building the project, so too are there penalties for failing to do so. Increased dependence on imported energy or a greater use of coal, possible supply interruptions during peak demand periods, and the likelihood of somewhat higher energy prices are direct costs associated with not building Dickey-Lincoln, and each of us should be fully aware of these consequences. The severity of these costs will be largely determined by the energy habits of all the citizens of New England. In a very real sense, each of us has the power to determine our own energy density as well as the environmental legacy we pass on to our children and grandchildren.

The draft environmental impact statement does identify several alternative methods of energy generation and storage which are termed potentially viable substitutes for Dickey-Lincoln. Included among the alternatives are further hydroelectric development other than Dickey-Lincoln, solar and wind energy, and the use of fuel cells. New technologies will inevitably be developed in the coming years which could assist in meeting the peaking energy needs of New England. And, of course, the Passamaquoddy tidal power project must also be viewed as a possible alternative to Dickey-Lincoln, along with load management strategies and conservation.

As I have in the past, I will continue to work for appropriations which will insure that every alternative source of energy is examined carefully. Similarly, I will work for funding of construction projects which will provide full flood protection not only to Fort Kent, but also to other downstream areas which would have been aided by Dickey-Lincoln.

As a final thought, I would like to comment briefly on the decisionmaking process which has brought us to this point in our deliberation on Dickey-Lincoln. I have always felt that it was important that Dickey-Lincoln receive a fair and objective hearing, particularly in view of the project's long and controversial history. In support of this view, I have fought hard in the House of Representatives to insure that this project received its day in court. I am now satisfied that this is the case and that, once again, the public interest has been well-served by the mandates of the National Environmental Policy Act of 1969.

I am confident that others who have reviewed the environmental impact statement and participated in the workshops leading to the development of the report share this view. Copies of the draft EIS and its appendixes are available for review at the following repositories in Maine and New England, and I strongly urge as many citizens as possible to avail themselves of the opportunity to review and comment on this important document. It will be time well spent.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. COHEN. I am happy to yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Speaker, I rise to congratulate my distinguished friend, and colleague from Maine (Mr. COHEN), for the courageous stand he has taken today on the Dickey-Lincoln School Lakes project.

It is no secret that I have opposed this project from the moment of its conception many years ago. Time and again over the years I have addresed this Chamber to express my strong opposition to the project in the various forms it has taken as its proponents attempted to modify and alter it in misguided attempts to make it palatable. It has always been my firm position that the disadvantages of the proposals far outweighed their purported advantages.

In recent years the gentleman from Maine (Mr. COHEN), has argued just as strenuously in favor of the project. The gentleman argued convincingly for funding for an environmental impact statement on the proposal in the belief that the statement would justify construction of the project.

I was just as convinced that the environmental impact statement would verify my contention—that the project represented an environmental catastrophe and an economic monstrosity.

The draft environmental impact statement recently released by the Corps of Engineers, while purporting to justify the proposal, effectively endorses my long-standing position. It verifies my belief that the project would permanently destroy much of the wildlife habitat of the area. The corps' statement estimates that the project would destroy some 80,000 acres of terrestrial habitat, including 36,893 acres of land critical to the survival of the white-tail

deer. The loss of this habitat would permanently reduce the numbers of these white-tail deer.

The figures on the timber loss that would result from the project are conservative, compared to other studies, but they do testify to the permanent damage that would result from this wasteful project. The proposed dam would destroy timber production worth between $206 and $311 million over the projected 100-year life of the dam.

The draft statement is weak in two principle areas: First, the statement briefly discusses the potential contributions from energy conservation but fails to come to grips with the options available. For example, the statement does not mention the recent study of the Massachusetts Audubon Society which cites energy savings for 43 times the output of the proposed dam, through the installation of residential attic insulation.

Second, the statement fails to fully discuss the long-term impact of the proposal. Instead, it dwells on the short-term conversion impact. In particular, the statement does not fully consider the uniqueness of this area, and the natural resources that would be permanently destroyed, even after the projected 100-year life of the dam.

The report also alludes to, but does not fully discuss the potential jobs impact of this proposal. From the statement of the corps, it appears that the dam construction activities would create 1,900 jobs, of which all but 200 would be of a short-term nature. This compares to the potential increase of 5,000 jobs in the timber industry, which would be eliminated by this project. Thus, the area will experience the adverse impact of a "boom-and-bust" economy, where there is a dramatic increase of temporary jobs, followed by a dramatic loss in permanent jobs. This "boom-and-bust" cycle would also have a permanent, damaging effect on the local economy.

This wasteful and unwise proposal is not deserving of the support of the taxpayers. Its cost is currently estimated to be $691 million, and is expected to exceed $1 billion in the foreseeable future. I will redouble my efforts to see that this boondoggle is not funded.

When the interest of his constituents, his State, and the environment are at stake, the gentleman from Maine is obviously not afraid to admit that he would rather be correct than consistent. He is one of the ablest Members of the House of Representatives.

Mr. COHEN. Mr. Speaker, I thank the gentleman from Massachusetts.

As the gentleman has indicated, during the course of the long debates on this project since I have been in this Congress, I have indicated to the gentleman from Massachusetts that I always favored the completion of all the environmental studies, and I stated that once those studies were completed I would make a decision based on the evidence. That is what I have done today.

Mr. Speaker, I thank the gentleman from Massachusetts (Mr. CONTE) for his very generous and complimentary remarks.

IN MEMORY OF CLIFFARD CARLSON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 5 minutes.

Mr. CORCORAN of Illinois. Mr. Speaker, it is my sad task today to inform you that one of our former colleagues has died. Cliff Carlson did not serve long in this House. It is typical of him that he stepped aside following Illinois' last reapportionment to allow Les Arends to remain in the House after only 8 months.

In addition to being a most successful businessman, he was a man deeply conscious of his responsibility to his community, his country, and to his fellow man. He was a delegate to three Republican conventions, and he held several other party offices. He served his country in the Navy and in Congress, where he was an advisor to the UNESCO General Conference.

He served the community as a director of the Marmion Academy and as a trustee of the Delnor Hospital in St. Charles, Ill. He was active in seeking the continued development of the Fox River Valley.

Cliff Carlson's time in this House was short, but in that time he served his district to the best of his ability. No matter how long we may be part of this House, none of us can hope to do more.

A BILL TO REDUCE THE TRADEOFF BETWEEN JOBS AND A CLEANER ENVIRONMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 10 minutes.

Mr. KEMP. Mr. Speaker, in recent weeks one of the most important employers in western New York, the Bethlehem Steel Co., announced that it was cutting back production and permanently laying off 3,500 workers at its Lackawanna N.Y. plant. Among the reasons cited for this action, which will have disastrous economic effects on the entire region, was the tremendous cost of complying with Federal environmental protection standards, about $60 millions in the next 5 years.

No one denies the importance of cleaning up our environment. For too many years we have all treated common access goods, like air and water, as costless when in fact they are not. The use of clean air and water has a cost associated with it just like the cost of using any other natural resource and must be paid.

We simply cannot ignore the fact that it is going to take tremendous amounts of capital to achieve the twin goals of a clean environment and a high rate of economic growth in the years ahead.

One vital step would be to recognize that it is unfair to impose the entire cost of financing pollution control equipment onto the private sector all at once. The economic cost of complying with environmental regulations just since 1972 is already more than the cost of the OPEC oil cartel. The magnitude of this cost may be illustrated by the following examples:

United States Steel has just signed a 7-year agreement with Federal, State, and local environmental agencies that will require it to spend $600 million over that period to eliminate air pollution from its Clairton Coke Works in Pittsburgh.

The steel industry as a whole will be spending well over $1 billion annually on pollution controls—and that is a conservative estimate. This expenditure amounts to over one-quarter of the industry's total annual capital investment.

Meeting EPA's 1983 water pollution standards will cost all of American industry, over the next 7 years, about $60 billion for capital equipment and another $12 billion annually in operating and maintenance costs.

Meeting noise pollution standards, as mandated by Congress and enforced by the Occupational Safety and Health Administration—OSHA—will involve expenditures of over $15 billion in capital costs and $2 billion to $3 billion in operating costs in the years immediately ahead. If these noise standards are raised to the level recommended by the U.S. National Institute for Occupational Safety and Health—a recommendation endorsed by EPA—that capital costs will climb to over $30 billion.

The Wall Street Journal recently reported that new health regulations in the cotton industry will cost some $3 billion over the next 7 years. It has been estimated by Prof. Murray Weidenbaum that American industry's costs to meet OSHA safety standards this year will be over $4 billion.

EPA is on record—for what that is worth—as calculating that industry's total capital investment requirements for all kinds of pollution control equipment will, in the decade 1972–81, add up to $112 billion.

The cost of installing pollution equipment is exactly the same as if a tax were imposed on American industry for the same purpose. It raises the firm's cost of doing business while doing nothing to increase production, and may even reduce production. The people who will ultimately pay this cost are consumers and the firm's employees and stockholders.

Yet pollution control equipment is usually thought of as a capital investment, and is considered so for tax purposes. The result is that if one deducts the cost of complying with environmental protection regulations from the total capital expenditures of American industry over the past several years, and factor out inflation, there is virtually no real capital investment taking place in this country at all.

Therefore, the first thing we must do is to encourage capital formation, because only by enlarging and modernizing America's industrial plant can we hope to afford the cost of meeting our goal of clean air and water without increasing unemployment or reducing economic growth. Second, we must help American industry finance the cost of installing pollution control equipment.

I have spoken out on the necessity for capital formation for years and have offered my Jobs Creation Act as the means to achieve this goal. Now I am offering a bill to allow firms to write off the cost of pollution control equipment in 1 year, as a normal business expense, rather than over 5 years as provided by the Tax Reform Act of 1969.

This may seem like a relatively small change to make, but it will be of great benefit to companies like Bethlehem, which have invested hundreds of millions of dollars on pollution control equipment over the past several years, by improving their cash flow and offsetting the impact of inflation on recovered costs.

I originally introduced this legislation as part of my Jobs Creation Act over 2 years ago. Had it been enacted at that time there is no doubt that companies like Bethlehem Steel would be in a better financial condition to expand jobs and productivity than they are today. Therefore, I hope Congress will act quickly to enact such legislation lest we achieve our goal of cleaning up the environment only at the cost of destroying jobs and our free enterprise economy.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. SARASIN) is recognized for 5 minutes.

Mr. SARASIN. Mr. Speaker, on August 5, 1977, I was absent from part of the legislative session of the House as I was attending a bill signing ceremony at the White House regarding the Youth Employment and Demonstration Projects Act of 1977. Had I been present, I would have voted in the following fashion:

Rollcall No. 507: House Resolution 729: Committee funds. The House agreed to the resolution to provide funds for the expenses of investigations and studies to be conducted by the House Permanent Committee on Intelligence, "yea."

MILITARY'S VOCATIONAL TESTING PROGRAM COMES UNDER FIRE AGAIN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, as we return to the Congress now, after the Labor Day holiday, so, too, do millions of young people across the country return to the classroom. As has been the case in each of the past several years, over 1 million teenagers in our schools will take the armed services vocational aptitude battery—ASVAB—during this school year.

I was one of many Members of Congress who followed with considerable interest the recent controversy over ASVAB. That is, of course, the vocational aptitude test that is given to high school students by Armed Forces recruiting command personnel, in cooperation with local school officials.

Our former colleague, Charles Mosher, in the last Congress raised a number of substantive questions about the way in which ASVAB was administered. His almost singlehanded efforts led to an agreement from the Pentagon that ASVAB procedures and materials would be changed so that unsubstantiated claims would be eliminated from the "sales pitch" and fuller disclosure of relevant information would be made to students and parents—see the CONGRESSIONAL RECORD for May 6, 1976, page 12929.

Those changes were made in good faith and have been fully implemented, and there now appears to be little criticism of ASVAB on procedural grounds. However, a new, and in some ways more troubling, criticism has been raised. As children across the country are now returning to school, I think this is a good time to examine again ASVAB.

Mr. Speaker, Lee J. Cronbach is the Vida Jacks professor of education at Stanford University. Many regard him as one of this Nation's leading authorities on the subject of aptitude testing. In a soon-to-be-published review, Dr. Cronbach says very bluntly, "I advise school officials to stop ASVAB testing."

Professor Cronbach recounts the congressional criticisms of ASVAB and notes the agreement negotiated between Chuck Mosher and the Department of Defense. But he goes on to say that even after those procedural difficulties were resolved we still are left with a test that does not meet the needs of educators and guidance counselors—and students—in our high schools. He seems to think that the test itself may do more harm than good.

These observations are contained in an article Dr. Cronbach wrote for publication in the eighth mental measurements yearbook, a prestigious publication that is concerned with questions pertaining to standardized testing and related issues.

An excellent and easily understood summary of Dr. Cronbach's somewhat technical article was written by a staff reporter in the APA Monitor, a publication of the American Psychological Association. At this point in the RECORD, I am inserting the full text of Dr. Cronbach's critique of ASVAB as well as Ms. Pam Moore's summary which appeared in the APA Monitor:

[From the APA Monitor]

NADER TAKE NOTE . . .

The Defense Department is taking its lumps these days for promoting use of a vocational aptitude test—the Armed Services Vocational Aptitude Battery (ASVAB) to be exact—which reportedly is administered to over a million high school students a year. The ASVAB has run into congressional opposition in the past, largely on the grounds that it is a recruiting device sold to schools for free and, until recently, was given to students under the guise of vocational guidance without filling them in on the whole story.

Current concern, however, has extended to the issue of quality, and according to a draft review of the ASVAB by Stanford's Lee Cronbach for *The Eighth Mental Measurements Yearbook*, it's not worth even its nonexistent price. In a commentary that may score a new high for not mincing words, Cronbach runs through the test's questionable past, evaluates its problematic present and simply advises school officials to stop ASVAB testing, at least unless and until the military cleans up the test. Among its noteworthy technical flaws, Cronbach mentions that test items are badly edited, some "are loaded with detail to the point of tedium," and some are sufficiently incomprehensible as to require reading the tester's mind.

Cronbach notes that "no worthwhile" validity studies relating to civilian careers have been reported and those currently available "are amateurish." He also states that many of the subtests are "unreasonably difficult" and on at least one, fully one third of the examinees—both males and females—score no better than chance. "ASVAB is designed to cream off and recruit above-average young people, not to assess the lower half," he continues, a scheme that might have been appropriate "in the good old days for a hire-and-fire-at-will employer who had an oversupply of applicants." But, he adds, the Armed Services "cannot rely solely on well-prepared young people."

"Especially," he says, "they must face up to sex differences. The inability of the typical high school girl to recognize a pipecutter or to say what a thermocouple does indicates nothing about the career she could be trained for. The military ought to be encouraging more women to go into technical specialties, not using ASVAB to rule them out."

And, according to Cronbach, when it comes to interpretation of test scores, matters are even worse. "ASVAB's student report form is to be condemned" for several reasons, he states, not the least of which is its garish red, yellow and green striped profile sheet (for "go," "caution" and "stop"). "For all its hypocritical prose saying that scores 'should not be considered good or bad', such a report signals to many students that their vocational prospects are discouraging," says Cronbach.

Delivering his *coup de grace*, Cronbach notes that there are other low-cost batteries which are far more useful for guidance than ASVAB and he also points out that schools are facing a major policy issue. "I doubt," he offers, "that schools can defend allowing one employer—even a large and public one—to administer its selection tests in the schools" without offering the same courtesy to others. "At a time when the charge of 'too much testing' is raised, even against tests designed to serve the schools' purposes, the case for administering ASVAB in the schools is flimsy."

Sources in the Office of the Secretary of Defense, Manpower and Reserve Affairs branch report that the ASVAB is currently undergoing some revision to be completed before the next school term begins, but there's little information about how far the changes will go.

REVIEW OF ASVAB ARMED SERVICES VOCATIONAL APTITUDE BATTERY

(By Lee J. Cronbach)

Perhaps more young people take ASVAB than any other differential aptitude battery—over a million students each year. The reason is simple: The Armed Services provide and score the tests at no cost to the school; moreover, they go to some lengths to persuade school officials to allow ASVAB testing.

The battery as recruiting aid. Aptitude information is needed to classify recruits. Mass testing of tenth- through twelfth-graders makes this information immediately available when some of them enlist as seniors; more to the point for the military, the scores identify able adolescents to be recruited. The services agreed in 1966 to develop a single basic battery for all branches. The initial package was made up of sections drawn from

the existing service tests; the content of the package has been revised several times since.

The test is advertised to schools as a resource for career guidance. If a local school decides to give ASVAB, a military office supplies a tester. ASVAB is budgeted at over three million dollars, which pays for test development and research, testing operations, and promotional activities. This far exceeds the resources available to such competing batteries as DAT and GATB.

The ASVAB program came under severe Congressional scrutiny in 1975. Although the initial impetus was a letter to Congressman Charles Mosher from a teacher who saw ASVAB as a duplication of what the government supported in GATB, larger issues surfaced. The Friends Peace Committee and the ACLU questioned the role of students as a captive audience for recruiting. The criticism was especially concerned with the probity of orienting material supplied the examinee and his parents. An agreement negotiated in 1976 cleared the air and seems to have ended the conflict.

The agreement included the following terms. (1) The revised material states frankly that the test is used to guide recruiting as well as in the school's guidance program. Now, when the student signs up to take the test, his consent is "informed". (2) In previous years, strong assertions were made about the relevance of ASVAB to civilian career planning. The new leaflet says: "ASVAB's ability for determining civilian job skills has not been proven. . . . ASVAB scores . . . do indicate the areas of vocational training within the military services within which they are most likely to suceed. . . . [E]ducators believe that many military specialties are related to civilian occupations." (The second sentence quoted remains dubious; see below.) (3) The individual scores, it is said, are distributed to the recruiting units of the services. After two years "all personal identifying information is erased," but the scores will be retained for research.

Test form and quality. Forms 5, 6, and 7 of ASVAB are essentially equivalent. Each consists of 12 subtests; the typical subtest consists of 20 four-choice items. Of the available technical information, over half comes from Form 2; most of the information seems to fit the current form and where necessary it is used in this review without special identification. Five of the subtests in current forms ask for recall of information—about automotive mechanics, for example, or general science. There are other subtests for verbal, numerical, clerical perception, and spatial aptitudes. Subtest raw scores are added to form six "composites". For example, the Communications (C) composite (said to be pertinent to operation of communication equipment) combines Arithmetic Reasoning, Mechanical Comprehension, and Space Perception subtests. Two subtests enter none of the composites, though perhaps some military selection rule uses them.

For purposes of civilian guidance the content is not well distributed. Allocating half the battery to technical information is a fault. A few simple questions on experience would provide adequate cues to the counselor; guidance is concerned more with routing the student into proper training than with assessing what he has already learned. The battery lacks the measures of manipulative skills that some batteries have, and has no dierct measure of Abstract or Nonverbal reasoning.

ASVAB items have not been edited well. The Clerical and Spatial items are loaded with detail to the point of tedium. In subtests not intended to measure verbal comprehension, many items are worded more complexly than necessary. Reading the tester's mind is required at times. The solutions to some mechanical-comprehension items rest on mechanical features of equipment that are not directly visible in the drawings. In one item the right answer is reached by realizing that when the tester says "Theoretically, the raft would move . . ." he means, "If water did not offer resistance, ..."

Validity studies in the military. Diverse studies have validated ASVAB composites against grades in military technical schools. One of the best reports is a 1976 draft report (unsigned) on concurrent correlations of ASVAB with Final School Grades given in each of 25 Navy Class-A schools. The training of Operations Specialists may be taken as an example. The GT composite was thought to be the appropriate selection measure; after correction for restriction of range, its validity was 0.50. In that school, the validities of the three other composites examined ranged from 0.43 to 0.50. Typically, ASVAB does about as well as a test can be expected to do in identifying those in the eligible population who are good risks for admission to a school. ASVAB has little or no differential validity; subtests and composites that on their face are irrelevant to a particular course often are among the best predictors. One reason for the lack of differential validity is the overlay of composites; Arithmetic Reasoning, for example, is added into three of the four composites on which the Navy study reported. It was psychologists in the Personnel Research Branch of the Army who did the most, thirty years ago, to prove how important for classification differential measurement is. Hence it is surprising to find ASVAB adopting a design that reduces differential validity.

The formula applied to correct validities for restriction of range may not give a proper adjustment. Overcorrection is to be suspected both in the Navy data and in the validities reported from Air Force Technical schools. There, many of the composites are said to have corrected validities of 0.80 and above, with grades as the criterion.

Other technical qualities. No worthwhile validity studies relating to civilian careers have been reported, though some are promised. The studies now at hand are amateurish, the most horrible example being a substudy that correlates a general ASVAB composite with overall grade average on a sample of five students in one high school. Much about validity can be inferred from other facts, however.

Many subtests are unreasonably difficult; among both males and females one finds a third of the population scoring no better than chance on Space Perception, for example. On the mechanical-information subtests, only a few females get half the items right. ASVAB is designed to cream off and recruit above-average young people, not to assess the lower half. This would have been appropriate in the good old days, for a hire-and-fire-at-will employer who had an oversupply of applicants. But the Armed Services cannot rely solely on well-prepared young people. Especially they must face up to sex differences. The inability of the typical high-school girl to recognize a pipecutter or to say what a thermocouple does indicates nothing about the careers she could be trained for. The military ought to be encouraging more women to go into technical specialties, not using ASVAB to rule them out.

The subtest reliability coefficients from independent testings have a median of 0.80 in an enlistment-station sample, 0.64 in a high-school sample. The figures must be discounted for the sex-sensitive tests; within-sex reliabilities would be still lower. Many subtest intercorrelations exceed 0.60. The composites have good reliabilities (around 0.90), but they intercorrelate highly; the six composites measure one factor. Only the Clerical-Administrative composite (CL) and the General Technical (GT) have a modest amount of reliable variance after the first principal component is removed. Difference scores involving one of these have reliabilities around 0.60–0.70. Differences for the six remaining pairs have reliabilities ranging from 0.53 to 0.00. (The counselor's manual gives no explicit psychometric information on the composites, even though these make up the student profile. I am indebted to Gary Schaeffer and Tom Sachse for working up usable statistics from information scattered through the manual.)

From these calculations and from the high-school validity data, I just that the ASVAB general factor predicts grades as well as other lengthy tests would, but that the composites have negligible differential validity and negligible use for guidance. The differential reliability of the short subtests is poor.

Interpretative information. ASVAB's student report form is to be condemned. In the first place, it reports the six capricious composites and not the 12 subtest scores; the subtests are more interpretable than the composites, though they are poor measuring instruments. The interpretations offered for the composites are not justified by any research, and some are absurd. Recall that CO is an arithmetic-mechanical-spatial composite. The adolescent high in CO is encouraged to consider some jobs that may indeed depend on this aptitude mix: photogrammetrist and audiovideo technician, for example. But what reasoning adds translator or fashion designer or cable splicer to the list? Worse yet, the student who scores high on the GM composite—which measures the same individual differences as CO except for errors of measurement—is told to become a bricklayer or miner. The report form makes no mention of careers that require a college degree. This attempt to suggest vocational interpretations is irresponsible. The extensive counselor's manual has similar deficiencies.

Much else is wrong with the student report form. It is laid out with percentiles as equal intervals, thus exaggerating differences near the median. The ASVAB computer prints out only a profile relative to norms from a grab sample that pools grades 10–12 and pools males and females. Space is allowed for the student to plot a second profile after having the school counselor look up the pertinent within-grade-within-sex percentiles in the manual. The margin for errors in this unnecessary do-it-yourself process is unacceptable. The profile sheet is dramatized with red, yellow, and green stripes; a score in the green area is supposed to mean "all signals go!" The foremost fault of this scheme is that a great many students are going to have all their scores in the yellow ("caution") and red ("Stop!") areas. For all its hypocritical prose saying that scores "should not be considered good or bad," such a report signals to many students that their vocational prospects are discouraging.

I advise school officials to stop ASVAB testing, at least until the student report form, and preferably the whole battery, is drastically revised. The scores now offered are of much less worth for guidance than those offered by the low-cost GATB and by commercially published batteries. Moreover, schools face a large issue of policy. I doubt that schools can defend allowing one employer—even a larger and public one—to administer its selection tests in the schools unless they are prepared to offer the same courtesy to IBM or the leading local industry. At a time when the charge of "too much testing" is raised even against tests designed to serve the schools' purposes, the case for administering ASVAB in the schools is flimsy.

THE OBEY TASK FORCE RECOMMENDATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANDERSON) is recognized for 60 minutes.

Mr. ANDERSON of Illinois. Mr. Speaker, tomorrow the House Commission on Administrative Review, chaired by our colleague from Wisconsin (Mr. OBEY), is scheduled to take up the recommendations made by its task forces on administrative units and work management. All of us received a copy of these recommendations during the August recess and were asked to review them and comment on them. I took advantage of this opportunity and today would like to summarize for my colleagues the comments which I submitted to the Commission for its consideration.

HOUSE ADMINISTRATOR

The principal recommendation of the Task Force on Administrative Units was that an Office of House Administrator be established to direct, plan and coordinate the day-to-day administrative support operations of the House. The Administrator would be nominated by the Speaker, subject to House approval, and would serve a 2-year term, subject to removal only by the Speaker, with the approval of the House Administration Committee.

I think the task force makes a convincing case that our present administrative support activities are widely scattered among various House officers and administrative units and thus are poorly planned, directed and coordinated. The examples cited by the task force on financial mismanagement, and delays and backlogs in processing voucher payments are especially disturbing. Obviously, strong and competent new central direction is called for.

I think the task force report could have been more useful in explaining the present system and justifying the proposed reorganization if it had included detailed, comparative organizational charts of the two systems, including what existing supervisory offices will be abolished and retained under the consolidation. For example, will the proposed new House Comptroller replace the existing Chief Finance Officer of the House or simply be layered on top of him? How many additional personnel—or fewer personnel—are anticipated under the consolidation, and at what additional—or less—cost? Could the consolidation be accomplished under an existing officer of the House, such as the Clerk, or must we establish a new Office of House Administrator? In short, do we need to build a new wing onto the House when a remodeling and Housecleaning might do the same job as efficiently and at less expense?

If the Commission should decide to endorse the proposal for a House Administrator, I would strongly object to exempting him from removal by the House. All other officers of the House are subject to removal by the House by privileged resolution—see House manual, section 315. I do not accept the task force's argument that the professionalism of the Administrator will be jeopardized if he is subject to removal by the House. Surely, someone as powerful and important as the proposed Administrator must be accountable to the full House as an institution, and not just to the Speaker and the House Administration Committee. The proposed exemption from removal by the House also puts him beyond the reach of discipline by the Committee on Standards of Official Conduct in terms of its authority to recommend removal by the House for alleged wrongdoing. No Member, officer or employee should be immune from the regular disciplinary processes of the House. And finally, I would point out that, just as the Administrator should be accountable to the full House and subject to removal by it, he should also enjoy this protection against arbitrary removal by any one person. It is conceivable that under the proposed removal procedure, the Speaker, with the consent of the House Administration Committee, could dismiss an Administrator for less than justifiable reasons. An Administrator should have his day in court, so to speak, just as any other officer would now have under House precedents and procedures.

HOUSE AUDITOR

The Task Force on Administrative Units has proposed the creation of a House Auditor in the Office of the House Administrator, subject to appointment and removal by the Administrator, with the approval of the House Administration Committee. The House Administration Committee would form an Audit Subcommittee to provide policy guidance to the Auditor. The Auditor would be responsible for assuring adequate financial audits of all House accounts, and periodic operational audits to assess the effectiveness of expenditures in meeting the administrative and legislative support needs of the House.

I applaud this proposal for a House Auditor, something we on this side of the aisle have been pressing for for some time. I do question whether the Auditor should be subsumed under the office of the Administrator since, among other things, the Auditor would presumably be auditing the operations of the Administrator in connection with his financial responsibilities. If the Auditor is chosen by the Administrator and may be removed by him, it is questionable whether the Auditor can be as thorough or as objective as he should be regarding the financial operations of the Administrator.

It seems to me it might be preferable to have the Auditor chosen by the Speaker or House Administration Committee, perhaps subject to House approval, operating outside the Office of the Administrator and reporting directly to the House Administration Committee's Audit Subcommittee. I think it is important that the Auditor's findings and activities be above any suspicion that they have been tailored to please a superior to insure job security.

LEGISLATIVE SUPPORT ACTIVITIES

Both tack forces have made recommendations regarding our various legislative support units—the Congressional Research Service —CRS—the Congressional Budget Office—CBO—the Office of Technology Assessment—OTA—and the General Accounting Office—GAO—which I consider to be ill-advised. The Task Force on Administrative Units has proposed that the Clerk of the House "should play a significant role in alleviating the mission and competition problems that are developing in connection with" these units, and in taking "the initiative in searching for an arrangement or mechanism that can serve as a means of enhancing congressional coordination and communication with these support organizations." The Task Force on Work Management has proposed that the "legislative support agencies should be specifically directed to assist the Speaker and minority leader," including at least two meetings a year with those leaders.

I object to the first proposal on the grounds that the Clerk cannot be expected to have a sufficient grasp of substantive issues or research techniques to be an effective mediator between these units; and moreover he cannot unilaterally assume this kind of supervisory or coordinaing role since these are all services which are shared with the Senate. I object to the second proposal because, as the report itself points out, the Speaker and minority leader already have access to these agencies for long-range analyses, and the agencies already meet together on a monthly basis to coordinate and discuss their activities. I am therefore suspicious of any further attempt to specify a special obligation or relationship between these agencies and the party leaders in the House because, whether intended or not, this smacks too much of politicizing the agencies by bringing them under greater partisan direction and control. Taken together with giving the Clerk, an elected officer of the majority party, a greater role in "coordinating" the activities of these agencies and in "alleviating the mission and competition problems" between them, I fear we would be running the real risk here of compromising and jeopardizing their credibility, integrity, objectivity and independence.

I further think that some competition between these support agencies is healthy in terms of giving the House a fuller range of analyses and options. I would be highly suspicious if they all began to crank out the same findings and conclusions, especially if they were under greater control from the Speaker and Clerk. It is a matter of public knowledge that there is some dissatisfaction on the part of the leadership and some Members with these agencies because they have sometimes produced studies unfavorable to congressional majority or administration proposals, in both this and the previous administration. The most recent example of this was the various studies which questioned whether the administration's energy proposals were capable of meeting its announced goals.

I think we must recognize that these offices were established for the express purpose of giving us the type of independent and expert opinions that would enable us to analyze certain problems without being totally dependent on data supplied to us by the executive branch. I think this continues to be necessary if

we are to regain our stature as a strong, coequal branch of government, regardless of which party is in control of which branch. I would hope, just because a Democratic administration is now in power, that the leadership does not revert to a reliance on the executive branch for information and analyses and undermine the mission of these legislative support agencies by subjecting them to partisan control and considerations.

HOUSE ADMINISTRATION COMMITTEE

The Task Force on Administrative Units has recommended that both parties consider giving their respective House leaders the role of nominating to the House the party members who would serve on the Committee on House Administration. The task force reasons that if House leaders are accountable for the administrative affairs of the House, and if the House Administration Committee is to have an expanded role in this regard, then the leaders should have a greater role in determining the makeup of the committee.

I object to this proposed procedure for naming Members to the House Administration Committee because our committees are supposed to be creatures of the House and not of one or two leaders. As things now stand, nominations to committees are proposed by party caucus nominating committees which are chaired by the respective party leaders, subject to ratification by the full caucus and finally the House. The leaders thus already have substantial influence in this process.

Any greater control over this process by the leadership would be a very dangerous concentration of power and could reduce members on the affected committee to mere rubber stamps of the leadership. While some Members might be willing to swallow their pride and independent judgment and subordinate these to the wishes of the leadership for a seat on a prized committee, for example, the Rules Committee, it is questionable whether they would be as willing to serve on the House Administration Committee if they were expected to be little more than proxies for their party leaders. It should also be emphasized that the House Administration Committee is concerned with more than just the administrative operations of the House. Under clause 1.(i)(11) of House rule X, the House Administration Committee also has jurisdiction over "measures relating to the election of the President, Vice President, or Members of Congress; corrupt practices; contested elections; credentials and qualifications; and Federal elections generally." Thus, the proposed control of House Administration Committee members by the leadership has much broader implications than accountability for the administrative affairs of the House. It could even raise a serious conflict of interest question if either of the leaders were involved in a contested election.

HOUSE INFORMATION OFFICE

It is noted at the end of the report of the Task Force on Administrative Units that—

> The staff is also preparing a recommendation of the establishment of a House Information Office . . . to provide information of an institutional nature to the general public, press and Capitol visitors.

Variations on this proposal were suggested back in 1974 in a report entitled, "Congress and Mass Communications: An Institutional Perspective," prepared for the Joint Committee on Congressional Operations by John G. Stewart on contract to CRS. That report offered such options as: A congressional news service that would provide detailed stories on a daily basis to newspapers, television and radio stations and other interested subscribers; a Federal information network that each day would broadcast the activities of the executive, legislative and judicial branches on an FM frequency; a congressional information service organized by the Library of Congress to provide the news media, schools and colleges, civic groups, and private individuals with more detailed information on the duties and activities of Congress; a series of instructional films on aspects of the legislative process to be produced by the Joint Committee on Congressional Operations; and a Congressional Broadcasting Systems that would operate on a local FM frequency whenever Congress was in session.

In reacting to such proposals in my testimony before the Joint Committee on Congressional Operations on February 20, 1974, I said the following:

> . . . I do not think the Congress as an institution should be engaged in news dissemination or the production of educational materials. Such proposals as a congressional news service, federal information network, and congressional information and film services smack a little too much of news management and government propaganda for my comfort.

I went on to say the following:

> I think news dissemination is best left to the news media and the production of instructional materials is best left to the educators. The best news service the Congress can perform is to make news by newsworthy actions, not to manufacture news by slick devices. The best educational service the Congress can perform is to demonstrate that our constitutional system can function in the real world, not to fabricate instructional materials on how it is supposed to work.

My sentiments remain the same today as they were 3½ years ago when I delivered that testimony. We do not need a public relations office to tell others what to think or write about this institution. I think the public would be justifiably outraged at any expenditure of their funds for the purpose of polishing our image.

The August 12, 1977, issue of Congressional Insight, which is published by the prestigious Congressional Quarterly Publications, perhaps summed it up best, and I quote:

> The Obey Commission has revived talk of a House public relations office. It's the old complaint: the press doesn't understand us, therefore the public doesn't appreciate us. Somehow, the thought is that if more information were available, the people would have a higher regard for Congress. But the idea is too ticklish politically to work. Who would the information czar speak for? The entire House? The Speaker? (Tip O'Neill is emphatically his own spokesperson.) The proposal probably won't make it into the final Obey report, which will be finished just after Labor Day.

I sincerely hope that prediction is correct with regard to this ill-conceived and ill-advised proposal.

SELECT COMMITTEE ON COMMITTEES

The Task Force on Work Management led off its report with the recommendation that we establish a Select Committee on Committees for the purpose of making recommendations on modernizing the House committee system, including such matters as committee jurisdictions, size, numbers of committees and subcommittees, rules, staff, space and equipment. The Task Force recommends that the select committee be created before the end of this session and report back by July 1, 1978. As a staunch supporter of such a select committee in the 93d Congress, whose work was eventually undone by a Democratic Caucus substitute resolution, I strongly endorse another attempt in this Congress.

It seems to me with the newer membership we have around here, and therefore less vested interest in seniority and turf, we might be able to bring about a rational realignment of our committee jurisdictions. In addition, many of the more senior Members of this House have since expressed regrets that they did not support the proposals of the so-called Bolling-Martin committee because they have become acutely aware of the drag our current jurisdictional hodgepodge has had on the progress of legislation. Those of us who serve on the Rules Committee are confronted weekly with jurisdictional disputes and the leadership has had to rely more and more on ad hoc and select committees to bring some order out of all this chaos. I hope the House will move early on this proposal of the task force and that the select committee will meet the deadline set by the task force without interference and delays from the Democratic Caucus.

HEARING SUMMARIES

The task force has proposed that all committee hearings be indexed and abstracted by committee staff and be made available to the public in the offices of the committees. I think this would be very useful and would take the proposal one step further by suggesting that committees be required to keep a verbatim transcript of all hearings and meetings, and that these, along with the indexes and summaries, be available to the public unless the information is of a confidential or national security nature, and so protected by law or House rules. This is in essence the thrust of my House Resolution 163 which would amend clause 2(e)(1) of rule XI to this effect.

OTHER COMMITTEE PROPOSALS

The task force has proposed that committees experiment with different formats for their hearings, and I see nothing in the House rules whieh now prevents this. I think panels of witnesses, even those having opposing views, can be very useful to a committee providing sufficient time for questioning is allowed. I do take issue with the proposed rule

that written testimony be presented 48 hours in advance to the staff, and that witnesses be confined to a 10-minute oral summary when they appear. I think committees can now operate under such procedures if they wish since the House rule speaks generally to advance submission of testimony and oral summaries. The most troublesome aspect of the proposed rule is that only the chairman of the commitee, in consultation with the ranking minority Member, be allowed to waive the 10-minute rule. This is fraught with great potential for abuse since it is not inconceivable that a chairman would waive the requirement for witnesses favorable to his position and not for those holding contrary views. This could obviously result in a great abuse of minority rights.

As for the proposal that committees publish a weekly summary of their actions in the Daily Calendar, and a monthly schedule of upcoming activities, I think the present daily summary of committee activities in the "Daily Digest" in the back of the CONGRESSIONAL RECORD is sufficient, and that the weekly schedule of committee hearings published in the same Digest could easily be expanded one a month to a monthly preview. I do not think it is necessary to duplicate this information in the Daily Calendar.

CONGRESSIONAL RECORD

I fully agree with the proposal that words actually spoken in the House be distinguishable in the CONGRESSIONAL RECORD from those remarks which are simply inserted. This is long overdue and something which my colleague from Wisconsin (Mr. STEIGER) has been plugging for years. I also have introduced a resolution (H. Res. 175) which would implement this proposal through an amendment to the House rules.

COMMITTEE STAFF

I applaud the attempts of the task force to put a cap on the growth of committee staff. I am not convinced from the data presented that there is justification for permitting even a 3-percent growth rate in committee staff in each Congress, particularly when you consider that this would not include the proposed committee staff assistants for individual members. That proposal alone should reduce the need for additional committee staff. Moreover, while the workload of Members' offices has grown with each Congress, we are held to a constant staff ceiling of 18 slots.

Mr. Speaker, as any Member who has reviewed this 93-page document of the task forces is aware, my comments do not cover all the recommendations. I have commented here primarily on those with which I either take some issue or strongly agree. There are numerous other recommendations which are commendable and necessary. I think the task forces have done an excellent job in presenting a wide array of options to the Commission. I hope the comments which I have offered are taken in the constructive sense they were intended and that the Commission will consider them during their deliberations.

THE 38TH ANNIVERSARY COMMEMORATION OF THE INVASION OF POLAND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, September 1, 1939, was a day of infamy. It was a day of infamy because it was on this day 38 years ago that the military forces of the Nazis invaded Poland and set off a series of events that led to World War II.

Poland was the victim in September 1939; she was the sacrificial lamb; for it was the sacrifice of Poland that led all free nations of the world to make that final decision to stop Hitler from the conquest of all Europe.

Within a very short time, a matter of days, the Nazi war machine destroyed Poland. The heroic, courageous, patriotic Polish people fought desperately to turn back the mighty enemy, but the power of Hitler's army was too much for the Poles.

When victory became certain for the Nazis, the Soviet Union decided to seize its share of the war booty and its military forces, on September 17, crossed the Polish frontier and joined in the final destruction of the Polish state.

It is, of course, one of the tragedies of history that the victim too must pay the price of the enemy's miscalculation. For Poland and her people endured the worst of World War II only to find that a new enemy had taken control of the country's destiny once liberation became a reality. Communism quickly filled the void created by the destruction of Nazi power in Poland, and ever since the people of Poland have been subjected to a new and all-consuming tyranny.

A cruel fate had befallen the Polish in the first few years after the end of the war. Once effective opposition was destroyed, the Communist regime leaders set out to create in Poland a Communist state modeled after that of the Soviet Union. Freedom of religion no longer existed. Political freedom was narrowly limited by the Communist Party. The economic sector, particularly industry, was organized along Communist lines. In the cutural realm Communist control was total. No longer could the Polish artist, the playwright, the composer create his art freely as his inner soul demanded.

In this anniversary of the beginning of World War II, our hearts go out to the Polish people. Their lives have been too full of tragedy, misery, and suffering. These fearless, lovable, hard-working, courageous people deserve a far better fate than what has befallen them since September 1, 1939. And it is our hope that one day they shall have better times, and that they will be a part of the whole European community of nations enjoying fully the fruits of democracy and freedom.

As we again commemorate these sad events in the House of Representatives, I am proud to join the Polish-Americans in the 11th District of Illinois, whom I am honored to represent, and all over this Nation in their hopes and prayers for the reentry of Poland in the community of free nations. Freedom-loving people the world over are watching and the Communists must never be allowed to forget this or to ignore the yearning for liberty in the hearts of the Polish people.

TRUTH IN DEFENSE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. DOWNEY) is recognized for 15 minutes.

Mr. DOWNEY. Mr. Speaker, in the 94th Congress, I began a series of what I call "Truth in Defense" bulletins. The purpose of these bulletins is to rectify what I regard as factually incorrect statements on issues of national defense. Four such bulletins were issued in the 94th Congress; this will be the first to be issued in the 95th.

My purpose is not to pick a quarrel with anyone, but to provide all of us with a factually and conceptually sound framework upon which to base our decisions on questions of national defense. In an effort to provide fair opportunity for all sides to be heard, I observe the followlowing procedures:

First. Each "Truth in Defense" bulletin will be circulated in the form of a Dear Colleague letter. One legislative day after the letter is circulated, I will discuss its contents on the floor in a special order. Thus, any Member of Congress whose statements are criticized in a bulletin will have the opportunity to engage in public debate. I might add that the more comments I can elicit the happier I will be, whether the comments agree or disagree with me.

Second. I expect a substantial number of my bulletins to take issue with persons who are not Members of Congress. In such cases, I will send them advance copies of my comments and will offer to circulate their replies together with my own statements.

TRUTH IN DEFENSE—PART V

In the course of the Senate debate on the defense appropriations bills, Senator JAKE GARN made a number of statements on the B–1 and related matters of strategic deterrence. They can be found in the RECORD of July 18, 1977, pages 23502–23503. These statements and my comments follow:

I

Statement: If we upgrade a B–52 to be a standoff cruise missile carrier, as some have indicated, the cost is estimated at $16 billion. The whole B–1 fleet could be built for approximately $25 billion—$7 billion more.

Comment: The cost of upgrading the entire B–52D/G/H to be a standoff cruise missile carrier is estimated at about one quarter of a billion dollars, or one sixty-fourth of the figure suggested. $16 billion is the cost of completely redoing the B–52 to be a penetrating bomber, called the B–52X. The standoff bomber conversion is relatively cheap and simple.

II

Statement: The point is that an upgraded B–52, it . . . does not have the electronic countermeasures capability.

Comment: The B–52X, at the cost specified by Senator Garn, has the full B–1 electronic

countermeasures capability. Every piece of B–1 electronic countermeasures equipment can be installed and operating in every B–52G and B–52H for a total cost of approximately $1 billion. (Note: This is a contractor estimate, which is all that is available at this time. It is true that contractor estimates tend to be low, but any cost overruns in the electronic countermeasures would affect the B–1 and the B–52 equally.)

III

Statement: When we complain about a B–1 costing $100 million, which I am sure it would, if you want to buy a 747 . . . it could cost upward to $100 million too, and what do we have? We still do not have a B–1.

Comment: As a standoff cruise missile launcher, the 747 is superior to the B–1 in several key respects. It carries more than three times as many cruise missiles; its endurance aloft is longer; its operating cost per missile carried is much lower; it has more space and weight capacity for self-defense systems if these are judged desirable. While it is correct that the unit cost of the B–1 and the 747 cruise missile launcher will be comparable, with the B–1 we would be paying for speed and terrain-following capability which are not needed for the standoff mission, and we would be denying ourselves the payload and endurance which are needed.

IV

Statement: For a long, long time, Congress and Presidents . . . have pushed consistently the triad system of defense, that the greatest deterrent we could have would be to have this three-legged stool composed of manned bombers, intercontinental land-based ballistic missiles, and sea-launched ballistic missiles. It is important to look at the context in which the President made his decision to cut off one of the legs of the triad. . . .

Comment: We should try first to look at the objective of a military program, and we should recognize that the question of the hardware needed to achieve that objective is a subsidiary issue. We have a multi-legged nuclear deterrent because each leg is strong where the other two have inherent weaknesses, and because each provides a hedge against a possible Soviet defensive breakthrough which might neutralize the other two. Specifically, manned bombers have been useful because, unlike ballistic missiles, they can be launched in time of danger, held safely aloft for hours while the President negotiates, and ultimately recalled or sent on to target as he chooses. In addition, bombers are not vulnerable to anti-ballistic missile defenses as we now conceive them.

The standoff cruise missile launcher does all these things, and does them better. Because of its longer loiter time, it provides better useful recallability (the critical measure here is time from launch, not time to target) and its ability to penetrate advanced anti-aircraft defenses is superior to that of the B–1.

Thus, while the President has changed its name and, if you will, painted it a different color, he has not cut off the third leg of the triad; he has made it stronger.

V

Statement: The other two legs (of the triad) are weak. The Trident submarine system will not be fully operational until the mid-1980s at the earliest. So we have an older weapons system there, in contrast to the Soviet Union, which has its new class submarine in operation today to replace the Yankee class.

Comment: While the Delta submarine, which is replacing the older Yankee, is newer than our Polaris/Poseidon, this should not obscure the fact that our "old" submarines are better than the Soviet "new" ones. Our ships are far quieter, and we are able to keep more than 50 percent of them at sea at any given time, whereas the Soviets can keep only about 11 percent at sea. On this basis alone, one of ours is worth five of theirs. When one considers additional factors such as navigation capability, reliability of missile, accuracy of missile, number of targets addressable per ship, and severity of anti-submarine threat faced, our superior position is multiplied many times. Soviet submarine-based systems are superior only in that a small number of their missiles have longer range than ours, but this is of no military significance at the present time, since the quality of Soviet anti-submarine warfare is not high enough to require a longer-range missile on our part.

I should emphasize, however, that both Senator Garn and I are making mere academic debating points here. The relative merits of submarine-launched missiles are of no military significance since they do not engage each other.

VI

Statement: We have not deployed an ICBM in more than 10 years.

Comment: Within the past ten years we have deployed 550 Minuteman III ICBMs, plus a number of Minuteman IIs. We are now engaged in an upgrading of the Minuteman III which will give it more than six times as much hard target kill capability, thus making it a "new missile" in terms of capability.

A copy of the above was sent to Senator GARN on August 24, together with an offer to circulate his response, in full and without comment. He has not responded.

U.S. CANAL ZONE AND PANAMA CANAL SHOULD NOT BE GIVEN AWAY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, as is widely known, the United States is now the scene of a major propaganda blitzkrieg apparently aimed at conditioning the people of our country and their Congress into approving a long predetermined surrender to Panama of U.S. sovereign control over the U.S. Canal Zone territory and, eventually, of the Panama Canal itself. This drive is not of spontaneous character based upon realistic merits but directed from the executive branch, especially the Department of State.

In spite of the most active press campaign that I have ever followed in my entire career, the sovereign people of the United States have not been hoodwinked and their opposition to the proposed giveaway treaties has mounted tremendously. Polls over several years have shown a steadily mounting resistance to the projected surrenders and Members of the Congress, especially Senators, are now being deluged with letters of strong protest from all parts of the Nation. As of July 11, 1977, my correspondence count, in the form of letters and petitions, was in overwhelming opposition to the projected surrenders: 9,520 favorable to my position and 18 opposed to it. This is a ratio of 528.88 to 1 in support of retention by the United States of its undiluted sovereignty over both the U.S. Canal Zone and Panama Canal.

Among recently published articles dealing with the situation in realistic manner was one by Allan C. Brownfeld, an unusually well-informed Washington correspondent who for many years has closely followed the canal situation. In this article, he makes a number of important points, including the danger to the Monroe Doctrine, an emphasis of the fact that the United States is sovereign of the Canal Zone, the serious threat of a take over by Soviet imperialism of the Panama Canal, and a call for the Senate to reject the "strange giveaway" treaty.

Mr. Speaker, in order that the Congress and the Nation may have the indicated article by Alan C. Brownfeld easily available, I quote it along with my press release of August 11, 1977, concerning the "agreement in principle" of August 10, for a new Panama Canal treaty:

[Lima (Ohio) News, Aug. 25, 1977]

CANAL SHOULD NOT BE GIVEN AWAY

(By Allan C. Brownfeld)

President Carter has called on Congress and the American people to accept new treaties governing the Panama Canal and predicted that, if ratified, they would form "the foundation for a new era in our relations with all of Latin America."

The President stressed that the agreements would "fully preserve" American interests and national security requirements in the canal area. At the same time, he said, they would satisfy Panama's aspiration for ultimate control of the canal.

If the U.S. Senate does not ratify the agreement, Ambassador Sol Linowitz, one of those who negotiated it with the Panamanians, declared, it "would not bode well for future relations between the U.S. and Panama and the U.S. and Latin America. The danger of an explosive situation developing there if they are not ratified is there."

Looking carefully at the arguments presented by President Carter, Ambassador Linowitz, and other advocates of giving the Panama Canal to the Panamanians, one quickly discovers that the only real reason they offer for taking this action is that the Panamanians want the canal—and if they don't get it there may be an "explosive situation." This sounds very much like blackmail.

The fact is that there is no good reason, from the U.S. viewpoint, to give the canal, which is legally ours, to the Panamanian government, an unstable dictatorship which has close ties with Fidel Castro and is being wooed at the present time by the Soviet Union. Quite to the contrary, there is every reason to keep the canal firmly in American hands.

In an important book, "Hands Off The Panama Canal," Isaac Don Levine, a longtime student of communism, declares, "What is at stake in the controversy over the Panama Canal is the existing Soviet springboard for a leap to the canal—and not the question of replacing the outmoded 1903 treaty with a new, pact. That is a matter which can be solved by agreements providing enhanced emoluments and benefits for the great majority of the Panamanian people. The real challenge in the combustible issue is to the vital national interests of the U.S. in a critical strategic area—the Caribbean."

Concerning the notion that the Panama Canal is somehow not sovereign U.S. territory, Levine declares that ". . . nowhere in all the 26 articles of the convention . . . is there any clause reserving sovereignty or affirming it for the Republic of Panama over the areas granted by it to the U.S. On the contrary, the stipulations of the convention on the point are clear."

Beyond all of this, Levine, whose understanding of communism goes back to the Russian Revolution, which he covered as a journalist for the Chicago Daily News, de-

clares that the Monroe Doctrine would be seriously challenged by a giveaway of the canal.

Levine writes that the Monroe Doctrine "was fashioned by leaders who were convinced that appeasement invites aggression, that a bully cannot be stopped with diplomatic syrup . . . The Soviet leap to Angola with the aid of a Caribbean expeditionary force marks a new departure in the strategy of the Kremlin. It sets a precedent of aggression by proxy which cannot be allowed to stand. It must be reversed and it can be done without firing a shot. Unless that is achieved, the Soviet-Cuban dagger threatening the Panama Canal portends the coming of a catastrophe . . . The real choice before the U.S. in Panama is between unimpaired American control of the canal and a threatening takeover by the Soviet imperialists.

In July, at the very moment when U.S. and Panamanian negotiators were conferring, the Soviet Union was in the process of negotiating a potentially major trade and economic agreement with the Panamanian government. This deal could significantly enhance the Soviet presence not only in Panama but in other Latin American countries as well. It is significant, as well, to note that Panama does not even maintain diplomatic relations with the Soviet Union at the present time.

The visit to Panama by a high level Soviet delegation from July 11–19 received front-page treatment in Panama, but was unreported in the U.S. until Rep. Eldon Rudd, R-Ariz., disclosed the details in a House floor speech Aug. 4. Later, a spokesman for the State Department acknowledged that the U.S. "takes a dim view" of such Soviet overtures but tried to minimize the significance of the Soviet-Panama agreement, pointing out that "the deal is only in the discussion stage."

One element of the proposed agreement is the purchase of 50,000 metric tons of crude sugar from Panama by the U.S.S.R. at a price higher than the world market rate. Rep. Rudd declared that "The possible Soviet purchase is highly significant because Panama currently has a glut of sugar and cannot sell it. . . . Such an agreement with the Soviets . . . will result in the Soviets being taken to the cleaners by paying substantially more than the world market price . . . a concession that raises serious questions about the Soviet motive in making these agreements at this time of a new U.S.-Panama accord."

The Senate would do well to reject this strange giveaway of U.S. territory and sacrifice of U.S. interests.

A New Panama Canal Treaty

Congressman Daniel J. Flood of Pennsylvania, a nationally recognized authority on Panama Canal history and interoceanic canal problems, made the following statement concerning the August 10, 1977, "agreement in principle" for a new Panama Canal Treaty announced in the major news media on August 11:

The "agreement in principle" between representatives of the United States and the Republic of Panama made on August 10, 1977 and announced in the major news media of the United States on August 11 comes as no surprise to informed students of the canal question, which include many members of the Congress. It is a high point of a plan long in preparation to present the Nation and the Congress with a fait accompli.

The issues involved are not local Isthmian ones but global in their significance, involving the changing of the strategic Caribbean Sea and Gulf of Mexico into Red Lakes. As such, they are non-partisan in character and must be decided on the highest plane of statesmanship if our course is to be sound and our future protected.

To be valid any agreement signed by U.S. representatives must be ratified by the Senate and, if it includes provisions for the disposal of U.S. territory and property in the Canal Zone, such disposal must be authorized by the entire Congress, which includes the House of Representatives.

When the Congress reconvenes and has the text of the agreement it will receive due scrutiny. I shall oppose any giveaway of the Panama Canal or any dilution of U.S. sovereign control over the Canal's indispensable protective frame of the Canal Zone.

FAMILY VIOLENCE AND TREATMENT ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Maryland (Ms. Mikulski) is recognized for 10 minutes.

Ms. MIKULSKI. Mr. Speaker, today I am introducing the Family Violence and Treatment Act. This is my response to the growing problem of violence in the American home. Although there have been recent articles in the press dealing with this matter, it is still, for the most part, an invisible problem. I would like to use this opportunity to bring the severity of the situation to the attention of my colleagues. It is important for us to comprehend the crisis and act quickly.

Police reports, studies by social scientists, court records, and data from battered women shelters confirm:

First. One-fourth of all murders in the United States occur within the family and half of these are husband-wife killings.

Second. Twenty-five percent of couples in the United States have a violent episode during their relationship; 16 percent occur each year; 10 percent admitted extreme physical abuse. Other studies indicate the numbers could be as high as 60 percent of some form of violence occurring each year.

Third. At least 10 percent of the children who witness parental violence become adult batterers themselves.

Fourth. Police suffer directly. More of them die answering domestic violence calls than any other single category. One out of every five officers who lost his life in 1974 did so trying to break up a family fight.

Fifth. Only 2 percent of battering males are ever prosecuted. In most States, police cannot arrest a battering husband unless they witness the crime or have a warrant issued by a judge. Police often refuse to make an arrest even when they witness the crime, and women often find magistrates reluctant to issue warrants.

Sixth. Spouse beating is widespread, cutting across class, ethnic, racial, and economic lines. Family violence occurs as often in upper middle class families as it does in lower-class families.

Seventh. The expression "A man's home is his castle" explains in part the reason for domestic violence. First, there is the implication that the man owns the home more than the woman. Second, the imagery of the castle implies that it is shut off from outside interference, such as the police and the courts, until the violence reaches extremes.

Eighth. Violent acts are committed by women almost as frequently as they are committed by men. The implications for women, however, are more severe. Women are not as physically strong as men. In addition, women were raised to be subservient to men and, in some cases, believe that they deserve to be beaten. Finally, women often lack the financial independence to leave a violent environment.

Based on these facts, the problems of family violence should be a top priority for congressional legislation. Action must be taken by Congress to begin to solve this problem. My legislation addresses the problem of the battered spouse in a crisis situation, as well as the complex and deepseated phenomenon of family violence.

THE BATTERED SPOUSE

Because I am convinced that the programs that work best are those initiated by citizens of the community, my legislation proposes stipends so that local volunteers can work in their neighborhoods. The volunteers, trained by ACTION professionals, would establish and operate programs for battered spouses through the use of shelters, hotlines, and support services. My legislation builds on the innovative programs establishing a National Center for Community Action Against Family Violence with the ACTION agency. The center will: Train and support the volunteers; operate an informational clearinghouse and a national hotline; and will run a national media campaign to educate the public about family violence. By using the existing administrative structure of ACTION, we avoid creating a new Federal bureaucracy.

I talked to the Director of ACTION and he is excited about the program. Many activist organizations have told me that they like the grassroots approach. The program does not build dependence on Federal Government, but emphasizes the most promising approach to the delivery of human services—supported volunteers at the local level. The service program is decentralized and no Federal design is imposed. Local programs can be responsive to the needs of their communities which share the racial, class, or ethnic characteristics of the neighborhoods.

FAMILY VIOLENCE

The problem of the battered spouse is more critical and needs to be solved immediately, as the health and safety of peoples' lives depend on it. It is imperative, however, that we focus on the causes of family violence. My bill proposes the following initiatives to begin the work:

One. The establishment of an interdepartmental network of Federal agencies to coordinate all programs dealing with family violence.

Two. A reporting system to collect data on the incidences of family violence.

Three. A HEW-directed evaluation of the Federal programs dealing with family violence.

The Family Violence Prevention and Treatment Act offers a new approach, which can stand by itself or work in combination with other ideas. At a time of fiscal restraint and disenchantment with massive Federal spending programs to solve social problems, I believe my

approach can have a large impact on this situation for a modest amount of money. I urge your support for immediate action to tackle this important issue.

A TRIBUTE TO EDWARD CLARK

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. BURKE) is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, tonight, Mr. Edward Clark, who serves as the town clerk and treasurer for the town of Randolph, Mass., will be honored by his fellow townspeople for 23 years of dedicated service. Ed's many friends will assemble at Lantana's to pay tribute to him as he enters his well-deserved retirement years. A more dedicated public servant could not be found. However, it would be uncharacteristic of Ed to discontinue his strong affiliation with the town and its needs. I think we can be assured of his continued involvement in activities in behalf of the Randolph community for many years to come.

Ed served in the 313th Infantry, 79th Division during World War II. He served his country well and was decorated. As a member of the 77th Infantry, myself, during World War II and as a public official as well, I felt a special kinship with Ed, and I am sure that he would agree that life in the trenches is rather good training for life as a public official. He further served his country as a member of the Selective Service System—Local Board No. 125, as well as in the Veterans' Administration and Labor Department. On the local level, his contributions were as a member of the Randolph School Committee, Democratic Town Committee, and for the last 23 years, as Randolph's town clerk and treasurer.

I want to join with the townspeople of Randolph, his friends, and public officials in thanking him for his dedication, and with them, extend my very best wishes, for his long and happy retirement.

INTRODUCTION OF BILL AUTHORIZING PANAMA CANAL REFERENDUM

(Mr. HANSEN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HANSEN. Mr. Speaker, this morning I have introduced a bill to authorize an advisory referendum on the question of the Panama Canal to be held during the general election of 1978. I am well aware that Congress cannot, constitutionally, delegate its legislative functions to anyone including the very people from whom all of our Government authority comes. My bill would not do that; it would simply seek their advice.

Is that too much to ask in a democracy?

President Ford has stated that he delayed the treaty negotiations last year precisely because of the effect such a proposal would have had on the 1976 election. President Carter has indicated his concern for the timing of Senate ratification because of electoral implications. Both of these leaders seem to be aware of the popular resistance to their direction on this question, at least. My bill would let the people know that we, their representatives, in the Congress and Senate of the United States, not only hear their voices but want to heed their words.

Is that too much to ask in a democracy?

Mail in my office has been running overwhelmingly against the proposed treaty, and the same is true in every office of which I have any knowledge, and by public admission at the White House. Apparently to some, this voluntary outpouring of sentiment is not worthy of cognizance—after all, they contend our leaders know what is right!

I, for one, think that the people know what is right, and that listening and responding to their voice is not too much to ask in a self-governing nation.

In fact, that is what democracy is all about.

I invite all of my colleagues in the name of the public's interest to cosponsor this bill and urge your support for this simple "hearing aid" so that we may better understand the voice of the people.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. ZEFERETTI (at the request of Mr. WRIGHT), for September 7 and 8, 1977, on account of illness in the family.

Mr. STANGELAND (at the request of Mr. RHODES), for today and the balance of the week, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. EVANS of Delaware) and to revise and extend their remarks and include extraneous matter:)

Mr. COHEN, for 20 minutes, today.

Mr. MCKINNEY, for 20 minutes, today.

Mr. CORCORAN of Illinois, for 5 minutes, today.

Mr. JEFFORDS, for 20 minutes, today.

Mr. KEMP, for 10 minutes, today.

Mr. SARASIN, for 5 minutes, today.

Mr. WHALEN, for 10 minutes, today.

Mr. ANDERSON of Illinois, for 1 hour, today.

Mr. WHALEN, for 10 minutes, on Thursday, September 8.

Mr. WHALEN, for 10 minutes, on Friday, September 9.

(The following Members (at the request of Mr. VOLKMER) to revise and extend their remarks and include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. DOWNEY, for 15 minutes, today.

Mr. FLOOD, for 5 minutes, today.

Ms. MIKULSKI, for 10 minutes, today.

Mr. BURKE of Massachusetts, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. EVANS of Delaware) and to include extraneous matter:)

Mr. MCKINNEY.

Mr. YOUNG of Florida in five instances.

Mr. ARCHER in five instances.

Mr. DICKINSON.

Mr. FINDLEY.

Mr. DERWINSKI in three instances.

Mr. RINALDO.

Mr. CRANE in two instances.

Mr. MCCLORY.

Mr. STEERS in five instances.

Mr. KASTEN in two instances.

Mr. RUPPE.

Mr. RUDD.

Mr. COLLINS of Texas in four instances.

Mr. LENT in two instances.

Mr. COHEN in two instances.

Mr. CARTER.

Mr. WINN.

Mr. WHALEN.

Mr. SHUSTER.

Mr. MICHEL in three instances.

(The following Members (at the request of Mr. VOLKMER), and to include extraneous matter:)

Mr. EILBERG in 10 instances.

Mr. DE LA GARZA in 10 instances.

Mr. KILDEE.

Mr. BRODHEAD in two instances.

Mr. BYRON in 10 instances.

Mr. ROSENTHAL in 10 instances.

Mr. SISK.

Mrs. LLOYD of Tennessee in five instances.

Mr. ANNUNZIO in six instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. BROWN of California in 10 instances.

Mr. HAMILTON in 10 instances.

Mr. SIMON in four instances.

Mr. BRINKLEY in two instances.

Mr. FAUNTROY.

Mr. CLAY in three instances.

Mr. FRASER in 10 instances.

Mr. VENTO in two instances.

Ms. MIKULSKI.

Mr. BLOUIN.

Mr. ASPIN in 10 instances.

Mr. MOAKLEY in 10 instances.

Mr. WAXMAN in two instances.

Mr. ROGERS in five instances.

Mr. COTTER in five instances.

Mr. YOUNG of Missouri.

Mr. OTTINGER in two instances.

Mr. OBERSTAR in two instances.

Mr. EDWARDS of California.

Mr. ROE.

Mr. DRINAN.

Mr. MURPHY of Illinois.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 71. An act to strengthen the supervisory authority of Federal agencies which regulate depositary institutions, to prohibit interlocking management and director relationships between depositary institutions, to amend the Federal Deposit Insurance Act,

and to encourage officials of Federal agencies responsible for the supervision of financial institutions to complete their terms of office, and for other purposes; to the Committee on Banking, Finance and Urban Affairs;

S. 972. An act to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small businesses with advice and counseling on management development, technical information, product planning and development, and for other purposes; to the Committee on Small Business;

S. 1462. An act to authorize the Secretary of Agriculture to undertake an emergency runoff retardation and soil erosion prevention program, and to establish an emergency fund to carry out the program; to the Committee on Agriculture;

S. 1526. An act to establish an Associate Administrator for Women's Business Enterprise within the Small Business Administration; to the Committee on Small Business; and

S. 1866. An act to amend section 222 of the Communications Act of 1934 in order to include Hawaii in the same category as other States for the purposes of such section; to the Committee on Interstate and Foreign Commerce.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 1153. An act to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes; and

S. 1935. An act to amend Public Law 95–18, providing for emergency drought relief measures.

ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 2563. An act for the relief of Velzora Carr;

H.R. 6161. An act to amend the Clean Air Act, and for other purposes; and

H.R. 7589. An act making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. THOMPSON, chairman of the Committee on House Administration, reported that that committee did on August 6, 1977, present to the President, for his approval, bills and a joint resolution of the House of the following titles:

H.R. 7589. A bill making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes;

H.R. 2563. A bill for the relief of Velzora Carr;

H.R. 6161. A bill to amend the Clean Air Act, and for other purposes;

H.R. 6370. A bill to authorize appropriations to the United States International Trade Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes;

H.R. 1952. A bill to amend the corporate name of AMVETS (American Veterans of World War II), and for other purposes;

H.R. 6179. A bill to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes;

H.R. 4991. A bill to authorize appropriations for activities of the National Science Foundation, and for other purposes; and

H.J. Res. 372. A joint resolution to authorize the President to issue a proclamation designating the week beginning on November 20, 1977, as "National Family Week."

ADJOURNMENT

Mr. VOLKMER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 26 minutes p.m.) the House adjourned until tomorrow, Thursday, September 8, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2104. A communication from the President of the United States, transmitting a proposed supplemental appropriation for fiscal year 1978 for the Department of Commerce (H. Doc. No. 95–208); to the Committee on Appropriations and ordered to be printed.

2105. A communication from the President of the United States, transmitting proposed supplemental appropriations for fiscal year 1978 for the Environmental Protection Agency (H. Doc. No. 95–209); to the Committee on Appropriations and ordered to be printed.

2106. A communication from the President of the United States, transmitting notice of his intention to delay making a decision on a transportation system for Alaska natural gas, pursuant to section 7(a)(2) of Public Law 94–586 (H. Doc. No. 95–210); jointly, to the Committees on Interstate and Foreign Commerce, and Interior and Insular Affairs, and ordered to be printed.

2107. A letter from the Deputy Secretary, Department of Agriculture, transmitting a draft of proposed legislation to authorize civil penalties for violations of various laws for preventing the introduction and dissemination of livestock and poultry diseases, plant diseases, and plant pests; to the Committee on Agriculture.

2108. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a cumulative report on rescissions and deferrals of budget authority as of August 1, 1977, pursuant to section 1014(e) of Public Law 93–344 (H. Doc. No. 95–211); to the Committee on Appropriations and ordered to be printed.

2109. A letter from the Deputy Secretary of Defense, transmitting seven reports of violations of the Anti-Deficiency Act, pursuant to section 3679(i)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

2110. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report of the value of property, supplies, and commodities provided by the Berlin Magistrate for the quarter April 1–June 30, 1977, pursuant to section 719 of Public Law 94–419; to the Committee on Appropriations.

2111. A letter from the Assistant Secretary of Defense (Comptroller), transmitting certification that during the period October 1, 1976–March 31, 1977, no use was made of funds appropriated in the Defense Appropriation Act, 1977, or the Military Construction Appropriation Act, 1977, to make payments under contracts in a foreign currency except where it was determined that the use of foreign currencies was not feasible, pursuant to sections 734 and 109 of the respective acts; to the Committee on Appropriations.

2112. A letter from the Secretary of Agriculture, transmitting a report of a violation of the Anti-Deficiency Act, pursuant to section 3679(i)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

2113. A letter from the Comptroller General of the United States, transmitting his review of the proposed rescissions and deferral of budget authority contained in the messages from the President dated July 19, 1977 (H. Doc. Nos. 95–187 and 95–188), pursuant to section 1014(b) of Public Law 93–344 (H. Doc. 95–212); to the Committee on Appropriations and ordered to be printed.

2114. A letter from the Comptroller General of the United States, transmitting his review of the proposed rescission and deferral and the revised deferral contained in the messages from the President dated July 26, 1977 (H. Doc. Nos. 95–197 and 95–198), pursuant to section 1014 of Public Law 93–344 (H. Doc. 95–213); to the Committee on Appropriations and ordered to be printed.

2115. A letter from the Assistant Secretary of Defense (Comptroller), transmitting an addition to the list of contract award dates for the period July 15–October 15, 1977, submitted to the Congress on July 22 (Executive Communication No. 1991), pursuant to 10 U.S.C. 139; to the Committee on Armed Services.

2116. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a further addition to the list of contract award dates for the period July 15-October 15, 1977, pursuant to 10 U.S.C. 139; to the Committee on Armed Services.

2117. A letter from the Assistant Secretary of Defense (Comptroller), transmitting the selected acquisition reports and SAR summary tables for the quarter ended June 30, 1977, pursuant to section 811(a) of Public Law 94–106; to the Committee on Armed Services.

2118. A letter from the General Counsel of the Department of Defense, transmitting a draft of proposed legislation to amend titles 10 and 37, United States Code, relating to the appointment, promotion, separation, and retirement of members of the Armed Forces, and for other purposes; to the Committee on Armed Services.

2119. A letter from the Acting Secretary of the Army, transmitting notice of the Secretary's determination that transportation of chemical agents and munitions located at Tooele Army Depot, Utah, is necessary in the interests of national security, pursuant to 409(b)(4) of Public Law 91–121; to the Committee on Armed Services.

2120. A letter from the Assistant Secretary of the Air Force (Research, Development, and Logistics), transmitting a report covering the period January 1 through June 30, 1977, on Air Force experimental, developmental, and research contracts of $50,000 and over, pursuant to 10 U.S.C. 2357; to the Committee on Armed Services.

2121. A letter from the Director, Office of Legislative Affairs, Department of the Navy, transmitting notice of the Navy's intention to sell a naval vessel to the Government of Italy, pursuant to 10 U.S.C. 7307; to the Committee on Armed Services.

2122. A letter from the Director, Office of Legislative Affairs, Department of the Navy, transmitting notice of the intention of the Department of the Navy to donate certain surplus property to the Hawaiian Railway Society of Honolulu, Hawaii, pursuant to 10 U.S.C. 7545(c); to the Committee on Armed Services.

2123. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects proposed to be under-

taken by the Army Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2124. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects proposed to be undertaken by the Army National Guard, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2125. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects to be undertaken by the Army National Guard, pursuant to 10 U.S.C. 2233a (1); to the Committee on Armed Services.

2126. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of construction projects to be undertaken by the Army National Guard and the Naval and Marine Corps Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2127. A letter from the Administrator of General Services, transmitting a report on the strategic and critical materials stockpiling program for the 6 months ended March 31, 1977, pursuant to section 4 of the Strategic and Critical Materials Stockpiling Act (50 U.S.C. 98c); to the Committee on Armed Services.

2128. A letter from the Acting Secretary of the Treasury, transmitting a report on the operations of the Exchange Stabilization Fund for fiscal year 1976 and the transition quarter, pursuant to 31 U.S.C. 822a; to the Committee on Banking, Finance and Urban Affairs.

2129. A letter from the Secretary of Housing and Urban Development, transmitting the 13th report on the implementation of the Emergency Homeowners' Relief Act of 1975, pursuant to section 111 of the act (Public Law 94–50); to the Committee on Banking, Finance and Urban Affairs.

2130. A letter from the Chairman, Cost Accounting Standards Board, transmitting proposed new and revised cost accounting standards, rules, and regulations exempting small business concerns and reducing the requirements that certain other companies must meet, pursuant to section 719(h)(3) of the Defense Production Act of 1950, as amended; to the Committee on Banking, Finance and Urban Affairs.

2131. A letter from the President and Chairman, Export-Import Bank of the United States, transmitting a report on loan, guarantee, and insurance transactions supported by Eximbank during June 1977, to Communist countries; to the Committee on Banking, Finance and Urban Affairs.

2132. A letter from the President and Chairman, Export-Import Bank of the United States, transmitting a report on loan, guarantee and insurance transactions supported by Eximbank during July 1977 to Communist countries; to the Committee on Banking, Finance and Urban Affairs.

2133. A letter from the Mayor of the District of Columbia, transmitting his response to the Comptroller General's report on unexpended capital outlay fund balances of the District of Columbia Department of Recreation, pursuant to section 736(b)(3) of Public Law 93–198; to the Committee on the District of Columbia.

2134. A letter from the Deputy Auditor of the District of Columbia, transmitting a copy of the Department's report entitled "Timeliness in Enforcement of Human Rights Law and the Effect of the Council Transfer of Equal Opportunity Personnel," pursuant to section 455 of Public Law 93–198; to the Committee on the District of Columbia.

2135. A letter from the Director, District of Columbia Bail Agency, transmitting a report on the Agency's operations from the period January 1, 1976 to December 31, 1976, pursuant to 23 D.C.C. 1307; to the Committee on the District of Columbia.

2136. A letter from the Executive Secretary to the Department of Health, Education and Welfare, transmitting proposed final regulations for guidance and counseling programs, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2137. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for title II, section 201–208—the Indochinese Refugee Children Assistance Act of 1976, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2138. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for the Community Service and Continuing Education special programs and projects, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2139. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for the Assistance to States for the education of handicapped children program and the incentive grants program for handicapped children ages 3 through 5, pursuant to section 431(d) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2140. A letter from the Acting Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for the State student financial assistance training program, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2141. A letter from the Acting Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations governing libraries and learning resources, pursuant to section 431 (d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2142. A letter from the Acting Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for the emergency adult education program for Indochina refugees under section 315 of the Adult Education Act, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2143. A letter from the Director, Community Service Administration, transmitting a draft of proposed legislation to amend the proposed Economic Opportunity Amendments of 1977; to the Committee on Education and Labor.

2144. A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, transmitting a report on actions taken on recommendations contained in the report of the President's Committee on Mental Retardation (March 1976), pursuant to section 6(b) of the Federal Advisory Committee Act; to the Committee on Government Operations.

2145. A letter from the Chairman, Foreign Claims Settlement Commission, transmitting notice of a proposed new system of records for the Commission, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

2146. A letter from the Administrator of General Services, transmitting the annual report on the investigations of the cost of travel and the operation of privately owned vehicles to Federal employees while engaged on official business, pursuant to 5 U.S.C. 5707 (b)(1), and the determinations of the average actual cost per mile for the use of a privately owned motorcycle, automobile, and airplane pursuant to 5 U.S.C. 5707(b)(2); to the Committee on Government Operations.

2147. A letter from the Secretary of Agriculture, transmitting notice of proposed changes in the Department's system of records, pursuant to 5 U.S.C. 55a(o); to the Commtitee on Government Operations.

2148. A letter from the Secretary of Housing and Urban Development, transmitting notice of proposed changes in the Department's system of records, pursuant to 5 U.S.C. 552 a(o); to the Committee in Government Operations.

2149. A letter from the Deputy Assistant Secretary of the Interior, transmitting notice of proposed changes in the Department's system of records, pursuant to 5 U.S.C. 552a (o); to the Committee on Government Operations

2150. A letter from the Secretary, Federal Trade Commission, transmitting notice of five new proposed systems of records established by the Commission, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

2151. A letter from the Comptroller General of the United States, transmitting a list of reports issued or released by the General Accounting Office during July 1977, pursuant to section 234 of Public Law 91–510; to the Committee on Government Operations.

2152. A letter from the Comptroller General of the United States, transmitting a report on the status of the Federal agency accounting systems during the 15 months ending September 30, 1976 (FGMSD–77–21, August 24, 1977); to the Committee on Government Operations.

2153. A letter from the Comptroller General of the United States, transmitting the annual report on progress and results of the continuing program to improve the usefulness of fiscal, budgetary, and program-related information to Congress (PAD–77–73, August 30, 1977) pursuant to section 202(e) of the Legislative Reorganization Act of 1970, as amended; to the Committee on Government Operations.

2154. A letter from the Clerk, U.S. House of Representatives, transmitting his semiannual report of receipts and expenditures for the period January 1 through June 30, 1977, pursuant to section 105(a) of Public Law 88–454 [2 USC 104a] (H. Doc No. 95–204); to the Committee on House Administration and ordered to be printed.

2155. A letter from Secretary of the Interior, transmitting a proposed plan for the use and distribution of the judgment funds awarded to the Saginaw Chippewa Indians in docket 57 before the Indian Claims Commission, pursuant to 87 Stat. 466; to the Committee on Interior and Insular Affairs.

2156. A letter from the Assistant Secretary of the Interior, transmitting a copy of the proposed rules for the initial regulatory program and coal production fee required by the Surface Mining Control and Reclamation Act of 1977; to the Committee on Interior and Insular Affairs.

2157. A letter from Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend section 317(c)(1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain U.S. obligations and for other purposes; to the Committee on Interior and Insular Affairs.

2158. A letter from the Chairman, Pennsylvania Avenue Development Corporation, transmitting the annual report of the Corporation for 1977, pursuant to section 11 of Public Law 92–578, as amended; to the Committee on Interior and Insular Affairs.

2159. A letter from the Acting Secretary of State, transmitting a report on an unauthorized transfer of U.S.-origin military equipment, pursuant to subsections 3(c)(2)

and 3(e) of the Arms Export Control Act; to the Committee on International Relations.

2160. A letter from the Acting Assistant Secretary of State for Congressional Relations, transmitting a copy of Presidential Determination No. 77–15, finding that it is in the national interest of the United States to waive the exclusion of Morocco from sales under title I of the Agricultural Trade Development and Assistance Act of 1954, pursuant to section 103(d)(3) of the act; to the Committee on International Relations.

2161. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a copy of Presidential Determination No. 77–18, finding that it is in the national interest of the United States to waive the exclusion of Portugal from sales under title I of the Agricultural Trade Development and Assistance Act of 1954, pursuant to section 103(d)(3) of the act; to the Committee on International Relations.

2162. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the Department of State's intention to consent to a request by the Government of Israel for permission to transfer certain U.S.-origin military equipment to the Government of Honduras, pursuant to section 3(a) of the Arms Export Control Act; to the Committee on International Relations.

2163. A letter from the Acting Assistant Secretary of State for Congressional Relations, transmitting notice of the Department of State's intention to consent to a request by the Government of Australia for permission to sell certain U.S.-origin military equipment to the Government of Canada, pursuant to section 3(a) of the Arms Export Control Act; to the Committee on International Relations.

2164. A letter from the Acting Assistant Secretary of State for Congressional Relations, transmitting notice of the Department of State's intention to consent to a request by the Government of the Netherlands for permission to sell certain U.S.-origin military equipment to the Government of Italy, pursuant to section 3(a) of the Arts Export Control Act; to the Committee on International Relations.

2165. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of proposed licenses for the export of defense equipment sold commercially to Iran (transmittal No. MC–48–77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

2166.
